(c) *New England*.—Much less known is the action of the Pilgrim Fathers. In 1650 they passed a law forbidding people to meet on the Lord's Day from house to house in Plymouth.¹ On 2nd October nine men and women were presented for so doing. There was no suggestion of any riot; they were worshipping quietly. Governor William Bradford, who signed that law, had four years before described the early experience of himself and his friends, keeping 'their meetings every Sabbath in one place or another, exercising the worship of God among themselves.'² He must

have had a very strong sense of the need of keeping his little colony homogeneous. Under his successor the Pilgrims used the stocks, the cage, the jail; they fined, confiscated, whipped, banished, till the Restoration ended their scandalous doings.¹ When such things were done in the green tree of Plymouth, the state of affairs may be readily imagined in the dry tree of Boston. There the persecution culminated in hanging four Quakers on the common early in 1660. But the Puritans at least were thoroughly consistent, and acted from loftier motives. With them the desire for a unified territory was accessory to a genuinely religious feeling, as with Calvin, whose conduct in the case of Servetus had set them the example.

(d) *Russia*.—In few lands is there such close blending between Church and State as in Russia. It arises out of the circumstances in which Muscovy achieved independence. The clergy did much to promote the organization by which the rule of the Muslim Mongols was ended, and the invasion of the Roman Catholic Poles was repelled. Before the 15th cent. ended, a grandson of the Kaisar at Constantinople had as Tsar transplanted the Byzantine traditions to Moscow, whose archbishop he caused to be recognized by the four Eastern patriarchs as a fifth colleague. The royal house soon died out, and a grand national assembly chose a son of the patriarch to be Tsar. In the middle of the 17th cent. the patriarch Nikon instituted many reforms with the support of the Tsar and of all the bishops but one, who was deposed, flogged, and kept in prison till he died mad. The laity and many clergy resisted; persecution led to civil war. In 1667 Nikon was deposed by an ecclesiastical council, but the schism continued; even to-day, after constant oppression, the Old Believers are supposed to number 12,000,000. Peter the Great averted the risks arising from future pretensions of any patriarch by abolishing the office and instituting a holy governing synod, composed chiefly of bishops nominated by himself, and presided over by himself or a lay deputy—very like a Tudor High Commission with Thomas Cromwell at its head. This change was enforced by more persecution, and a new rebellion was subdued.

Two generations later Catherine II. took over all the capital of ecclesiastical property, paying the clergy and monks regular salaries; it was a good precedent for the French National Assembly, though the Ecclesiastical Commission of 1836 applied the principle in England only to the bishops. But Catherine's extension of boundary brought under her sceptre Lutherans of the Baltic and Roman Catholics of Poland, so that the homogeneous province of 1600 has swollen to a heterogeneous empire, with new ecclesiastical problems. To-day in a population of 125,000,000 there are 14,000,000 Muslims and 5,000,000 Jews, the persecution of whom is not here dealt with; in the Christian population Roman Catholics, Lutherans, Old Believers, and Armenians are large factors, though altogether they are not a quarter of the number of the State Church. In theory there is a general toleration; in practice there is nothing of the kind.² Propaganda is forbidden; at the best of times a minister of a sect can be registered only for one building and one congregation, while police frequently attend to watch. Prison, flogging, removal to the Caucasus or Siberia, and exile are the constant experience of such ministers, and also of many lay Dissenters.

(e) *France*.—The religious wars of the 16th cent. resulted in the Edict of Nantes securing a certain privileged position of toleration to the Huguenots

(g.v.). Louis XIV. could not brook such division, and, prompted by others with different motives from his, he set to work to unify his realm. Bitter persecution led up to the revocation of the Edict of Nantes in 1685, the expulsion of all ministers, and the most strenuous measures for the conformity of the laity. The reaction came with the French Revolution a century later, but the proclamation of 'liberty, equality, and fraternity' on 14th July 1789 proved illusory. The National Assembly adopted Catherine's plan with ecclesiastical property, and went farther. The monastic orders were abolished, and a new civil constitution was framed for the Church. Of 136 bishops only four took the oaths, and 79 new prelates had to be found; the parish clergy resisted, and 600 are said to have been massacred at Avignon alone. The Legislative Assembly was anti-Christian. It ordered Paris to be cleared of priests, and three weeks later 300 clergy were massacred in prison, thus ushering in the Reign of Terror. This culminated in November 1793, when Christianity was formally abolished, and the existence of God was denied.

(f) *Portugal*.—This country affords an earlier case when a great Roman Catholic corporation suffered persecution. In 1750 the kingdom was under clerical influence, especially that of the Society of Jesus.¹ A series of economic reforms, the organization of trading companies, and the development of the colonies brought the State and the Jesuits into sharp collision. If Richelieu would not tolerate an ecclesiastical *imperium in imperio*, no more would Pombal. In 1759 the Society was expelled from all the Portuguese dominions, and its funds were sequestered. In extension of this action, it may be pointed out that the governments of France and Spain, also staunchly Roman Catholic, felt obliged to take similar steps eight years later, that the pope refused to permit the Spanish Jesuits to land in Italy, that even the Austrians withdrew support, and that the next pope suppressed the whole order for ever. He set in the forefront of his reasons that the Jesuits ruined souls by their quarrels and their compromises with heathen usages. The bull has never been withdrawn. Another pope, equally infallible, reconstituted the order, which silently re-established itself in Portugal, and was a second time expelled in 1834, and a third time in 1910. On neither occasion was any action taken against the Roman Catholic hierarchy and parochial organization or against public worship. The State has thrice been obliged to defend itself against a powerful international organization, whose character was declared by the papacy to be bad. Roman Catholicism is still the religion of Portugal. The constitution both permits the Protestant religion and lays it down that no one can be persecuted for religious reasons so long as he respects the religion of the State and commits no offence against public morals. Nor is this a dead letter; a priest who in 1904 caused a Protestant worker to be assaulted and robbed was sent to prison for 35 days.

3. A political blunder.—When different religious parties were more evenly balanced, the rulers sometimes saw that the only chance of internal peace was a wide toleration, and that persecution would be a mistake. An early example is found in Poland, where, to avert civil war, Calvinists and Lutherans were tolerated from 1552, and Mennonites were invited by the king to come and settle, with the promise of religious freedom. On his death a compact of Warsaw during the interregnum assured on 28th Jan. 1573 absolute religious liberty to all 'dissenters from the religion.' So also in

the Netherlands, where William of Orange, himself successively Catholic, Lutheran, Calvinist, had to insist that there must be mutual concessions as the price of bare existence in the face of Spanish troops. He carried his point first in 1576 with a Pacification of Ghent and again in the Union of Utrecht.

Rulers were assisted to see their way to this, by the wide acceptance of a new political theory originated by Calvin,¹ published in his *Institutes*, and thus spread over the whole Western world. It reached English readers first in the *Politique Power* of Bishop John Ponet, 1556:

'Men ought not to obeie their superior that shall commaunde them to doo anything against Goddes Word. . . . Princes abusing their office may be deposed by the body of the whole congregation or commonwealth.'

Five years later all could read Calvin's closing words:

'If they [the three estates in everie realme] winke at kinges wilfully raging over and treading down the poor communitie . . . they deceitfully betray the libertie of the people, whereof they know themselves to bee appointed protectors by the ordinance of God.'²

Acting on Knox's exposition of this theory, the Scots deposed the queen regent in 1559, and the parliament ratified the Revolution on that ground. Beza's *Droit des magistrats* (1573) and Philippe de Mornay's *Vindiciæ contra Tyrannos* (1579) gave full scope to the theory; and in 1581 the Estates of the Netherlands solemnly deposed Philip, justifying the act in their declaration of independence.

The Italian jurist Hierom Zanchius, teaching in Germany, added to Aquinas's doctrine of passive resistance the obligation to active resistance.

'If for the sake of religion you oppose yourself to the king, you oppose yourself not to power but to tyranny, and unless you do so oppose yourself, you act contrary to divine and human law.'³

The doctrine was repeated at Heidelberg by the German David Pareus:

'Inferior magistrates may justly, even by arms, defend the commonwealth and church or religion against a superior magistrate.'⁴

His book had the honour of being burned by James I., who blinded himself to the fact that most of his thinking subjects accepted this theory.

These books were chiefly political, many by lawyers and statesmen; they were widely circulated and translated. England demanded new editions after 1640, and the dogma that persecution for the sake of religion justifies armed resistance and deposition led again to appropriate action. And, whereas the Continental thinkers were from the upper ranks, it was a representative council of the army which in August 1647 drew out sixteen proposals as the basis of a treaty with the king. One proposed to abolish all coercive power in ecclesiastical officers, another to repeal the Uniformity and Conventicle Acts, a third to make the recent Covenant voluntary rather than obligatory. Two months later a body of democrats presented to this council a manifesto styled 'the Agreement of the People,' which they considered and amended. After an interlude of a second war the army presented it formally to the House of Commons in January 1648–49.

The ninth clause deals with religion, and provides 'that, to the public profession so held forth, none be compelled by penalties or otherwise; . . . that such as profess faith in God by Jesus Christ, however differing in judgment from the doctrine, worship, or discipline publicly set forth, as aforesaid, shall not be restrained from, but shall be protected in, the profession of their faith and exercise of religion, according to their consciences, in any place except such as shall be set apart for the public worship.'⁵

This document is the careful definition of 'the Good Old Cause' for which the army declared itself to have fought. In the Instrument of Government (16th Dec. 1653), defining the constitution under which the Commonwealth was governed, the above provisions were incorporated word for word.

The nation was by no means ripe for such ideas, and the six years of the Protector did not educate it as the forty-five years of Elizabeth had done. Moreover, from the beginning Cromwell was recreant. When he confined recusants within their radius of five miles, he was only continuing Elizabeth's plan, and availing himself of a special exception in the Instrument. When he heavily fined prelatists who rebelled, he again applied Elizabeth's plan, and might say that rebels came off lightly with only fines. But he forbade ejected ministers to teach in schools, and set new precedents of persecution destined to be used against his supporters. And he turned on them also; orders went to Scotland to see that no Baptist should teach in a school or hold any office of trust. Faithless to his own express announcement a few years earlier that the State regarded efficiency and not opinions, Cromwell did the very thing that he had forbidden Crawford to do, and weeded the army of Baptist officers. Before his death he was persecuting many parties, and was fiercely denounced by the leaders of 1647, some of whom republished the Calvinist doctrine in the pamphlet *Killing no Murder*, in May 1657. After his death 'the Good Old Cause' revived, but its leaders were in a minority, and, with the restoration of the Presbyterians to power in 1659, persecution was both legalized and practised freely for a generation.

The literary campaign continued, dealing with the political aspects of the matter; and it called forth writers of very different types. Sidney and Locke were of the Christian school; the essay *Concerning Toleration* was drafted at Oxford during the cruelties of 1666, but was completed and was first published most appropriately in Holland.¹ Almost immediately Parliament accepted the view that persecution had failed to secure unity and was a political blunder. The Toleration Act was passed in 1689. The Rainbow Club of the Huguenots discussed the matter, and P. Bayle's *Dictionnaire historique et critique* (4 vols., Rotterdam, 1697) leavened Continental thought. Voltaire, after an English sojourn of 1726-29, returned to ring the changes for half a century on the motto 'Ecrasez l'infâme!' 'Down with persecution!' The deists and the unitarians took up the cause. It found champions such as Mill, Buckle, and Lecky. A statement from an agnostic standpoint was republished in 1893 by Leslie Stephen in his essay on 'poisonous opinions.'²

4. **A sin against God.**—There was a momentary glimpse of this view by Luther at Worms, but he soon lost sight of it; and the familiar confessions of the Reformation admit the right of the civil authority to coerce in matters of religion. Specially noteworthy is the general unanimity of Calvinist theologians in affirming not only the absolute independence of the spiritual courts in matters spiritual, but also 'the duty of the civil authorities to carry out their spiritual sentences to their appointed civil consequences.'³ Against such a doctrine the continuous, direct, and elaborate Biblical indictment of persecution begins with Englishmen, enjoying the actual liberty secured at Amsterdam by the wisdom of William in the teeth of the Calvinist ministers.

A group of exiles from Gainsborough set down twenty short propositions in 1609, one stating that excommunicated persons are not to be avoided in what pertains to civil affairs. This was soon complemented by this statement:

'The magistrate is not by virtue of his office to meddle with religion, or matters of conscience, to force and compel men to this or that form of religion, or doctrine; but to leave Christian religion free, to every mans conscience . . . for Christ onlie is the king, and lawgiuer of the church and conscience.'¹

In 1614 a citizen of London residing in Holland presented to King James a small book called *Religions Peace: or a plea for liberty of conscience. Wherein is contained certain reasons against persecution for religion.* Next year appeared another little work, *Obiections answered by way of dialogue, wherein is proved . . . that no man ought to be persecuted for his religion, so he testifie his allegiance by the oath appointed by law.* In 1620 another pamphlet came from the same group, *A most humble supplication of many of the king's majesty's loyal subjects . . . who are persecuted only for differing in religion, etc.* Eight editions appeared of these three works, quite apart from antiquarian reprints.²

The next assertion of the principle of liberty was made, not against the Stuarts, but against refugees from them who reproduced their policy on Calvin's principles. Anne Hutchinson arrived in Boston in 1634, was refused admission as a member of John Cotton's church, and so began a conventicle in her home. As Cotton tried to stop it, Roger Williams copied out some extracts from the 1620 book and sent them to him, initiating a war of pamphlets. The Company formally forbade new churches to organize without consent of the officers and of the elders in existing churches; whereupon the elections turned on this prohibition. The sitting governor was defeated, and Henry Vane, the champion of freedom, was chosen; but with 1637 the persecutors returned to power. They secured their victory by expelling Mrs. Hutchinson, Williams, and many other opponents. Others left in disgust, some going to Connecticut, but Vane to England, where he continued his championship against the Scots commissioners in the Westminster Assembly, breaking with Cromwell in 1650 largely on the same issue, and being imprisoned by him in 1656 because he protested against the Protector's persecution of the Episcopalian clergy.

Meanwhile the victorious ministers and elders on Massachusetts Bay followed up many refugees, and tried to assert authority over the Island of Rhodes. Williams was sent to London to secure exemption from the Company's jurisdiction. There he published in 1644 a long criticism dedicated to Parliament and entitled, *The Bloody Tenent of Persecution, for Cause of Conscience, discussed.* This is a standard work, examining the question on a Biblical basis. It led to a long debate in New England.

Old England also was roused to the question. Christopher Blackwood proclaimed that compulsion of conscience was a pillar of Antichrist. Seven London Calvinistic Baptist churches, issuing a confession of faith, were equally clear, and, as the confession was keenly criticized, they revised it, and dedicated it to Parliament, which was about to enforce uniformity. They declared that they would willingly submit to all civil laws, but could not submit to some ecclesiastical laws; therefore they would accept the consequences in persecution.

One of the signatories took stronger ground next year, propounding 50 questions to the Assembly of Divines on the subject of compulsion. Obtaining no answer, he expanded them into a book on the

necessity of toleration, with a long title defying the Assembly and Parliament. This he printed and published without the censor's imprimatur.¹ The same year Rhode Island codified the laws passed hitherto without legal authority. On 10th May 1647, summing up what had been already stated and acted upon for nine years, the four towns enacted under their charter that 'all men may walk as their consciences persuade them, every one in the name of his God.'²

Two years later Lord Baltimore, Roman Catholic proprietor of the colony of Maryland, sanctioned a Toleration Act which drew the line only at two points: reproachful words against the Virgin Mary were punishable with fine, whipping, and banishment; denial of the Godhead of any of the three persons of the Trinity entailed confiscation of goods and death. This law, however, was repealed five years later after a revolution, when the Puritans from Virginia obtained the upper hand; they banned 'popery, prelacy, and licentiousness of opinion.'³ The policy and practice of Rhode Island remained unchanged. Jews were welcomed as settlers, and enjoyed the right of public worship as early as 1658. Five years later a charter was obtained from Charles, with a provision that 'no person within said colony at any time hereafter shall be in any wise molested, punished, disquieted or called in question for any differences of opinion in matters of religion.'⁴ Thus the theories adopted and expounded by Englishmen fifty years earlier had won their way to permanent embodiment under the auspices of the same religious communion. Freedom was won, and was not used selfishly to enslave others, but was held for all as a trust from God.

5. The antithesis in practice.—Issues were now fairly joined, and the results exhibited. Persecution was either a duty to God or a sin against God. The results in a few countries may be glanced at.

The Provincial Congress of Massachusetts on 9th Dec. 1774 resolved in words 'that the establishment of civil and religious liberty to each denomination is the sincere wish of this congress';⁵ but no deeds followed. In August 1789 a committee of the Baptist churches in Virginia memorialized Washington, and next month the first amendment to the draft constitution of the United States declared that Congress should 'make no law respecting any establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press.'⁶ In 1832 even Massachusetts, the earliest and the latest home of intolerance and persecution, gave up the relics of the union of one favoured Church with the State.

Progress was slower in England. Money penalties were exacted regularly in the city of London till a legal decision of 1767. Tithes are even yet payable throughout Great Britain to the Established Churches. Freedom of the press came almost by an oversight, not because of Milton's *Areopagitica*. Persecution under legal forms continued till after the Napoleonic wars, when, at the cost of acquiescing in large money grants to the Church of England, Dissenters obtained the repeal of the Conventicle Act; the Test and Corporation Acts also disappeared in 1828. Only within living memory have the grammar-schools and universities in England been opened again to all, or offices

been made technically available. Still there is a social boycott in many respects; in some towns no one need hope for the mayoralty, whatever eminent services he may have rendered, unless he will be at least an Occasional Conformist.

Latin America was long governed by men imbued with Roman Catholic ideals. After the political revolts last century the opposition was headed by men largely indifferent to religion, if not actively hostile. A typical case is Mexico; the issues were clearly stated, and literally fought out between 1857 and 1867. The *Plan de Tacubaya* upheld the special rights of the Roman Catholic Church, Roman Catholicism as the sole religion, and censorship of the press. The liberals fought for freedom of religion, freedom of the press, nationalization of Church property, and abolition of special tribunals for ecclesiastics. They won, but the temper of the clericals remains. In 1887 the *Defensa Catolica* declared that 'true charity consists in opposing one's neighbour, in injuring him in his material interests, in insulting him and in taking his life, always supposing that it is done for love of God.'¹ This is not empty talk. At Atzala in 1876 a Protestant church was set on fire during service, and, as the worshippers came out, they were hewn down by a fanatical mob. Even in 1898, at Irapuato, a Protestant girl was dragged to the public square and threatened with burning.

Some other States have not yet reached the Mexican position even in theory. The fourth article of the Peruvian Constitution declares that 'the nation professes the apostolic Roman Catholic religion; the State protects it, and does not permit the public worship of any other.'² The penalty is no longer death, but there are severe disabilities. In practice every one doing Protestant work must be prepared to risk his life. In 1909 a colporteur was mobbed at Dores do Turvo in Brazil, the priest calling on the people to burn him. In Paraguay a priest stirred up the people to kill the heretic if he did not leave, and he was restrained only on an appeal to the government. Nor are such incidents peculiar to the other side of the world. Tales like these are constantly being reported as to Roman Catholic priests on the Continent. In the diocese of Trier a worker finds a priest walking beside him all day and every day, warning the people; in Styria, Italy, and Brittany workers are boycotted, food is refused, and any one who heeds them is threatened with eviction; mobs are raised against them in Carniola and Posen; they are arrested illegally in Lemberg, Spain, and Portugal. So strong is Roman Catholic influence in these countries that protection can seldom be obtained, redress hardly ever. Such conduct is the logical issue of the Roman Catholic theory. Under necessity a Roman Catholic may indeed abstain from molesting a heretic; only, as one of themselves states it, 'if expedient, he would imprison you, fine you, possibly he might even hang you. But be assured of one thing, he would never tolerate you for the sake of the "glorious principles" of civil and religious liberty.'³

Against such dangers the counter-measures of Portugal in 1910 have already been noted. Very similar measures had been constitutionally taken by France between 1901 and 1905. Religious orders were forbidden to teach in school; then they were dissolved; Napoleon's concordat with the Vatican was formally abrogated; liberty of conscience and

the free practice of public worship were guaranteed to all.

But, when a State finds itself confronted by a great international organization like the Roman Catholic Church, powerful enough to defeat Bismarck in fourteen years and make him come to Canossa despite his defiance, then even ordinary legislation seems sometimes insufficient. It is no small tribute to the insight of the Rhode Islanders that in 1638 they drew the line between freedom of worship, assured to all, and the franchise, granted only to those who upheld that principle as fundamental. They were careful to have the distinction made again in their charter of 1663, which guarantees absolute religious liberty to all settlers, whether freemen or not. And substantially the same point is made in the Constitution of 1789; freedom of worship is promised to all, but no one can become a citizen of the United States without acceding to that constitution which promises it. Americans discern that an unlimited toleration risks suicide; those who would persecute, had they the power, are not admitted to power. Roman Catholics therefore try to minimize their principles in the United States. Gibbons has a chapter glorifying civil and religious liberty, which opens thus:

'A man enjoys religious liberty when he possesses the free right of worshipping God according to the dictates of a right conscience, and of practising a form of religion most in accordance with his duties to God. . . . The Catholic Church has always been the zealous promoter of religious and civil liberty.'¹

But two years later the pope declared:

'That kind of civilization which conflicts with the doctrine and laws of Holy Church is nothing but a worthless imitation and a meaningless name.'²

He blamed severely every State which grants 'equal rights to every creed, so that public order may not be disturbed by any particular form of religious belief.' In his encyclical on catholicity in the United States it gave him pleasure to acknowledge that this was exactly the state of affairs there. In another on allegiance to the French Republic in 1892 he declared that the separation of State and Church was equivalent to the separation of human legislation from Christian and divine legislation, an absurdity. Writing on the chief duties of Christians as citizens, he stigmatized it as an act of consummate wickedness to ignore the rights of the Church under pretext of keeping the civil law; in contrast he required 'complete submission and obedience of will to the Church and to the Roman Pontiff as to God Himself.'

American statesmen realize the issues. One vice-president wrote:

'The immigrant . . . must learn that we exact full religious toleration and the complete separation of Church and State.'³

Grover Cleveland declared at his inauguration:

'He who takes the oath to-day to preserve, protect and defend the constitution of the United States, only assumes the solemn obligation which every patriotic citizen . . . should share with him.'⁴

No Roman Catholic has ever been faced with the conscientious problem involved in taking that oath, but every alien who desires naturalization shares the obligation to the extent of swearing to support the constitution. An official message of another president states plainly that against all who come to war upon free speech, a free press, free thought, free schools, the free and unmolested right of religious liberty and worship, the gates must be promptly and tightly closed.⁵

Such utterances of statesmen are based only on

political grounds of expediency. It is well to recur to the fundamental religious differences.

'The true Church,' says Joseph Poble of Breslau, 'can tolerate no strange Churches beside herself. . . . She regards dogmatic intolerance not alone as her incontestable right, but also as a sacred duty.'¹

G. H. Joyce states that 'the right of the Church to invoke the aid of the civil power to execute her sentences is expressly asserted by Boniface VIII.' This, he adds, is theologically certain, but practically impossible at present.²

The counter-theory was lucidly expressed more than 300 years ago by Leonard Busher:

'It is sin for kings and governors to destroy their subjects for difference of religion, at the persuasion of their bishops.'³

LITERATURE.—This is indicated in the article.

W. T. WHITLEY.

PERSECUTION (Indian).—In the indigenous literature of India, whether Vedic or classical Sanskrit or of more recent date, there is little that would suggest the existence of a state of religious persecution. References are abundant to the rivalry of creeds and systems, giving evidence of conflicting beliefs and the worship of many gods, whose spheres and authority are not always reconcilable. Previous, however, to the irruption of Muhammadanism, whose fierce and intolerant character is reflected in its records, Indian literature shows little trace of religious differences composing themselves by other than peaceful means. This result is perhaps to be anticipated on the basis of two considerations at least. (1) On the one hand are the nature and contents of the literature itself, wanting as it is for the most part in the historical element. The motive power of the persecution may be religious bigotry or zeal, but its conduct and execution are within the domain of history, and, where the records fail, deeds of persecution may also pass unnoticed. Moreover, the early literature is the creation of Brāhman writers, and has been preserved almost entirely in the hands of the dominant caste, and gives expression to their point of view. They would be little likely perhaps to record deeds of violence and wrong done to others whom they regarded as inferiors, especially where religious prejudice entered into the account. Such acts would either be unheeded, as in the natural order of things, or be as speedily as possible consigned to oblivion, as occasion not for boasting but for silence. That the latter argument does not in all instances hold good the example of Muhammadan historians serves to prove.

(2) Indians also, like all Orientals, are naturally tolerant of variant belief. Differences appeal to them ordinarily as basis for discussion and controversy, not for violent repression; and the victory at which they aim is dialectic, and relies upon argument and persuasion, not upon brute force. It is only under the influence of excitement, as at the great festivals, or of pressure from without that they endeavour to put down religious differences with a strong hand, and to enlist authority and the social order in the service of creed and the rights and privileges of an established faith. In this respect the change in Indian feeling and practice within the last half century has been most marked (see below). Under such circumstances all Orientals are liable to passions of frenzy, which exhibits itself in deeds that have little relation to the ordinary rules of conduct and life.

Although the early and successive invasions of the Aryans brought into the Panjab and N. India a cult differing from and superior to the crude animism of the aboriginal tribes of Dravidian or other origin, in the course of which the latter were either destroyed or more usually became the bondmen and slaves of their conquerors, there is

¹ CE xiv. 766.

² CE xii. 286.

³ *Tracts on Liberty of Conscience*, p. 41.

no indication of religious animosity or persecution. If the *Atharvaveda*, as is probable, gives expression to the thought and religious habit of these primitive peoples, the contact inspired contempt and abhorrence in the minds of the ruling caste, but the ultimate issue was stringent non-intercourse, not forceful repression of distasteful opinions and practices. A broad and simple animism, whether of a more or less advanced character, is indeed little likely to persecute in the name of religion. Neither are its convictions sufficiently deep and strong, nor are they differentiated in sufficiently marked a degree from the beliefs and usages of the surrounding animistic tribes of lower culture. It is the higher religions, with more definite conceptions and securely held creeds, that deliberately adopt a policy of compulsion towards those whose cherished beliefs differ from their own.

There is therefore little or no real evidence of persecution in India even on a limited and local scale prior to the advent of Islām. In the Hindu law-books and elsewhere references are to be found to atheists and heretics, but they hardly convey the impression of an active intolerance, nor do they enjoin repression or interference in any way with heterodox custom or belief. The high-born *Snātaka*, e.g., is not to honour heretics, even by a greeting.¹ On the other hand, he is not to dispute with them.² Elsewhere atheism is declared to be a minor offence, involving loss of caste.³ The *Brāhmana* who is an atheist is unworthy to partake of the oblations to the gods and ancestral spirits;⁴ and a kingdom where these prevail or hold rule is speedily ruined;⁵ in such a land the *Snātaka* should not dwell.⁶ Perhaps the nearest approach to a suggestion of persecution is where the king is enjoined to banish heretics together with gamblers and others from his realm.⁷ There is little indication of ill-feeling, much of the claim to or consciousness of superiority, so familiar in later times. The contact also of ancient Hinduism with the daughter or separatist forms of faith, Buddhism, Jainism, and others, cannot be shown to have been generally, or except accidentally and under unwonted conditions, associated with violence. Orthodox Hinduism has usually been a kindly parent to the numerous rival or reformed sects which have originated from within its broad and tolerant creed during the course of its long history; and most of these after a brief and troubled career have returned into the communion of the faith or church from which they sprang. The mutual relations have been characterized by dispute and controversy, but rarely by active measures of repression, unless these have been provoked by aggressive conduct on the part of the heterodox teachers or communities themselves. Its missionary work also in the days when Hinduism was an expanding force was accomplished, as far as we know, by peaceable means, not by compulsion.

This is essentially true of the relations and intercourse between Hinduism and its greatest rival in India, Buddhism. The causes and history of the disappearance of the latter from Indian soil are obscure. There is no real evidence, however, that it was hastened by persecution from the side of Hinduism. Natural and perhaps inevitable decay, on the one hand, a revival and rekindling of the national faith, on the other, contributed to a result which was consummated by the destructive and persecuting zeal of the Muhammadan invader. The witness of the Chinese pilgrims, especially of Hiuen Tsiang in the earlier part of the 7th cent., is the most instructive in this respect. Their testimony to the wide-spread influence and very numerous

adherents of both faiths in India is unequivocal; but the decline in the numbers and prestige of the Buddhist schools in the experience of the later traveller in comparison with the increasing ascendancy of Hinduism is marked. The rivalry of the two faiths, however, was maintained by keen discussion and argument, and the victories won were victories of persuasion, not of authority and force. It is possible, perhaps probable, that sporadic instances occurred of the use of persecuting methods to secure the downfall of a despised or dangerous heresy or heretical teacher. These were of local and transient importance, and do not invalidate the general rule and practice; and, apart from vague tradition, there are no instances on record where the evidence is sufficient to command assent. In the 9th cent. the great constructive teacher and dialectician Sankarāchārya, in the course of his extended travels in the north of India, is said on occasion to have used his influence and success in controversy for the forcible silencing of his adversaries; and of an earlier thinker and philosopher, Kumārila-bhatta, there is a tradition preserved that he promoted a persecution of the Buddhists. It is doubtful whether in either case the tradition has any firmer basis than the natural desire of later times to glorify the zeal and ascendancy of a famous teacher. A more normal and typical example of the relations between the sects is certainly afforded by Hiuen Tsiang's account of the great assembly convened at Allahābād by the emperor Harshavardhana (A.D. 643), when friendly discussions took place between the leaders of the different sects and statues were erected on successive days of the festival in honour of the supreme divinities of the several faiths represented.

With the coming of Muhammadanism all was changed; and the various religious faiths, which hitherto had existed amicably side by side, bent and suffered together before the torrent of fanaticism and lust of conquest that swept over the land. Islām made no distinction between the differing forms of belief and creed that it encountered on its onward march. The adherents of all alike were infidels and idolaters, whose conversion by forcible means, if others failed, was a religious obligation; and death was the penalty of refusing to accept the creed of the conqueror. When the early waves of invasion had spent themselves, and fanatic zeal and hatred ceased to be stimulated by the experience of actual warfare against the infidel, there was a gradual relaxation of the tension. Except when a revival of persecution took place under the influence or at the instigation of a stern and fanatic ruler like Aurangzib, the mutual antipathy of conqueror and conquered learned to accommodate itself to the necessities of a common life. And only at the religious festivals or when the people were carried away by extraordinary excitement was there any manifestation of angry feeling or recrudescence of persecuting zeal. It remained true, however, that, in spite of a not inconsiderable degree of reciprocal borrowing of tenet and observance, the fanatic spirit was and is always present, though latent, and an apparently trivial circumstance may at any time precipitate an outbreak. In the early centuries of conflict and persecution Buddhism seems to have suffered most and very many of its adherents were put to death. Thus the final blow to a faith already decadent, and in process apparently of passing away, was administered by Muhammadan persecuting zeal. The cessation of the more active forms of repression came too late to save the Buddhist faith for India. It lives in Bengal and elsewhere only in the permanent mark which it has left on Hindu usage and belief, and in the borrowed figures and names of Hindu gods.

Towards Hinduism the attitude of the conquerors ultimately became changed. To crush and eradicate the Hindu faith proved impossible. Violent persecutions and massacres were ineffective to bring about an alteration either in the spirit or in the passive endurance of an entire people. Very many, however, suffered death for their religion in many parts of India; and the desolation caused, even if the numbers of the slain have been exaggerated in the somewhat boastful records of the Musalmāns themselves, extended over wide areas, and was with difficulty repaired in the course of centuries. More peaceable relations were brought about when the governing race found its need of the assistance of Hindu ministers and officers of State to control the country and to gather in the revenue. Muhammadan usage and law proved to be inapplicable, and could neither be enforced nor made fruitful of good results in the presence of immemorial prescriptive right and custom tenaciously held. Native administrators, judges, and collectors provided the necessary intermediaries; and the asperity of religious prejudice and dislike on either side was softened by mutual intercourse and the felt need of mutual aid. Thus the two creeds learned to live together for the most part in peace, the dominant faith out of self-interest abandoning its weapon of violence and persecution, and the leaders of the subject peoples lending their aid in the establishment of order and the maintenance of civil right. Fanatical manifestations of the dormant spirit with their accompaniment of strife and murder were never entirely checked. On both sides, however, men of influence were found sufficiently wise and strong to see the evil and discourage the use of force against religious belief. The occasional rioting and outrage which harassed and hindered the growth of tolerance and mutual understanding were due to special religious excitement or the sinister promptings of self-interested and bigoted men. With the extension of inter-communication and with a wider sympathy and knowledge such dissensions will become more rare, and will finally altogether cease. It is probable that the influence of wise and far-seeing leaders of both parties is already sufficiently strong to frustrate other than merely local expression of the persecuting spirit and the lust to destroy.

It is remarkable that the Muhammadan aggression, which completed the ruin of the Buddhist faith upon Indian soil and its expulsion from India, although it took full effect upon the kindred community of the Jains, left the latter with greatly impaired vigour and diminished numbers, but in possession of a religious life and organization which have endured to the present day. Mrs. Sinclair Stevenson, in her recent book,¹ makes the interesting suggestion that the Jain survival and the effective if passive resistance which the community offered to the creed and power of the conqueror were due in part at least to the provision made by them for the participation of the laity in the recognized order and life of the church. Official Buddhism took cognizance only of the monastic rule and estate, and found no place for those who did not feel themselves called upon to assume the monastic vow, or to undertake the duties and share the privileges and hopes of the monk. Jainism recognized and made legal the position of the layman in the ecclesiastical scheme equally with the monk, and thus entered into the national life and secured such a hold upon the affections of the people that it survived the onslaught when less firmly founded Buddhism was overthrown.

Perhaps the most striking example in India of the effect of a cruel persecution in consolidating and defining the religious life of a community is

¹ *The Heart of Jainism*, Oxford, 1915.

that of the Sikhs in the Panjāb. Originating in the 15th cent. in a protest against Hindu laxity in morals and idolatry in worship, they found themselves ultimately brought into conflict with the dominant power of the Mughal emperors, and were forced in self-defence to take up arms to maintain their existence and religious liberty. With definite and fixed convictions which they had learned partly from Islām itself and partly from a reformed and purified Hinduism, they were confronted with the alternative of acceptance of the formula and creed of the ruling faith or destruction. They refused to submit to either, but endeavoured rather to maintain their freedom and rights with the sword. The persecution which ensued had the effect of welding a community and organization in its origin purely religious into a militant order and a nation of soldiers, tenacious of military right and norm no less than of creed and faith, who proved their prowess later against the British themselves and in warfare in many lands.

Thus Islām is responsible for the introduction into India of the conception of persecution for the faith, and of its application in the most terrible form of fire and slaughter. When these methods proved ineffective to break the spirit of Hinduism or destroy a national religion, a practical truce was made, due in part to the discovered need for mutual help and support, and the two faiths learned to live more or less amicably together and to tolerate differences of belief and observance. The history of the other great monotheistic religion which found its way to India was altogether different. Christianity in India has never been in a position to persecute, even had the will been present. A weak and scattered minority of the population, insignificant in numbers, the Christians were of necessity apologetic in attitude, and their complete civil and political aloofness left them no choice but to profess and practise toleration of all alien faiths. That this was consonant with their wishes and ideals, and in harmony with their truest interests, is, of course, correct. Nevertheless the aggressive spirit and action of the new religion, and its denunciation of popular religious customs and festivals when these were contrary to true morals and purity of worship, provoked a counter persecution, which in many instances was carried out with the utmost concentration of bitterness and dislike. Moreover, the Indian Christian from the lower castes, whence the great majority of the converts were derived, learned to assert his rights, and refused to render that abject deference to the Brāhman priest or high-caste landowner which for centuries these men had been accustomed to exact. His principles also, the conception of duty with which he had been imbued, and the obligations of his faith, if realized and consistently discharged, forbade him to rest satisfied with freedom to worship God in his own way, but urged him to press upon others with all the force and insistence at his command the acceptance of his own creed and submission to all the rules which his code of faith and morality affirmed. Thus in two respects especially the Indian convert to Christianity found himself in conflict with the usages and beliefs of the people among whom he lived: he refused to recognize the gods whom they revered, but claimed, on the other hand, to have learned the better way of worship of the one true God; and in regard to social relations it was impracticable for him to take part in a family and village life which in nearly all its ramifications was so intimately associated with idolatrous conceptions and practices, or to share the burdens, financial or other, which custom required of the community. His new status, moreover, entailed various civil and legal disabilities, especially in

regard to marriage and to funeral ceremonies; and these were generally found to press upon him most heavily in the Native States, where the legal code had not yet been advanced to the degree of religious tolerance and strict impartiality enforced in the parts of the empire directly administered by the Crown. These disabilities were the result of loss of caste. The Christian convert was *ipso facto* out-casted, and thereby became unable to fulfil the duties and obligations which were or seemed to be essential to the maintenance of the fabric of Hindu society. In all these instances the initiative in persecution and in a social boycott which entailed very serious consequences and was frequently accompanied by violence was taken by the Hindu leaders themselves. The Muhammadans as a rule stood aloof, and regarded the movement towards Christianity with indifference; they at least took no overt part in opposition or persecution, unless a co-religionist were involved, when the vitality and strength of the old fanatic spirit quickly reasserted themselves. Thus the rôle of the religious persecutor seemed, curiously enough, to have been transferred from the hands of the one community to the other. The Hindu actively resented his neighbour's change of faith, and exerted all the power which custom or a defective law or administration put into his hands to make the convert feel the weight of his resentment. The Musalmān was more in sympathy with the Christian standpoint and belief, and saw no need for forcible intervention or repression, unless the prestige of his own creed or the loyalty of a member of his own faith seemed to be endangered.

Most of the records of this persecuting movement, which is practically co-extensive with the entire Indian peninsula, are contained in the published literature and reports of the Christian missionary societies. The experience of every missionary includes instances of attempts to deprive native Christians of village rights, of unjust oppression and eviction by high-caste Hindu landlords, of fictitious charges in the law-courts sustained on ingeniously concocted evidence and sworn to by false oaths, and of violence and cruelty employed towards young converts to induce them to recant. Where these attempts are successful, restoration to caste and Hindu society is gained only by way of degrading ceremonies.¹ In the principal towns the force of public opinion is already sufficiently strong and enlightened to discountenance such methods. In the country districts, however, remote from European influence, where ancient prejudice and custom reign supreme, and where Christianity has endeavoured to obtain a footing, incidents of this character are of common occurrence. In part at least the persecuting action of the dominant religion is prompted by the instinct of self-preservation. The Christian faith is aggressive; and a true instinct warns the loyal adherent of Hinduism that between his own system and creed and the new religion which lays claim to universal acceptance no compromise is possible. A similar claim had been made, it is true, in the past by Islām, and supported with even greater insistence and vehemence. But Islām was too powerful to be resisted, and the persecuted Hindu suffered for the most part in silence and resignation. Christianity, weak in numbers and social prestige, lay open to reprisals, and it seemed that religious animosity might with impunity gratify itself in the oppression of its adherents. Moreover, the rapidly growing influence and popularity of

the latter faith did appear to threaten Hinduism with disaster. But the persecuting spirit is not natural to the Hindu, nor in accord with the precepts of his faith. In all probability, however, it will be only by degrees, and coincidentally with the spread of enlightenment and the growth of a better understanding and public spirit, that a barrier will be raised against open manifestations of fear and dislike. The ancient fanatical and persecuting tendencies of Muhammadanism may then wake again in the presence of a powerful and progressive rival, and a new chapter in the strangely one-sided history of Indian persecution be written. For the present the Indian Christian is the only sufferer from the spirit which he has himself by his attitude and convictions of necessity evoked in the ancient Indian faiths.

LITERATURE.—The Muhammadan historians themselves furnish the evidence for the relations of victorious Islām to the subjected Indian peoples. For the rest the relevant literature is to be found almost exclusively in the reports, etc., of the missionary societies. See also Julius Richter, *A Hist. of Missions in India*, Eng. tr., Edinburgh and London, 1908.

A. S. GEDEN.

PERSECUTION (Muhammadan). — The theory of the Muslim State draws a clear distinction between the true believers who accept Islām and the protected communities (*ahl al-dhimma*, *dhimmī*) who follow other faiths. This twofold division is employed in the following article.

1. **Muhammadans.**—The early Arab conquerors appear to have been satisfied with a formal acceptance of Islām and to have made no inquisition into private opinions; but, as their empire became more firmly established and sectarian divisions made their appearance, the bitterness of controversy evoked a fanatical spirit, and open hostilities broke out between the adherents of differing theological opinions; and, as these often denied the validity of established authority, the history of Muhammadan sectarianism became largely political in character, and in some cases, especially in those of heresies arising within the boundaries of the old Persian empire, represented a revolt against Arab domination. The vicissitudes of such movements thus belong rather to political history, and the conflict of the ruling power with the Khawārij (*q.v.*), the various 'Alid factions, etc., can hardly be described as persecution. The effort to suppress religious opinion as such, apart from political opinion, would seem to have begun with the persecution of the Mu'tazilah. Hishām (724-743) put to death Ghaylān al-Dimashqī for maintaining the doctrine of the freedom of the will; first his hands and feet were cut off, and, when he continued to inveigh against his persecutors, his tongue was cut out (Tabarī, *Annals*, ed. M. J. de Goeje, Leyden, 1879-1901, ii. 1733; Ahmad b. Yahyā b. al-Murtadā, *Al-Mu'tazilah*, Leipzig, 1902, pp. 15-17). The same *khalīfah* ordered the execution of Ja'd b. Dirham for teaching that the Qur'ān was created (Ibn al-Athīr, *Kāmil*, ed. C. J. Tornberg, Leyden, 1851-76, v. 196 f.). Hārūn (786-809) sought to check freedom of theological speculation by throwing into prison the Mutakallims, or scholastic theologians (Ahmad b. Yahyā, p. 32). But the first systematic inquisition into heresy was the *miḥnah* ('test') instituted by Ma'mūn in 833 for the conviction of those who denied the doctrine of the creation of the Qur'ān. Ahmad b. Hanbal and other learned theologians were subjected to cruel sufferings to induce them to give assent to the doctrines accepted by the *khalīfah*. Ma'mūn defended his position in a letter to the governor of Baghdād (Tabarī, iii. 1117), by maintaining that God expects a ruler whom He has entrusted with the care of His servants to instruct his subjects in the way of salvation, define for them the limits of their faith,

¹ A Śūdra community in the Deccan has, within the last few months (1916), led the way in a formal declaration that no one of their members shall be penalized or in any way made to suffer for becoming a Christian, or be debarred from re-entrance into caste and the full exercise of caste rights should he return to the Hindu faith.

remove their doubts and explain their difficulties, and bring back to the truth those who have gone astray. This persecution of those who denied the creation of the Qur'ān was continued by his successors until 848, when Mutawakkil forbade the holding of this doctrine on pain of death, and the Mu'tazilah in their turn became the victims of the persecution of the State; in 1029 Qādir-billāh summoned all the 'ulamā to his palace and made them sign a confession of faith, especially condemning Mu'tazilite doctrines. A rigorous persecution was also carried on against the Zindīqs (or crypto-Manichæans), who appear to have been numerous in cultivated circles under the early 'Abbāsids (Al-Nadīm, *Kitāb al-Fihrist*, p. 338, gives a list of them). Mahdī crucified a number of them in the city of Aleppo in 780 (Tabarī, iii. 499), and during the last two years of his reign instituted an inquisition in Baghdād and other towns, under the direction of 'Umar al-Kalwādhi, who hunted down many victims (*ib.* 519–522, 588); his successor, Hādī, continued the persecution during his brief reign of thirteen months (*ib.* 548 f.).

As the political power of the 'Abbāsids declined, the fanaticism of the 'ulamā appears to have increased. Abū Ḥanīfah († 767) had already declared that death was the penalty for the Muslim who apostatized from the faith as taught by Muḥammad, and later theologians spread the net wider, demanding the blood of any Muslim who denied the prophetic mission of Muḥammad or even doubted a single letter of the Qur'ān, or maintained that God did not speak with Moses ('Iyād, *al-Shifā*, Cairo, 1272, ii. 259 f., 337). Under Mutawakkil (847–861) the orthodox 'ulamā had the support of the government in the persecution of every form of heresy, as well as the sympathy of the fanatical mob; in his reign a certain Ibn 'Āsim, accused of reviling the companions of the Prophet, was scourged with 500 stripes and left in the sun until he died, his body being afterwards thrown into the Tigris (Tabarī, iii. 1424 f.); he also put to death a man named Maḥmūd b. al-Faraj, who claimed to be a prophet and maintained that the angel Gabriel had revealed to him a Qur'ān (*ib.* 1349). But, apart from such individual cases of heresy, the zeal of Mutawakkil was directed against whole sects, such as the Shī'ahs, whom he persecuted throughout his reign; he destroyed the graves of 'Alī and Ḥusain, and forbade pilgrimage to their site.

This persecution is typical of the treatment that Shī'ahs have from time to time had to suffer at the hands of a Sunni government (for a summary of such persecutions see Hammer, *Gesch. des osmanischen Reiches*, i. 706–708). In 1029 Qādir-billāh drove the Shī'ahs out of the mosques and installed Sunni preachers in their place, and put Shī'ahs to death for heresy on several occasions in his reign. Two centuries later Musta'sim instituted another persecution against them. The general recognition by Shī'ah theologians of *taqiyyah* (lit. 'fear,' 'foresight'), i.e. concealment of a man's real beliefs through fear of the consequences of an open profession of faith, and their approval of such a practice, are evidence of the dread which the Shī'ahs had of being persecuted by the Sunnis (I. Goldziher, 'Das Prinzip der Taqiyya im Islam,' *ZDMG* lx. [1906] 219–222). Ibn al-Mutahhar al-Ḥillī, a Shī'ah controversialist († 1326), maintains that in most periods the Shī'ahs have hidden themselves 'in the corner of *taqiyyah*' in terror of the rulers of their time (Goldziher, *Beiträge zur Literaturgesch. der S'ā*, Vienna, 1874, p. 469). But the most appalling persecution of the Shī'ahs was that organized by Sulṭān Salīm I., who made a search for them throughout the Turkish dominions, and had 40,000 either

massacred or imprisoned for life (Hammer, i. 709; de la Jonquière, *Hist. de l'empire ottoman*, i. 139).

After their triumph over the Mu'tazilah the followers of al-Ash'arī (q.v.) had themselves to suffer persecution. In 1046 the Seljūq *sulṭān* Tughril Beg was persuaded by his *wazīr*, Abū Naṣr Maṣnūr al-Kundurī, to forbid the Asharites to preach in the mosques or to teach their distinctive doctrines; many learned men of this sect fled from the *sulṭān's* dominions, but some were captured and imprisoned (Schreiner, *ZDMG* lii. 488).

The orthodox reaction of the 11th cent. fostered a spirit that was as dangerous to philosophers as to heterodox theologians. Mu'tadid (in 892) had forbidden the sale of all philosophical books, and Qādir-billāh (in 1018) issued an edict against all free-thinkers and heretics (A. von Kremer, *Kulturgesch. des Orients*, Vienna, 1875–77, ii. 465 f.). Under the Almohads in Spain a storm of persecution burst upon the philosophers, particularly in the reign of Ya'qūb al-Manṣūr (1184–99), who banished Ibn Rushd from Cordova.

Several of the Sūfi mystics under Muhammadan rule suffered martyrdom under the charge of heterodoxy. Hallāj was cruelly put to death in 922, after having been scourged with a thousand stripes and having his hands and feet cut off (E. G. Browne, *A Literary Hist. of Persia*, London, 1902–06, i. 430). Abū'l-Qāsim al-Qushayrī, the author of an important treatise on Sūfism, was imprisoned during the persecution under Tughril Beg (1046). Shihāb al-Dīn Yahyā al-Suhrawardī, reputed to be the most learned man of his time, was imprisoned and then strangled by order of Malik al-Zāhir, son of Saladin, in 1191, though this prince had at first extended to him his patronage; but the orthodox clergy in Aleppo succeeded in convicting him of heresy (A. von Kremer, *Gesch. der herrschenden Ideen des Islams*, Leipzig, 1868, p. 89 ff.). The founder of one of the Sūfi sects, the Ḥurūfis, Faḫr-ullāh Tabrizī, was put to death by Mirān Shāh, son of Timūr, in 1393; one of his disciples, the Turkish poet, Nāsimī, was condemned to be flayed alive in 820 (1417–18), having been found guilty of blasphemy by the 'ulamā of Aleppo, and a few years later some Ḥurūfis were burnt alive in Adrianople (E. J. W. Gibb, *Hist. of Ottoman Poetry*, London, 1900–09, i. 346, 381–383, 387).

It is not possible here to give an account of the numerous individuals put to death for heresy—e.g., Muḥammad b. 'Alī al-Shalmaghānī, who taught the transmigration of the soul and was considered by his followers to be an incarnation of the divine, and other false prophets (Schreiner, p. 472 f.)—nor of the many claimants to be the promised Mahdī (q.v.) at various periods of Muhammadan history (for instances of such persons put to death in Turkey see Hammer, i. 798, ii. 594, 639, iii. 172; J. Darmesteter, *Le Mahdi*, Paris, 1885).

2. Protected communities.—(a) *Christians.*—The Qur'ān, and the prescriptions of Muslim jurists based upon it and the practice of the Prophet, granted to the followers of other faiths a certain measure of freedom of religious life and practice; but Muhammadan history is full of examples of persecution, especially of the various Christian sects. One of the earliest instances¹ of such persecution is that of the Banū Taghlib. The members of this Arab tribe who remained Christian had been treated with special consideration and allowed to pay tribute in such a form as to make them appear as equals of the converted Arabs and not as a subject people. But it seems to have irked the Muslims that any members of one

¹ The expulsion of the Christians of Najrān by 'Umar I appears to have been prompted by purely political considerations (L. Ostani, *Annali dell' Islam*, Milan, 1906–14, iv. 353 ff.; H. Lammens, *Le Califat de Yazid Ier*, Beirut, 1913, p. 351 f.).

of the great Arab tribes should continue to stand aloof from what had become the national faith of the Arab people, and tradition attributes to 'Alī the expression of a savage wish to put all the males of the tribe to death and enslave the rest of the population (Cætani, iv. 228). Even the tolerant 'Umar is said to have ordered Ziyād b. Hudayr to deal roughly with them (Abū Yūsuf, *Kitāb al-Kharāj*, p. 69), and Walid put Shamālah, the chief of the tribe, to death because he refused to accept Islām (JA IX. iv. [1894] 438 f.).

With this exception the Christians enjoyed an ample toleration under the early Umayyads, but severe measures began to be taken against them by 'Umar b. 'Abd al-Azīz, induced either by zeal for his own faith or out of umbrage for the failure of the assault on Constantinople in 717. He decreed that no Christians should be appointed as magistrates or allowed to ride on saddles; that, if a Muhammadan killed a Christian, the penalty should be not death, but a fine; that Christians should not be allowed to bear witness against Muslims in the courts;¹ nor were they to uplift their voices in prayer; at the same time he abolished the tax levied on houses, land-rents, etc., for the benefit of churches and monasteries, ordered all crosses in public places to be pulled down or effaced, and forbade the Christians to wear silk or fine linen (Michael the Elder, *Chronique*, ii. 489; Abū Yūsuf, p. 73; Theophanes, in PG cviii. 808).

But hatred of the Christians appears first to have taken a popular form under the theocratic rule of the 'Abbāsids, who looked upon the State as a religious community and themselves as invested with spiritual as well as temporal power. To the later period of this dynasty belongs the compilation of the so-called Pact of 'Umar, which was often appealed to when restrictive measures were imposed upon the *dhimmīs*; in accordance with this document, no new churches were to be built, and no proselytism attempted; outward respect was to be shown to the Muslims, and their dress, etc., was not to be imitated; the Christians were not to ride on saddles, bear arms, display their crosses on the churches or in the streets, or celebrate religious worship in a loud voice; a distinctive dress, particularly a girdle round the waist, was to be worn, and so on (Gottheil, in *OT and Semitic Studies in Memory of William Rainey Harper*, ii. 382-384, where references are given to the various versions of this document). These regulations certainly did not exist in the time of the ruler whose name they bear, nor were they put into force rigidly or consistently; they represent the more intolerant practice of a later age, and some outburst of fanaticism was generally needed for any demand to be made for their application. In a period of persecution even more vexatious measures were sometimes enforced, as in the reign of Mutawakkil (in 850 and 854), who ordered the *dhimmīs* to affix wooden images of devils to their houses, to distinguish them from the houses of the Muslims; their graves were to be levelled with the ground; their children were not to be taught in Muslim schools, nor by any Muslim teacher; as well as the girdle, they were to wear yellow scarves, and have two patches of cloth, each of a different colour, sewn on the back and front of their dress; they were to ride only on mules and asses, with wooden stirrups, etc. (Tabarī, iii. 1389 f., 1419).

In such periods of persecution there was generally some destruction of churches, especially of such as had been erected since the Muslim con-

quest. Walid (705-715) appears to have been one of the first *khalīfahs* to order churches to be pulled down (Michael the Elder, ii. 481); but under the 'Abbāsids such instances became more common, beginning with Hārūr (Tabarī, iii. 712) and culminating in the violent persecution set on foot by Mutawakkil (847-861). Numerous instances are found scattered throughout the pages of Christian and Muslim historians; but for no country do we find so long a series as for Egypt, beginning with the 2nd cent. of the Hijrah down to the troubled days of Mamluk rule (*Hist. of the Patriarchs of the Coptic Church of Alexandria*, ed. B. Evetts, Paris, 1904 f.; Maqrīzī, *Khīṭat*, Bulāq, 1853, ii. 492-500).

Forceful conversion to Islām was frequently the accompaniment of such persecution. One of the earliest instances was that of the Christian Arabs of the tribe of the Banū Tanūkh in the reign of Mahdī (775-785); seeing a number of them who lived near Aleppo and learning that they were Christians, he angrily ordered them to accept Islām; under compulsion they complied, to the number of 5000, but one of them suffered martyrdom rather than apostatize (Gregorius Abulpharagius, *Chronicon Syriacum*, ed. P. J. Bruns and G. G. Kirsch, Leipzig, 1789, p. 134 f.). A long series of such compulsory conversions might be given from the history of various parts of the Muhammadan world; as the power of Muhammadan governments declined, so such compulsion tended to assume a character of greater ferocity; e.g., during the persecution of the Christians of Crete in 1670, 15,000 Christian boys are said to have been circumcised in a single day, and most of them died in consequence (A. D. Kyriakos, *Gesch. der orientalischen Kirchen, 1453-1898*, Leipzig, 1902, p. 12).

The death penalty for apostasy (see APOSTASY [Muhammadan]) was often imposed in a cruel manner, in the case of Christians who had promised to become Muhammadans in a moment of weakness or despondency, or even in jest, or under the influence of drink, or through some misunderstanding (Dozy, *Hist. des Musulmans d'Espagne*, ii. 51; de la Jonquière, i. 34; M. Febure, *Teatro della Turchia*, Venice, 1684, p. 39 f.). The boy-martyr, Elias, was held to have become a Muslim merely because he had thrown away his girdle when dancing to amuse his master's guests, and was put to death because he refused to abjure the Christian faith (F. Combefis, *Christi martyrum lecta trias*, Paris, 1666, pp. 156-192).

The persecution of the Christians was sometimes connected with economic conditions—e.g., jealousy of the prosperity and wealth of individual Christians (E. Renaudot, *Hist. Patriarcharum Alexandrinorum Jacobitarum*, Paris, 1713, pp. 432, 607; Nāsir-i-Khusrau, *Safar-nāmah*, ed. C. Schefer, Paris, 1881, p. 155 f.; Maqrīzī, *Khīṭat*, ii. 498; Shedd, *Islam and the Oriental Churches*, pp. 117 ff., 247 f.), or resentment at the fact that high offices of state were given to non-Muslims (Arnold, *The Preaching of Islam*, pp. 63 f., 107). From the earliest days of the Arab conquests the new rulers had found it impossible to carry on the complicated machinery of government without the assistance of the trained officials of the old régime, and, in spite of frequent protests, non-Muslims have been similarly employed up to modern times. But, in deference to popular clamour or the protests of theologians, such non-Muslim employees of the State have from time to time been driven from their posts. Manṣūr (754-775) removed all *dhimmīs* from the administration, and several of the later 'Abbāsids issued decrees to the same effect, as also the Mamluk *sultāns* of Egypt (*ib.* p. 75 f.). Such administrative changes were generally accompanied by much suffering for the Christians.

¹ Dionysius of Tell Mahrē (*Chronique syriaque*, ed. J. B. Chabot, Paris, 1896, p. 18) attributes this regulation to the son of 'Umar, Yazid II. (720-724), who decreed that the testimony of a Syrian should not be accepted against that of an Arab.

In some cases (but these the less frequent) the persecution originated in a decree of the Muhammadan government; in others it was stirred up by the fanaticism of the mob (Shedd, pp. 244-246) or the bigotry of the 'ulamā. Some of the later Muslim theologians went so far as to ascribe to the Prophet forged traditions, expressly contradicted by his own conduct and by his authentic utterances; e.g., an Egyptian jurist of the 14th cent. puts forward as sayings of the Prophet the following intolerant principles:

'No church shall be built in a Muslim land, nor shall those that have fallen in ruins be repaired,' and 'No churches (are to be permitted) in Islam' (JA iv. xviii. [1851] 513).

Similarly, they sometimes attempted in vain to force the hands of the government that protected the tolerated communities; e.g., a theologian of the 18th cent., after enumerating the enormities of the Christians, exclaims:

'The 'ulamā consider this state of things; they weep and groan in silence, while the rulers who have the power of checking these criminal abuses only shut their eyes to them' (ib. xix. [1852] 109).

It is not possible here to give in detail the annals of the sufferings of the Christians under Muhammadan rule, but certain epochs may be referred to as signalized by special severity of persecution. One of these was the period of the conversion of the Mongol princes to Islām; the Muhammadans remembered their sufferings during the Crusades and the overbearing conduct of the Christians after the destruction of 'Abbāsid rule by the Mongols in 1258; e.g., when the city of Damascus surrendered to Hūlāgū in 1260, the Christians destroyed the mosques in the neighbourhood of their churches, made the Muslims bow to the cross carried in procession, and sprinkled with holy water the clothes of the Muslims and the doors of the mosques that were spared (H. H. Howorth, *Hist. of the Mongols*, London, 1876-88, i. 210). Such behaviour stirred up a resentment that led to terrible reprisals when the reins of power again passed into Muslim hands. Consequently we find that, as the Mongol princes adopted Islām, the condition of the Christians under their rule tended to grow worse; e.g., the conversion of Ghāzān, the Ilkhān, in 1295 was marked by a cruel persecution of the Christians (ib. iii. 396-398).

In the Turkish dominions the various revolutionary movements among the subject races, which began early in the 19th cent. with the struggle for Greek independence, were largely stimulated by a feeling of exasperation at the religious repression from which they suffered under the corrupt Turkish administration of the time, and the reprisals and the administrative measures taken by the ruling power were acerbated by religious fanaticism, and often took the form of religious persecution, as in Serbia, Bulgaria, and Armenia (see Parliamentary Papers on the conditions of Christians in Turkey from 1854 onwards).

(b) *Jews*.—Despite the opposition of the Jews to the mission of Muhammad and the severe references to them in the Qur'ān (ii. 70-73, v. 64-69, etc.), their condition under Muhammadan rule appears to have been generally more tolerable than that of the Christians. But in periods of persecution they ran the risk of sharing the sufferings of the other *dhimmis*; the restrictive regulations of the Pact of 'Umar were applicable also to them. Along with the Christians they were victims of the bigotry of Mutawakkil and Hākim.

In Spain they were tolerated until the arrival of the Almoravids, when Yūsuf b. Tāshfin threatened to compel the Jews of Lucena to become Muhammadans, but was persuaded by rich gifts to let them retain their old faith (Dozy, iv. 254 f.). The Almohad 'Abd al-Mu'min, after his capture of Morocco in 1146, gave the Jews the choice

between Islām and death, but was afterwards persuaded to let those who wished to remain Jews go into exile; he promulgated a similar edict and destroyed the synagogues in all the cities of N. Africa conquered by the Almohads, and, when he extended his dominion over Spain, meted out the same treatment to the Jews there (Graetz, iii. 367 f.).

In Persia the Jews had enjoyed a brief prosperity under the Mongol Arghūn (1284-91). On his death the Muhammadans wreaked their vengeance upon the Jews for the humiliations which they had suffered from the Mongol conquerors (ib. iii. 672); and, when Arghūn's son, Ghāzān, was converted to Islām, the Jews suffered as much as the Christians (see above). They were persecuted also in the reigns of Shāh 'Abbās († 1629) and his great-grandson, 'Abbās II. († 1667), and under the rule of the Afghan conquerors (1722-29). Persecutions occurred also during the 19th cent., in Hamadan (1892), Kirmanshah (1896), and Tihiran (1897).

In N. Africa they had to suffer arbitrary treatment and frequent persecution from the barbarous Moorish population (ib. iv. 417). Mulai Yazid, in 1790, ordered their houses to be pillaged (REJ xxxvii. [1898] 120; Budgett Meakin, *The Moors*, London, 1902, pp. 431 f., 451 ff.). In 1840 a fierce persecution broke out in Damascus, as the result of the Jews being accused of a ritual murder, and spread into a number of towns of Syria and Turkey (Graetz, v. 677 f.).

(c) Among the religions that were tolerated as having been mentioned in the Qur'ān (ii. 59, v. 73) was that of the Sabians; but they too were exposed to persecution: at the beginning of the reign of Mahdī, in 775, the great temple at Edessa in which they met for religious worship was destroyed, and many Arabs practising Šābiism were put to death (JA viii. xix. [1892] 84).

Although the Zoroastrians are not expressly mentioned in the Qur'ān, the Muslim legists included them among the *dhimmis*, and granted them the same degree of toleration (q.v.). Persecution seems to have been rare up to the close of the 'Abbāsid period; but they fell upon evil days in the 18th cent., under the rule of the degenerate descendants of Shāh 'Abbās (who had himself been generally tolerant to his non-Muslim subjects), and many of the Zoroastrians of Ispahan were forced to embrace Islām (Corneille Le Bruyn, *Voyages*, Paris, 1725, v. 170 f.); those of Kirman and Yazd who welcomed the Afghan invaders suffered cruel reprisals when the Afghans were expelled from Persia in 1730. Fresh troubles befell them under Nādir Shāh, and in the terrible sack of Kirman in 1794 by Āgā Muhammad Khān (the founder of the present dynasty) their quarter of the city was entirely destroyed. By the 19th cent. the condition of the Zoroastrians in Persia was very low, and they were almost exclusively confined to Yazd and its neighbourhood. The extortionate manner in which the *jizyah* was collected led to great suffering, and some Zoroastrians apostatized to save themselves from torture, until this tax was abolished in 1882 (D. F. Karaka, *Hist. of the Parsis*, London, 1884, i. 55 ff.; D. Menant, 'Les Zoroastriens de Perse,' *RMM* iii. [1907] 205 ff., 421 ff.; and art. GABARS). In 1888 the Zoroastrians were still subjected to many petty annoyances: they had to wear a yellow raiment to distinguish them from true believers;

'they are not permitted to wear socks, or to wind their turbans tightly and neatly, or to ride a horse; and if, when riding even a donkey, they should chance to meet a Muslim, they must dismount while he passes, and that without regard to his age or rank' (E. G. Browne, *A Year amongst the Persians*, London, 1893, p. 370 ff.).

There were some other non-Muslim religious

bodies, numerically of less importance, who suffered persecution on account of their faith. The Yazidis of Mesopotamia were subjected to a series of persecutions during the 19th cent. with the object of compelling them to conform to the faith of their Turkish rulers (O. H. Parry, *Six Months in a Syrian Monastery*, London, 1895, pp. 256 ff., 358; J. Menant, *Les Yézidis*, Paris, 1892, p. 164 ff.; *Al-Mashriq*, ii. [1899] 834 f.). For the persecution of the Bábis, Druses, and Manichæans, see artt. BĀB, SECTS (Christian), MANICHÆANS.

The severe condemnation of idolatry in the Qur'ān (iv. 115-120, xxi. 98-100, lxvi. 9, etc.) seems to make it impossible for any Muslim ruler to grant toleration to idol-worshippers, and Māmūn once stated very clearly that idolaters must choose between the acceptance of Islām or one of the religions recognized by the Qur'ān and death (Al-Nadīm, p. 320); and it was a commonly accepted principle that war should be waged against the people of the Book until they paid *jizyah*, but against idolaters until they accepted Islām (Yahyā b. Ādam, *Kitāb al-kharāj*, ed. T. W. Juynebol, Leyden, 1896, p. 12). Consequently the heathen races that have come under Muhammadan rule have generally suffered harsh treatment, and even when political policy has prompted a more considerate treatment of their religious observances, they have been constantly exposed to outbursts of fanaticism.

The political and social disabilities from which the non-Muslims suffered were directly connected with the fact that their creed was different from that of their rulers, and, when the Muhammadan government was weak or corrupt, religious intolerance found easy victims. When money was to be extorted, the *dhimmī* had the least power of resistance, and justice could be denied him, since his evidence was not accepted in a Muslim court of law. Some fanatical theologians interpreted in a brutal spirit the last word of the verse in the Qur'ān (ix. 29):

'Fight against such of those to whom the Scripture has been given, as believe not in God nor in the last day, nor declare unlawful what God and His apostle have declared unlawful, nor profess the religion of the truth, until they pay *jizyah* out of hand, being humbled.'

The *dhimmī* must be kept standing a long time when he comes to pay the *jizyah*, he must bend his head and back low, and the Muslim official who receives it must seize him by the beard and strike him on both cheeks, so that his humiliation may be complete. This contemptuous attitude towards the non-Muslim reaches its culmination in the offensive burial permits which were issued in the 18th and 19th centuries when a Christian died (Denton, *The Christians of Turkey*, p. 117; H. C. Lukach, *The City of Dancing Dervishes*, London, 1914, p. 181; G. B. Chirkov, *Dva Lyubopytnykh arabskikh dokumenta k istorii vnutrennyago byta vostochnykh christian*, Moscow, 1900, p. 2).

The non-Muslim has thus run the risk of being exposed to a constant series of petty annoyances, reminding him of his inferior status, at the hands of unjust officials and vicious persons of all kinds, throughout most periods of Muhammadan history, though organized persecution by the government has been rare (see art. TOLERATION [Muslim]).

LITERATURE.—No separate work has been devoted to the subject of Muhammadan persecution; the facts are to be found scattered throughout the annals of Muhammadan historians (e.g., Tabari, Ibn al-Athir, etc.) and the Christian historians who have lived under Muhammadan rule (e.g., Barhebraeus, Eutychius, Māri b. Sulaymān, Severus, etc.). The following works may also be consulted: Abū Yūsuf, *Kitāb al-Kharāj*, Cairo, 1302 A.H.; Al-Nadīm, *Kitāb al-Fihrist*, ed. G. Flügel, Leipzig, 1871; Michael el Elder, *Chronique de Michel le Syrien*, 4 vols., ed. J. B. Chabot, Paris, 1900-10; Aḥmad b. Yahyā b. al-Murtadā, *Al-Mu'tazilah: being an Extract from the Kitāb al-mīlāt wa'l-tihāl*, ed. T. W. Arnold, Leipzig, 1902; 'Iyād b. Mūsā al-Yahsūbi, *Al-Shifā fi tarīf buḥūq al-musṭafā*, Cairo, 1272; M. Belin, 'Fetons relatifs à la condition

des Zimmis' (tr. from Arab., in *JA* iv. xviii. [1851] 418 ff.); W. M. Patton, *Aḥmed ibn Hanbal and the Mihna*, Leyden, 1897; R. J. H. Gottheil, 'Dhimmis and Moslems in Egypt,' *OT and Semitic Studies in Memory of William Rainey Harper*, Chicago, 1908, ii.; R. P. A. Dozy, *Hist. des Musulmans d'Espagne*, Leyden, 1861; J. von Hammer, *Gesch. des osmanischen Reiches*², 4 vols., Pesth, 1834-35; A. de la Jonquière, *Hist. de l'empire ottoman*, Paris, 1914; T. W. T. W. ARNOLD.

PERSEVERANCE.—The subject of perseverance may be treated either (1) from the doctrinal point of view as an element in a system of theology, for which a basis may be sought in the teaching of Scripture confirmed by reason and experience; or (2) from the practical and ethical point of view, as a virtue to be striven after by the Christian, the ethical conditions of which may be inquired into and set forth.

1. **Doctrinal.**—From the doctrinal point of view, the assertion of the perseverance of the saints is the affirmation that those who have become once truly regenerate, or united to Christ by genuine faith, 'can neither totally nor finally fall away from the state of grace; but shall certainly persevere therein to the end, and be eternally saved' (*Westminster Confession*, ch. xvii.; *Larger Catechism*, 79; cf. *Canons of Synod of Dort*, ch. v. can. 3). This is a characteristic doctrine of the Augustinian and Calvinistic theology, flowing logically as it does from the Augustinian and Calvinistic conception of the salvation of sinners as due to unconditional election and irresistible divine grace. This doctrine is rejected by the Roman Catholic Church, which teaches the possibility of a man once justified falling away from grace.

'If any one maintain that a man once justified cannot lose grace and therefore that he who falls and sins never was truly justified, let him be accursed' (Council of Trent, sess. vi. ch. xv. can. 23).

Similarly, the Arminians and the Lutherans teach that those who were once justified and regenerated may, by neglecting grace and grieving the Holy Spirit, fall into such sins as are inconsistent with true justifying faith, and, continuing and dying in the same, may finally fall into perdition (*Confession of the Remonstrants*, xi. 7; *Formula Concordiæ*, p. 705). In support of the doctrine of the certain final perseverance of the saints various passages of Scripture are adduced:

Jn 10²⁷⁻²⁹ 'My sheep hear my voice, and I know them, and they follow me: and I give unto them eternal life; and they shall never perish, and no one shall snatch them out of my hand. My Father, which hath given them unto me, is greater than all; and no one is able to snatch them out of the Father's hand'; Ro 8³⁵⁻³⁹ 'Who shall separate us from the love of Christ,' etc.; 11²⁹ 'The gifts and the calling of God are without repentance'; Ph 1⁶ 'Being confident of this very thing, that he which began a good work in you will perfect it until the day of Jesus Christ.'

The doctrine is inferred also from the nature of regeneration and renewal as a work of divine grace. All those passages of Scripture which lay emphasis on the working of the Holy Spirit, or on divine grace, as the cause to which the spiritual life in individual human persons, alike in its beginning and in its progressive continuance, is due, seem to lead logically to the doctrine of certain final perseverance as guaranteed by the steadfastness of the Spirit's working and the victorious power of divine grace (e.g., Eph 1¹³, 2⁸, 1 P 1²⁸, Jn 14¹⁶, 2 Co 1²¹, etc.).

If the beginning of Christian life in the indi

vidual is due solely to unconditional divine election (Ac 13⁴⁸, Ro 8³⁰) and its continuance is due entirely to the inward working of the Holy Spirit (Ph 2¹³), then it stands to reason that perseverance unto the end is certain in the case of all who have become regenerate, because no room seems to be left for any possible falling away or any failure to attain. But the responsibility of the individual for the development of his character and the issue of his life seems also to be done away with on this conception of the matter. The free exercise of will power by the individual as a morally responsible agent seems to be ignored or left out of account.

So argue the Romanists, Arminians, and others, who are so anxious to safeguard human freedom as a factor in determining the issues of life for individuals that they feel constrained, not only to deny unconditional election and irresistible grace as the determining factors in regeneration and conversion, but also to leave room for a possible final falling away from grace, through subsequent perversity, of those who were once justified and regenerated. They are wont to charge those who advocate the doctrine of the certain final perseverance of the saints with thereby fostering a dangerous and unwarrantable sense of security in Christians, in place of that 'fear and trembling' with which it becomes them to 'work out their salvation' as persons liable to fall away and therefore needing to exercise continual watchfulness (Ph 2¹²). Besides the exhortations to diligence (such as 2 P 1¹⁰) and the warnings of danger in case of carelessness (such as Rev 3², 1 Co 10¹²) addressed in the Scriptures to believers, apparently implying the possibility of their falling away from grace, those who reject the doctrine of certain final perseverance are wont to quote such passages as Lk 14³⁰, Mt 13²⁰, Jn 15⁶, 2 P 2²⁰, and especially He 6⁴⁻⁶ 10²⁶, in favour of their view, and to point to experience as furnishing examples of those who once were professing Christian believers but have fallen away into unbelief or ungodliness (Jn 17¹², 2 Ti 4¹⁰, Rev 2⁴). The issue in dispute, in so far as it is of a psychological character, turns on the question whether a man's will, in order to be and to remain free, must always remain unstable or uncertain as to its choices; or whether it is possible that the human will may become established in goodness without ceasing to be free, so that its free choice of good will become a certainty. The will of God is conceived of as free, yet as invariably choosing with certainty the right and the good and rejecting the evil. If the will of man can, in any way, attain to a similar stability in goodness, while still remaining free, the certainty of his final perseverance is assured; so that certainty of final perseverance is not inconsistent in idea with the retention of freedom of will. It is psychologically possible. The question then comes to be whether, and by what means, a man's will may become permanently established in goodness in this life, so as to guarantee his final perseverance.

Calvinists affirm that this is effected when the individual becomes truly united to Christ through freely yielding to the Spirit's gracious influence in regeneration and conversion; for thereby the individual becomes a member of Christ's Body, linked to Him by a vital bond of union, and the whole power of Christ and of the Spirit becomes pledged to ensure his perseverance (1 Co 6¹⁷). The remnants of indwelling sin in the believer may lead to temporary lapses or backslidings; but the dominion of sin over that individual has been finally broken (Ro 6¹⁴), and his ultimate perseverance in choice of right is assured. This seems theoretically sound and conclusive. But, in practice, an overweening

confidence or a careless security is excluded by two considerations of a practical kind. (a) Even if final perseverance is assured through God's working in us, care and watchfulness are needed to prevent temporary lapses or backslidings, which are deplorable and hurtful to the soul. Many exhortations to watchfulness and prayer and earnest moral effort addressed in Scripture to believers may be taken as counteractive warnings against such lapses and backslidings to which Christians are liable (e.g., Mt 24⁴² 25¹³ 26⁴¹, Ph 2¹², etc.). (b) Further, the conditions of true regeneration and union with God through Christ are such that it is possible for individuals to be self-deceived as to their true standing, and to assume a security which is not warranted by their real condition. Hence the need for the exhortation given to professing Christians to 'give diligence to make your calling and election sure' (2 P 1¹⁰). The falling away of some who at one time had a place among professing Christians is explained in various passages of Scripture as due to the fact that, notwithstanding the fair appearance of spiritual life in the sight of their fellow-men, they were from the beginning without that real power of godliness which comes from vital union with Christ (1 Jn 2¹⁹, Rev 3¹). Where 'regeneration' is minimized or robbed of its true ethical significance and transformed into something of a magical or mechanical nature effected through an external rite, it is easy to understand why the possibility of the 'regenerate' falling away should have to be insisted on as borne witness to by experience. The possibility of men being self-deceived as to their real standing, through being content with what is merely formal and ritual or external, and failing to realize the high ethical and spiritual significance of regeneration and all that it implies, should serve to counteract any danger of a too easy security in connexion with a doctrine of final perseverance.

In view of these possibilities of self-deception, as well as the possibilities of deplorable and hurtful temporary backslidings on the part of the truly regenerate, the apostolic exhortations and warnings addressed to professing believers are not without justification, even though the doctrine of the certain final perseverance of the truly regenerate be a sound doctrine. Even such solemn warnings as we find in He 6⁴⁻⁶ 10²⁶ (which furnish the strongest Scriptural support of those who contend for the amissibility of grace and deny the doctrine of certain final perseverance) may be interpreted as needful warnings addressed to a concrete practical situation and not necessarily involving any theological implication inconsistent with a doctrine which seems to be well founded in Scripture and in reason, and from which many humble Christians have derived comfort and help in fighting the good fight of faith. The doctrine of the certain final perseverance of those whose wills become established in goodness through freely yielding to the Holy Spirit's gracious influence in regeneration and renewal is usually held in conjunction with the Calvinistic doctrines of particular and unconditional election and the irresistibility of divine grace in conversion. It may, however, be held by those who reject these other doctrines as unethical and inconsistent with human freedom and responsibility. Thus Martensen, though he accepted the Lutheran position on most points of doctrine, professes his adherence to the Reformed, in opposition to the Lutheran, doctrine on this question of final perseverance (*Christian Dogmatics*, § 235). It is in the free act of yielding to the drawings of the Spirit and the influences of divine grace in regeneration and renewal, which leads up to the gradual establishing of the will in goodness, that place is found for human responsibility and for human

freedom as an important factor in determining the issues of life (Mt 23³⁷, Jn 5⁴⁰, Ro 2⁴).

2. **Ethical.**—Regarded from the more purely practical point of view as a virtue or grace to be aimed at by earnest moral endeavour, perseverance is a duty to which Christian believers are urged in Scripture by many and varied considerations. Thus our standing as sons of God, together with the assured hope of being like Christ when He appears, is adduced by St. John as a stimulus to the Christian to 'purify himself, even as he is pure' (1 Jn 3³). St. Peter also adduces the believer's position as 'purified' in soul by 'obedience to the truth' through the Spirit as a reason why we should 'love one another with a pure heart fervently' (1 P 1²²). St. Paul, too, frequently bases his exhortations to believers to perseverance in holy living on a consideration of the believer's position as justified by faith and in union with Christ (Ro 6⁵⁻¹¹ 12¹² 13⁵ 10¹ 14 etc.), while he urges the consideration that 'God is working in us' to ensure the success of our efforts, not as a reason for sloth or easy security, but rather as a stimulus and incentive to earnest moral endeavour (Ph 2^{12*}).

The writer of the Epistle to the Hebrews also makes strong appeal to those to whom he writes, because of their past experiences of gospel grace and privilege, and the indications which they have shown of true spiritual life, to 'shew the same diligence unto the fulness of hope even to the end' (6¹¹), while he enforces his appeal by a solemn warning as to the danger of those who fall away after having gone a certain length and gained some experience of the influences of preventent grace (6⁴⁻⁵; cf. 1 Co 10¹²). Earnest moral endeavour, therefore, grounded in faith, and stimulated by hope and love, is one of the ethical conditions of perseverance unto the end, viewed as a Christian virtue. But it is not the sole or main condition. Indeed, moral struggle and effort are apt sometimes to beget a spirit of independence and self-reliance which is alien to the true spirit of the Christian life. For that is essentially a life of conscious dependence on a power greater than ourselves which is working for us and in us—the power of God as manifested in the crucified and risen Christ, and in the Holy Spirit who applies the Christian redemption to us. Hence the main ethical condition of perseverance as a Christian grace is represented in Scripture as being 'abiding in Christ' through steadfast and continuous exercise of the will in faith and self-surrender (Jn 15⁴). Or, inasmuch as the function of the Holy Spirit is to take of the things of Christ and show them unto us (Jn 16^{13*}), the main condition of perseverance in holy living is represented as being a continuous yielding of ourselves in believing self-surrender to the motions and promptings of the Holy Spirit given to us by God as an 'earnest' of our salvation (2 Co 5⁵, Ro 8¹⁴). Perseverance in holiness may call for moral effort and striving, but it is not the effort of self-reliant independence or self-sufficiency, but rather the effort to keep ourselves in touch with Christ through faith (Ph 3¹⁰, Gal 2²⁰), to 'walk in the Spirit' (Gal 5¹⁶) and allow ourselves to be 'led by the Spirit' (Ro 8¹⁴). The main condition of perseverance as a Christian virtue is indicated by St. Paul in 2 Co 3¹⁸:

'We all, with unveiled face reflecting as a mirror the glory of the Lord, are transformed into the same image from glory to glory, even as from the Lord the Spirit.'

With a view to thus keeping themselves in the 'fellowship' of Christ (Ph 3¹⁰) and in 'the love of God' (Jude 21), and so making their 'calling and election sure' (2 P 1¹⁰) and securing their perseverance unto the end, believers are exhorted to make a diligent use of the means of grace—the Word (Eph 6¹⁷), the sacraments (1 Co 11²⁸), and prayer

(Eph 6¹⁸)—and not to forsake the assembling of themselves together for common worship (He 10²⁵). Thus abiding in Christ, and having Him abiding in them through constant faith and watchfulness and willing self-surrender to the Holy Spirit's leadings, believers are enabled to bring forth the fruit of the Spirit and are 'guarded by the power of God through faith unto a salvation ready to be revealed in the last time' (1 P 1⁵).

PERSONAL IDEALISM.—See PLURALISM.

PERSONALISM.—I. **History and definition.**—The earliest suggestion of the relationship between personality and nature was made by Anaxagoras, whose 'thought-stuff' was conceived as the self-moving purposive force in natural phenomena. Aristotle laid the foundation for personalism by affirming self-consciousness as the highest being, but Hellenism generally considered personality limiting and not to be predicated of the supreme being. Augustine first held fast to the experience which personality has of itself as its highest principle. The uniqueness and individuality of the human soul or the inner experience were to him vital to any true theory of God and the world. Descartes found in personality alone the basis of union between thought and thing. Up to this point personality had been considered in the light of fundamental truth rather than of fundamental reality.

The idea of personality as the foundation of knowledge was further developed by Berkeley, Leibniz, Kant, Fichte, Hegel, and Lotze. They agree that the immediateness of self-consciousness is the starting-point of philosophy. In this sense Eucken, Howison, Bergson, James, F. C. S. Schiller, Ward, Royce, and others of the modern school may be called personalists.

From the metaphysical point of view, we may distinguish between those personalists of pluralistic turn to whom the ultimate reality is a system of related selves and those of monistic temper to whom the ultimate reality is a single person which differentiates itself into the many personalities and objects of the world. Neither of these types of thought leads to a consistent personalism. The latter tends towards pantheism, and the former leaves us in an impossible pluralism.

Personalism, in the proper sense of the term, asserts a system of selves related through a supreme personality. It conceives of the supreme person as existing in and through the concrete continuous exercise of his personality, thinking, willing, and sustaining all things. This personality, far from being subject to analysis, is the ultimate fact which alone makes the world as a whole intelligible. Lotze affirmed personality of the divine being, but neglected to carry out the implication to its deeper theistic conclusions. Renouvier, who first employed the term 'personalism,' thought it necessary to escape pantheism by assigning the world of being to a single primary creative act. Bowne, however, insisted upon a supreme personality creatively present in the on-going of the world.

Personalism in this stricter sense is closely allied

with the thought of Augustine, and accords with the Christian demand for a personal relationship of man to the infinite world-ground which is a person.

Personalism may then be defined as that system of philosophy which views personality as the active ground of the world, and as containing in the mystery of its own unique being the key to all the antinomies of metaphysics. It is the latest form of theism and has been most completely worked out in the writings of the American philosopher, Borden Parker Bowne. It occupies a mediating position between pure empiricism and pure idealism, and is to be judged by its definition of reality, its doctrine of knowledge, and its conception of space and time.

2. **The personalistic definition of reality.**—The real is that which can act or be acted upon. The materialist, assuming that the seat of reality is in the atom, negates the validity of all mental processes. He is faced by the double problem of how the atom can produce mistaken perceptions and how it is possible to account for reflective knowledge. Pure idealism, approaching the question from the opposite direction, encounters difficulty with the problem of evil. If all that we see is the manifestation of the divine, whence comes evil in the world?

The personalistic interpretation of reality is designed to meet these difficulties. The world of things is not a mere succession of phenomena, but depends upon the causal activity of a divine personality. The mutual relations and interactions of the world spring from the unity of the supreme will. The mind grasps a true world because both thinker and thing are included in the one creative harmony. This truth is foreshadowed in the experience of causal efficiency by the human personality.

Out of this definition of reality flows the personalistic definition of being. Being is neither abstract supreme idea nor unknowable substance lying behind phenomena. Being is implied in the capacity for intelligent causal action, or in the capacity for being acted upon. All that exists is the result or manifestation of a supreme, active, purposive intelligence which creates and sustains the world of lesser intelligences and things. It has no meaning apart from this purpose which is its ground. Mind can understand the movement of matter because both proceed from the same source. The mind grasps the meaning of the world because it owns kinship with the intelligence which creates the world. It is itself purposive, self-directive, and causal within the world-order. By this definition personalism escapes the pantheistic conclusions of absolutism and the mechanical determinism of empiricism.

Personalism is saved from the vagueness of most forms of idealism by its pragmatic requirements. *E.g.*, the purposive causal intelligence is not taken as pure abstraction existing independently of the world. As the very essence of human personality lies in its self-directive freedom and causal efficiency, so these qualities are affirmed of the divine personality. The divine being exists in, and not apart from, his activity.

If the question is raised how, on such an assumption, we escape the dilemma of a fore-ordered universe, or a fatal dualism raised by man's freedom to do evil, it may be replied that human freedom is a part of the divine purpose within certain limits allotted to man. If it be asked what then becomes of the divine purpose and foreknowledge when man acts contrary to the will of God, it may be answered that foreknowledge does not include those individual facts which lie within the range of human action, but applies rather to that larger purpose, the development of character, which

would be impossible apart from freedom. It may well be that from the eternal view-point an eventual world of voluntary righteousness is of vaster importance than a world of involuntary sinfulness. The thing desired seems to be a growing moral personality in man like that which exists in God. Personality, then, which we must believe to be the supreme treasure of the eternal consciousness, is likewise the supreme gift and task of man.

3. **The personalistic definition of thought.**—Thought is that form of mental activity the aim of which is knowledge or truth. Its fundamental conditions are an enduring self-conscious thinker, the possibility of common understanding of terms used, and a sure correspondence between the thinker, the thought, and the thing.

Continuing the thought of the mediating character of personalism, let us apply the definition of knowledge. Empiricism endeavours to trace mental images to movement in nerve-cells. But, when the perception of roughness has been traced from the resistance of matter to the cells of the brain, we are forced to explain how the shocking of nerve-cells becomes an idea of roughness. It is no answer to assume a 'double face' to nervous action; for then each nerve-cell must be endowed with all the magic powers of brain and personality. The only way to bridge the gap is to assume an enduring personality which interprets the nervous shock as roughness in the object. Were the movement of nerve-cells to cover the whole process, there would be no place for error, for one man's sensation of the fundamental reality would be as good as another's. But empiricism meets its greatest difficulty in the problem of reflective knowledge. If we try to think of nerve-shocks stored in the cells of the brain to be called forth by sensation or association, we are forced to explain how reflective knowledge can be more than a hodge-podge of sensational memories. What power is present to produce a new result in reflective knowledge? Would a physical mixing of the cells of old sensations produce reflective knowledge? If, on the other hand, there be a self-identifying personality interpreting impressions according to a growing knowledge, misled often, but coming by repeated experience to enlarging conceptions, we have the crucible in which matter and mentality may come together.

This interpretation is also far removed from the view of the absolutist to whom the fundamental in thought is an abstract divine idea. To the personalist knowledge exists only in the concrete. Thought is not the mere replica of the divine idea. It is a self-realized result of individual action and freedom. It may be tinged with error or ignorance, but its distortion cannot be laid to the charge of the supreme thinker.

How may we know that there is a reality corresponding to our knowledge? We succeed only as we assume that the world of things and persons is created and upheld by a purposive intelligence. In this supreme personality, source of thinker and thing, lies the final unity.

4. **Personalism and other philosophical problems.**—(a) *Space and time.*—Until the days of Kant space and time had been generally conceived as fundamental realities existing independently of all intelligence. It was Kant who set them forth as merely the forms under which the thinking mind relates the world of things and events to itself and to each other. Personalism agrees with Kant in his view of the subjective nature of space and time, but goes on to assert an objective validity as well. I may say that time and space are only the forms under which I think, but are they peculiar to me? If purely subjective, as Kant taught, there is no way of granting them

general validity and no assurance that our calendars or geographies will agree. Both time and space must be given objective validity to free them from the disjunctive caprice of the individual and make possible a world united in space and time relations. The forms of time and space gain a validity universal for intelligent beings through a supreme personal intelligence who creates and upholds all.

(b) *Causality.*—With materialism the mind can never grasp the real thing, but only its phenomena. Hence, in dealing with causality materialism is for ever hiding its processes under a figure of speech. Reality is shifted from mass to molecule, from molecule to atom, from atom to æon, from æon to electron, and always that which is invisible. Out of these imagined actions and reactions all causation is said to spring.

Idealism sweeps this whole world of phenomena into subjectivity. But by subjective we may mean either one of two things. We may mean that which is peculiar to the individual alone or that which is true for intelligence anywhere and which has no existence apart from it. Failure to make this distinction is fatal to idealism. Unless it is made, the system of experience becomes the fiction of the individual.

In describing causality personalism makes a distinction between phenomenal and efficient causality. Phenomenal causality has reference to the true order or succession of events. We name this succession 'cause and effect.' We say that the effect can be traced to its cause, which is correct enough for practical purposes; if we speak of efficient causation, it is not adequate. Retracing from effect to cause in the phenomenal world, we are committed to the infinite regress. Moreover, we have a closed system, as all effects are potentially present always. There is no place for the new. We are finally forced back upon the assertion of the unknowable. We might be satisfied with this affirmation of nescience, did not two considerations arise to disturb us: (1) that the human spirit revolts against such a conclusion, and (2) that our own experience of personality gives an example of efficient, uncaused causality. Human laws are founded upon this fact. The human personality is not the prey of driving molecules and brain-storms. In the recesses of personality lies the possibility of starting new successions of cause and effect. If, then, we are to have efficient causation, we must find it not in unthinking atoms, nor in their combination, nor in impersonal laws of succession, but, rather, bound up with the purpose and intelligence of a personality.

Phenomenal causation is the succession of appearances common to all. We can mark the pre-existences and successions which hold universally in the world of experience, and we can formulate their laws without granting them causal efficiency or assuming anything concerning their metaphysical ground. Efficient causation, on the other hand, deals not with the order of succession but with the ground of being itself.

Causal explanation must be in terms of personality or it must vanish altogether. Any world-ground capable of real causation, not itself involved in the atomic flux, must be both personal and intelligent.

(c) *Change and identity.*—With materialism change is impossible. What we call change is a re-arrangement of atoms. Even thought can be no more than that. We have a static universe with its prescribed number of atoms, and all possibilities lie in their permutations and combinations. With absolutism change is a mere appearance. In the ultimate reality, the divine thought, all is static.

Entertaining a lively sense of this problem, Bergson posits duration as the abiding element in change. Change can mean something only to that which retains its identity through all changes. But abstract terms have no way of relating events. This can be done only by an abiding personality. If, then, the human personality is to locate itself in the universe or to image that which survives the passing world of events, it is driven to affirm a supreme enduring personality, in which the world and all lesser personalities find a common unity.

(d) *Unity and plurality.*—Driven by criticism to acknowledge the dualism that exists between thought and thing, and with no basis of mediation, some minds are turning to the affirmation of pluralism (*q.v.*). But a disjunctive universe is as much an impossibility for thought as a world pre-determined by a divine idea. The pluralist cannot make his world disjunctive enough to be consistent. Unless he preserves a certain amount of unity—the unity of a mind able to grasp the fleeting events of time and the baffling appearance of change—knowledge is meaningless.

Personalism affirms that the only real unity of which we are directly aware is the unity of the free and conscious self. The self survives the passing events of experience, relates them to itself under the forms of time and space, and makes itself the centre of its changing world. That there is any higher unity is due to the fact that one is not alone, but is surrounded by a world of self-conscious intelligences, themselves comprehended in synthesis by a supreme personal intelligence. Through self-conscious and self-acting personality alone can the world be brought into substantial unity.

Thus are we rid of the conflict between mind and matter, noumena and phenomena, and the disjointed world of pluralism. This is done also without resort to an idealism which, though grand in conception, is death to the maintenance of freedom.

R. T. FLEWELLING.

PERSONALITY.—What is a self, and how are we conscious of it? The words 'self' and 'person' may be taken as equivalent, and, as 'personality' is a more familiar term than 'selfness,' we may put our question in this form, What is personality, and how do we know it?

The quality of personality is known to me because I have perception—in the strict sense of the word—of one being which possesses the quality, namely, myself. The view that I perceive myself is not a very common one, especially in recent philosophic thought, but a discussion of it is absolutely essential for the comprehension of the nature of spirit.

In this article the word 'perception' is used to denote that species of awareness which we have of the existent—awareness being a mental state which is not a belief, though it is knowledge. It is of great importance to be clear as to what is meant by 'awareness' and 'perception.' The present writer uses both terms in the manner introduced by B. Russell, and explained by him in his paper on *Knowledge by Acquaintance and Knowledge by Description*.

I am aware of an object, or am acquainted with an object—the phrases are used as synonymous—when 'I have a direct cognitive relation to that object. . . . In fact, I think the relation of subject and object which I call acquaintance is simply the converse of the relation of object and subject which constitutes presentation. That is, to say that S has acquaintance with O is essentially the same thing as to say that O is

presented to S. . . . When we ask what are the kinds of objects with which we are acquainted, the first and most obvious example is *sense-data*.¹ When I see a colour or hear a noise, I have direct acquaintance with the colour or the noise. We are also acquainted, in introspection, with 'objects in various cognitive and conative relations to ourselves. When I see the sun, it often happens that I am aware of my seeing the sun, in addition to being aware of the sun, and when I desire food, it often happens that I am aware of my desire for food. . . . The awarenesses we have considered so far have all been awarenesses of particular existents, and might all in a larger sense be called *sense-data*. For, from the point of view of theory of knowledge, introspective knowledge is exactly on a level with knowledge derived from sight or hearing. But, in addition to awareness of the above kind of objects, which may be called awareness of *particulars*, we have also what may be called awareness of *universals*. . . . Not only are we aware of particular yellows, but if we have seen a sufficient number of yellows and have sufficient intelligence, we are aware of the universal *yellow*; this universal is the subject in such judgments as "yellow differs from blue" or "yellow resembles blue less than green does." And the universal *yellow* is the predicate in such judgments as "this is yellow," when "this" is a particular *sense-datum*. And universal relations, too, are objects of awarenesses; up and down, before and after, resemblance, desire, awareness itself, and so on, would seem to be all of them objects of which we can be aware."²

This, then, is what 'awareness' means. By 'perception' is meant the awareness of what Russell calls 'particulars,' or *sense-data* in a large sense. All of these are substances. And we can, of course, be aware of them only when they exist. Perception, therefore, is always awareness of the existent. But awareness which is not perception need not be of the existent. If I know what any simple characteristic means, I am aware of it. But my awareness, *e.g.*, of yellow, does not prove that there is any existent thing which has the characteristic of yellow.

Perception, however, is not limited to the perception of substances. There is, indeed, no perception except when a substance is perceived, but, along with the substance, we are able to perceive some particular characteristic of the substance. This is proved by the fact that we make judgments, which no one would assert were in all cases incorrect, that a substance has certain characteristics, for which our only evidence is our awareness. And, since the judgment is that a particular existent substance has the characteristic, the awareness on which it is based must be perception. Since the characteristics of the existent themselves exist, the best definition of perception will be that it is awareness of the existent.

What existent things do we perceive? It is clear that I do not perceive physical objects (as opposed to *sense-data*) or other people's minds. My only ground for believing in them is by an inference from the *sense-data* which I do perceive. This does not mean that every belief in them is a deliberate and conscious inference from a premiss about *sense-data*. On the contrary, I often judge that there is a table in the room, or that I have met a friend, without making any judgment whatever that I have perceived any *sense-data*. But, although my judgment that there is a table in the room is not an inference from *sense-data*, it will not be a judgment which I have any right to make unless I have experienced *sense-data* such that the existence of the table in the room could be legitimately inferred from them. And, if any doubt is thrown, by myself or others, upon the correctness of my judgment as to the table, the only way in which it can be justified is by an inference from *sense-data*.³

¹ Russell, pp. 1-4. The present writer cannot accept, without some reservation, the account of what objects it is that we are aware of by introspection, but this does not affect the meaning of awareness.

² In the same way the only way of justifying my belief that another person exists will be by an inference from *sense-data* which (except for a Berkeleyan) will lead first to a belief in his body (or a reality appearing as his body) and then to himself. Of course the *sense-data* which are the basis of such an inference need not be as closely connected with the object inferred as to be a case of what is commonly called seeing, touching, etc., the

We do perceive, then, *sense-data* (using this word in the larger sense, to include our perception of mental events by introspection). We do not perceive physical objects or other people's minds. But one question still remains. Does each of us perceive himself?

The present writer believes that this is the case. The reasons which have led him to this view were suggested by a passage in Russell's paper already quoted above.¹

I am certainly aware of certain characteristics—*e.g.*, the characteristic of equality. I know, then, the proposition, 'I am aware of equality.' If I know this proposition, I must know each constituent of it. I must therefore know 'I.' Whatever we know must be known by acquaintance or by description. If, therefore, 'I' cannot be known by description, it must be known by acquaintance, and I must be aware of it.

Now, how can 'I' be described in this case? The description must be an exclusive description, *i.e.* one which applies to nothing but 'I,' since I do not know what 'I' means unless I know enough about it to distinguish it from everything else. I am aware, as already said, of equality, and I am aware, by introspection, that there is an awareness of equality. Can I, by means of these, describe 'I' as that which is aware of equality? But it is obvious that this is not an exclusive description of 'I,' for it could not be that unless it were certain that I was the only person who ever possessed awareness of equality. It is obvious that this is not certain, and that it is possible that some one else besides me was, is, or will be aware of equality. (In point of fact, I have overwhelming empirical evidence for the conclusion that some other persons *are* aware of equality.) Thus we cannot get an exclusive description of 'I' in this way.

It may be thought that an exclusive description could be reached by going a step further. I am not only aware, it may be said, that there is an awareness of equality, but I am also aware that there is *this* awareness of equality, the particular mental act which is my awareness of equality here and now. Now, if 'I' were described as that which is aware of *this* awareness of equality, should we not have reached an exclusive description? For no one else, it may be argued, could be aware of *this* awareness of equality except 'I' myself who have it. Of course, in order that this may be an exclusive description of 'I,' I must know what I mean by *this* awareness of equality. But this would be a case of knowledge by awareness. This awareness of equality would be a *sense-datum*, of which we could be aware by introspection, since no one denies that *sense-data* can be known by awareness. Thus, it is said, we can dispense with the necessity for awareness of self, and hold that the only awareness of the existent—the only perception—is of *sense-data*.

This argument, as has been seen, has, as one of its steps, the assertion that no one can be aware of an awareness of equality except the person who has that awareness. To this point we shall return later. But first we must point out that, even if this step were correct, the argument would not be valid.

The judgment which we are now considering is the judgment, 'I am aware of *this* awareness.' Now this is not merely a judgment that some person, however identified, is aware of the awareness. It also asserts that the person who is aware of the awareness is the person who is making the object itself. I never saw the Andes or the death of Caesar, but my belief in them is an inference from visual *sense-data* in reading books about them.

³ Russell did not, however, work out his contention in detail which was not essential for the main design of his paper.

judgment. And how can I be entitled to assert this identity if 'I' can be known only by description? In that case I am aware of this awareness, and of making a judgment, and I may be entitled to conclude that there is some one who is aware of the awareness, and that some one is making the judgment, since both awarenesses and judgments require persons to make them. And it may be the case that 'the person who is aware of this awareness' is an exclusive description of the person to whom it applies. But how do I know that the person thus described is the person who makes the judgment? If I am not aware of my self, the only thing I know about the person who makes the judgment is just the description, 'the person who makes this judgment.' And, granting that this is an exclusive description, I am still not entitled to say, 'I am aware of this awareness,' unless I know that the two exclusive descriptions apply to the same person. If the person is known only by these descriptions, or by other descriptions, it does not seem to me possible to know anything of the sort. Thus, if 'I' can be known only by description, it seems impossible that we can know that I am aware of this awareness, or of anything else, since the judgment, 'I am aware of X,' always means that the person who is aware of X is also the person who is making the judgment.

On the other hand, if I do perceive my self, there is no difficulty in justifying either the judgment, 'I am aware of this awareness,' or the judgment, 'I am aware of equality.' There is no need now to find an exclusive description of 'I,' because I am aware of it, i.e. know it by acquaintance, and therefore do not require to know it by description. And I can now justify the assertion, implied in the use of 'I,' that the person who is aware (whether of *this* awareness or of equality) is the person who makes the judgment. For in perceiving my self I perceive also, as was said above, some of the characteristics of my self. And, if I perceive it to have the character of being aware, of equality, or of an awareness, and also perceive it to have the characteristic of making this judgment, I am justified in holding that it is the same person who is aware and who makes the judgment.¹

We have thus good reason to assert that I can perceive my self—i.e., if I can know my self at all. For it would be impossible for any one who believed that the self could be known to deny the truth of some proposition which takes the form 'I am aware of X.' And we have seen that such propositions cannot be justifiably accepted unless I can be aware of—i.e. perceive—my self.

Thus the attempt to describe the self which is aware of equality by its identity with the self which is aware of *this* awareness of equality has broken down, even if we grant the premiss which it assured—that 'that which is aware of *this* awareness of equality' is an exclusive description of the substance to which it applies. But we must now examine into the truth of this premiss, for, although the argument would not hold even if it were valid, the question of its validity is important in itself.

It is very commonly held that it is impossible for any person to be aware of any mental state except the person who has the state, and, therefore, that only one person can be aware of it. With regard to awareness which is not perception, it is universally admitted that more than one person can be

aware of the same thing. It is only by awareness that we can know what any simple characteristic means—since, being simple, it cannot be defined—and the meaning of compound characteristics depends on the meaning of simple characteristics. If, therefore, two people could not be aware of the same simple characteristic, it would be impossible for one person ever to communicate his thoughts to another.

Opinions differ with regard to sense-data in the narrower sense of the word—excluding those admittedly gained by introspection, and including only those which come, or appear to come, from the external senses. Some thinkers regard them as such that two people can perceive the same sense-datum. Others, however, hold that each sense-datum can be perceived only by one person, although sense-data perceived by different people may be caused by the same object and may justify inferences as to the existence of that object.

But that which falls wholly within a mind is usually denied to be perceptible by any mind except that in which it falls, whether it be a state of the mind, a relation between two states of the mind, or a relation between the mind and one of its own states. Thus those thinkers who hold, as some do, that sense-data in the narrower sense are states of the mind are invariably to be found among those who hold that each sense-datum can be perceived only by one person—who is, of course, the person of whom they are states. And, in the case of the remainder of sense-data in the wider sense—those which are admittedly mental, and reached by introspection—it is generally held, or, rather, tacitly assumed, that they can have no other perceiver than the mind within which they fall. Among these, of course, are all awarenesses.

Now it does not seem that we are justified in asserting this as an absolute necessity. No doubt it is the case that I do not perceive any state of mind of any person but myself. I have good reason to believe that none of the persons whom I know, or who have recorded their experience in any way which is accessible to me, has ever perceived the states of mind of any other person than himself. Nor have I any reason to believe that any other self in the universe has done so. But the fact that there is no reason to suppose that it does happen is very far from being a proof that it could not happen. Is there any reason for supposing that it could not happen? Even if it is asserted that we have no reason to suppose that any self does perceive anything but its own states (a view which involves that sense-data in the narrower sense are states of the self), there is no impossibility in its doing so. That relative isolation of a self (of course it is not complete isolation) which would prevent it from entering into a relation of perception with anything outside itself need not be essential to the self because it is true of it throughout our experience. If, on the other hand, sense-data in the narrower sense are not parts of the self, then I can perceive something which is outside me, which is one step towards perceiving what is inside another self. The fact that in our experience this second step is never taken does not prove that it is impossible.

It must be remembered that, if A should perceive a state of B's, that would not make it a state of A's or any less exclusively a state of B's. To have a state and to perceive it are two utterly different things. In our present experience, as we have just said, no one does the second who does not do the first. But the first often occurs without the second. I often have a state, even a conscious state, without being aware of that state,¹ and this does not

¹ It may possibly be said that the awareness is never simultaneous with the judgment asserting the awareness. The present writer would be inclined to doubt this. But at any rate it is clear that the judgment can succeed the awareness very rapidly, and in that case we are probably justified in asserting that the self which is aware and the self which judges the awareness are the same self. This point will be discussed later.

¹ If this were not so, every conscious state would start an infinite series of perceptions, since a perception is itself a state,

make it any the less my state. Since the two are so distinct, A might perceive a state of B's, which perhaps B himself did not perceive, and yet it would be B's state and not A's. Confusion on this point has had a good deal to do with the prevailing belief that one self cannot perceive a state of another self.

It is, therefore, not intrinsically impossible that one self should be aware of a state of another self (or that more than one self should be so), and, as a self can be aware of its own state, it is not intrinsically impossible that two selves should be aware of the same awareness. We cannot, therefore, be certain that 'the person who is aware of *this* awareness' is an exclusive description of a person of whom it is true. And, if 'I' can be known only by means of this description, I cannot be certain who 'I' is, and cannot be certain that I know the meaning of the proposition, 'I am aware of *this* awareness,' or of the proposition, 'I am aware of equality' (since the 'I' in the latter was to be described by means of the former). But it is certain that I know the meaning of these propositions, and it is certain that I am certain of their truth. Thus, for a second reason, the attempt to show that 'I' can be known by description in this manner has broken down.

An attempt might be made to know 'I' by description which would not be liable to the second objection. For it might be said—and truly—that, while it is not impossible for more than one self to be aware of a particular awareness, it is impossible for more than one self to *have* the same particular awareness. If I am aware of X, it is not impossible that you, as well as I, should be aware of my awareness of X, but it is impossible that my particular awareness of X should also be your awareness of X, or anybody else's, since what is a state—*i.e.* a part—of one self can in no case be a state of another self.

This view the present writer believes to be correct. It has been denied, both on the ground that my awareness of X is not a part of me and on the ground that two selves might possibly have a common part. But it is not necessary to decide these points here, as it can be shown that, even if the view is correct and no two selves can have the same awareness, it will still be impossible to know 'I' by description.

The attempt to know it by description on this basis would be as follows. If we start from 'I am aware of equality,' and wish to describe the 'I,' we must proceed to the further proposition, 'I have *this* acquaintance with equality,' which will always be true if the other is. Then the 'I' in the latter proposition can be described as the self which has *this* acquaintance with equality. This description cannot apply to more than one thing, and is therefore an exclusive description of it. And the thing so described is the 'I' in both propositions. And in this way we do avoid the second objection. But our new attempt is still open to the first objection—that it involves that two descriptions apply to the same self, and that we have no right to make this assumption. For, when I assert the proposition, 'I have this awareness,' it means that the self who has this awareness is the same as the self who asserts the proposition. Now, I can only describe the one—if it is to be described at all—as the self which has this awareness, and the second as the self which makes this judgment. Both of these are exclusive descriptions. (Of course, by 'this judgment' is meant the *psychical* fact of judgment, not the proposition which is asserted.) and I should have to be again aware of that, and so on. We know that this is not the case. We do not very often perceive a perception, and perception of a perception scarcely ever happens except when we are engaged on epistemological or psychological investigation.

But I have no reason to suppose that they refer to the same self, and therefore I am not entitled to say, 'I have this awareness,' or, consequently, 'I am aware of equality.'

If, on the other hand, I am aware of *my* self, I am entitled to say, 'I have this awareness,' because I am aware of my self with the two characteristics of having the awareness and of making the judgment. Once more, then, we are brought back to the conclusion that, if I am entitled to make any assertion about my awareness of anything, I must be aware of my self.

Nor is this all. The same line of argument will show that, unless 'I' is known by awareness, I am not justified in making *any* statement about my self, whether it deals with awareness or not. If I start with the proposition, 'I am angry,' and then, on the same principle as before, describe 'I' as that which has *this* state of anger, my assertion will involve the assertion that it is the same self which has this state of anger and which is making this proposition. And, if 'I' can be known only by description, there is no reason to hold that it is the same self which both has the state and makes the assertion.

It is not, of course, impossible for us to have good reasons for believing that two descriptions both apply to some substance which we know only by description. I know other people only by description, but I may have good reason to believe of my friend X that he is both a socialist and a post-impressionist. But the case now before us is not analogous to this. My beliefs about X depend for their correctness on the correctness of various inferences from sense-data of which I am aware—perhaps auditory sense-data which I hear, and which I infer to be due to his desire to communicate his opinions to me. But, when I judge that I am angry, the conclusion that it is I who am angry is not an inference from my awareness of a state of anger whose characteristics are such that it can only belong to a particular person. I am as directly certain that it is I who am angry as I am that the state of anger exists. And, if 'I' is not known by awareness, the only alternative is that 'I' should be described as that which is involved in the simple fact of the existence of the state of anger—the only element in the proposition of which, on this hypothesis, we are aware. That is, it must be described simply as the self which has this state of anger. And in this description there is nothing from which we can legitimately conclude that this is the same self as that which makes the assertion.

Our conclusion, then, is that, if 'I' can be known at all, it must be known by awareness, and that, if it cannot be known by awareness, we are not justified in asserting any proposition in which the term 'I' occurs. Unless we take this extremely sceptical alternative, we must admit that 'I' is known by awareness.

It may be asked why this result has not been accepted by so many—perhaps most—recent philosophers. The explanation may be partly that they saw that 'the self which has this state' is an exclusive description of a self, when this state is known by awareness, and that they did not see the further point that this description gave us no ground to identify the self which has the state with the self making the assertion, and that this identity is implied in the use of 'I.' But probably the chief reason is that they looked for the awareness of the self in the wrong way. They tried to find a consciousness of self which had the same *positive* evidence for being an awareness as is found in an awareness of equality or in an awareness of some particular sense-datum. And this attempt failed. For the 'I' is much more elusive

than the other realities of which we are aware. It is divided into parts which are not themselves selves (unlike the parts of sense-data, which, if perceptible, are also sense-data); and of these parts we can be aware, and generally are, or can be, when we are aware of the 'I.' It is easy, therefore, to suppose that it is only the parts—the actual states—of which we are aware, while the 'I' is known only by description, and the belief in it can be justified only by inference from the states. This view also gains plausibility from the fact that 'I' has no content except parts of this sort. For it is natural, though erroneous, to argue that, if all the parts of the 'I' can be perceived separately, it is impossible to perceive the 'I' as a whole except by perceiving all those parts. And, of course, in perceiving the 'I' we do not perceive all its parts.

Thus, if we merely inspect our experience, the awareness of the 'I' is far from obvious. The only way of making it obvious is that suggested by Russell and employed in this article. We must take propositions containing the 'I,' and, to test the view that 'I' is known by description, endeavour to replace 'I' with its description. Only then does the impossibility of knowing 'I' except by awareness become clear.

Our conclusion is that 'I' must be known by awareness, if it is to be known at all. The alternative remains that it is not known at all, and that no statements which contain 'I' as a constituent are justifiable.

Of those philosophies which, without falling into complete scepticism, deny the reality of the self the two most important are Hume's and Bradley's. Hume (*Treatise of Human Nature*, I. iv. 6, ed. T. H. Green and T. H. Grose, 2 vols., London, 1909, i. 533 ff.) seems to take the view that we must be aware of the self if we know it at all, since he contents himself with proving to his own satisfaction that we can have no 'impression' of it, and does not discuss the possibility that I might have a 'compound idea' of it, as I have of the death of Cæsar, which I did not see. He offers two arguments against the possibility of an impression of the self. The first is that the impression, if there were one, must be the same throughout life.

'But there is no impression constant and invariable. Pain and pleasure, grief and joy, passions and sensations succeed each other, and never all exist at the same time. It cannot, therefore, be from any of these impressions, or from any other, that the idea of self is deriv'd; and consequently there is no such idea.'

In answer to this we may say, in the first place, that it is not necessary that the impression should be the same throughout life. If I had it for a minute, it would be enough ground to believe in the self then. Whether there was any reason to suppose that the same self existed before and afterwards would be a matter for further argument. But, whether it did or did not, a self that lasted for a minute would still be a self. As for the passage quoted, no one would deny that no impression of 'pain and pleasure, grief and joy, passions and sensations' could be an impression of the self. But to conclude at once, as he does, that no other impression can be an impression of self is entirely unjustified.

His grounds for making this illegitimate step are probably the fact that, if there is a self, it has parts, all of which are pains, pleasures, griefs, joys, passions, sensations, or something else which is not a self, and his supposition that, in that case, there can be no impression of the self which is not an aggregate of these. And this becomes explicit in his second argument.

Mankind, he says, 'are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement.'

Without accepting the detail of this, we may agree that all the content of a self falls within various mental states, not selves, and that—at any rate, within certain limits—these change while the self remains the same self. But it does not follow from this that the self is not an existent reality, any more than it follows that a college is not an existent reality, because it is made up of men who are not colleges, and who join and leave the college while it remains the same college.

Moreover, Hume's attempt to account for the arrangement of the mental states without accepting the reality of the self, when looked at more closely, seems to involve the very reality that it was meant to exclude. For what is meant by saying that the perceptions which exist form different 'bundles or collections'? It does not mean that those which form the same bundle are connected in space with one another more closely than they are with those in other bundles, for Hume does not regard the perceptions as being in space. Nor can it be that they are connected more closely in time, or by resemblance. For, if there is really a bundle wherever there is, on the ordinary theory, a self, then similar and simultaneous perceptions are found in different bundles, and dissimilar and non-simultaneous sensations in the same bundle. It seems impossible to avoid the conclusion that the contents of each bundle must be determined to be parts of that bundle by their relation to, or inclusion in, some reality which is not any one of the contents, nor the aggregate of these taken as a plurality, but is something as ultimate as, say, one of the contents. If we reach this, we have reached the self.

It is not necessary to consider in detail all the stages in Bradley's searching and brilliant analysis of the various possible meanings of the self, on which he founds his conclusion that the self is not absolutely real. It is clear that, if the view which we have taken is to be refuted in consequence of any of his criticisms, it will be by those which he offers in respect of the sixth sense of the word which he discusses—that in which the self is a subject which becomes an object (*Appearance and Reality*², London, 1908, ch. ix.). For the self which, as we have decided, each of us knows by awareness as his 'I' is, as we saw, that which is the subject which perceives and judges. We do not say that it is only that, that it does nothing else. On the contrary, it is that which loves when my judgment, 'I love,' is true, and which is angry when my judgment, 'I am angry,' is true. But it is also that which is the subject in all knowledge. If Bradley has succeeded in disproving the reality of a self which is the subject of knowledge, he has disproved our conclusion. But, if he has not done this, he has not weakened our conclusion at all, since none of the other senses of self which he discusses is such that its validity is involved in the validity of self in our sense.

The self, Bradley says, is a concrete group. With this we may agree, since Bradley apparently means by it only that there is a plurality of parts in the self. He then points out that most, if not all, of the content of the self can become an object, and from this he concludes that very little, if any, of the content of the self can belong to it essentially. His view is that what becomes an object becomes *ipso facto* part of the not-self, and that what is not-self cannot be the self, or part of it. If Bradley is right in holding that whatever becomes an object must be removed from the self, then it is clear that no self can know its own existence. For no self could know its own existence without being an object of knowledge to itself, and a self cannot be its own object if the object *ipso facto* ceases to be self. Thus not only must we abandon

the view that I know my self by awareness—which we had found reason to think was the only way in which I could know myself—but, more generally, all knowledge of my self by my self is directly shown to be impossible.

But what reason is there for holding that a self cannot be its own object, remaining all the time the self which has the object? There appears to be no reason whatever. The presumption is certainly that it can be its own object, for, if it could not, I could never know my self (whether by awareness or by description), and consequently could never know any proposition in which 'I' occurs. Now, there are propositions in which 'I' occurs which I do assert, and which are *prima facie* true. The present writer can see no ground why this presumption should be rejected. It cannot be denied that there are certain relations in which a substance can stand to itself, and what is there in the case of the relation of knowledge which should make us reject the *prima facie* view that this is one of them? So far from that being the case, the more we contemplate our experience, the more reason we find for holding that it is impossible to reject knowledge of self. If we are right in this, Bradley's objection to the reality of the self, in the sense in which we have taken self, falls to the ground.

I am, then, aware of my own self. We now pass to a question of considerable importance—the relation of the self to time, or to that real series which appears as a time-series. It is a common view that the definition of substance should include permanence in time, or, at least, persistence through a certain amount of time.¹ But it is better to adopt a different definition, by which that which existed at a single and indivisible point of time would also be a substance. With regard to selves, the view that nothing is a self unless it is persistent through time is still stronger. Indeed, many refutations of the reality of selves confine themselves to showing, or attempting to show, that a self, defined in whatever way is being criticized, could not persist for the period covered by the life of a human body.

What can we say, on our theory, as to the persistence of the self? I know my self by awareness, and I can therefore be certain only of those of its characteristics of which I am aware, or which are involved in those of which I am aware. Am I aware of the persistence of my self through time? It seems to me that I am. For awareness lasts through the specious present. At any point of time, then, I may perceive my self at that point of time, and also my self at any previous point of time within the limits of a specious present. And if, between these points, I begin or cease to perceive something else, I shall, if I attend to the relation between the two perceptions, be aware of my self as persisting while other things change, and so as persisting in time.²

This period of time is, of course, very short relatively to the life of a human body. Have we any reason to suppose that the self which we perceive through a specious present persists itself through any longer time? It has been held by some writers that, for past periods which are earlier than any part of the specious present, but yet relatively near, our memory gives us absolute

certainty that the things which we remember did occur. If that is the case—it is not necessary for us to discuss whether it is or not—I can have absolute certainty that I existed at a time which falls within the limits where memory is absolutely trustworthy. If, at the present moment, I remember that I was aware of myself in the past, then the 'I' who now remembers and the 'I' who was then aware must be the same 'I,' unless the memory is erroneous—which it cannot be, by the hypothesis, within these limits—and therefore the same 'I' must have persisted from the moment of the remembered awareness to the moment of the remembrance.

Beyond this, there is no *certainty* of the persistence of self. If, outside the limits of certain memory, I remember that I did or was certain things in the past, that professed memory may be deceptive in two ways. It may, in the ordinary sense, be false, as when, in a dream, I remember that I committed a murder ten years ago. In the second place, even if the events which I now remember did happen to some one in my body, I may be in error in thinking that I experienced them. There may then have been another self related to my body, whose experience I now know and mistakenly judge to have been my own. The latter alternative is not at all probable, but it is not impossible. But, although there is no absolute certainty that my present self has lasted longer than the specious present and the short preceding period of certain memory—if there is such a period—yet there may be very good reason for holding that it is extremely probable that it has done so. There is very little reason to doubt that the feelings with which I now remember that I saw Benares really did occur more than twenty years ago, and the self which experienced them was the same one which is now remembering them. And there is very little reason to doubt that the same 'I' of which I am now aware did have various experiences ever since the birth of my present body, although I have no memory whatever of most of them. On similar grounds there is very little reason to doubt that, unless my body dies within the next week, the 'I' of which I am now aware will still exist at the end of this week.

The grounds on which we come to such conclusions will, of course, be empirical. But the results which we have reached as to the nature of the self, and as to my absolute certainty of my own existence within certain temporal limits, will have an important bearing on the validity of the conclusions as to further persistence. For, when objections have been offered to the common-sense view that each self—at any rate under usual circumstances—persists through the whole life of a living body, they have generally been made on the ground either that we do not know what the self is which is said to persist or that its persistence is incompatible with the changes in the 'bundle' of mental events. But we are now able to say that by the self we mean something of which the 'I' of which I am aware is an example. And so the question of any self existing to-day, whether it existed twenty years ago, is a perfectly definite question, whatever may be held about the true answer. We are also now able to say that, within the specious present, we are aware of a self which remains the same while changes occur among the mental events.

We have thus justified the statement at the beginning of this article. The quality of being a person is known to me because I perceive one being which possesses the quality, namely, myself. To be a person is a quality which I perceive in 'I,' when I perceive 'I,' and which I do not perceive in anything else which I do perceive, though I believe,

¹ For the sake of brevity, 'time' is used as an equivalent to 'time,' or that real series which appears as a time-series, whenever the context removes any danger of ambiguity.

² It does not, of course, follow that a thing begins or ceases to exist because I begin or cease to perceive it, but at any rate the perceptions will begin and cease. Since the perceptions are parts of the self, it follows that the same self can contain parts which exist at different times. It is also obvious that it can contain parts which exist simultaneously. If I know that I am angry, my self contains simultaneously a state of anger and a state of awareness (of the anger). Again, I am sometimes aware that I am both hot and happy.

rightly or wrongly, that it is possessed by other substances which I do not perceive. But is it a compound of various other qualities, or is it simple and indefinable? It would appear that it is the latter. There is a quality of personality, which, like redness, is made known to us by our perception of substances which have it, and, like redness, is simple and indefinable.

What is the relation of consciousness to personality? When we say that a self is conscious, we mean that it is conscious of something, *i.e.* it knows something. It would be a difficult question to decide whether the possession of personality necessarily involved the possession of consciousness, and, if so, whether a self had to be conscious at all times when it was a self, or whether its personality could continue during intervals when it had not consciousness.

A self-conscious self is one which knows itself, which, by our previous results, involves that it is aware of itself. Must a self be self-conscious? It has been maintained that it must be so. Sometimes it is said that consciousness is essential to the self, and that no being could be conscious unless it were self-conscious. Sometimes it is admitted that a being might be conscious without being self-conscious, but then, it is said, it ought not to be called a self. The present writer disagrees with both these views. It seems to him quite possible for a being to be conscious without being self-conscious. It is true that the only conscious being of whom I am ever aware is necessarily self-conscious, since it is myself. But I am not always self-conscious when I am conscious. Memory gives me positive reason to believe in states when I am not aware of myself at all—not states that are either abnormal, on the one hand, or mystic, on the other, nor states in which in any sense I am not a self, or am less a self than at other times, but a perfectly normal and frequent state in which I am conscious of other objects and am not conscious of myself, because my attention does not happen to be turned that way. I seem to remember such states. And, even if I did not remember them, it would still be perfectly possible that there should be such states, though there might be no reason for supposing that there were. And there is no reason why there should not be beings who are always in the condition in which I am sometimes, of being conscious without being self-conscious.

In answer to such considerations as these, it is sometimes said that self-consciousness is always found when consciousness is found, but that the self-consciousness is so faint that it escapes observation when we try to describe the experience which we remember. If there were any impossibility in the existence of consciousness without self-consciousness, it is doubtless to this hypothesis that we should be driven. But there seems no reason whatever why I should not be conscious of something else without being conscious of myself, and therefore no reason why we should conclude to the existence of this faint self-consciousness, of which, by the hypothesis, we can have no direct evidence.

Again, it is said that there is always implicit or potential self-consciousness. By this is meant that a conscious self could always be self-conscious if circumstances turned its attention to itself, instead of away from itself, that there is no intrinsic impossibility of self-consciousness. This is doubtless the case with me, and selves like me, at the times when we are not self-conscious. But it does not alter the fact that, at those times, we are just as really not self-conscious as at other times we are really self-conscious. Why should there not be beings who were conscious but whose nature was such that they could never be self-conscious?

It has also been maintained, as we said above, that, even if there could be beings who were conscious without being self-conscious, the name of self should be reserved for those who are self-conscious. This usage, it seems, would not be so convenient as the one which we have adopted. To call a conscious being a self only when it was self-conscious would involve that each of us would gain and lose the right to the name many times a day. It would be less inconvenient if the name of self were given to those conscious beings which are ever self-conscious, even at the times when they were not so. But there is a more serious difficulty. We are invited to define personality as being conscious of self. And consciousness of self is a complex characteristic which can be defined only when it is known what we mean by a self. Therefore, if self means the same on the two occasions when it enters into the statement, 'a self is that which is self-conscious,' we have a circular and unmeaning definition of selfness. But, if we avoid this by self not meaning the same on each occasion, it is obvious that we are using the word in a very inconvenient manner. On the whole, therefore, it seems better to say that selfness does not involve self-consciousness.

We have now determined what is meant by self, and how it is that we have the characteristic of personality. Spirituality may be defined as the quality of having substantial content all of which is the content of one or more selves. From this it follows that all selves are spiritual substances, but that they are not the only spiritual substances. Parts of selves, such as thoughts and volitions, or the parts of thoughts and volitions, would be spiritual. And so would groups of selves, whether those groups are important, such as a nation, or trivial, such as a bridge-party, or purely arbitrary, such as the group made up of Louis XIV., Sir Nathaniel Wraxall, and Sir Isaac Newton. (So, also, we may note for the sake of completeness, would be a group made up of some selves and some parts of selves. But this has no practical importance.) These are all spiritual substances, but they would not all be called spirits, since usage confines the phrase 'a spirit' to what is also called a self.

It would sometimes be maintained that our definition of spirit is too narrow. Whatever falls within the substantial content of any self, it would be said, is certainly spiritual, but spirit also includes content which is not part of any self. There is, or may be, knowledge, volition, emotion—in a word, experience—which does not fall within any self, and is not the experience of any self, and all this, it would be said, falls within spirit.

It might perhaps be admitted that, if there were such non-personal experience, it would have a good claim to be called spiritual. But the present writer submits that it is impossible that there should be. This is not a question about names. The assertion is that we mean the same thing by the names 'knowledge,' 'volition,' and 'experience' as is meant by the advocates of this view, and that we mean the same thing by the term 'self.' (At any rate, any slight difference that there might be in the meanings of the words would not account for the difference of opinion about impersonal experience.) The assertion is that there cannot be experience which is not experienced by a self because it seems evident, not as part of the meaning of the terms, but as a synthetic truth about experience. This truth is ultimate. It cannot be defended against attacks, but it seems beyond doubt. The more clearly we realize the nature of experience, or of knowledge, volition, and emotion, the more clearly, it is submitted, does it appear that any of them are impossible except as the experience of a self.

Nor are we led to doubt this conclusion by finding that it leads us into any difficulties. For nothing that we know suggests to us in the least the existence of impersonal experience. We never perceive it, since each of us perceives only himself and his own sense-data—and none of the facts that we do perceive is better explained on the hypothesis that there is non-personal experience than on the hypothesis that there is not.

All substantial content of spirit, then, must fall within some self. But now another point arises. Can any substantial content fall within more than one self? In that case either one self would form part of another or two selves would overlap, having a part common to both. Is this possible? It seems impossible that any part should be common to two or more selves. When I contemplate, to begin with, what is meant by an act of knowledge, a volition, or any other part of my experience, it seems as impossible to me that such a state should belong to more than one self as it is that it should not belong to a self at all. It may be said that this still leaves open the possibility that there should be parts of a self of which that self is not and cannot be aware—which are, in the ordinary phrase, unconscious parts of the self—and that these may be common to more than one self, though conscious parts could not be.

It is doubtful whether this view, that unconscious parts can be common to two selves though conscious parts cannot, has ever been maintained. Whenever it has been held that two selves could have a common part, it has always been held that one self could be part of another. And, since all selves are always held to have some conscious parts, this would involve that some conscious parts were parts of two selves. But, whether the view has been maintained or not, it seems false. From the nature of the case I cannot observe an unconscious state of a self, and all that I could know about it would be that it was a state of a self, and an unconscious state. But this is enough. For, when I consider what is meant by a self, it seems to me clear that a self is something which cannot have a part in common with another self. The peculiar unity which a self has puts it into a relation with its parts which is such that a part could not have it to two selves. Or, to put it the other way round, any relation which a substance could have to two wholes, of each of which it is a part, cannot be the relation of the state of a self to the self.

Since selves persist through time, each self is divided into parts persisting through the parts of the self's persistence. (And these parts it would have, even if we were wrong in our view that acts, of knowledge, volition, and the like, are parts of the self who knows and wills.) It seems equally impossible that any part in this dimension should be common to two or more selves.

The impossibility of any part of any self belonging also to any other self is, we may say, an ultimate truth, and cannot be proved. But it can be indirectly supported by discussing various ways in which it has been said that it is possible that one part should belong to more than one self. In the first place, it is often said that one self (and so the parts of it) can be part of another, if the included self is a manifestation of the inclusive self. This view has always been popular, because one of the chief grounds for wishing to show that one self can be part of another has been to make it possible for man to be part of God. For various religious motives many people have been anxious that a personal God—a God who is a self—should be the whole of what exists, or the whole in which all spiritual life falls. And, if man is to be part of God, it is a natural and attractive view to regard man as manifesting God's nature. If a self could

be part of another on condition of its being its manifestation, it would cover those cases in which people are generally most desirous to show that one self is part of another. Now, it is no doubt true that a self can manifest the nature of a whole of which it is a part. Thus we may say that Dante manifested the nature of the society of the Middle Ages, and that Chatham manifested the nature of England. But England and the society of the Middle Ages are not selves. Again, one self can manifest the nature of another. Thus a theist, who was not a pantheist, might say of a good man that he manifested the nature of God. But the manifestant is not part of the self whose nature he manifests. It seems that in many cases in which it is said that one self can be part of another the assertion is based on a confusion about manifestation. It is said that the inclusion can take place, if the included self manifests the other. And, because a self can be conceived to manifest the nature of a whole of which it is a part, and can be conceived to manifest the nature of another self, it is confusedly held that it can be conceived to manifest the nature of something which is *both* a whole of which it is a part and another self. But this, of course, is an illogical inference.

In the second place, it is suggested that, if a self A perceived a self B, and all its parts, and had other contents besides those perceptions, then B would be a part of A, and the parts of B would also be parts of A. This suggestion also applies chiefly to the inclusion of man in God. For we know of no case where a man can perceive another man, or his parts, and it is generally said (though, as said above, probably erroneously) that this would be impossible. But in the case of God it is often thought that this limitation need not apply. It is possible, no doubt, that B and its parts might be perceived by A, whether A was God or not. But this will not make B and its parts into parts of A. B perceives its own parts, or some of them, but the relation of having them as parts and the relation of perceiving them are quite different relations, and, if A should have the second, it does not follow that it will have the first. The confusion is probably due to the fact that, in our ordinary experience, no one perceives the part of a self except the self of which it is a part, and it is therefore mistakenly assumed that anything which did perceive it must be a self of which it is a part.

These considerations diminish any doubt which might fall on the truth of our position that the inclusion in selves of other selves or their parts is impossible. If it really is an ultimate truth, it may be said, why have so many thinkers believed that it is not true at all? But any force that there might be in this objection is diminished when we see that many of the people who asserted that the inclusion was not impossible had confused it with one of various other things which are quite possible, but are not the inclusion in question.

It is sometimes asserted, not only that such an inclusion is possible, but that we have empirical evidence that it does occur in those comparatively rare instances usually known as cases of 'multiple personality.' The most striking of these, and the one best adapted to prove the contention, if any of them could do so, is the case recorded by Morton Prince in his well-known work, *The Dissociation of a Personality* (New York, 1906). It does not seem to the present writer that any of the most interesting facts recorded in this book, or any other facts of the same class of which he has read, are incompatible with the view that only one self is, in each case, concerned with all the events happening in connexion with any one body, the characters, and the events remembered by that

self, suffering rapid oscillations, due to causes not completely ascertained. That such oscillations do take place has been certain since the time of the first man who became quarrelsome or maudlin when drunk, and reverted to his ordinary character when sober. The oscillations in such a case as we are now considering differ in degree, no doubt, from those seen in every-day life, but they introduce no qualitative difference.

Whether all the facts recorded of multiple personality can be explained in this way is a question into which we cannot now enter. But, if there were any of such a nature as to be incompatible with the theory that a single self was concerned in them, they would necessarily be of such a nature as to be compatible with the theory that they were caused by two selves, neither of them including the other, or any part of the other, which happened to be connected with the same body—

a connexion which we do not come across in any other part of our experience, but which has no intrinsic impossibility.¹ Thus any fact of multiple personality, whether the divergence of personality were slight or great, could be accounted for without requiring the hypothesis of inclusion, and no doubt can arise from these facts as to the correctness of our view that the impossibility of the hypothesis of inclusion is an ultimate truth.

Since such inclusion is an impossibility, it follows that, unless I am the whole universe, the universe cannot be a self. For I am aware of myself as a self, and, if I am not the whole universe, I am part of it. And the whole of which a self is part cannot be a self. This result is the same whether, of that part of the universe which is not me, all, some, or none consists of other selves.

PERSONIFICATION (Introductory and Primitive).—Personification may be defined as the act of attributing a living, conscious, and active personality to inanimate natural objects (from the smallest object to complete portions of the physical world, and even the whole world itself), to forces and phenomena, to manufactured objects, or to abstract ideas and words.

There are two great difficulties in studying a subject like personification: (1) to discover the exact significance to primitive man (or, failing him, uncivilized man) of what we call 'personality'; and (2) to reconstruct, as far as possible, the psychological mechanism behind the process of personification. The first of these problems need not be treated here (see LIFE AND DEATH [Primitive], PERSONALITY). With regard to the second, there are so many examples of personification collected by modern bibliography that our only practicable plan here seems to be to arrange the facts roughly in classes and, noting as we go along the partial explanations that they suggest, try to come to a general conclusion. The examples in each class are so numerous that only a few can be mentioned. For further details see the literature at the end of the article.

I. CLASSIFICATION.—**1. Inanimate natural objects.**—The forces of nature and portions of the physical world (as primitive man imagines them) everywhere form the most important subdivision of the first class of personifications. It is impossible to draw up a complete list of all the varieties in use among the extinct primitive religions, and of those of which present-day uncivilized races give us a poor and distorted idea. But we may present a list in which the order followed is that corresponding, roughly, to the principal divisions of the universe as conceived by the most typical of those religions.

First there are the elements themselves, or, rather, what primitive man imagines to be the principal elements forming this universe. Water, fire, and earth we find universally conceived as persons. But this generalization presupposes an effort of fairly far advanced synthetic conception. A rougher or more childish subdivision is usual, the more elementary naturism generally resulting in the following classes:

(a) The sky, or (much more frequently) the

different skies or portions of the world that is conceived as above the earth and separated from it by the world of air. These are sometimes superimposed regions and sometimes real separate worlds. For the process of personifications of this class see art. SKY-GODS.

(b) The intermediary space between the sky, conceived as a solid world, and the terrestrial world is formed by air or airs. See art. AIR AND GODS OF THE AIR.

(c) The terrestrial waters form one of the commonest classes of personification. The sea or the different seas (*e.g.*, the ocean of Dahomey, the glacial sea of the Eskimos, the Ouajit Oirit of the Egyptians) are wide-spread types. These personified waters are quite different from the waters of lakes and rivers (see below, I. 2 (c)). They are maritime waters. A point to be noticed is the general predominance of a special personification for the water which forms the boundary of the inhabited world—*e.g.*, the old *Ωκεανός* of Homeric Greece. In most cases it serves to connect the mass of terrestrial waters with those held up by the sky or those of the 'abyss' on which the earth rests. This notion throws light on primitive cosmogony, and on the primordial water of so many mythologies, from which every thing and every personified spirit, even the Supreme Being, came forth in the beginning (*cf.* art. WATER-GODS).

(d) The personified earth (not as an element, but as an expanse) has a place in most ancient myths; it appears at the very dawn of cosmogony in its creator rôle. Almost all the religions which reached the stage of outlining a world-history show the earth in this rôle, either alone or, more frequently, with the co-operation of the personified sky (see SKY-GODS). Usually the earth is conceived as female and consequently as a mother (*cf.* EARTH-GODS), but in exceptional cases (*e.g.*, in Egypt) it is personified as a man. He engenders, and the rôle of giving birth to the world is reserved for a female sky. The necessary concourse of the two elements is identical; but the maternal rôle of the sky shows a more philosophic idea of origins.

¹ No great difficulty is represented by the fact that, on this theory, one self would sometimes 'remember' what had happened to the other. Two such selves would have an important and unusual connexion, in the occupation of the same body, which might well be sufficient to account for this.

(e) Quite distinct from the person of the earth are the chthonic personifications of the under world. They correspond to various conceptions among primitive peoples, and concern not the superficial living layer of the soil, but a region quite different from the earth, about whose structure and extent races have had very different ideas (see DEATH AND DISPOSAL OF THE DEAD, STATE OF THE DEAD). It is sometimes regarded as a single division, sometimes as a series of divisions of the organized world. For these underground regions see UNDER WORLD.

(f) At the foundation of the series of personifications created by naturism we find the 'abyss,' or the primordial mass, usually imagined as liquid. In some cosmogonies it is the oldest of all persons, before the sky and the earth, which are only its emanations or persons sprung from it (see SKY-GODS)—e.g., the Egyptian *nun* and the Sumerio-Chaldean abyss in advanced religions, and 'the waters' of the Bushongo and of the myths of S. Africa at the earlier stage.

Such a series of personifications is the product of an advanced naturism. It presupposes a complete view of the supposed subdivisions of the world, and, consequently, quite a power of generalization. We may therefore reasonably suppose that it is far from representing the primitive stage of the personification of nature. Much more ancient, to all appearance, are the fragmentary personifications found in every part of the universe. Before the sky was personified as the one universal sky, man personified separately, and as so many distinct entities, the different parts of the firmament, the various regions of the different skies (not to mention their inhabitants [see below, I. 2 (a)]); he imagined and personified the 'lower sky,' the 'upper sky' (as still seen in the Pyramid Texts at a much later date), the sunset sky and that of the sunrise, the 'skies of the horizons,' etc.; in the same way the spaces of the air were divided into quarters and domains, each of which was a person. As for the waters which sleep or roll on the surface of our planet, the enumeration of their personifications would be endless—springs, fountains, brooks, streams, rivers, ponds, lakes, marshes, etc. Their characteristic traits also suggested other personifications, viz. cascades, torrents, rapids, and cataracts. It should be noticed that the pre-historic religions of the valley of the Nile and those which we find to-day on the Black Continent or in Polynesia point towards the same conclusion: it is in springs and especially in remarkable irregularities of surface (rapids, cataracts, etc.) that the most ancient personifications of water seem to occur; i.e., the notion of force or energy superseded that of expanse. The phenomena peculiar to an aquatic region, like Morbihan in Brittany or the lagoons on the west coast of Africa (cf. R. E. Dennett, *At the Back of the Black Man's Mind*, London, 1906, and *Nigerian Studies*, do. 1910), reveal a similar mechanism for the particular cases.

The same infinite variety of persons is found for the solid element. The whole book of Nature is included, from the great peaks and high mountain-summits and the promontories and headlands on the coast to isolated rocks, from forests to isolated clusters of trees, from the great Arctic iceberg to isolated islands of ice.

The personifications of the chthonian domain have less numerous manifestations: grottoes, caverns, and especially passages supposed to be entrances to the other world. The *akir* and *amentit* of ancient Egypt have their equivalents in many a semi-civilized race in Africa at the present day, just as the various 'passages' in the subterranean domains of ancient Chaldaea or of

Homeric Greece have theirs in the remains of uncivilized religions.

2. **Natural forces and phenomena.**—The long list of personifications of physical nature shows us a constantly-recurring fact: among the objects most frequently personified we always find in the first rank those which attract man's attention either by their characteristic, exceptional, or abnormal appearance or by their apparent activity and its direct effects on man for good or ill. And if, as is probable, the understanding of the first causes and of the general manifestations of physical phenomena is beyond the intellectual power of primitive man, we again reach the hypothesis that personification originated not in the great divisions of the material universe, but in its very small fragments or portions when they seem to attract attention by an exceptional activity or power. It is therefore by isolated things, or small portions of space, of the earth or of the waters, and especially by manifestations of their energy apparent to the senses, harmful or beneficent, that personification must have arisen. This seems to be proved by an examination of the various personified natural forces, which we shall class, for convenience' sake, in the same purely artificial order as before.

(a) Thus, in the domain of the celestial we find personified alongside of regions of the heavens having no apparent rôle, like the Milky Way, all bodies whose movements and courses attract attention, and especially those whose activity seems to influence terrestrial phenomena or the state of human beings. This process of personification seems anterior to real deification and to any astrological system (see SUN, MOON, AND STARS). The personification of the solar or lunar eclipse as a hostile monster is a universal religious phenomenon and is everywhere of first importance. As a general rule we notice the pre-eminence of comets over fixed stars in their normal aspect, that of planets over the constellations, and that of the moon over the sun (generally found among uncivilized races). Here we get fresh light on the origins of personification. We also see the importance attached to the personified thunder-bolt, lightning-flash, or thunder-peal, as to all fragments of meteorites and fire-balls, and especially to the rainbow, to which so many primitive religions give an important place among sacred personifications. It is only at the second stage of religious evolution (e.g., in N. Africa, in Nigeria, among the Gallas, among the Hereros, in Ethiopia, and in Egypt—to mention only the African region) that these manifestations of the world above are connected with the personal activity of the sky-god; they become his voice, his appearance, or his material fragments (cf., e.g., the thunder-god or the ram-god of Dahomey).

(b) In the personification of air phenomena we find the same state of affairs, sometimes with more definiteness. *Aeolus* in classical mythology and the Chaldean Demon of the South Wind are only two among many survivals of a great number of persons who, before being gods or spirits, in the proper sense of the word, were the 'animation' (see ANIMISM) of the most violent and remarkable phenomena of the air. The north winds of the savages in northern regions, the tempests of the Ainu, the winds of the whole of pre-Columbian America, the storms, great rains, hurricanes, cyclones, and water-spouts of so many savage races throughout the world did not become real gods until a much later stage (China, Kanda, Melanesia, New Zealand, W. and S. Africa). Later still they became the attributes or the manifestations of great gods. But that is not to say that they were always directly personified for their own sakes. A careful examination of cases shows that these activities are usually connected with a fixed and

visible point of the material world; it is with a peak, a summit, an iceberg, or a headland that the gusts of wind, storms, and hurricanes are connected (e.g., Lake Tanganyika and Lake Victoria Nyanza, the Cameroon summits and the Ruwenzori mountains), and not with the spirit dwelling on these peaks or headlands, but, on closer examination, with the personified peaks or headlands. The problem is more difficult in personifications of phenomena such as the *aurora borealis* among races of cold countries, the St. Elmo fire, and the zodiacal light; and great caution is necessary here.

(c) But the region of 'persons' of the water (torrents, rapids, cascades, cataracts, etc.) shows the same facts (see above, I. 1 (c)), as do also the chthonian manifestations. Points where earthquakes are frequent, the volcanoes of Kilimanjaro in Africa and those of Mexico, Fujiyama in Japan, and the Icelandic geysers were personified for their own sakes, and as distinct persons, from the very fact of their activity, before becoming simply the habitat of a spirit or a god who shows his particular energy through them.

This review of the inanimate physical world and its chief manifestations of power seems to lead to the conclusion that personification (without considering yet whether it proceeds from pure animism or from a kind of dynamism) originated in man's encounter with a series of objects, and in phenomena attributed to those objects, and supposed to be endowed with will and intelligence, or at least passions, and consequently forming a personality, as primitive man understands it. But this explanation is only partial, and, as a matter of fact, the process of formation of the personality is much more complex. The naturistic world is only one part of the domain of personification.

In the very undeveloped stages of non-civilized societies we find a complete group of personifications which apparently cannot be explained in this simple way. Such an abstraction as time, e.g., seems *a priori* likely to escape personification, in the concrete sense of the word (the only acceptable sense in the case of primitive or non-civilized man). But we find that this personification is of general occurrence, in pre-Columbian America (e.g., Aztecs and Mayas) as well as in proto-historic Africa (the Nile Valley) or non-civilized Africa (Yorubas, Ashantis, Dahomans, etc.), where the 'persons' of the chief seasons or divisions of the meteorological year, of the type of the American Nipumukhe and the Pipunikhe, the Egyptian *taru*, etc., play an important part. And these are real personifications, not rôles or 'appearances' assumed by the spirits or gods, of whom these divisions of time would be simple emanations.

The problem thus becomes very complex. At first there may have been the conception of persons whose activity shows itself in a group of regular phenomena, classified by the human mind under such simple terms as 'months,' 'seasons,' etc. From this a generalization would take place in time and space of those more humble personifications which we find in the forms of personifications of germination and maturity, of the return in spring of certain vegetable or cereal species, or more commonly in the form of the 'grain-spirit' or the spirit of the crops or harvest. These minute personifications, arising partly from animism and partly from dynamism (see below, I. 4), would proceed, as in the cases mentioned above, by more and more extensive generalizations up to an elaborate series of phenomena considered in their complete evolution. But the explanation becomes very doubtful in a case of personification of larger divisions of time, such as the year (cf. PERSONIFICATION [Egyptian]), cycle, period, etc. The stellar explanation is not sufficient, for it is evident that

these 'persons' have a real existence, independent of the stars and the celestial movements to which they ultimately adapted themselves.

Taking time-divisions in descending order, we find personifications of the divisions of the season; of the month and its subdivisions into four weeks or shorter periods; then of the day and its parts, hours or their equivalents. The complicated systems of the non-civilized Far East, of Central America, and of W. Africa show independent (and sometimes ingenious) types of these groups of personifications. But here we must notice: (1) the purely conventional and artificial character of many of them, and (2) their dependence, real though often difficult to prove, on spirits or deities; these pseudo-persons are in reality dependences or 'virtues' of deities or spirits far oftener than entities with an existence of their own.

A similar reservation must be made with regard to the divisions of space, not the natural divisions which are enumerated above (I. 2 (a)), but the asymmetrical ones invented by the half-knowledge of savage races or those of a proto-historic stage—e.g., the four cardinal points of the compass, or 'celestial houses' personified. Careful inquiry shows that, in the cases studied up to the present, these divisions are always 'functions' of some spirit or deity. It may be held, on the contrary, that the spirit or god assumed the personifications, or that he was originally subordinate and became detached from them. But closer examination shows that, as a general rule, he is anterior to them. The personifications, then, always slightly artificial, depend on the god from the very beginning, and not the god on them.

3. **Manufactured objects.**—We now reach a new set of personifications, which cannot be entirely explained by dynamism any more than by direct animism—artificial divisions of the earth made by man himself, or inanimate things which man has produced or shaped with his own hands. The most characteristic examples of the former are the personified State, province, or domain; of the latter the personified human constructions (city, town, village, fortress, isolated buildings, and, most naturally, temple or chapel). Another important group of 'persons' is the vast crowd of objects worked on or manufactured by man, from the gathered sheaf of grain or bunch of plants to implements, weapons, machines, and instruments of all kinds. The most remarkable group of personifications of this type consists of constructions such as bridges, or cult-objects such as tabernacles, altars, etc. (cf., e.g., artt. ALTAR, BRIDGE), in which the distinct personality is clearly seen. We must reserve the examination of the mechanism controlling the formation of this class in the meantime; the following groups may help to explain it.

4. **Abstract ideas.**—Perhaps we may find new light in another class of personifications, which seem at first sight to proceed from a kind of animism grammatically applied by human language to pure abstractions. The personification of good or evil forces and of harmful qualities or powers, such as will, force, justice, order (e.g., the Egyptian Mā'et), health, illness, death—in a word, abstractions—is a religious phenomenon not only of universal occurrence but also of the greatest antiquity. Although our data have been enriched by hundreds of excellent new examples since the facts and arguments of Max Müller and E. B. Tylor were advanced, the theory itself does not seem to have made corresponding progress. It is wise to regard as a kind of 'disease of language' a great many personifications, which in any case do not appear to be primitive—e.g., functions or functional qualities of an intellectual kind (calculation, architecture; e.g., the Sakhmet-abui of Egypt) or of a physical kind (hunting, fishing)—and to consider many of these personified activities or characters as detached *dérial*, so to speak, of certain demons, spirits, or gods, with whom they are constantly associated in all religions; and, lastly, we must reject as artificial and purely conventional all that is comprised to-day under the very vague name of 'allegory'—vices, virtues, arts, sciences, commerce, industry, etc.—as these are late inventions to which a real personality has never been seriously accorded outside of rhetoric or poetry.

But, even after these eliminations, there remains an imposing number of abstract persons who defy any single interpretation. Is time, considered in *abstracto*, a person? The Greek *Χρόνος* points to an affirmative. Space and Destiny figure as personalities in more than a hundred religions, from the most humble to the classical systems of antiquity, and not only distinct from all the divine persons, but often superior to them or hostile towards them. Matter (Egyp. *nun*) exists in several non-civilized systems. Neither pure and simple animism nor animism working through language can explain these abstract entities satisfactorily.

Some light, however, is thrown on them by the present-day religions of some savage races. If, e.g., we look at the personification of the idea of disease, we find that abstract generalization is beyond the conception of primitive man. There are diseases, but not disease in the abstract. Every affection or pain is either the definite work of a spirit or demon or a definite person. The wealth of amulets, fetishes, and attempts at images (painted, carved, and sculptured) establishes this fact beyond all doubt. Now, fetishism proceeds from dynamism as much as from animism; e.g., in W. Africa malaria, sleeping sickness, abscesses, gastric derangements, and smallpox have special representations or separate fetishes and form persons having no connexion with each other. Similarly, Oro, the Dahoman disease-god, is originally the personification not of disease in general, but of internal bodily pain (probably lumbar or intercostal pain). There were as many real personifications as there were localized diseases and pangs, including hunger and thirst, which are real beings. It is only at a much more advanced stage that we find the personification of disease or pain in general; and still later (needless to say) that of beings such as Evil, etc. We may say that such fictions as Death holding in her hand Anxiety, Pain, and Misery (e.g., the Hel of N. European myths) are purely literary and belong to the period of the creation of myth and folklore.

Here also we apparently come to the same conclusion as in the case of the cosmographic and cosmogonic personalities: the earliest personifications were not inclusive or general, but myriads of small personalities born from objects, events, or fragmentary experiences. More thorough research into the metaphysics of the non-civilized will probably lead to the same conclusions for personalities such as Force, Health, Knowledge, etc. The religious texts of proto-historic and pre-historic Egypt are valuable here as the only written evidence of primitive thought. From them we see that there was not one physical force, but several; more than one kind of health and productiveness; twenty kinds of 'knowledge'—of deceit, of 'cleverness,' of 'magical powers,' etc.—and not one Knowledge. And everywhere the tendency of primitive personification to form separate entities reappears.

This leads us to the very important personification of death. There is hardly a single race among whom Death, under the most diverse forms, has not been a person and had its place in myth. We need not consider the stage during which it is a purely allegorical figure, as in classical and modern literature. Death personified, and a real person, is found almost everywhere. Are we to think that it also is a later generalization, and that originally there were ten or twenty different kinds of death, forming as many personalities? The nature of death among the various races (see DEATH AND DISPOSAL OF THE DEAD) seems to lead to a different conclusion. To primitive man death is not annihilation, but a rupture of several elements, all more or less perishable, but each keeping, at the

moment of what is called death, its own separate life, capable of being prolonged. Death is therefore not a state, but an energy or an act. It is always the act of a person, every kind of death being the result of the evil activity of one of these persons. Death is thus an effect, a consequence, and yet it has become, at the same time, a single personality like each of the other personified energies.

We find in many religions a Death with its kingdom, a Death with its court, ministers, and army; and this at first gives the idea of a power as ancient and as distinctly personal as the oldest gods and spirits. But the Death of so many myths and religious literatures does not belong to primitive soil. The study of African, shamanist, or Australian death shows that the earliest stage had no conception of the huge formidable figures created later by the great semi-civilized mythologies of Polynesia and S. America, the learned religions of the classical world, or the systems of N. Europe. It is even doubtful whether the Death of pre-Columbian Mexico is a distinct personification; it is more probably an attribute, a force belonging to a deity, as is the case with the supreme god of a region of Black Africa. And it should be noted here that ancient Egypt (which kept so closely to the ideas of non-civilized races in many respects) is not acquainted with a personified Death; the monster *Tiat* is not death, but the destruction which consumes ghosts.

It has seldom been remarked that death has always been personified, while life has not been personified to the same extent. There are few indications so valuable as this fact in reaching by synthesis the conception of death that prevailed among primitive men. Life was not the opposite of death. When death became a personification, it was by the ordinary process of personifying acts and energies. But life defies definition by the savage mind; it seems to be neither a state nor an energy, but, in the majority of the cases examined, a thing inseparable from various fragments of matter, and, consequently, impossible to personify separately. We can only mention this peculiarity in passing; it is common among non-civilized peoples, and may lead to important results in the study of primitive psychology.

II. CONCLUSIONS AS TO ORIGINS AND PROCESS.
—1. Personification forms.—However incomplete our enumeration of the various kinds of personifications may be, its first result is to show the (perhaps preponderating) importance of the notion of force. But how was this notion expressed? The material forms given by man to the various personifications supply important elements for the consideration of the origin and nature of personification. And, while the material classification of so many hundreds of persons is difficult, the bibliography at our disposal gives a sufficient number of distinct types for the various religions.

(1) The first category comprises anthropomorphic forms. The sex of these personifications is determined sometimes by the material objects which are their corporeal essence, sometimes by their activities, and sometimes by language. The Sun, man or woman, the Moon, of male or female sex, the Stars, of different sexes, the Father- or Mother-Earth, are examples which might be supplemented throughout the whole of the cosmographic series examined above (I. 2 (a)).

(2) Animal forms (apart from the difficult questions of zoolatry and totemism [q.v.]) constitute the second of the great classes. The ram-thunderbolt, the serpent-rainbow, the dragon-tornado, the dragon-eclipse, the white-bear-tempest, are among hundreds of examples. As a general rule, animal figures seem to be the form preferred for personifications of awe-inspiring energies, rapid action, and terrible aspect. 'Mixed' forms, i.e. half-animal and half-human, do not seem ever to be direct formations, but result from the union of two or more personalities originally distinct.

(3) Lastly, monstrous or fantastic forms, of strange or horrible aspect (e.g., the South Wind in

the Chaldaean religion), for very simple psychological reasons, are reserved for wicked personifications. An examination of the chief forms of persons of this category, as represented in the iconography of N. Europe, Polynesia, Africa, and pre-Columbian America, yields abundant facts in support of this.

But do these three forms (anthropomorphic, zoomorphic, and monstrous) represent the really primitive way of expressing personalities? An affirmative answer amounts to admitting that idolatry preceded fetishism. The study of the crudest forms of personification among savages shows a different mechanism, which at the same time gives us a closer view of the manner in which a great many of these personalities are elaborated.

Of course, we must eliminate all the personifications introduced by a later age—the purely poetical, allegorical, conventional, or grammatical—as artificial and without foundation. They are often simple pictographic devices, if we may say so, implying no real belief in a positively existing person. We shall also omit the various personalities that are merely hypostases (see below, II. 4) of deities of superior rank. They are simply linguistic or pictographic means of expression and not truly primitive.

In the first place, then, the process of pure and simple animism, as Tylor defines it (*PC*³ i. 425), and the psychological mechanism by which Keane (*Man, Past and Present*, pp. 279 f., 421, 502 f.) explains anthropomorphism (*q.v.*) are contradicted by an increasing array of facts, and it would be most incorrect to assume here (as has been so improperly done in many other problems) that the mentality of the savage is the same as that of the child. Pure and simple animism is perhaps reconcilable, strictly speaking, with the statement that in naturalist personifications the spirit is independent of the object or thing which it personifies (the system of inflexions of the Bantu languages is a striking example of this conception); but it clashes with the personifications of acts, forces, and energies. If it connects them with specifically distinct spirits or gods, it at the same time destroys the real existence of these personifications. If it allows them to exist, it cannot explain, in the majority of cases, either their characteristics or their material appearance. It is undoubtedly true that for primitive man everything lives, and that there is no such thing as an inanimate object. Everything has an *anima* (or several), and each thing manifests by its real or imagined activity the existence of a conscious voluntary principle endowed with instincts, feelings, and passions. But what do we find to be the favourite material means employed to express or fix these personalities and make them real? As a rule the forms have no direct connexion with the forms that we should expect to result from the beliefs attached to the personalities. Theriomorphism or zoomorphism, *e.g.*, is proved to be the result of most complicated processes (as is usually the case among savages, because they cannot see the simple, the general, or the synthetic); it is manifestly the product of ultra-conventional, symbolical conceptions, as far removed from the real nature of the personality which they express as, *e.g.*, the Christian representation of the dove is from the theological idea of the nature of the Holy Spirit. The most common and most ancient practice of uncivilized races was to translate and incarnate their personifications in aniconic objects.

The great number of personifications of plants, fruits, stones, pebbles, animal or vegetable debris, and especially the fantastic combinations of them made by the hand of man, are indications of vital importance. It is well known that even in the

fetishes with human or animal form (real semi-idols) the force or virtue—in a word, the soul or the person of the fetish—does not depend on the form or the characteristics of the puppet of wood (or any other material), but on the collection of bones, feathers, hairs, nails, leaves, grasses, or other substances that cover it or are fixed in its head, on its back, or in front of it. Now these medleys are not magically connected with the spirits or demons of the beings from whom they proceed; it is an entirely different personality that is named and fixed in the fetish by such collections. The relation, therefore, is not animistic. It may be objected that the fetish itself is not a person, but the momentary shelter, the abode, of a person. But even this objection (supposing it to be true for all so-called fetishes, which is far from being the case) would tend to confirm the dynamist character of the origin of personification in the instances examined so far.

2. Symbolical representations.—We shall examine briefly the methods of the dynamist expression of personifications. They are extremely varied. Sometimes primitive man proceeds by allusion to the supposed affinities of the entity to be personified with the whole class of substances the separate members of which produce part of the energies belonging to it; this is the origin of fetishes. Sometimes he proceeds in the same way, but by antinomy or antiphrasis. Sometimes he employs the animal or vegetable forms, simple or complex, by means of which the person usually manifests one of his activities (this process is quite different from direct animistic representation of the ordinary habitat of a personality; that has to do with animism properly so called, zoolatry, dendrolatry, and, later, idolatry). In other circumstances he proceeds by symbolism or sympathetic magic, representing the objects whose virtues or characteristics most resemble those of the personalities which he wishes to express (*cf.*, *e.g.*, J. Henry, *L'Âme d'un peuple africain: les Bambara*, Paris, 1909, p. 212 ff.). Sometimes there are allusions (very difficult for us to understand) to the virtues expressed by colours, personifying some superior force, or by lines, strokes, or geometrical combinations, or by stones whose clearness, brilliancy, and texture are the material expression of the qualities of the personality. Easier to understand are the processes which express the conception of the personality in lifelike representations, by association of ideas, the effect for the cause, or *vice versa*—*e.g.*, the effects of inundation, fire, death, or disease—by material allusions or by symbolical parallels, by means of objects that suggest to the mind their first causes or, on the other hand, their results; examples are the personification of thunder by fragments of stone or meteorites (which later become the basis of litholatry), the use of horns to personify strength, and of all kinds of brilliant objects to personify light, etc., or the representation (in Dahomey) of a pole painted blue, with red dots, to personify smallpox (because the body of a black-skinned person suffering from this disease assumes that appearance). In the anthropomorphic class the different personalities of the various pains and physical ills (including hunger and thirst) are translated by the representation of the result of their energy—a man with a twisted neck to personify wryneck, a man as thin as a skeleton to personify consumption, etc. This class is unlimited and includes all kinds of expressions of good and bad personifications. It leads, by extension, to the representation of the personality by the figure of a being who, in character or powers, comes nearest the activity imagined in the personality represented—an important process, as it is the origin of fully half

of the zoomorphic or theriomorphic figures. A still more curious development is the materializing of the personification in the representation of an object which produces effects similar to those produced by the personality to be expressed; the stick, the sword of hard wood, the arrow, the lance, the stone axe, and the imitation of lightning are the most remarkable examples of this class. It has had a most important result, in the much later idea of placing these representations in the hands, on the head, or on the body of images with human features, in order to complete, by gesture or attitude, the manifest expression of the activity displayed, and it has contributed in large measure to anthropomorphism and idolatry.

3. Personification of energy.—These examples are perhaps sufficient to throw a little light on the difficult question of the origins of personification. The originating elements are many, and there is every appearance that all have been active separately and from the very beginning. It cannot be denied that pure and simple animism was first responsible for a large number of the persons believed to exist in the physical world of rocks, mountains, waters, winds, etc.—in a word, of nature broken up into thousands of objects. Direct animism also explains the personality given to the products manufactured by man. The need of concrete images of words, even the most abstract, the need of giving them, so to speak, flesh and bones and visible attributes, was also the source of a number of personifications, and for this grammatical animism the views of Tylor, correcting the exaggerations of Max Müller, are an excellent scientific basis.

But, besides these forms, and at the same time, another feeling led primitive man to personification. Neither the *mana* nor the *orenda* of recent theories seems to define it exactly, any more than the 'feelings of immensity' or of 'incoercible force' of F. B. Jevons's ingenious theory (*Introd. to the Study of Comparative Religion*, p. 114 ff.). Conceptions so strongly synthetic are beyond the mentality of the savage. If we may make an attempt at a more correct explanation, primitive man seems to have confusedly guessed the existence of an impersonal force, united to matter, distinct and different from spirits, demons, or gods, whose existence and activities he also recognized. He never attempted to define this force theoretically; he did not even try to conceive it in its unity any more than he could, in the case of matter itself, do anything but perceive some of its fragments or aspects. But here and there he discerned its manifestations, either in duration (e.g., the seasons) or in space (e.g., the celestial regions or quarters of the sky), or in both at once (e.g., germination), or, lastly, in the encounters with invisible forces which he experienced. Whenever he discerned these more or less fragmentary manifestations, he detached them from the mass of the inaccessible and the unknown, and by this very act he created a personification. It became detached from the whole with the same ease which in developed religions gives so many multiple souls, essences, or attributes to one and the same god.

4. Personification and syncretism.—This capacity of breaking up into different personifications a single force confusedly surmised (but never seen) justifies one of the most noteworthy characteristics of the evolution of the savage's notion of personality.

Such personalities were naturally, and by previous definition, deprived of all moral character. They had, for good or ill, only the qualities which best explained the physical manifestations whose activity had led man to imagine as first causes of

such activity the existence of certain persons. Now, this is something entirely different from anthropomorphism—though many writers (e.g., Jevons) have imagined it to be so originally—viz. that man proceeded by first imagining beings like himself, and then endowing them with passions and manifestations of energy similar to his own. Certainly, when primitive man, in order to define the appearance of these personifications, tried to realize their desires, appetites, instincts, passions, and beneficent or harmful emanations (benevolence, anger, pity, resentment), he had no other resource in his thought, still less in his spoken thought, than to use as models the images and words which he used of himself. We often do the same when our poor terminology forces us to say 'God hears,' 'God sees,' He 'understands,' He 'is grieved,' or He 'pardons,' or even when we say that He 'knows.'

A discussion on this point would be useless, as it is merely a question of terminology. At bottom the process of ascribing a character to a certain personality has resulted chiefly from the supposed experience and the knowledge claimed of its material manifestations, by observing the most characteristic phenomena of the life of nature—its winds, its waters, its various aspects, and its apparent convulsions. These are the essential characteristics of all these personifications; and the inevitable consequence was that they must have been originally totally indifferent to the human being. They were neither friendly nor hostile to him (these words are devoid of meaning to primitive man). They lived and showed their powers in the direction which satisfied their aptitudes and needs. Where man felt their activity to be helpful or harmful, they were in the end classified as good or bad. But this process was very slow, for the effects of the activity of those persons on the human being determined the relations of reverence and fear, and suggested inveigling them long before men thought of loving or hating them. Such relations, aiming at self-protection or utility, were neither hostile nor friendly; they were utilitarian. They were not measured by the theoretic power of the personæ, but by the frequency of the relations with man. A far-off and quasi-inactive personification, like the sky, e.g., may be among many uncivilized races the most ancient, powerful, and remarkable of personifications, while at the same time it is the one with which they are least concerned, and to which they pay only the most meagre of reverential or propitiatory rites.

This simple formation of the characters of personifications from observation explains syncretism—in a way which at first sight is almost paradoxical—much more easily than it could be explained if the question of moral qualities had to play a part. As a matter of fact, the conferring on a certain personification *par excellence* of a separate definite activity, then later of a permanent activity (equally definite), has given rise to specifically functional personifications. But, in proportion as the complexity of an activity of nature was better understood by man, he detached from the first personification separate new personalities, corresponding to the separate new forces which he understood. But such a mechanism, by its very facility, must just as easily work in the opposite direction. For at the same time the advance of thought and research on the principle of causality was constantly connecting with each other successions of activities at first believed to be separate, so that, alongside of the continual multiplication of personifications by more complete knowledge of the complexities of life, there was found in the world a gradual (and not less continuous) uniting

of personifications originally separate. Thus new persons constantly appeared, and the former ones at the same time gradually merged into each other, by the play of the multiple souls of a single being or by the theory of 'aspects' or that of hypostases of one and the same person. In this incessant double process a sort of primitive syncretism tended to evolve. Sprung at one and the same time from the various animisms and from what, for want of a better name, we must call dynamism, primitive personification, having reached this point, enters the sphere of semi-civilized and advanced religions (for which see the following comparative articles).

GEORGE FOUCART.

PERSONIFICATION (Egyptian).—I. Scope of the article.—In this article it is intended to deal only with those deities which can reasonably be called 'personifications'; and these are deities of which we have reason to believe that they were suggested more by inward reflexion than by observation of external things—deities, in fact, in which the conceptual or thought element looms larger than that of sense or perception. The distinction is an artificial one, for the act of deification obviously implies a highly conceptual view of the thing deified; the sun, *e.g.*, though an object of perception, could not have become a god except through certain qualities of power and the like attributed to it. The value of the term 'personifications' as a means of classifying our facts is that it enables us to attack the problem of god-making at its nearer and more easily explorable pole. Starting with gods of a highly abstract character like Hike, 'magic,' we thence pass on to more concrete deities—*e.g.*, personified geographical terms like Amentet, 'the west.' At the borderline of our subject are certain psychical entities like Bai, 'soul,' Khaibet, 'shadow,' and symbolic deities like Shesmu, the god of the 'oil-press' and 'wine-press,' and Meskhenet, the goddess of the 'birthplace.' Beyond the border we find it convenient to place nature-gods, animal-gods, fetishes, and all classes of gods whose names immediately evoke the image of particular objects or phenomena in the visible world.

The propriety of including symbolic gods under this head might be questioned on the ground that their names, unlike those of other personifications, do not correspond to the precise thing that it is intended to personify, but symbolize it by a generalized concrete object intimately connected with it, to which personality is attributed. Thus Shesmu is the god who presides over vintnery and the production of oils, but his name does not signify these activities, but means the 'press' used in connexion with them. From the Egyptological point of view, however, it would be inadvisable to separate this category of deities from those which can more justly be called personifications; Meskhenet, 'birthplace,' *e.g.*, is usually found associated with Shay, 'fate,' or Renenet, 'nursing.'

The ground to be covered in this article has been demarcated in reference to the psychological notions of perception and conception, but we might equally well have defined personifications in terms of 'things' and 'names.' The Egyptians seem themselves to have regarded the matter in that light, for the following words are put into the mouth of the god Hike: 'I am that name which the Sole Lord created, when as yet there were no two things upon the earth' (P. Lacau, *Textes religieux égyptiens*, Paris, 1910, no. 78, line 5 f.).

2. Personification and language.—Language is full of metaphor from personal life, and, since the meaning of every name is coloured by the predicates and epithets used in connexion with it, a sort of animatism is involved in all speech, as, indeed, it is in all thought. But, when the Egyptian says that a fire 'gives' warmth, or that right 'brings' its venture safe to port, it is hardly correct to cite this as sufficient evidence of personification; the speaker may have been utterly unaware that his expressions implied the attribution of personality either to fire or to right. A second Egyptian, on the other hand, in the moment of pronouncing the same phrases, may have had a dim mental image of fire and right as persons, in which case personification of a rudimentary and momentary kind would undoubtedly be involved. Language, then, using personal metaphors, does not necessarily attribute personality, though it provides a fertile soil out of which a more real because more conscious and permanent personification springs up almost inevitably.

3. Causes of personification.—(a) *Analogy.*—We are not here seeking the origin of the earliest gods, and are therefore entitled to start our inquiry at a point of time when the Egyptians already possessed a multiplicity of deities. It seems obvious that in such an atmosphere new deities would be created with the utmost ease, if only to sustain the character and style of a mythological passage. When it was related that the sun-god Rē emerged upon a lily from the primeval waters, called Niu or Nūnu, it became almost inevitable that those waters should be spoken of as engendering Rē, and the repetition and variation of the same theme would soon convert Niu or Nūnu into a fully-fledged deity, whom Rē addressed as 'my father,' and who was accounted 'the eldest god.' In quite different contexts analogy and close association might work very similar results; thus in one Theban tomb the 'lifetime' (*ahie*) of the deceased owner and the 'false door' (*ahie*), where offerings were laid before him, are exceptionally co-ordinated with 'his soul,' 'his fate,' and other entities both here and elsewhere considered divine; and in the next sentence all the substantives thus co-ordinated are referred to as 'these gods' (N. de G. Davies and A. H. Gardiner, *Tomb of Amenemhêt*, London, 1915, p. 99 f.). This is an instructive instance of the way in which gods were artificially multiplied.

(b) *Pictorial art.*—A second highly important cause of personification was the wide extension given to painting and sculpture as a means of recording ideas and facts. The inability of pictorial representation, as such, to meet all the exigencies of expression imposed by thought and language early led to its bifurcation into the two separate branches of illustrative art and hieroglyphic writing (*Journal of Egypt. Archaeology*, ii. [1915] 71-75). These two branches pursued their development *pari passu* and in constant combination with one another, and it not seldom happened that one of them encroached upon the domain of its fellow. There can be little doubt that the actual step involved in personification was often due to an encroachment of this kind; sculpture encouraged personification by usurping the function of writing and by attempting to express pictorially things which in reality rather called for expression in language or writing; *e.g.*, a frequent theme in the adornment of early tombs was the bringing to the deceased of funerary supplies by his country estates; the latter, however, could hardly be depicted otherwise than by allegorical methods; the word for 'estate' (*nēet*) being feminine, it was natural to represent the list of contributing estates as a procession of women with offerings in their hands. The adoption of the pictorial medium may

¹ The writer is deeply indebted to Dr. A. Wolf for valuable criticism and advice in the use of terms.

thus have been the accidental means by which the image of a personal agent became perpetuated in the minds of the Egyptian in connexion with names of things that had hitherto evoked no very definite or tangible images. In the early temples this procedure was extended. The obvious analogy between the fruitfulness of the provinces and the fertility of the Nile was seized upon by the artists, who depicted the provinces in the image of the Nile-god, giving to them, as to him, the head of a male deity but the milk-laden breasts of a mother. Nor did this artificial multiplication of gods end here; material prosperity could almost equally well be attributed to such abstract causes as 'riches,' 'peace,' or 'health,' or else to general conceptions like 'seed,' 'summer,' or 'creative command'; all of these might accordingly be represented in human shape, their sex being determined by the grammatical gender of their names. It is noteworthy that these wholly artificial beings are apt to be associated in the sculptures with deities of a far less dubious character—a fact which could not fail to assist the legitimization of their existence; by this are meant a readiness to consider them on the same footing as the old, universally-recognized gods, and an absence of any feeling that they were mere inventions of the mind, not to be taken seriously.

For some early and typical representations of this kind see L. Borchardt, *Das Grabdenkmal des Königs Sahu-rē*, Leipzig, 1913, vol. II. plates 20, 29, 30, with the comments by K. Sethe, pp. 99 f., 108 f.

(c) *Writing*.—Egyptian hieroglyphic writing, being born in the fashion described above (b), never succeeded in purging itself entirely of its original pictorial elements. These survived, in particular, in the class of signs known as 'determinatives,' which are simply picture-signs placed after phonetically written words in such a way as to determine or suggest their meaning. All written

names of gods are followed by the sign , repre-

senting an ordinary male deity, or else by , the

falcon-god Horus, the type of the gods, upon a standard such as was carried in religious processions; the latter was the earlier method. Goddesses similarly were indicated by the presence of

the sign , for which is sometimes substituted

either one of the two determinatives of male deities or else the image of the typical serpent-goddess, Buto, . Now this very habit of writ-

ing, together with the fact that only few words were allowed to dispense with determinatives, would naturally tend to bring the question of personification or non-personification actively into the field of consciousness. For Egyptologists the presence or absence of such determinatives is the most natural test: when, e.g., we find the word 'life' with this clear meaning and determined with a sign of divinity, then we can hardly refuse to speak of it as personified.

(d) *The fundamental cause*.—The causes of personification considered hitherto are, however, contributory rather than fundamental. At the root of all god-making lies a respectful attitude of mind towards certain phenomena, physical or mental, arising from a consciousness that they are sources of power difficult to control, yet necessarily to be reckoned with. It is in connexion with either the practical or the intellectual interests of mankind that this respectful attitude of mind manifests itself, and a broad survey of the concepts personified will show that they represent either

facts that have a direct bearing upon human welfare or notions that appeared essential to a mythological interpretation of the world. Of course personification did not always necessarily follow immediately upon the realization of the importance of a conception; it is a definite, more or less conscious step taken at a given moment. Psychologically considered, personification appears to be the reaction against the vagueness and consequent elusiveness of conceptions as compared with perceptions—in other words, the tendency, upon realizing the forceful, influential nature of a phenomenon, to form a mental picture of it more vivid and therefore more in accordance with its supposed importance. The method in which this was done will be explained below; meanwhile it must be said that, looking beyond this general statement, we cannot really account for the selection of the concepts personified except as due to chance, i.e. to causes too complex to be summed up in one general formula. Certain points, however, stand out clearly. There is sometimes an alternative to personification: attributes deemed of importance may attain to a sort of personal reality by being made characteristic of one or other of the great gods. Thus Thôth became the god of learning, Ptah the god of handiwork, Min the god of procreation. Personification and attribution may co-exist; e.g., Mā'et, the goddess 'right,' is found beside Ptah, 'the lord of right' (*neb mā'et*). Affiliation often serves as a means of reconciling the two; the sun-god Rē had a clearly-marked ethical aspect, and in consequence Mā'et was described as his daughter. A point of a different kind worth noticing is that, on the whole, the personification of evil things was avoided in Egypt; Sôd, 'fear,' is one of the rare exceptions. This reluctance to attribute power and importance to what is bad speaks volumes for the optimistic outlook of the Egyptians.

4. *Personification and visualized form*.—All personification, by definition, involves a certain change of appearance, visual or other. Let us consider what happens when the sky is personified, though strictly this example lies beyond the scope of the present article. Language and thought being unable to escape from the human analogy, it follows that the more 'meaning' the sky acquires, i.e. the more numerous the attributes and functions ascribed to it, the less able will the perceived physical reality be to do justice to the augmented conception as a whole. Clearly the deliberate positing of a personal agent in place of or beside the perceived reality will provide a much better peg upon which to hang the previous and subsequent conceptual accretions, and will allow of the expression of these in much more vivid, because more personal, language. The visual sense being by far the most important of the senses, personification usually manifests itself in a visual form, whether this be actually externalized (sculpture or painting) or merely implied by verbal imagery. Sometimes one word is kept for the physical reality, like *pet*, 'sky,' while an old synonym is employed for the personified concept, like Nut, the heaven-goddess. In the visual forms that personifications assume the specific characteristics of the things personified tend to be indicated: the Nile-god has the swelling breasts of a mother and a body covered with wavy lines suggesting water; Nut, the heaven-goddess, forms an arch with her body, supporting herself with hands and feet above the recumbent earth-god, Geb; the 'external manifestation,' *bai*, is a bird with human face, the bird-like appearance apparently being intended to symbolize the ease with which the *bai* could ascend to heaven and take a place among the stars; the *ka*, or 'character,' being nothing more than the

spiritual image of a man, follows the changes of his growth, the *ka* of the child being a child, and the *ka* of the grown man being a grown man. Elsewhere cruder methods are used for representing the specific character of a personification: Sokhet, the marsh-goddess, is sometimes shown with a plantation of reeds and flowers placed upon

her human head; Mā'et, 'right' () wears

the feather which for some unknown reason is the symbol of right; Sia, 'understanding,' either has his name written in hieroglyphs over him or else

has the characteristic phonetic sign () in the

written word *sia*¹ actually touching his head. Personification, curiously enough, does not always demand that the deities which it forms should be depicted outwardly in the form of a person; all that is demanded is that there shall be some concrete and easily visualized rallying-point round which the attributes of personality can group themselves. The harvest-goddess Ernūtet is represented either as a woman with the head of a cobra or as completely a cobra; this is doubtless because that snake was so frequently found among the ripe corn. The names of certain personifications may suggest concrete symbols of this kind (symbolic gods); thus Shesmu, the god of the wine-press and of the oil-press, really personifies the making of wine and oil, which is symbolized under this mental image; the picture of the wine-press occurs incidentally in the hieroglyphic writing of his name, and it is doubtless mere accident that the god himself was not pictorially represented in that form.

5. Degrees of personification. — In its most rudimentary form personification was, for the Egyptians, little more than a natural mode of emphasis, analogous to our use of capital letters in writing. But between this embryonic form of deification and the most fully developed personifications almost every stage of growth can be observed and exemplified, until at last there is no distinction between them and the principal gods of the pantheon. Indeed, the main interest in the study of personifications is the prominence which it gives to the fact that the vast majority of gods¹ differ from them not in kind but only in degree, that their characteristics are not those of real persons, as the language of the older school of mythologists would often seem to imply, but that, since they are merely concepts decked out in the semblance and trappings of real persons, their individuality is at all times of a very precarious, unstable, and indefinite kind. Their gradual acquisition of substance and externality can nowhere better be seen than in the evolution of a personified abstraction. The metaphors of language, as we have seen (§ 2), give the primary impulse; but it is to sculpture and, in a less degree, to ideographic writing (§ 3 (b) (c)) that is largely due the definite creation of a personality that is visualized with some clearness and even with a certain measure of consistency (§ 4). Around this nucleus the theologians and the myth-makers weave their tissue of legends and adulatory epithets, each new tale and each new title adding to the appearance of objective reality, making the personification more lifelike. At last men may be prevailed upon even to worship it. The history of Hike', 'magic,' may serve us as an illustration. Originally perhaps a mere descriptive term predicated of individual acts of a certain mysterious

quality, it first becomes a collective term for a number of such acts, and then a designation of the particular quality that they possess in common.¹ As such Hike' is described in the Pyramid Texts as speaking threats against unfriendly gods. Thanks to exaggerated verbal imagery of this kind, Hike' is next found in the Vth dynasty, depicted upon a temple wall as a male deity at the head of a procession of personified districts. This development marks his definite entrance into the pantheon; henceforth it is easier to describe the functions of magic in reference rather to the vividly remembered image made familiar in sculpture than to the remote and somewhat elusive concept, and mythical traits now tend to be invented which have but little relation to the observed facts that gave rise to the word 'magic.' The process, we must be careful to observe, is one not of substitution, but of differentiation; the old general term *hike'* continues to exist and have its uses, but side by side with it is the conception of a god Hike', which comes into play when the mind, so to speak, is differently attuned, when the imaginative, emotional tendencies are being given more rein. In a Middle Kingdom text Hike' figures as a deity created by the sun-god Rē-Atum 'when as yet no two things existed'; and from his activity as deputy of the sun-god sprang all living things. The fantastic idea now gained currency that dead men might become reincarnate in the likeness of so potent a divinity, and spells having this end in view were invented. Next Hike' is found escorting Rē through the nether world, as he sails by night underground from west to east; in the temple of Luxor we behold him in attendance at the birth of a new Pharaoh. Lastly, in Græco-Roman times, he is discovered at Esneh as the son of the god Khnum and the goddess Nebuu, actually receiving a cult under the name of Hike'-pe-khrōd, 'magic-the-child'; here doubtless his image, visible and tangible and as living as any god can ever become, was preserved in its own shrine and attended by his own priestly servants. It is not maintained, of course, that Hike' ever took a place among the highest gods of Egypt, but in the end he appears to be hardly at all more spurious than the best of them.

On Hike' see an article by the present writer in *PSBA* xxxvii. [1915] 253-262, also *ib.* xxxviii. [1916] 129.

6. Instability of personifications. — (a) *Instability of visual form.* — There was very little stability as regards the outward forms of personifications; nor were human shapes necessarily prior to animal or other shapes. The goddess of the harvest, Ernūtet, was a cobra-goddess from the start. A good instance of a god with secondary and variable animal shapes is Shay, 'fate,' who in his earliest occurrences—*e.g.*, in the papyrus of Ani (ed. E. A. W. Budge, London, 1913, vol. i. pl. 3)—is human-headed. Later, and perhaps through assimilation to the creator-god, Khnum, he is represented as a goat (Budge, *Greenfield Papyrus*, London, 1912, pl. 108); and later still the writing of his name shows him to have been imagined in the form of a serpent, or else in the semblance of the animal of Seth (see G. Möller, *Die beiden Totenpapyrus Rhind*, Leipzig, 1913, p. 54, no. 370). Symbols can likewise be secondary. The spelling of the god     Sekhem, 'power,' in the

Pyramid Texts shows that he was not at that time invariably considered to manifest himself in the outward appearance of a sceptre (a word for sceptre is *shn*); but in the temple of Abydos we see sculptured upon the walls a sceptre accompanied by the words 'Thōth, *shn* of the gods,'

¹ Some gods, of course, were really persons. The Pharaoh was a god, and a certain number of human beings, both kings and private persons, were deified after their death. See art. *HEROES AND HERO-WORSHIP* (Egyptian).

¹ This is mere hypothesis; see below, § 8, *ad finem*.

where *šhm*, 'sceptre-power,' is the abstraction 'power' visualized in the form of a sceptre, imbued with personality, and finally identified with Thōth.

For references to *šhm* see W. Spiegelberg, in *RTAP* xxviii. [1906] 164.

(b) *Singularity and multiplicity.*—The very individuality of personifications was of a dubious quality. We have just seen that Sekhem, 'power,' could be merged into Thōth and so lose its identity and independent existence. Some different examples of a similar variability must now be quoted. Meskenet, goddess of the birthplace, at some moments appears with a single, distinct personality of her own, as a deity accompanying the other divinities of birth (Khnūm, Heqet, etc.) from childbed to childbed, there determining the length of life decreed for the new-born babe. Elsewhere, however, we gather that every man possesses his own Meskenet (Davies-Gardiner, *loc. cit.*); according to Abydene tradition, there were four goddesses of the name (R. Lepsius, *Todtenbuch der Agypter*, Leipzig, 1842, ch. cxlii.), who were sometimes identified with Tefēnet, Nut, Isis, and Nephthys respectively (e.g., Lepsius, *Denkmäler*, iv. 82a). So too we have Sia, 'the god of understanding, but elsewhere we read of the personified understanding of every god (K. Sethe, *Die altägypt. Pyramidentexte*, Leipzig, 1908, no. 411).¹ Even old-established gods might multiply their personalities in a similar way. Khnūm, e.g., not only acquires a new and separate personality for every new locality in which he was worshipped, but he is also on rare occasions named as a private creator-god of whom every man might possess an example of his own (Davies-Gardiner, pp. 99, 113). In short, the world of deities reflects, on the one hand, the unity, on the other hand, the infinite variability, displayed in the mental world; it can differentiate and identify in the same manner as thought can distinguish and compare. No rule can be set up as to whether a god will first manifest himself as a unique or as a multiple being: in the case of Khnūm we can hardly doubt that Khnūm, absolute, preceded 'his (particular) Khnūm.' On the other hand, personified *ka*, 'character,' clearly started as a general term, innately deified and varying with each individual possessor of a *ka*; nor is it until the New Kingdom, and then only very rarely indeed, that *ka* is found as an absolute, single deity, equivalent almost to our 'Providence' and apt to be equated with the Nile as the fount of all well-being. About the same time it became usual to attribute to the sun-god Rē and to his descendant the Pharaoh a stereotyped list of fourteen *kas*, or attributes, each of which had its own specific nature and name, such as 'power' or 'brilliance.' They are often depicted, together with a series of female counterparts, in the late temples.

The hitherto unrecognized meaning 'Providence' for *ka* (e.g., J. F. Champollion, *Monuments de l'Égypte et de la Nubie*, Paris, 1835, pl. 254; H. Brugsch and J. Dümichen, *Recueil des monuments égyptiens*, Leipzig, 1862-85, iii. 92) is due to the same order of ideas as that which connected the *ka* with *šay*, 'fate,' Gr. *ῥαῖς* or *Ἀγὰρ* (see W. Spiegelberg, in *Z. xlix.* [1911] 126). For the fourteen *kas* of Rē see *PSBA* xxxviii. 83-89, 94 f.

Singular personifications were viewed under two aspects: (1) as forces acting at the moment in which they are spoken of, and (2) as historical characters whose existence lay in a far distant past. To these is sometimes implicitly added a third and future aspect—e.g., when we find the hope expressed that a dead man may assume shape as some personified being like Hike' (§ 5).

7. *Personification and cult.*—There is no inherent reason why personifications even of abstract ideas should not become the objects of a cult, but as a matter of fact few of the deities dealt with in this article were ever honoured in that way. The one really important exception is the *ka*, the personified character or individuality of a man; this was

¹ Hereafter quoted as *Pyr*.

supposed to cleave eternally to the tomb after the death of its owner, and from the earliest times both kings and their subjects possessed 'servants of the *ka*,' or '*ka*-priests,' who administered to their cult. Of Renenet and Meskenet (§ 9 (a) 5, (I) 1) we read in the XVIIIth dynasty that offerings were made to them among other gods at Speos Artemidos (Sethe, *Urkunden des ägypt. Altertums*, Leipzig, 1906, iv. 389). Hike', as we have seen, was in Greek times worshipped at Esneh (§ 5). Seshat, the goddess of writing, seems to have had a cult even in the earliest periods. When, however, priests of Mā'et and Hike' are mentioned in Old Kingdom tombs, it must not be at once concluded that those deities possessed temples and an organized cult of their own; it is clear from the contexts that the holders of these titles were always judges or doctors respectively, and it may well have been merely the exercise of these secular functions that constituted the ritual of their priesthood.

8. *Personifications and epithets.*—We now return to a subject touched upon already in § 3 (d). In the light of the last paragraphs personifications now appear as conceptions inflated with a new and spurious mode of being, which they enjoy, so to speak, in their own right, not by virtue of a parasitic existence as attributes or epithets. The most perfect examples are infinitives personified, like 'Onekh, 'life,' 'Aut-ye, 'elation of heart,' 'joy,' for the infinitives are by their very nature abstract and withdrawn from the actual objects, here living creatures and joyful beings, from which they derive their essential characteristics. In Egyptian texts, however, a technical difficulty prevents us from recognizing such personifications as easily as we could wish; no vowels being written, it is seldom possible to discriminate personified infinitives from other personified parts of speech. Hence it is usually necessary to examine the context very carefully in order to decide whether an apparent personification is really such or is an epithet. Epithets may be participles, adjectives, or common nouns, or may be paraphrased by expressions like 'lord of right' instanced above (§ 3 (d)). The important feature of epithets is that they serve to qualify, not the idea inherent in themselves, like personifications, but deities whose existence is quite independent of them, resting upon wholly different postulates. Thus, when we come across the god *šhm*, the question arises whether this means 'power' in the abstract or 'the powerful one,' referring allusively to Osiris or to some other god. This the context alone can settle.

The above statement must not be read to mean that all personified abstractions are in the infinitive. On the contrary, Egyptian, like other languages, often conveys the idea of the abstract through the concrete; e.g., the name of the goddess Mā'et, 'right,' is probably a feminine participle, 'she or that which is direct,' Gr. *τὸ δίκαιον*, the Egyptian language expressing a neuter sense by means of the feminine gender. Why 'writing' should have been personified as a goddess and not as a god is obscure; the name Seshat possibly, but not certainly, means 'she who writes.' Hike', 'magic,' is a substantive personified; but whether the nominal formation involved in this name is one appropriate to common nouns or to abstractions is beyond our knowledge. On symbols see above, § 4.

9. *The more important personifications.*—Completeness is here out of the question, and the following enumeration is intended merely to give some idea of the field covered, and of the various degrees reached by personification in different cases. The vocalization of the names is usually quite hypothetical, and the classification makes no pretence to have a scientific principle.

(a) *Life, death, fate, etc.*—(1) 'Onekh, 'life,' depicted as a Nile-god (J. E. Gautier and G. Jéquier, *Fouilles de Licht*, Cairo, 1902, p. 25, XIIth dynasty). He is also named on the Turin altar (*TSEA* iii. [1874] 112), a monument of quite late date, not of the VIth dynasty, as sometimes supposed. Elsewhere he appears with head of *cruz ansata* and body and limbs of a man, carrying a divine banner (e.g., A. St. G. Caulfield, *The Temple*

of the Kings at Abydos, London, 1902, pl. 14, XIXth dynasty); this is a mere decorative device.

(2) Mout, 'death,' only once in a poetical passage of late date; see art. LIFE AND DEATH (Egyptian), § 4.

(3) Sonb, 'health,' as Nile-god (Gautier, *loc. cit.*); in an incantation where parts of the body are identified with various duties, 'thy intestines are health' (A. Erman, 'Zaubersprüche für Mutter und Kind,' verso, 5, 4, in *ABAW*, 1901); see also *Pyr.* 1190.

(4) Shay, 'fate,' Gr. *ψαῖς* and *Ἀγῶς* *Δαίμων*, in one place described as *ὁ μέγας δαίμων ὁ φρονιμώτατος* (see Möller, *loc. cit.*), and, for his various visualized forms, § 4). For the *shay* of individuals see Davies-Gardiner, *loc. cit.*; 'his *shay*' is later sometimes substituted for 'his *ka*'.

(5) Renenet, 'nursing,' personified as a woman; to be carefully distinguished from Ernēt (I (3)); often coupled with Shay (A (4)) or with Meskenet (I (1)); at Edfu identified with Seshat, the goddess of writing (Lepsius, iv. 410). For the *renenet* of individuals see Davies-Gardiner, *loc. cit.*; for her cult, above, § 7.

See also 'Ab'e, 'lifetime' (§ 3 (a)); Meskenet, 'birthplace' (below, I (1)); and, for the creator-god Khnum, § 6 (b)).

(6) *Attributes of living beings.*—(1) Ma'a, 'seeing,' and (2) Sözem, 'hearing,' in late times depicted as male deities; there was also a combined deity Ma'a-Sözem, 'seeing-hearing.' Cf. *PSBA* xxxviii. 85, n. 13.

(3) Hu, 'commanding utterance,' and (4) Sia, 'understanding,' two personified abstractions of considerable importance (see *PSBA* xxxviii. 43-54, 83-95). They are represented as male deities in the train of the sun-god, who created them by an act of self-mutilation. According to one fable, it is to them that the universe owes its existence—a Memphite variant of the tale makes out Ptah to be the cosmic god, from whom emanated Horus as 'tongue' and Thoth as 'heart,' i.e. intellect. Among the fourteen *kas*, or attributes, of Rē Hu, as an active agency to whom material prosperity can be ascribed, is coupled with Zefa, 'plenty,' whence Hu has often been misunderstood to signify 'food' or 'taste.' When associated with Zefa, and rarely, too, when associated with Sia, Hu is one of a pair of Nile-gods; but Sia, as the more passive attribute of the two, is seldom regarded as a source of material prosperity and only once is found named among the *kas* of Rē. Hu and Sia are two of the chief attributes of royalty, and as such are often associated with Ma'et. Lastly, Hu seems to have been one name of the Sphinx—the image in which the power of Pharaoh and that of the sun-god Atum often found expression.

(5) Sekhem, 'power' (see above, § 6 (b), 8).

(6) User, 'influence,' and (7) Nakht, 'vicinity,' are names of two of the fourteen *kas* of Rē.

(8) 'Aut-yeb, 'elation of heart,' 'joy,' as a woman (Borchardt, pl. 30, Vth dynasty); also on the late Turin altar (*TSBA* iii. 112).

(9) Hab, 'sport' or 'festivity,' as son of Sökhet, 'country' (J (3)) (*Pyr.* 555).

(10) Sond, 'fear,' depicted in human shape on the sarcophagus of Sethos I., but with lion's head on later monuments (R. V. Lonzzone, *Dizionario di mitologia egizia*, Turin, 1884, p. 1079f.; *RTAP* xxv. [1903] 30). At the festival of Osiris his image occupied one of the thirty-four illuminated boats used in the ceremonies (*RTAP* iv. [1883] 28).

(c) *Attributes of living persons and their actions.*—(1) Hike', 'magic' (see above, § 5). He is also named as one of the fourteen *kas* of Rē.

(2) Mä'et, 'right,' the most frequently mentioned of all personifications. Her name appears to mean 'that which is straight or direct' (Lat. *rectum*), whether ethically ('right') or intellectually ('truth'); this suggests that the conception of her may have been born in the law-courts, where both aspects come into play at the same time. Sometimes we find the goddess conceived of as double (Mä'yt, 'the two rights' [already in *Pyr.* 317]), perhaps in allusion to the rival claims of two litigants. Mä'et is figured as a goddess, either sitting or standing, with a feather on her head. In mythology she is the daughter of Rē and closely related, probably as spouse, to Thoth, the god of regularity, law, and learning. There are no clear indications that she possessed a real cult in early times (see above, § 7). On Mä'et see A. Wiedemann, in *AMG* x. 561 ff.; Lanzzone, pp. 276-280; H. Brugsch, *Religion und Mythologie der alten Ägypter*, Leipzig, 1890, pp. 477-482; Budge, *Gods of the Egyptians*, London, 1904, i. 416-421.

(3) Seshat, the goddess of writing. Her name may mean 'she who writes' or 'she who paints' (the verb has both senses), but she was more often referred to by the epithet Sakhket-'abui, 'she who puts off the two horns.' This epithet would appear to hint that she was originally a cow-goddess, who had taken to a less bovine occupation; but her identity with Isis-Hathor, though well attested for late times, is not proved for the Old Kingdom. If such were her real origin, she could hardly rank as a personification in the sense of this article. Seshat possessed priests of her own at a very early date, and appears to have been associated with Thoth at Hermopolis Magna, though for this the evidence is not very early. She was the goddess of painting as well as of writing, and presided over the ceremonies connected with the planning of temples and other buildings. She was represented red in hand and usually sitting. She wears a skin and has on her head a kind of rosette with seven or five rays (*sht* can mean 'seven'), above which and separated from which is seen what may be interpreted as the horns rejected by the goddess; the combined head ornament is perhaps a mere *rebus* for the name Sakhket-'abui. See the very detailed art. 'Seshat' by G. Roeder, in Pauly-Wissowa.

(d) *Attributes of the external world.*—(1) Hetpet, 'peace,' depicted as a woman (Borchardt, ii. pl. 30, Vth dynasty).

(2) Zefa, 'plenty,' depicted as a Nile-deity (*ib.* pls. 25, 29, Vth dynasty; Gautier, p. 24, XIIth dynasty; E. Naville, *The Temple of Deir el Bahari*, London, 1901, iv. 110, XVIIIth dynasty); in all three cases together with Hu, 'commanding utterance' (above, b (3)). Hu and Zefa occur later also as two of the fourteen *kas* of Rē (see above, § 6 (b), *ad fin.*). For Zefa as a Nile-god associated with Hapy, 'the Nile,' see Gautier, p. 24.

(e) *Attributes peculiar to the sun-god.*—Among the fourteen *kas* of Rē enumerated in late times are (1) Khu, 'glory,' (2) Pesd, 'shining,' and (3) Tehen, 'sparkling' (§ 6 (b), *ad fin.*).

(f) *Names connected with generation and growth.*—(1) Muyt, 'seed,' of human beings and animals, depicted as a woman (Borchardt, pl. 29, Vth dynasty).

(2) Nekhet, 'budding,' depicted as a woman (*ib.* pl. 30; mentioned also *Pyr.* 4, 145f.).

See also the gods of birth above (a (4) (5)) and below (I (1)).

(g) *Products, natural or artificial.*—(1) Nepri, 'corn' (*Pyr.* 1065), frequently depicted as a Nile-god (Borchardt, pls. 25, 26, 30, Vth dynasty; Gautier, p. 34, XIIth dynasty), and named as the patron of harvests (e.g., *ZÄ* xxxiv. [1896] 46; *PSBA* xviii. [1896] 202); fabled to be the son of Ernēt, the harvest-goddess (I (3)), and born on the first day in the summer or harvest season (Brugsch, *Recueil des monuments*, i. 67); sometimes identified with Osiris; a spell to enable a dead man to become reincarnate in his image is occasionally found (Lacau, no. 55). A goddess Nepri sometimes takes the place of the god Nepri (see G. Maspero, *Hist. ancienne des peuples d'Orient*, Paris, 1894, i. 81, n. 2, where further references are given).

(2) Noub, 'gold,' occurs as a goddess from the Middle Kingdom onwards. Presumably she must have originated as a separate personification; in our existing sources, however, she is always found identified with Hathor, the goddess of beauty, dance, and ornament (see T. Deveria, *Mémoires et fragments*, Paris, 1896, i. 1-25).

(3) Tayt, 'clothing,' a goddess often named as the maker or giver of clothing or the bandages for mummification (e.g., *Pyr.* 56, 737, 738, 741; *PSBA* xviii. [1896] 202; *RTAP* xxxiii. [1911] 92). The name, which also appears in the more fully developed form Taytet (*Pyr.* 56, 2094), seems to be derived from a word meaning 'garment' (*RTAP* xxxii. [1910] 84) or in a more special sense 'awning' (Budge, *Book of the Dead*, London, 1898, i. [text] 206).

(4) Dua-wēr, 'the great morning-god,' is depicted in human form (Borchardt, pl. 19). His name is written with the symbol

, and Sethe has shown (text *ad loc.*, p. 97) that he is

nothing more or less than the royal beard personified. In the Pyramid Texts (1329, 1423, 2042) his name is associated not only with the act of shaving but also with other incidents in the morning toilette—e.g., face-washing—and the royal barber appears to have been called 'priest of Dua-wēr.'

(h) *Cosmic and similar deities.*—Over this topic we shall pass lightly, omitting all reference to the air-god Shu, since our object is to deal rather with the later and more artificial gods whose beginnings are not completely shrouded in darkness.

(1) Kaku, 'darkness' (male), and (2) Kaket, 'darkness' (female), are a pair out of four pairs of frog- and snake-headed divinities that play a part in the cosmogonical legend of Hermopolis Magna (Khmūnu, 'eight-town'), where there suddenly emerged from the primeval waters a hill upon which lay the solar egg. The names of the other pairs were: (3) Nūnu and (4) Nūnet, 'the primeval waters,' (5) Hehu and (6) Hehut, 'space' (?) and (7) Niu and (8) Niuw, 'negation' (variants Gōreh and Gōrehet, 'quiescence'). Some violence has been done to these conceptions by the attempt to make them square with the early Greek cosmogonical ideas; nor has sufficient attention been paid to their negative character, from which point of view they appear to be aspects of a primitive, undifferentiated chaos. Offerings were made to these eight gods at Speos Artemidos in the XVIIIth dynasty (see Sethe, *Urkunden*, iv. 359). For detailed discussions of these gods see Lepsius, 'Über die Götter der vier Elemente,' in *ABAW*, 1856; Brugsch, *Religion*, pp. 123-146; Budge, *Gods of the Egyptians*, i. 282 ff.

(9) Ikhekhu, 'dusk,' is occasionally personified—e.g., *Pyr.* 751.

Here a purely mythological goddess must be mentioned, as she illustrates in a striking manner the lengths that the Egyptians were prepared to go in their artificial manufacture of deities. As cosmogonic god Atum was originally wifeless, and legend states that he created the first pair of gods (Shu and Tefenet) by an obscene action of his hand (*Pyr.* 1248). In the Middle Kingdom a goddess (I (2)) Zaitet, 'his hand,' was invented as wife of Atum; she was perhaps a passing fancy of the priests of Lycopolis, and she is merely named for the purpose of providing Atum with a spouse (*Bulletin de l'Institut français d'Archéologie orientale*, x. [Cairo, 1912] 169).

(i) *Conceptions of time.*—Only direct personifications of spaces of time are here considered. The months (Budge, *Gods of the Egyptians*, ii. 292 f.), the decans (*ib.* p. 309 f.), and the hours (*ib.* pp. 300-302) had tutelary gods of their own, some of whom were deities familiar in other connexions, while others seem to be names of particular stars. We also read of 'the 366 gods and goddesses,' clearly the deities of the days; but there seems to be no deity 'day,' 'month,' or 'hour,' though the goddess Unwet has been claimed (*Sphinx*, iv. [1901] 4 f.) for the last

(1) Bonpet, 'year,' represented as a goddess on whose head is seen the shoot , the hieroglyphic symbol for 'year'; not of

very early occurrence, for the Turin altar (*TSBA* iii. 112) is late, and not early, as Wiedemann (*PSBA* xxxvi. 203) supposes. This goddess of the year is usually found identified with Isis, Hathor, or Sothis (see Brugsch, *Thesaurus inscriptionum aegyptiacarum*, Leipzig, 1883, pp. 215-230).

(2) Rôkeh, 'burning,' name of the hot period of the year, covering the seventh and eighth months. These are named the 'great burning' and the 'little burning,' respectively, deities depicted in the Ramesseum with human heads, and with hippopotamus heads at Edfu (see E. Meyer, 'Nachträge zur ägypt. Chronologie,' in *ABAW*, 1907, p. 16).

Of the three seasons (3) 'Akhet, 'inundation,' (4) Pröet, 'spring' (our winter), and (5) Shômû, 'summer' (the harvest-season), the first two are figured as goddesses and the last as a Nile-god in sculptures of the Old Kingdom (*ZÄ* xxxviii. [1900] 107) and later (Meir, unpublished, XIIIth dynasty; Brugsch, *Recueil*, vi. 180, Ptolemaic), in agreement with the grammatical gender of their names; but sometimes all three are represented as Nile-gods (Brugsch, *Geographische Inschriften altägypt. Denkmäler*, Leipzig, 1857-60, iii. pl. 4; above, § 3 (b)). Shômû, 'summer,' as more fertile than the other seasons, is the one most often represented (e.g., Gautier, p. 25, XIIIth dynasty).

(j) Geographical terms, merging into nature-gods, which are excluded from this article (see *NATURE* [Egyptian]).

(1) Ti-mehu, 'Lower Egypt,' and (2) Shema, 'Upper Egypt,' very frequently depicted as Nile-gods (e.g., Borchardt, pls. 24, 29, 30, Vth dynasty; Gautier, pp. 24, 25, 35, XIIIth dynasty; Brugsch, *Recueil*, vi. 129, 131, 134, etc., Graeco-Roman period).

(3) Sôkhet, 'country,' a goddess with the hieroglyph for field

upon her head, often seen among the nome-gods shown

bringing offerings in procession (§ 3 (b)) (e.g., Brugsch, *Recueil*, vi. 129, 132, Graeco-Roman period). In earlier times she is usually named in connexion with scenes of fowling in the marshes (P. E. Newberry, *Bent Hasan*, ii., London, 1894, p. 24), and fowling is called her 'craft' (Borchardt, p. 88). She is already mentioned in *Pyr.* 555, where Hâb, 'sport' (b (9)), is called her 'son.'

(4) Hâ, an early god whose name is written with the desert-sign upon a standard , and in whom it is tempting to

see a personification of the desert; in this case *hâ* would be an obsolete word for 'desert.' The alternative is to regard the desert as merely an attribute or possession of this god, whose origin then might be quite different. Hâ was worshipped in the Xoite nome; for the evidence bearing upon him, together with some theories that cannot here be discussed, see Newberry, in *Annals of Archaeology*, Liverpool, 1908, i. 24-29. A deity whose name is written similarly, and who from his association with Hâ'py, Hu, Ka', and the nome-gods must personify the desert, is named (Brugsch, *Recueil*, iii. 92, XIXth dynasty).

(5) Amentet, 'the west,' a goddess on whose head is seen

the symbol for 'west' (e.g., Borchardt, pls. 1, 29, Vth dynasty; Davies-Gardiner, pls. 10, 27, XVIIIth dynasty; and often). The dead being by preference buried in the west, she early becomes the goddess of the necropolis, and as such is named or depicted as welcoming or protecting the dead, as she does for the sun. She is very frequently identified with Hathor. Plutarch (*de Is. et Osir.* 29) gives Ἀνέστis as the name of the place whither the souls of the dead pass, and his fanciful etymology, 'he who gives and takes,' implies that he believed the corresponding personification to be a male deity, like the Greek Hades.

(6) Yebtet, 'the east,' a goddess with , the sign for 'east,'

on her head (Davies-Gardiner, pl. 27, XVIIIth dynasty).

(7) Waz-wâr, 'the great-green,' i.e. the sea, depicted like a Nile-god (Borchardt, pl. 30, Vth dynasty; Gautier, p. 24, XIIIth dynasty; Naville, *Deir el Bahari*, v. 123, XVIIIth dynasty).

(8) Hâ'py, 'the Nile,' is too ancient and important a god to be dealt with here.

It is hardly necessary to illustrate in detail the personifications of nomes, towns, and villages, which are frequent both in the temples and in the tombs. The existing nome-lists are enumerated by C. Steindorff in *ASG* xxvii. [1909] 864-868; admirable statues of certain nomes as deities, male or female, were found by G. Reisner in the pyramid-temple of Mycerinus (see Maspero, *Essais sur l'art égyptien*, Paris, 1912, pp. 27, 29, 31, IVth dynasty).

(k) *Psychical entities*.—These are by their very nature multiple, that is to say, deemed to be as numerous as the individuals to whom they belong, though they may also sometimes, like Ka, 'Providence' (§ 6 (b) *ad fin.*), become single and universal. For a popular account see A. Wiedemann, *The Ancient Egyptian Doctrine of the Immortality of the Soul*, Eng. tr., London, 1895. Here only two of the principal kinds of 'soul' will be dealt with, since the present writer dissents from the ordinarily accepted views.

(1) The *ka* () is usually explained either as the 'double'

(Maspero) or as the 'genius' belonging to a man or a god; for the discussions that have arisen over this question see the literature quoted in Davies-Gardiner, p. 99, n. 7, and *RTAP* xxxvii. [1915] 78. The view here favoured is that enounced by H. Brugsch (*Hieroglyphisch-demot. Wörterbuch*, supplement, Leipzig, 1882, p. 1230), according to which the *ka* is a man's individual 'character'—the sum of his attributes. Not only gods but also men are sometimes named as possessing a plurality of *kas*, their 'attributes' then being meant. These two renderings are naturally too modern and too specific to cover the whole meaning of the term, and in certain contexts it may be better translated 'psychic self,' 'nature,' 'genius,' 'double,' or even 'master'; the best course of all is to retain the original word. The objection to the renderings 'double' and 'genius' is that they lay excessive stress on aspects of the *ka* which are connected less with the conception which is personified than with the bare fact of personification and its consequences. For the visualized form of the *ka* see § 4, and for its cult § 7. The prominence of the sepulchral aspect of the *ka* was perhaps due to the belief in the changeability, after death, of the other principal constituents of a man's personality; for, while his 'incarnation' or 'external manifestation,' namely (2) the *ba*, might assume various new forms, his *ka*, i.e. his individuality (with which his name was very nearly identical), remained constant, and was believed to persist in the tomb. The *ba* could, by definition, assume many shapes; as a volatile, visible being, capable of ascending to the heavens, its most ordinary form was that of a human-headed bird. Re' possessed seven *ba*, but no man appears to have had more than one at a time. Naturally, the *ba* received no cult, as its essential characteristic was that of a 'living' thing, able to look after itself. On the *ka* see, further, above, § 6 (b). In connexion with the ritual of the dead it is exceedingly important to bear in mind that this was based on the belief that the man himself continued to live after his physical death; it is he, and not his *ka*, who is primarily the recipient of the funeral sacrifices. The speculations which hypostatized the *ka* and the *ba* may, for all we know, be as old as the funerary ritual itself; the latter, however, is comprehensible without it, for it arises, not from any intellectual self-analysis, but simply from the passionate refusal to acknowledge the possibility of death. See art. *LIFE* and *DEATH* (Egyptian).

(l) *Symbolic gods* (see § 1).—(1) Meskenet, 'birthplace,' the name of the brick or pair of bricks upon which women crouched in giving birth, was personified under the form of a goddess with

the sign  (bicornate uterus?) on her head. In the texts

she is coupled with Khnûm or Renenet (a (5)), and can be either single or multiple (§ 6 (b)); we read of 'thy Meskenet' already in *Pyr.* 1183 (see W. Spiegelberg, *Aegyptologische Randglossen zum Alten Testament*, Strassburg, 1904, pp. 19-25).

(2) Shesmu, 'press,' whether for the making of oil or for the making of wine; the word is determined by the ideographic sign of the press (e.g., *Pyr.* 402). As god of wine he appears already in *Pyr.* 1552: 'Shesmu comes to thee with liquid (?) wine.' For Shesmu as the god who prepares the ointments and oils for embalming see the references given by Möller, p. 80, n. 60; *RTAP* xxxvii. 76. Shesmu must be carefully distinguished from the god Shesmety and the goddess Shesmetet—forms of Horus and Sekhmet respectively—who derive their names from the land Shesmet, perhaps the region of Kosseir (Sethe, in Borchardt, p. 82).

(3) Ernûtet, 'cobra,' in later times exclusively the goddess of the harvest, 'lady of the granary' or 'lady of sustenance,' who gave her name to the ninth (later eighth) month Pharmuthi (see Lanzone, pp. 472-477, where, however, there is some confusion with Renenet (a (5))); see, too, under g (1) above). The earliest references to Ernûtet (*Pyr.* 302 and Erman, 'Hymnen an das Diadem,' in *SBAW*, 1911, col. 7, l. 4) appear to have no reference to the goddess's function in connexion with the harvest; she is there apparently identified rather with the snake-goddess upon the brow of the Pharaoh. If this be her original nature, then she cannot be considered as essentially a symbolic deity on the same footing as Meskenet or Shesmu.

LITERATURE.—This has been given in the body of the article.

ALAN H. GARDINER.

PERSONIFICATION (Greek).—I. **Introductory.**—The habit of assigning a conscious and active personality to all kinds of natural objects, and even to abstract ideas, seems to be almost universal at a certain stage of human development. The tendency is nowhere, perhaps, more prevalent than among the Greeks, whose intensely anthropomorphic imagination here finds full scope. The word 'personification,' in its narrower sense, is often used to imply a more or less artificial and allegorical invention, such as Apelles' picture of Calumny with her attendants Ignorance, Suspicion, and the rest, or figures such as Peace and Britannia in a modern cartoon; and some even of the earlier Greek personifications may be of similar nature. But it is convenient to use the word here in a wider sense, as referring also to persons who have acquired a definite religious or mythological char-

acter, without, however, losing the direct significance of their names.

2. Classes of personifications.—Personifications may be conveniently divided into three classes: they may be (a) of natural objects, localities, etc., (b) of collective bodies, such as cities or peoples, or (c) of abstract ideas, such as Fear, Strife, Justice, etc.

(a) *Natural objects.*—The sun-god (Helios) and the moon-goddess (Selene) are hardly to be regarded as impersonations, since they have a definite mythological character in some regions; but there is a general tendency in Greece for their mythological and religious side to be merged in Apollo and Artemis, while Helios and Selene come to be mere personifications of the sun and moon, often used in art to give a cosmic setting to a scene—as in the east pediment of the Parthenon. A good example is offered by the Blacas vase in the British Museum, where sunrise is depicted by Helios rising out of the sea in his chariot, preceded by Eos (the dawn, Aurora), while Selene rides away on her horse, and the stars, in the form of boys, dive into the sea.

A similar conception occurs in the personification of times and seasons—Day and Night with her children, Death and Sleep; and the hours or seasons (*ῥαί* [see *HORÆ*]). Later artificial inventions of the Hellenistic age were the Year (Eniautos) as a man and a Four-year Cycle (Penteteris) as a woman. Chronos, too (Time), sometimes confused with Kronos, and Æon were included in some Orphic beliefs later developed by the Gnostics. It is doubtless the result of Greek influence that in Christian times the days of the week come to be personified, especially *Ἁγία Παρασκευή* and *Ἁγία Κυριακή* (St. Friday and St. Sunday), who are represented as richly draped female figures. On later mosaics personifications of the seasons of the year, with their distinctive attributes, are a favourite subject.

Personifications of place are commoner than those of time. Earth (Ge or Gaia), in early times a distinct goddess and the mother of the giants, becomes later a merely allegorical figure or personification. Ocean, as distinguished from various sea-gods, has virtually no mythological character, though Homer calls him the origin of the gods; he appears on the François vase, and on the Pergamene altar. On the Tower of the Winds at Athens the eight winds merely serve to indicate the quarters of the sky. Earlier we find winds personified as winged figures; but none of them, except Boreas, acquires any mythological standing. The clouds in Aristophanes' play are evidently a meteorological personification; the name of Nephelē (Cloud) occurs as that of a mythical character also. In the case of rivers, again, we find two distinct usages. River-gods in early times are important and efficient deities; but figures of rivers come frequently to be used as mere allegorical representations of localities. This was the case, according to Pausanias (v. x. 7), on the east pediment of the temple of Zeus at Olympia, where the recumbent figures of the Alpheus and Cladeus define the boundaries of the *Altis* at Olympia; the Kephissos (or Ilissus) of the west pediment of the Parthenon offers another similar example; but both identifications have been disputed. Later we often find figures of rivers, such as the Nile with his sixteen cubits playing around him as little children. Similar personifications are common in later art, mountains, springs, meadows, etc., being represented by human figures, often in the form of nymphs. Nymphs or personifications of places are sometimes more individual in locality, when they represent well-known places such as Nemea; and the eponymous hero or heroine of

any place or district is in a certain sense an impersonation, as in the case of Ægina or Corinthos. In some instances the eponymous hero or heroine was really an earlier god or goddess; e.g., Cyrene has a relation to her city more like that of Athene to Athens. But other representatives of cities and peoples fall rather into class (b), collective personifications.

(b) *Collective bodies.*—This class differs from class (a) mainly in the fact that, even when the personification is local in character, the people rather than the actual locality is typified. The Demos of Rhegium, a dignified bearded figure, appears as a personification of the people of the city on its coins early in the 5th cent. B.C., and about the same time the coins of Tarentum represent the Demos of that city 'who is conceived in the likeness of Taras the founder of Tarentum, and so is figured as a youth.'¹ Similar personifications of the Demos of cities are not uncommon in later art; another example of the hero as representing the people is offered by the figure of Corinthos already quoted on a bronze mirror;² he appears seated, while a standing female figure, the colony Leucas, places a wreath on his head. The Demos (of Athens) is introduced as a character in the *Knights* of Aristophanes, and was doubtless represented as a typical citizen. Boule, the Senate, appears as a draped female figure on an Attic relief, and similar representations are very common on late coins. The reliefs heading treaties or decrees often contain figures representing the people concerned; but these are sometimes the deities of the cities; e.g., Athens and Samos are represented by Athene and Hera. In later times a city or country is commonly personified in the form of a female figure, often wearing a mural crown. Sometimes the personification takes a more definite form as the Fortune of the city (*Τύχη πόλεως*); the best known example is the figure of Antioch by the sculptor Eutykhides, made at the time of the foundation of the city about 300 B.C.; this is said to have been worshipped with divine honours in the district. The figure of Megalopolis, in a group with Zeus and Artemis in that city, is also a clear instance of personification. It was by Cephisodotus and Xenophon; unfortunately it is not certain whether the Cephisodotus was the elder, of the early 4th cent., or the later, the son of Praxiteles; it cannot be earlier than 370 B.C. Figures of Hellas and of Salamis appeared on the screens of the throne of Zeus at Olympia (c. 430 B.C.). Similarly, Hellas and Asia are seen among gods and other allegorical figures on the well-known vase at Naples, representing Darius preparing for his war with Greece. Perhaps the most extreme example of such a personification is the (habited) Earth (*Οἰκουμένη*), on the relief of the Apotheosis of Homer in the British Museum, representing 'ecumenical' assent—a conception very far removed from that of Earth (Ge or Gaia) on early monuments. Ætolia, as a warrior-maiden or Amazon, with one breast exposed, appears seated on coins of the Ætolian league; and this or similar figures suggested the type of the goddess Roma on coins. The statuary type of this goddess was based upon that of Athene, which, as we have noticed, was used sometimes as a personification of her chosen city Athens.

(c) *Abstract ideas.*—The third class of personifications is very miscellaneous in character, but is not easy to subdivide either chronologically or by subjects. A distinction might be drawn between such as actually have a place in worship and ritual and such as are merely creations of a poetical or artistic imagination; but among the Greeks we

¹ P. Gardner, *Types of Greek Coins*, Cambridge, 1888, p. 101.

² *Monuments grecs*, i. [Paris, 1873] pl. 3.

find many in the former class which we should rather expect to belong to the latter only. Thus in Athens there were altars to Eleos, Aidos, Peme, and Horme (Pity, Shame, Rumour, and Impulse); in Sparta were sanctuaries of Gelos (Laughter) and of Phobos (Fear). Again, Cephisodotus's statue of Peace (Eirene) nursing the infant Wealth (Plutos) looks like a transparent allegory, yet both divinities had a share in the State worship of Athens. At the other end of the scale are such deities as Eros (Love) and Nike (Victory), though these are by no means of the same nature. Eros, in some places, notably at Thespie, was a primitive and independent god; elsewhere he was worshipped mainly with his mother Aphrodite. In these cases, apart from the direct significance of his name, he can hardly be called a personification. But he has practically no mythical character or personality in early times, though in the Hellenistic age tales about him become common; the best known is that in which he is joined with another allegorical personification, Psyche (the soul). This, however, belongs to the region of romantic invention rather than genuine mythology (see LOVE [Greek], I. 3). Nike, on the other hand, has hardly any place in myth, and, when she is worshipped, it is usually as a particular form of another divinity—e.g., Athene Nike in Athens. Several similar personifications occur in apposition to the names of deities, almost as epithets—e.g., (Athene) Pronoia, (Artemis) Eukleia, (Artemis) Eupraxia, (Aphrodite) Euploia; most of these also occur independently. Tyche (Fortune) was in many places worshipped, apart from her impersonation of certain cities mentioned above (*b*), as a great goddess, sometimes in the form of Ἀγαθή Τύχη. A common class of personifications are those that occur as companions of Aphrodite or of Dionysos. These are common on artistic representations. With Aphrodite, besides Eros, we also find Himeros (Desire) and Pothos (Yearning for the absent), Peitho (Persuasion), who has a more distinct mythical personality, Eunomia, Harmonia, Paidia, Eudaimonia, etc. Dionysos is accompanied by several of these, as by Dithyrambos, Tragedia, Komos (Revel Rout), Methe (Drunkenness), and even Kraipale (its after effects). Telete seems to be a personification of the mysteries. Ethical personifications are found not only in worship—e.g., Dike, Dikaosyne (Justice)—but also in literature and art. In early art Dike smites Adikia, her opposite, in the form of a hideous woman; the symbolism continued into the Christian virtues and corresponding vices. Eris (Strife) plays an important part in early myth, as also does Ate, in the belief 'quem deus vult perdere, prius dementat.' A similar rôle in the drama and in art derived from it is played by Lyssa and Oistros (Madness). Nemesis, also, may in certain cases be regarded as a personification, though at Rhamnus she had a temple where her cult as a goddess was primitive. A well-known Homeric passage (*Il.* ix. 502) describes the *Aral* (Prayers) as daughters of Zeus, who halt after the steps of Ate. *Apai* also (Curses) are often personified; but in this case they tend to be identified with the Eumenides, or Furies, and so to pass from personification to definite mythical personality. Kratos and Bia, Strength and Violence, who fetter Prometheus in Aeschylus's play, have their place in systematic genealogy. Even in the case of personifications which appear to be mere inventions of the poet's or artist's imagination we often find some reference to accepted worship or belief. Perhaps the clearest instance of such invention is to be found in a picture like Apelles' Calumny, already mentioned, or a relief such as the Apotheosis of Homer. Here the allegorical figures include the

Iliad and Odyssey, Myth, History, Poetry, Tragedy, Comedy, Nature, Virtue, Memory, Faith, Wisdom, Time, and the World. Another example, of earlier date, is seen in the dedication of Micynthos at Olympia, where, besides various gods, were Agon (Contest) with ἀλγῆρες, or jumping-weights, and Ἐκεχειρία (the Sacred Truce of Olympia) crowning Iphitus, the founder of the games; this group was set up early in the 5th cent. B.C. Logos (the Word) and Sophia (Wisdom) are prominent in the mingled Hellenistic and Oriental philosophy which finds expression in apocalyptic writings, and, through their influence, in some forms of early Christianity.

3. Conclusion.—These instances are necessarily somewhat miscellaneous; but they suffice to show the manifold developments of personification in Greece. It is by no means surprising to find the tendency so common in the literature and art of a people endowed with so intensely anthropomorphic an imagination as the Greeks. But, considering the highly developed and systematized polytheism of their religion, the existence and recognition in State worship of so many personifications of places, of communities, of physical or mental conditions, and of moral qualities call for some comment. There even seems at first sight some resemblance to the many *numina* that preside over every action in the Roman *Indigitamenta* (*g.v.*); but there is, on the other hand, the essential distinction that the Greek personifications are thought of as in human form, and have attributed to them a human character. It has been noted how some of them come to be closely associated with the chief gods or goddesses, sometimes as companions or attendants, sometimes, so to speak, as incarnations or manifestations. In this way they found their place in the polytheistic system. Moreover, the anthropomorphic imagination of the Greeks filled every region of earth and sea, rivers and springs, mountains and trees, with beings of human form, Nereids or nymphs or river-gods. These were not originally personifications; but the belief in their existence facilitated the creation of imaginary beings of a similar character to personify the various ideas that have been enumerated. And, in later times, as a belief in the actual existence of these supernatural beings waned, it became easier to invent personifications of all sorts, and to give free scope to a poetical and artistic imagination. Such later examples in Greece are not essentially different from those which we find in more recent literature and art. But the earlier personifications are of a different nature, and arise from the same anthropomorphic tendency that gave so clear and personal a character to the chief Olympian gods.

LITERATURE.—H. Stending, 'Lokalpersonifikationen,' and L. Deubner, 'Personifikationen,' in Roscher; P. Gardner, 'Countries and Cities in ancient Art,' in *JHS* ix. [1888] 47 ff.

E. A. GARDNER.

PERSONIFICATION (Roman).—Personification is a psychological process which plays an important part in the development of religious concepts. In a general sense it is the process of conceiving of inanimate and even unmaterial and abstract objects as possessed of life and soul. This primitive form of personification, which might be called 'vivification,' lies at the base of that early religious stage known as animism. As animism passes over into anthropomorphism, so vivification develops into personification, as we are accustomed to think of it; but the change is quantitative rather than qualitative, and the power which in pre-historic times endows *janus*, the physical door, with a heavenly counterpart Janus, the spirit of the door, and the power which develops Janus, the spirit of the door, into Janus, the two-faced bearded god, are one and the same. It is simply a question of development. Owing to

certain tendencies in the psychological constitution of the ancient Roman, personification plays an especially important part in Roman religion. In fact an intimate study of personification is perhaps the best means of obtaining in this latter day a fruitful idea of the essence of ancient Roman religion. It is almost the only road through the thickets of conventionalism and formality which have always hidden the heart of Roman religion from the vision of the moderns.

The earliest concept of the divine among the Romans was in the nature of a function; they believed in divine powers, *numina*, unseen, unknown, unnamed. These powers were possessed of life and soul, and were thus in the primitive sense personified. Gradually out of the thick mist of cosmic forces the Romans began to see gods as men walking, and they straightway equipped these gods made in the fashion of men with all the functions and attributes which had originally belonged to the unknown *numina*. Each god, therefore, had many powers and attributes, and these were expressed by what were called *cognomina*, adjectival (more rarely nominal) addenda to the name itself (on these early *cognomina* cf. J. B. Carter, *De deorum Romanorum cognominibus quaestiones selectae*, Leipzig, 1898). Thus Jupiter as the patron god of freedom was called Jupiter Liber, and as the god of victory Jupiter Victor. The Roman genius from the very beginning was characterized not so much by imagination as by the power of abstract thought. This was characterized in its turn by an extraordinary ability to transfer the abstract into the concrete and back again. The Roman mind found one of its favourite employments in sending ideas, like free balloons, into the void of abstract, and then making them captive and concrete by attaching them to earth again. But there was also a great continuous fermentation in the realm of the gods. The Romans took a pre-eminently practical interest in their gods in spite of the fact that gradually the anthropomorphic concept had won the day; they cared for their gods not so much for what they were as for what they did; hence the adjective attached to the god, describing the function, was so much emphasized, and the god relatively so neglected, that the adjective or noun often took the primary place and in many cases eventually broke off from the god and set up an independent existence of its own (e.g., Portunus as originally Janus Portunus, Mercurius as originally Hermes Mercurius, Diespiter as originally Jupiter Diespiter). In certain cases, however, the Roman mind, with its extraordinarily keen development of the philosophical-philological sense, realizing that the adjective was the expression of an abstract idea, changed it into an abstract noun and, personifying the noun, worshipped it as an independent deity.

In all this material, attempts at chronological determination meet with great difficulty. We can only say that certain abstracts seem to go back to pre-historic times, and among these is undoubtedly the goddess Fides. She seems to be the earliest illustration of the process just described. Jupiter as the god of oaths and fealty became very early known as Diovis (or Dios) Fidius (Zeus Ilarios), and out of the adjective Fidius by constant accentuation came the goddess Fides, who is said to have had her own cult even in the mythical regal period and her own sanctuary on the Capitoline in the immediate neighbourhood of the chapel of Jupiter Lapis (the patron deity of international good faith). This much at least is certain, that in 254 or 250 B.C. a temple was dedicated to her on the Capitoline by Atilius Calatinus.

FIDES.—On the oldest sanctuary cf. Dion. Hal. ii. 75; on the temple dedicated by Calatinus, which was restored in 116 B.C. by M. Aemilius Scaurus, Cic. *de Nat. Deor.* ii. xxiii. 61, *de Off.* iii. xxix. 114; cf. *de Leg.* ii. xi. 28; apocryphal temple, Fest. p. 269. 8; festival of Fides, 1st Oct., *Fast. Arr. Amit. Paul.*; peculiar ritual, Livy, i. xxii. 4; Serv. *En.* i. 292, viii. 636; Hor. *Carm.* i. xxxv. 21f.; military records in her temple, *CIL* iii. 916, 10; dedicatory inscriptions, comparatively rare, *ib.* ii. 4497, vi. 148=xiv. 5, ix. 5422, 5845, 5848, x. 8775, 5903; *Eph. Ep.* iv. 79; head of Fides on republican coins; also frequent on imperial coins.

Apparently younger, but still of very great age, are two other personifications, **Libertas** and **Victoria**; like Fides, they both grew out of Jupiter. Jupiter Liber was originally the god of plenty rather than of freedom, but the word *liber* gradually changed its meaning and came finally to express individual freedom and to stand by itself as **Libertas**. Probably the goddess goes back to the very beginning of the republic, even though our earliest date is the second half of the 3rd cent. B.C., when Ti. Sempronius Gracchus (consul, 238) dedicated a temple to her on the Aventine.

In similar fashion Jupiter Victor seems to go back at least to the early republican times, and has his place in the ritual of the Arvales immediately after the Capitoline triad. As early as 295 B.C. Q. Fabius Maximus vowed him a temple. As for Victoria, we do not know when she began her independent existence, but she has a temple dedicated to her in 294 B.C. on the Clivus Victoriarum on the Palatine—a temple which ninety years later served as the first home for the Magna Mater on her arrival in Rome. With the coming of the empire the importance of the worship of Victoria was immensely increased. Each rival claimant for the supreme power thought of her in personal relation to himself, so that the goddess became the 'Victory of Caesar,' or the 'Victory of Vespasian,' etc. Here imperial coins give ample testimony. Finally, the statue which Augustus had caused to be erected in the senate-house in 29 B.C. became the symbol of all that was old and conservative in the religion of the Romans, and the last battles of official paganism against Christianity were fought under its shadow.

LIBERTAS.—On the temple, Paul. p. 121: 'Libertatis templum in Aventino fuerat constructum'; dedicated by Ti. Sempronius Gracchus, Livy, xxiv. xvi. 19; festival, 13th April, cf. Ovid, *Fasti*, iv. 623f.; sanctuary on the site of Cicero's house, erected by Clodius, Dio Cass. xxxviii. xvii. 6; Plut. *Cic.* 83; Cic. *de Domo*, 108ff., 131; cf. *de Leg.* ii. 42; in 46 B.C. Julius Caesar decreed a temple, Dio Cass. xliii. xlv. 1; statue in the Forum under Tiberius, *ib.* lviii. xii. 5; *Libertas Restituta* and *Libertas Publica*.

VICTORIA.—On the temple on the Palatine, Livy, x. xxxiii. 9; cf. *xxx.* xiv. 13; Fest. 262; *Notitia* and *Curiosum*, 10th region; near the temple was a chapel of Victoria Virgo dedicated by M. Porcius Cato in 193 B.C., Livy, xxxv. ix. 6; on the statue in the senate-house, Dio Cass. li. xxii. 1f.; *Fast. Maif.*; on the rôle of this statue in the closing years of paganism cf. Ambrose, *Ep.* i. xvii. 18, xviii. 32, lvii. 4-6; Symm. *Rel.* iii. 4; many inscriptions from the empire (see indices to *CIL*); represented on the so-called 'Victoriati' of the republic, and frequently on imperial coins.

Somewhat similarly the cult of Mars seems to have given birth to the closely connected pair of abstracts, **Honos** and **Virtus**. Here, however, we are not able to trace the process with any degree of accuracy, but the connexion is undoubted. Their most important temple was outside the Porta Capena in the immediate neighbourhood of the temple of Mars, and they were so identified with Mars that, e.g., in referring to the starting-point of the parade of the knights, writers refer indifferently to the Mars temple or to the temple of Honos. This temple of Honos was vowed by Q. Fabius Maximus Verrucosus in 233 B.C., and later dedicated. It was subsequently restored by M. Claudius Marcellus, who wished at the same time to change it into a temple of Honos and Virtus, but the pontiffs objected on technical grounds. He was able, however, to compromise matters by adding a separate temple for Virtus,

which was dedicated by his son in 205 B.C. The two temples were famous for their art collections. Later these two goddesses enjoyed special favour at the hands of Pompey, who gave them shrines at the top of his stone theatre.

HONOS and VIRTUS.—On the temple outside the Porta Capena, Cic. *de Nat. Deor.* ii. xxiii. 61; Livy, xxvii. xxv. 7 ff., xxix. xi. 13; cf. Val. Max. i. i. 8; Plut. *Mar.* 23, *de Fort. Rom.* 5, p. 313 E; restoration under Vespasian, Pliny, *HN* xxxv. 120; references to the parade of the knights, Dion. Hal. vi. xiii.; Victor, *de Vir. ill.* xxxii. 8; on the art treasures in the temple, Livy, xxv. xl. 2, xxvi. xxxii. 4; Cic. *Verr.* iv. 121; Ascon. p. 11 (Kießling); Pliny, *HN* xxxv. 120; another temple outside the Porta Collina, Cic. *de Leg.* ii. xxiii. 58; cf. *CIL* vi. 3692; still another temple, built by C. Marius, Fest. p. 344; *CIL* i. 2 p. 195, xviii. 16; shrines in Pompey's theatre, *Fast. Amit.*, 12th Aug.; shrine of Virtus founded by Scipio Numantinus, Plut. *de Fort. Rom.* 5, p. 318 D; temple of Honos at Puteoli (105 B.C.), *CIL* x. 1781; Collegium Honoris et Virtutis at Narbo, *ib.* xii. 4871; Collegium Virtutis at Nepes, *ib.* xi. 3205; games at Tarracina, *ib.* x. 8260; numerous inscriptions from all parts of the empire, both singly and together, on republican and imperial coins.

It is important to notice that this ability to emphasize a specific side of a deity's activity, by changing the adjective into an abstract noun and making an independent deity of it, was not confined to the earlier and more child-like period of Roman religion, but was still present at the close of the republic. Here we have the following remarkable instance. Sulla's belief in his own fortune and his fondness for the cult of Venus caused him to worship Venus Felix; when Pompey came to power, he in turn preferred Venus Victrix, but he avoided offending Venus Felix by worshipping Venus Victrix and Felicitas; finally Julius Cæsar chose to honour Venus Genetrix, but he joined to her Victoria and Felicitas. In this case we are not justified in saying that Felicitas came into being as the result of the breaking off of the cognomen Felix from Venus, for she existed long before this time, having received a temple in the Velabrum at the hands of L. Licinius Lucullus in 146 B.C. Her real prominence began with Sulla, who called himself Sulla Felix. Pompey's temple to Felicitas was connected, as we have seen, with one to Venus Victrix on the top of his stone theatre, and a similar combination occurred on the Capitoline. Julius Cæsar influenced M. Æmilius Lepidus to build a temple to Felicitas on the site of the old senate-house, the Curia Hostilia. Under the empire Felicitas was much sought after and was a special favourite of Augustus, and under Tiberius the senate caused a statue of Felicitas to be erected at Tiberius's birthplace, Fundi. In all the subsequent empire she was invoked in behalf of the emperor, both in public and in private.

FELICITAS.—On the temple in the Velabrum, Strabo, vii. vi. 23, p. 381; Dio Cass. frags. lxxv. 2 (Müller), xlii. 21; cf. Suet. *Cæs.* 37; shrine in Pompey's theatre, *Fast. Urbini.*, *CIL* i. 2 p. 339; shrine on the Capitol, *Fast. Ant.*, 1st July and 9th Oct.; temple on the site of the Curia Hostilia, Dio Cass. xiv. v. 11; on the connexion with Augustus, *Cum. Fer.*, *CIL* x. 8375, 15th April; *Fast. Præn.*, 17th Jan.; cf. Mommsen, *CIL* i. 2 p. 308; statue at Fundi, Suet. *Tib.* 5; frequent sacrifices by the Arvales, cf. G. Henzen, *Acta Arvalium quæ supersunt*, Berlin, 1874, pp. 71 f., 74, 84 f., 168.

Thus far we have discussed six abstracts—Fides, Libertas, Victoria, Honos, Virtus, and Felicitas. We have dealt with them first because they illustrate the close connexion of abstract deities and adjectival cognomina. All six go well back into the republic, and certainly one of them (Fides) goes back into the kingdom. In addition to these six, there are thirteen other abstracts which arose certainly before the 2nd cent. B.C., and eight seem to go back into the kingdom.

Of these eight, Ops and Salus occupy a peculiar position. The very great antiquity of Ops is guaranteed by her old cognomen, Consiva, connecting her with the old Roman god Consus, in whose control lay the blessing on the harvest. The existence of Ops is thus proved for the earliest stratum of Roman religion, but Wissowa makes the sugges-

tion that Ops may be there, to be sure, but not as an abstract deity. This point of view the present writer considers incorrect, and merely the result of reading into primitive conditions our sharp distinction between abstract and concrete. Ops as the guardian of plenty and Ops as the idea of plenty—the essence, and so the essential abstract quality of plenty—would be scarcely distinguishable in a world where all inanimate things had life and soul, and soul consisted in the exercise of functions always practical and yet often abstract. In the old calendar Ops had two festivals—the *Opiconsivia* of 25th August and the *Opalia* of 19th December. In those days she had no special sanctuary of her own, but the sacrifice took place in the chapel in the Regia, accessible only to the pontifex maximus and the Vestal virgins. In fact she was such a secret and retired goddess that the legend soon arose that she was the mysterious guardian of the city of Rome, whose name no man dared to betray. Later she received two temples—one on the Capitoline (first mentioned 186 B.C.) and one in the Forum, probably the temple dedicated between 123 and 114 B.C. by the pontifex L. Cæcilius Metellus Dalmaticus. On 10th Aug. A.D. 7 an altar to Ops was dedicated in the Vicus Jugarius. Ops had a temple at Præneste; as Ops Augusta she appears on the coin of Antoninus Pius, and as Ops Divina on the coins of Pertinax.

OPS.—Relation to Consus, Varro, *de Ling. Lat.* vi. 21; Fest. p. 186; Macrobi. iii. ix. 4; sacrifice in the Regia, Varro and Fest. *loc. cit.*; *Fast. Arv.*, 25th Aug.; on the secret name, Macrobi. *loc. cit.*; temple on the Capitoline, cf. H. Jordan, *Topographie der Stadt Rom im Alterthum*, Berlin, 1871–1907, vol. i. pt. ii. p. 43; *Fast. Vall.*, 25th Aug.; the matrons met at this temple for the Ludi Sæculares of Augustus, *Eph. Ep.* viii. 254; the Arvales met here on 7th Dec. A.D. 80, *CIL* vi. 2059. 11; another temple to Ops, as Ops Opifera, dedicated by Metellus Dalmaticus, Pliny, *HN* xi. 174; sacrifice on the Volcanalia, 23rd Aug., *Fast. Arv.*; altar of Ops Augustus in Vicus Jugarius, *Fast. Amit.*; temple at Præneste, *CIL* xiv. 8007.

Salus, like Ops, belongs also to the oldest period, and the proof is similar, the presence of Salus Semonia proving that Salus is the counterpart and companion of the old god 'Semo Sancus dius Fidius.' It is probably no accident, therefore, that dedicatory inscriptions to Semo Sancus have been found on that part of the Quirinal which was commonly called Collis Salutaris, with the Porta Salutaris. Her cult is therefore much older than her temple, founded in 302 B.C. by the dictator C. Junius Bubulcus. This old Roman goddess was doubtless the Salus Publica, the Commonweal, and is to be kept quite distinct from the later identification of Salus with the Greek goddess Hygeia. The old Salus was preserved even into the latest times as the 'Salus publica populi Romani Quiritium' in connexion with emperor-worship, or as Salus Augusta in the same connexion.

SALUS.—Salus Semonia, Macrobi. i. xvi. 8; cf. *Arch. epigr. Mitt. Oesterr.* xv. [1892] 77 ff.; 'Salutes pocolorum', *CIL* i. 49, from Horta; votive inscription in the grove of Pisaurum, *ib.* i. 179; old altar at Præneste, *ib.* xiv. 2392, with very ancient *lex aræ*; temple on the Quirinal, Livy, ix. xliii. 25, x. i. 9; dedication day, 5th Aug., *Fast. Vall.*; temple founded by Nero after the conspiracy of Piso, Tac. *Ann.* xv. 74; temple at Ferentinum, *ib.* xv. 53; cf. *CIL* x. 5821; many inscriptions from provincial cities; found on both republican and imperial coins.

Two more abstracts, Fas and Fines, the concept of righteousness and the deification of the boundary-line, can lay claim to a venerable age because they are invoked in one of the formulæ of the ancient priesthood of the Fetiales, who gave to the Roman world the primitive concept of international law.

FAS and FINES.—Livy, i. xxxii. 6: 'audi Jupiter, inquit, audite Fines—cuiuscumque gentis sunt, nominat—audiat Fas!'; cf. the soldier's dedication from Vinxbach near Brohl: 'Finibu(s) et Genio loci et I. O. M.', *CI Rhen.* 649.

Much more difficult to understand is the story of the next two abstracts, Fors Fortuna and Fortuna. They are unquestionably connected, and they are both associated in legend with the name of Servius Tullius.

Fors Fortuna had an old shrine on the right bank of the Tiber in Trastevere. Later, in 293 B.C., the consul Sp. Carvilius vowed a sanctuary to Fors Fortuna; the older sanctuary was situated at the first milestone of the Via Portuensis and the second one at the sixth milestone. Both had a festival on 24th June, in which the lower classes took special part (notice the coincidence of date with the modern popular festival of San Giovanni). Fors Fortuna seems to have been at first an agricultural goddess, the personification of the attendance on chance which characterizes a farmer's life. Gradually the special agricultural relation was forgotten, and she became in general the goddess of blind uncontrollable chance. It is probably in this more general sense that the third temple in Trastevere—that of Tiberius in the gardens of Caesar—is to be understood.

FORS FORTUNA.—Old temple in Trastevere, Varro, *de Ling. Lat.* vi. 17; Dion. Hal. iv. xxvii. 7; Ovid, *Fasti*, vi. 783 f.; Carvilius's temple, Livy, x. xli. 14; cf. Mommsen, *CIL* i.3 p. 320; on the festival of 24th June, *Fasti. Ant.*; Ovid, *Fasti*, vi. 775 f.; cf. Cic. *de Fin.* v. 70; Varro, *ap. Non.*, pp. 144, 425; votive inscriptions found at the sixth milestone, *CIL* vi. 167-169; on Tiberius's temple, Tac. *Ann.* ii. 41 (Dio Cass. xlii. 28, wrongly sets the temple in 47 B.C.); cf. Plut. *Brut.* 20, *de Fort. Rom.* 5, p. 319 A; 'Schola Fortis Fortuna' from Veii, J. C. von Orelli, *Inscr. Lat.*, Zürich, 1828-56, iii. 5791; altar at Aquileia, *CIL* v. 8219; dedication by a soldier 'numini Fortis Fortune', *ib.* vi. 170.

Akin to and yet distinct from Fors Fortuna is the goddess Fortuna, who seems to have gone through very much the same development, beginning as an agricultural goddess and developing into the representative of the general concept of chance in the world. Her oldest temple stood in the Forum Boarium and was associated with Servius Tullius. Her cult in later times grew to extraordinary proportions, and her functions were specialized and emphasized in a multitude of cognomina. For fuller details the reader is referred to art. FORTUNE (Roman); J. B. Carter, *De deorum Romanorum cognominibus*, and, 'The Cognomina of the Goddess Fortuna,' *Trans. of the Amer. Phil. Assoc.* xxxi. [1900] 60 f.

FORTUNA.—Three temples to Fortuna in the general sense, without special adjectives: (1) in the Forum Boarium, Ovid, *Fasti*, vi. 569 ff.; Dion. Hal. iv. xxvii. 7; Val. Max. i. viii. 11; Pliny, *HN* xxvi. 163; (2) in the region of the Circus Maximus, *Notitia*, 11th region; (3) 'ad lacum Aretis,' *CIL* vi. 9664.

The following are the more important cult-titles: ἀνορθότατος, sanctuary ascribed to Servius Tullius, Plut. *Quest. Rom.* 74, p. 281 E; augusta, frequent dedications and sanctuaries; also frequently on imperial coins; balnearis, *CIL* ii. 2701, 2763; Fronto, *de Orat.* S. 157 (Naber); cf. also balnearum, *CIL* vi. 182; barbata, Aug. *de Civ. Dei*, iv. 11, vi. 1; Tertull. *ad Nat.* ii. 11; bona, inscriptions and imperial coins; brevis, sanctuary ascribed to Servius Tullius, Plut. *Quest. Rom.* 74, p. 281 D; conseruatoria, *CIL* iii. 1933, vii. 211, 954, iii. 4289, 4558; dubia, Bas. Capitol., 13th region, 'vico Fortunae dubiae'; dua, A.D. 214, sacrifice by the Arvales, *CIL* vi. 2103 b. 71; cf. *CIL* ix. 2194; on imperial coins; equestris, temple near the theatre of Marcellus, vowed in 180 B.C. by Q. Fulvius Flaccus, Livy, xl. xl. 10, xli. 9; dedicated 173 B.C., Livy, xlii. x. 5; Vitruv. ii. iii. 2; Obsequ. 118; temple at Antium, Tac. *Ann.* iii. 71; εύελπεις, sanctuary attributed to Servius Tullius, Plut. *Quest. Rom.* 74, p. 281 E; altar, Plut. *de Fort. Rom.* 10, p. 323 A; felix, on imperial coins; huiusce diei, a temple in the Campus Martius, dedication day, 30th July, *Fast. Alf.*; cf. *Fast. Pinc.*; cf. Plut. *Mar.* 26; possibly another temple on the Palatine, Cic. *de Nat. Deor.* iii. xxv. 63, *de Leg.* ii. xi. 23; Pliny, *HN* ii. 16; mammosa, Bas. Capitol., 12th region, 'vico Fortunae mammosae'; manens, coins of Commodus; memor, *CIL* vi. 190; muliebris, sanctuary at the fourth milestone of the Via Latina, Val. Max. i. viii. 4; Fest. p. 242; Dion. Hal. vii. lvi. 4; Serv. *En.* iv. 19; Tertull. *de Monog.* 17; on coins of Faustina: obsequens, sanctuary attributed to Servius Tullius, Plut. *Quest. Rom.* 74, p. 281 E, *de Fort. Rom.* 10, p. 322 F; Bas. Capitol., 1st region, 'vico Fortunae obsequens'; *CIL* vi. 191; from Como, *ib.* v. 5247; from Cora, *ib.* x. 6509=1. 1153; on coins of Antoninus Pius; opifera, dedication from Tibur, Orelli, 1763; πάριον, temple by Trajan, dedication day, 1st Jan., Lyd. *de Mens.* iv. 7, p. 70. 14 (Wünsch); praesens, *CIL* vi. 181b; primigenia, temple on the Quirinal, dedication day, 18th Nov., *Fast. Arval.*; temple on the Capitoline, ascribed to Servius Tullius, Plut. *de Fort. Rom.* 10, p. 322 F; also dedicatory inscriptions from Rome, *CIL* vi. 192-195, 3681; and from Ravenna, *ib.* xi. 1. 1415 (?); privata (idēa), sanctuary on the Palatine, Plut. *de Fort. Rom.* 10, p. 322 F, *Quest. Rom.* 74, p. 281 E; publica, temple on the Quirinal,

dedication day, 5th April, *Fast. Praen.*; Ovid, *Fasti*, iv. 875 f.; cf. Dio Cass. xlii. xxvi. 3; *CIL* ix. 1543, x. 1558; publica populi Romani Quiritium primigenia, temple on the Quirinal, vowed 204 B.C. by P. Sempronius Tuditanus, Livy, xix. xxxvi. 8; dedicated 194 B.C., *ib.* xxiv. liii. 5, dedication day, 26th May, *Fast. Caer.*; Ovid, *Fasti*, v. 729 f.; dedicatory inscription from Britain, *CIL* vii. 702; on republican and imperial coins; redux, dedication of an altar near the Porta Capena in 19 B.C. on the return of Augustus from the East, Dio Cass. liv. x. 3; *Mon. Anc. Gr.* vi. 7 ff.; celebration on 12th Oct., *Fast. Amit.*; regular dedication day, 15th Dec., *Cum. Fer.*; Domitian built a temple in the Campus Martius, Mart. viii. lxx. 1 f.; for sacrifice by the Arvales, cf. Henzen, pp. 86, 122, 124; on imperial coins; respiciens (ἐπιστρεφόμεν), temple, Dio Cass. xlii. xxvi. 4; Plut. *de Fort. Rom.* 10, p. 323 A, *Quest. Rom.* 74, p. 281 E; Bas. Capitol., 10th region, 'vico Fortunae respicient(is)'; cf. *Curios. and Notit.*; salutaria, *CIL* vi. 184, 201 f., iii. 3315; stabilis, dedication from Veleis in Noricum, *ib.* iii. 6156a; virginatis, Arnob. ii. 67; virgo (παρθένος), sanctuary, Plut. *Quest. Rom.* 74, p. 281 E, *de Fort. Rom.* 10, p. 322 F; cf. Varro, *ap. Non.*, p. 189; virilis, sanctuary ascribed to Servius Tullius, Plut. *Quest. Rom.* 74, p. 281 E; *Fast. Praen.*, 1st April; Plut. *de Fort. Rom.* 10, p. 323 A; viscata (?) (ἱεστρία), Plut. *Quest. Rom.* 74, p. 281 E, *de Fort. Rom.* 10, p. 322 F.

Closely connected with Fortuna is Bonus Eventus, a sort of masculine parallel to Felicitas. He seems originally to have been a deity of agriculture, in whose power lay the success or failure of the crop. Hence he is included by Varro in his famous list of the twelve deities of the farmer. But his scope soon broadened and became general, and it is in the general sense that he is the recipient of many inscriptions from the provinces. These inscriptions indicate the private worship of individuals rather than a State cult. But a State cult must also have existed, because Bonus Eventus had a temple in the Campus Martius. The head of the god with inscription occurs on denarii of Caesar's time, and frequently on coins of the empire. The statues of the god represented him somewhat in the type of Triptolemos, as a youth making libation at an altar, and holding in his left hand stalks of wheat or a cornucopia. It is interesting to note that the statue in the symbolism harks back to the primitive agricultural side of his nature.

BONUS EVENTUS.—On the early agricultural character cf. the prayer in Cato, *de Agric.* 141: 'cum divis volentibus quodque bene eveniat, . . . uti tu fruges grandire beneque evenire siris'; Varr. *de Re Rust.* i. 6; provincial inscriptions, *CIL* ii. 1471, 2412, 3095, 4612, iii. 1128, 6223, suppl. 8244, v. 3218, 4208, vii. 77, 97, 425, viii. suppl. 16366, 17213, ix. 1560, xi. 622; *CI Rhén.* 983, 1034; Roman inscription, *CIL* vi. 144, 795; temple in Campus Martius, *Amm. Marc.* xxix. v. 19; on the statue, Pliny, *HN* xxiv. 77, xxvi. 23, and cf. O. Marucchi, *Bull. Arch. Com.* vi. [1878] 205 ff.

There follow three abstracts, which give every appearance of being very old cults, though we have no definite date. Iuventas had a little chapel in the cella of Minerva, in the old Capitoline temple of Jupiter. For every boy who came to man's estate and assumed the toga virilis a tax was paid into the treasury of Iuventas, while at the same time an offering was brought to Jupiter Optimus Maximus. She was the goddess of incipient manhood, the 'dea novorum togatorum,' patroness of those who had put on the toga for the first time. What was true of all young men was pre-eminently true of the emperor; hence Iuventas Augusta and the special imperial festivals in this connexion. This was the old Roman Iuventas, quite distinct, though often difficult to distinguish, from the Greek Hebe, who was present in Rome at least in the time of the Second Punic War and took part in the lectisternium of 218 B.C. It was Iuventas, the Greek goddess, to whom M. Livius Salinator vowed in the battle of Sena (207 B.C.) a temple, which was dedicated at the Circus Maximus by C. Licinius Lucullus in 191 B.C.

IUVENTAS.—Chapel in the Capitoline temple, Dion. Hal. iii. lxxix; Pliny, *HN* xxxv. 103; cf. Livy, v. liv. 7; Flor. *Epit.* i. 1. 71; Aug. *de Civ. Dei*, iv. 23; tax for all novi togati, attributed to Servius Tullius, Dion. Hal. iv. xv. 5; cf. Paul. p. 104; Cic. *ad Att.* i. xviii. 3; supplicatio on 19th Oct., anniversary of the days when Augustus put on the toga, *Cum. Fer. CIL* x. 8375.

On Iuventas-Hebe: temple by M. Livius Salinator, Livy, xxxvi. xxxvi. 5; Dio Cass. liv. xix. 7; *Mon. Anc.* iv. 8; Pliny, *HN*

xxix. 57; *Iactisternium* of 218, Livy, xxi. lxii. 9; occasional provincial dedications to *Iuventas*.

It is open to question whether *Pudicitia* formed a part of the State religion during the republic; she certainly did during the empire, and was worshipped by private persons during the republic. Under the name of *Pudicitia Plebeia* she had an old chapel in the *Vicus Longus*, in connexion with which there arose a legend of the cult of *Pudicitia Patricia* in the *Forum Boarium*. It is, however, extremely doubtful whether *Pudicitia Patricia* ever existed. *Pudicitia* was the special protectress of the purity of married life, and was worshipped therefore only by married women living in first wedlock (*matronæ univiræ*), or by widows who had married but once. During the empire she naturally became the patroness of the empresses, from *Plotina* onwards.

PUDICITIA.—*Pudicitia Plebeia*, Livy, x. xxiii. 6 ff.; cf. *Juv.* vi. 308; *Prop.* ii. li. 25; the legend of *Pudicitia Patricia*, Livy, x. xxiii. 8; *Fest.* p. 242; *Matronæ univiræ*, Livy, x. xxiii. 9; for connexion with *Plotina* see her coins with altar and inscription 'ara Pudicitiae'; dedication of a statue of *Pudicitia Augusta* in a temple of the *Dea Cælestis* in *Karpis* (Africa) by a 'flaminica divæ Plotinae,' *CIL* vii. 998; comparison of *Pudicitia* and *Livia*, *Val. Max.* vi. 1.

Quies is another goddess whose official worship seems to have begun under the empire, but who had a private cult during the republic. We hear of a sanctuary outside the city on the *Via Labicana*. After they had abdicated, *Diocletian* and *Maximian* caused medals to be struck with the inscription 'Quies Augustorum.'

QUIES.—Livy, iv. xli. 8: 'iam consul via Labicana ad fanum Quietis erat'; *Aug. de Civ. Dei*, iv. 16: 'Quietem, cum aedem haberet extra portam Collinam, publice illam suscipere noluerunt,' seems to rest on a misunderstanding of the passage in Livy; on the coins cf. J. H. von Eckhel, *Doctrina Numorum veterum*, Vienna, 1792-98, viii. 14.

Another group of abstracts which go back well into the republic consists of *Concordia*, *Spes*, and *Pietas*.

Concordia has an interesting and important history. She makes her first appearance in our records in the year 367 B.C., when the dictator, M. Furius Camillus, founded a temple at the northern end of the *Forum* in celebration of the cessation of strife between patricians and plebeians. In 221 B.C., at the close of the tumults connected with the Gracchi, L. Opimius restored the temple. On 16th Jan. A.D. 10 *Tiberius* dedicated this temple anew, under the name of *Concordia Augusta*; and about this time *Livia* dedicated a shrine to the goddess in the newly-built *Porticus Livia* on the *Esquiline*. In 218 B.C., in connexion with a military revolt in Gaul, the prætor, L. Manlius, vowed a temple to *Concordia*, which was erected on the *Capitoline* and dedicated 5th Feb. 216 B.C. Near the main *Concord* temple in the *Forum* a small chapel to *Concord* had been erected nearly a century before (304 B.C.) by the edile, Cn. Flavius, in gratitude for the ending of the quarrels which the censorship of Appius Claudius had called forth. In 164 B.C. the censor, Q. Marcius Philippus, erected a statue of the goddess in the hope that by her favour his censorship might be a peaceful contrast to the stormy times preceding. At the beginning of the fateful year 44 B.C., when it looked as though civil war had ceased, the senate decreed to build in *Cæsar's* honour a temple of *Concordia Nova*. In 10 B.C. *Augustus* erected an altar to *Concordia*, and ornamented it with a statue. In A.D. 16, after the suicide of *Scribonius Libo*, the senate gave thank-offerings to *Concordia*. *Nero* sought her favour, and under him *Concordia* appears in the list of deities to whom the *Arvales* make sacrifice. From this time onwards *Concordia Augusta* or *Concordia Augustorum* figures frequently on imperial coins. Finally, *Concordia* is the recipient of dedicatory inscriptions in many parts of the

empire, connecting her with *collegia*, municipalities, provinces, armies, etc.

CONCORDIA.—*Camillus's* temple, *Ovid, Fasti*, i. 637 ff.; *Plut. Cam. 42*; restoration by *Opimius*, *Plut. C. Gracchus*, 17; *Appian, de Bell. Civ.* i. 26; *Aug. de Civ. Dei*, iii. 25; rededication by *Tiberius*, *Fast. Præn.*, *CIL* i. 3 p. 308; *Ovid, Fasti*, i. 645 ff.; *Dio Cass.* lv. viii. 2, lvi. xxv. 1; *Livia's* chapel, *Ovid, Fasti*, vi. 637; *Manlius's* temple, *Livy*, xxii. xxiii. 7, xxiii. xxi. 7; *Fast. Præn.*, *CIL* i. 2 p. 309; *Flavius's* chapel, *Livy*, ix. xli. 6; *Pliny, HN* xxiii. 19; *Philippus's* statue, *Cic. de Dom.* 130 f., 136 f.; temple in *Cæsar's* honour, *Dio Cass.* xlv. iv. 5; altar by *Augustus*, *ib.* liv. xxxv. 2; *Ovid, Fasti*, iii. 881 f.; senate's thank-offering (A.D. 16), *Tac. Ann.* ii. 32; *Nero* and the *Arvales*, *CIL* vi. 2039. 10, 2041. 17, 2041. 31, 2042. 6; sacristans of the *Concordia* temple, *ib.* vi. 2204 f., 8703; altar in *Syracuse*, *Livy*, xxiv. xxii. 1; temple in *Gales*, *CIL* viii. 757; statue in *Cora*, *ib.* i. 1154 = x. 6508; dedication from *Casinum*, *ib.* x. 5159; frequent dedications to *Concordia Augusta* or *Concordia Augustorum*; noticeable are the *Concordiales Augustales* of *Patavium*, *ib.* v. 268; on coins of both republic and empire.

Possibly the cult of *Spes* goes well back into the republic. An indication of this would seem to be the existence of a region called 'ad spem veterem,' outside the city near the later *Porta Labicana*. The earliest temple, vowed by A. Atilius Calatinus during the battles of the First Punic War, with its dedication day, 1st Aug., stood in the *Forum Holitorium*. This temple was destroyed by fire in 31 B.C., and dedicated anew by *Germanicus* in A.D. 17. In addition, we have a reference to the existence of a 'templum Spei novum' in the seventh region. There was a special festival to *Spes* and *Iuventas* on the anniversary of the day when *Augustus* put on the *toga virilis*. In A.D. 63, when *Nero* and *Poppæa* returned to Rome from *Antium*, *Spes* appears in the list of the goddesses to whom the *Arvales* make sacrifice. This *Spes Augusta* occurs frequently in inscriptions and on coins, also as *Spes Populi Romani* and *Spes Publica*. See, further, art. HOPE (Greek and Roman).

SPES.—'Ad spem veterem,' *Livy*, ii. li. 2; *Dion. Hal.* ix. xxiv. 4; cf. *Frontin. de Aqu.* v. 19 ff., 65; *CIL* xv. 5929; temple in *Forum Holitorium*, *Cic. de Leg.* ii. xi. 28; *Tac. Ann.* ii. 49; *Dio Cass.* l. x. 3; *Livy*, xxi. lxii. 4, xxv. vii. 6; *Fast. Vall.* to 1st Aug.; the templum novum, in the supplement to *Notitia*, 7th region; festival to *Spes* and *Iuventas*, *Cum. Fer.*, *CIL* x. 8375; sacrifices by *Arvales*, *CIL* vi. 2043. 2, 10; temple at *Ostia*, *ib.* xiv. 375. 321; priestess at *Gabii*, *ib.* xiv. 2804; 'cultores Spei Augustae,' in *Antium*, *ib.* x. 6645; cult at *Aricia*, *ib.* xiv. 2158; at *Capua*, *ib.* x. 8775; statue with inscription, *ib.* vi. 757; cf. T. Schreiber, *Villa Ludovisi*, Leipzig, 1880, no. 292; simulacra are mentioned, *CIL* xiv. 2853, 2867, ix. 4663, x. 8295.

Pietas is, strictly speaking, the ideal of the relationship between parents and children. Judging from the great emphasis laid upon the sacredness of this relationship among the Romans, it seems highly probable that *Pietas* existed in private worship from very early times. In 191 B.C., at the battle of *Thermopylæ* against *Antiochus*, the consul, M'. Acilius Glabrio, vowed her a temple. Ten years later his son, also M'. Acilius Glabrio, carried out this vow and dedicated the temple of *Pietas* in the *Forum Holitorium*. We do not know what incident in the battle gave rise to the vow—possibly, as *Wissowa* suggests (*Religion und Kultus der Römer*², p. 331), an incident similar to that between P. Cornelius Scipio and his son, *Scipio Africanus Major*, at the battle of *Ticinus*. In the absence of facts, legend copies a Greek model, telling of a daughter who by the milk of her breast had nourished her mother in prison. The only connexion with the temple was, however, that the prison had formerly stood on the same site. This temple gave place in 44 B.C. to the theatre of *Marcellus*. Another temple of *Pietas*, with its dedication day 1st Dec., was situated near the *Circus Flaminius*. On the coins of M. Antonius (41 B.C.) and also on those of the empire *Pietas* is represented accompanied by a stork. This is probably a reference to the cult statue of one of these two temples. In the course of the empire the sharp edge of the meaning of *Pietas* was worn off, and she came to mean the general harmonious

relationship between the members of the imperial family. Cf. art. FILIAL PIETY, vol. vi. p. 18*.

PIETAS.—On Acilius Glabrio's temple, Livy, xl. xxxiv. 4 ff.; cf. Val. Max. ii. v. 1; destroyed by the coming of the theatre of Marcellus, Dio Cass. xliii. 49; Pliny, HN vii. 121; temple in the Circus Flaminius, *Fast. Amit.*, 1st Dec., CIL i. 2 p. 335; Obsequ. 54 (114); Cic. de Div. i. 98; on the coins of M. Antonius, E. Babelon, *Monn. Consul.*, Paris, 1885, i. 173 f.; altar vowed by senate on account of the illness of Livia, Tac. Ann. iii. 64; dedicated by Claudius, A.D. 43, CIL vi. 562; Pietas Augusta (or Augustorum) on imperial coins from Antoninus Pius and Faustina on; dedication from Rome, *ib.* vi. 563; a 'pontifex perpetuus domus Augustae' (in Bætica), *ib.* ii. 1663.

Mens occupies a peculiar and rather interesting place in our list of abstracts. We have seen Roman abstracts influenced by Greek ideas, as, e.g., in the case of Inventas-Hebe, but we have not met as yet an abstract which arose entirely through Greek influence. This is the case with Mens. In 217 B.C., after the terrible defeat at Lake Trasimene, the Romans, in addition to other propitiatory acts, vowed two temples, one to the Venus of Mount Eryx in Sicily and the other to Mens. These temples were built close together on the Capitoline, and were dedicated in 215 B.C. One hundred years later M. Æmilius Scaurus restored the temple of Mens. Mens was introduced into Rome at the command of the Sibylline oracles, and this, entirely apart from her close connexion with the Greek goddess, Aphrodite of Mount Eryx, is sufficient proof of Greek origin. A goddess, Bona Mens, occurs on the coins of Pæstum, and we have several inscriptions from Central and Southern Italy to Magistri Bonæ Mentis. The Bona Mens was what was lacking at Trasimene, and, interpreted in this sense, she would be the equivalent of *Σωφροσύνη*.

MENS.—The Capitoline temple, Livy, xxii. ix. 10, x. 10, xiii. xxxi. 9; Ovid, *Fasti*, vi. 241 ff.; Lact. Div. Inst. i. xx. 13; restoration by Scaurus, Cic. de Nat. Deor. ii. xiii. 61; Plut. de Fort. Rom. 5, p. 318 B; later dedication day, 8th June, Ovid, *Fasti*, vi. 241 ff.; *Fasti. Venus.*, *Fast. Majf.*; Mens Bona at Pæstum, CIL x. 472; at Cora, *ib.* x. 6512-6514; at Cales, *ib.* x. 4638; at Puteoli, *ib.* x. 1550; at Tibur, *ib.* xiv. 3564; at Alba Fucens, *ib.* ix. 3910 f.; inscriptions by private persons; Luna, *ib.* xi. 1327; Aquileia, *Arch.-epig. Mitt. Oesterr.* xix. (1896) 206; Lugdunum, CIL xlii. 1673.

Beginning with Julius Cæsar and extending through the empire, we have a large and apparently constantly increasing number of abstracts; but here, as always, we must take account of our general inability to date inscriptions within a century, and of the probability that in many cases the goddess in question may have existed long before, and these by chance may be our first references. Let us consider the more important of these deities in alphabetical order.

Æquitas.—We meet with her first in an archaic inscription from Vulci, 'Acetia'i pocolom'; her statue is dedicated to Fortuna Primigenia at Præneste; Arnobius (iv. 1) mentions her as a goddess; and she occurs on coins from Galba to Maximianus Hercules.

Æternitas.—Her name and a picture of her temple occur on the coins of Augustus and Tiberius. Æternitas Imperii soon became the official form, and Nero performed special games 'pro aeternitate imperii.' Thus in A.D. 66, after the discovery of the conspiracy of Piso, the Arvales sacrificed to her.

Annona.—The personification of the crops, along with Ceres as the giver of them, and sometimes without her, occurs on coins from Nero onwards. She has a dedicatory inscription from Rome, 'Annonae Sanctae,' and possibly two others, one from Spain and one from Ostia.

Clementia is the personification of mercy and pardon as illustrated in the emperor. She received a temple in honour of Cæsar in 44 B.C., and later an altar in honour of Tiberius; in A.D. 39 a regular yearly sacrifice was decreed in honour of Caligula,

and in A.D. 66, when Nero was kind to Tiridates, the Arvales sacrificed to her. On imperial coins she appears as Clementia Augusta, and later as Clementia Temporum, the only form from Gallienus onwards.

Copia is, Wissowa thinks (p. 332), merely the personification of the *copia* of cornu copiae, and he denies her existence in actual worship; but an inscription from Avignon, and the fact that two Roman deities, one at Thurii (193 B.C.) and one at Lugdunum (43 B.C.), were named Copia, seem to point clearly to a real cult.

Disciplina is at least as old as Hadrian. She occurs on the coins of Hadrian (as Disciplina Augusta) and in inscriptions from Africa and Britain.

Fecunditas appears first in A.D. 63, when the senate ordered a temple to be built in her honour, in gratitude for the successful delivery of Poppæa in childbirth. Probably at the same time the Arvales made sacrifice to her. The name and the representation of the goddess are found on coins beginning with the older Faustina. She is represented as carrying a child in one arm and a sceptre in the other, and sometimes as carrying a child in each arm. Under the name of Fecunditas Temporum, she appears on the coins of Barbia Orbiana and Otacilia.

Gloria is the recipient of a dedicatory inscription from Numidia; she appears as Gloria Exercitus on medallions of Constantius II. and Constantine II., and as simply Gloria on many imperial coins.

Indulgentia seems to come into existence under Hadrian; Marcus Aurelius dedicated a temple to her; she was the recipient of a chapel with a bronze statue in Cirta, Africa; and she appears frequently on imperial coins, usually as Indulgentia Augusta.

Iustitia, as Iustitia Augusta, received a statue in Rome on 8th Jan., A.D. 13; we have mention also in Rome of a 'sacerdos Iustitiae,' a dedicatory inscription from Ancona, and a reference to a statue from Æquiculi.

Pax, a blessing which can best be appreciated after a long period of war, appears on the denarii of L. Æmilius Buca in the year of Cæsar's death. After this premature appearance she disappears again, to return under Augustus, when her cult was definitely established. In 13 B.C., when Augustus returned from his expedition to Spain and Gaul, the senate decreed an altar to Pax, which was dedicated on 30th Jan., 9 B.C. In the meantime (10 B.C.) Augustus himself had dedicated altars to Pax Augusta, Salus Publica, and Concordia. Under Caligula the Arvales sacrificed to Pax on the anniversary of the dedication day of the Ara Pacis; and in A.D. 66, when Nero closed the temple of Janus, they made an offering to her. Finally, under the Flavian emperors the great Templum Pacis in Vespasian's Forum was built.

Providentia goes through an interesting development, beginning probably as early as the Augustan age. She is the personification of the foresight of the emperor himself, by means of which perils and disasters are fortunately avoided. Offerings were made to her after the fall of Sejanus, after the murder of Agrippina, after the discovery of the conspiracy of Piso, and after Galba had assured a successor to the throne. Gradually, however, the concept shifted, and Providentia began to be thought of as the protecting power of the gods. It is to Providentia thus thought of that the Arvales sacrificed in A.D. 183 for the health of Commodus. The same Providentia Deorum occurs at intervals on coins from the time of Hadrian onwards.

Securitas, as Augusta, Publica, or Temporum, is the deification of the abiding sense of peace and

security. On 10th Jan., A.D. 69, the Arvales sacrificed to her because Galba, in adopting Piso Licinianus, seemed to guarantee the security of the empire; on another occasion the people of Praeneste dedicated an altar to her; and we have an inscription from Cirta, in Africa, recording the erection of a statue. She is, of course, frequent on coins.

Tutela, the goddess who unites in herself all the ideas and concepts of protection, seems to belong to the empire, but to have come into existence in a fashion similar to that in which the oldest abstracts were made. Thus she bears a splendid testimony to the absolute conservatism of all the religious processes of ancient Rome. In a word, she seems to have grown up out of the idea of the *genius loci*—the 'deus in cuius tutela hic locus est'—the *deus tutelae*, or *genius tutelae*. Finally, Tutela broke off and became an independent deity, and a rival of the *genius*. The Tutela Augusta thus is equivalent to the Genius Augusti, and is often preferred by the empresses. In the closing years of paganism we meet with Tutela in household worship, in connexion with the *lares*, as a sort of female *genius*.

Valetudo belongs to the circle of Salus. The name appears in republican times on the denarii of M'. Acilius Glabrio, in connexion with a representation of Hygeia (Salus is on the obverse of the same coin). She is also the recipient of several dedicatory inscriptions from the provinces.

ÆQUITAS.—Vulci, *CIL* I. 43; Praeneste, *ib.* xiv. 2260; Arnob. iv. 1.

ÆTERNITAS.—On the coins of Augustus and Tiberius cf. H. Cohen, *Médailles impériales*², Paris, 1880-92; on the phrase 'aeternitas imperii', *CIL* vi. 2064. 45, 2065, 2067. 40; cf. Pliny, *Ep. ad Trai.* 59, 83; Nero's games, Suet. *Nero*, ii.; sacrifice of A.D. 66, *CIL* vi. 2044. i. 6.

ANNOA.—Rome, *CIL* vi. 22; Spain, *ib.* ii. 4976. 1; Ostia, *ib.* xiv. 45.

CLEMENTIA.—Temple (44 B.C.), Plut. *Ces.* 57; Appian, *de Bell. Cto.* ii. 106; Dio Cass. xlii. vi. 4; altar for Tiberius, Tac. *Ann.* iv. 74; yearly sacrifice for Caligula, Dio Cass. lxx. xvi. 10; sacrifice of A.D. 66, *CIL* vi. 2044. 1.

COPIA.—On the cornu copiae, Plaut. *Pseud.* 671, 676; Hor. *Carm. Saec.* 60, *Epist.* i. xii. 28; inscription from Avignon, *CIL* xii. 1023; for Thuri of C. B. V. Head, *Hist. Numorum*, new ed., Oxford, 1911, p. 88.

DISCIPLINA.—Eckhel, vi. 503; *CIL* viii. 9832, 10657, vii. 805.

FECUNDITAS.—The temple of A.D. 63, Tac. *Ann.* xv. 23; cf. Henzen, p. 85; for the coins of Cohen², nos. 205 (Faustine Mère), 93-105 (Faustine jeune), 13-26 (Lucille), 17 (Crispine), 84-85 (Julie Domne), 39-46 (Salonine), 8 (Orbiana), 18 (Ottacille).

GLORIA.—*CIL* viii. 6949: 'Gloriae Aug. Sacrum'; W. Fröhner, *Méd. de l'emp. rom.*, Paris, 1878, p. 361; Cohen², nos. 131, 132 (Constantin II. le Jeune).

INDULGENTIA.—Possible connexion with Hadrian, *CIL* viii. 8313 f.; temple of Marcus Aurelius, Dio Cass. lxxi. xxiv. 3; inscription from Cirta, *CIL* vii. 7095; for the coins cf. Eckhel, vii. 183, 190, 204.

IUSTITIA.—The statue of A.D. 13, *Fast. Praen.*; 'sacerdos Iustitiae', *CIL* vi. 2250; Ancona, *ib.* ix. 6890; *Æquiculi*, *ib.* ix. 4133; the altar from Capua (*ib.* x. 3812) dedicated to 'Iustitiae, Nemesi, Fatis' belongs to Greek and not Roman religion.

PAX.—Denarii of Æmilius Buca, Babelon, ii. 23; on Augustus cf. in general the Augustan poetry, Tibull. i. x. 45; Hor. *Carm. Saec.* 57; on the Ara Pacis, *CIL* i. 2 p. 320; *Fast. Amit.* 4th July; cf. *Fast. Ant.*; *Fast. Praen.*, 30th Jan.; cf. *Fast. Cæs.*; *Mon. Ancyr.* ii. 37 ff.; Dio Cass. liv. xxv. 8; Ovid, *Fasti*, i. 709 ff.; on Augustus's dedication (10 B.C.), Dio Cass. liv. xxv. 2; Ovid, *Fasti*, iii. 831 f.; sacrifice under Caligula, *CIL* vi. 2025 b. 8-10; A.D. 66, *ib.* vi. 2044. i. 12; cf. Henzen, pp. 78, 82; Vespasian's temple, Dio Cass. lxxvi. xv. 1; Suet. *Vesp.* 9.

PROVIDENTIA.—Coin of Augustus with altar and inscription, Eckhel, vi. 12, 128; an 'ara Providentiae Augustae' in the *Acta Frat. Arval.*, *CIL* vi. 2023 d. 15, 2033. 5, under Caligula and Claudius; Sejanus, H. Dessau, *Inscr. Lat. selectae*, Berlin, 1892 ff., i. nos. 157, 158; Agrippina, etc.; cf. *Acta Frat. Arval.*, *CIL* vi. 2042 a. 14, 2044 i. A. 2051 i. 29; Trajan, *ib.* x. 6310; the Severi, *ib.* iii. 1439; Providentiae Augustae, *ib.* v. 1871, viii. 841; offering for Commodus, *ib.* vi. 2099, iii. 18; on Providentia Deorum cf. Eckhel, vi. 507; Pliny, *Paneg.* 10.

SECURITAS.—*Securitas Publica*, Tac. *Ag.* 3; Arval sacrifice (A.D. 69), *CIL* vi. 2051; Praeneste, *ib.* xiv. 2899; Cirta, *ib.* viii. 7095. 98; *Securitas Perpetua* from Viminacium (Servia), *Oest. Jahreshfte*, iv. [1901], Beiblatt, p. 115.

TUTELA.—Henzen, p. 146: 'deus in cuius tutela hic locus est'; *CIL* ii. 3021, 3377, 4092: 'deus tutelae'; *ib.* ii. 2991: 'genius tutelae'; *ib.* iii. 4445, vi. 216: 'Tutela huius loci'; cf.

ib. vi. 777, and Petron. *Ivii.* 105; 'Tutela Tarraconensis', *CIL* ii. 4091; 'Tutela domus Rupilianae', *ib.* v. 3304; 'Tutela Candidiana', *ib.* vi. 776; Tutela alone, *ib.* ii. 2538, 3031, 3226, 4090, v. 4982, vi. 774 f.; on Tutela Augusta cf. *CIL* iii. 3349, 4056, v. 4982; Tutela in late household worship, Hieron. *in Esai.* 57; cf. relief, *Annali d. inst.* [1866], Taf. K. 4.

VALETUDO.—Dedication from Noricum, *CIL* iii. 5149; from Lecce, *ib.* ix. 3812 f.; from Mauretania, *ib.* viii. 9610; on republican coins.

There are nine abstracts which seem all to have been the recipients of a cult, for in each case we have either a dedicatory inscription or a reference to an altar. For most of them we have only one reference, but of course this state of affairs is doubtless largely accidental. They are as follows: *Amicitia*, to whom in A.D. 28 an altar was erected in honour of Tiberius; *Civitas* (dedicatory inscription from Rome); *Dies Bonus* (dedicatory inscription from Caesarea in Mauretania); *Fama* (dedicatory inscription from Cologne), *Fama Augusta* from Batica; *Maestas* (dedicatory inscriptions from Rome and from Halicarnassus); *Natio*, said to have been worshipped in the region of Ardea; *Sanctitas* (dedicatory inscription from Antiana [Pannonia Inferior]); *Ultio* (altar under Tiberius in A.D. 20); *Vis* (dedicatory inscription from Aquileia).

Finally, there are several abstracts which occur only on coins or in the poets, and regarding which we are justified in being very sceptical as to the actual existence of a cult: *Abundantia*, on coins from Elagabalus to Valerius Maximus; *Constantia*, on the coins of Claudius and his mother Antonia; *Hilaritas*, on imperial coins, also as 'Hilaritas Augusta, populi Romani, temporum'; *Incunditas* Augusta, on a coin of Alexander Severus; *Lætitia*, on imperial coins, also as Lætitia Augusti, Augustæ, Augustorum, Fundata, Publica, Temporum; *Liberalitas*, on imperial coins, also as Liberalitas Augusta; *Moderatio*, on imperial coins; *Patientia*, on coins of Hadrian; *Tranquillitas*, on imperial coins, also as Tranquillitas Aug., Augg., Beata Tranquillitas; *Ubertas*, on imperial coins, also as Ubertas Sacculi.

In connexion with personification an interesting piece of work remains to be done, namely a study of the various pictorial types, with special attention to the language of symbolism. The basal concept is practically always the same (except in the case of Spes and Virtus), a draped female figure, but the variations in attributes and their permutations and combinations suffice to indicate a multitude of distinct deities. This language of symbolism, which was spoken fairly consistently at least until the time of Hadrian, merits diligent study, and such an investigation will throw much additional light on the history of personification among the Romans.

LITERATURE.—On the general subject cf. W. Warde Fowler, *Roman Ideas of Deity*, London, 1914; G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902, 21912. These are both most reliable. L. Deubner's art. in Roscher, iii. 2. 2068 ff., needs considerable correction, but contains much valuable material. For individual abstracts consult the separate art. in Daremberg-Saglio, Pauly-Wissowa, and Roscher. R. Engelhard, *De personificationibus quae in poetis atque arte Romanorum inveniuntur*, Göttingen, 1881, is of no value.

JESSE BENEDICT CARTER.

PERSONIFICATION (Semitic).—I. Primitive form.—Animism, the primitive form of religious personification, underlies the Semitic religions. W. Robertson Smith (*Rel. Sem.*², pp. 54, 86 f., 131, 134) is explicit on this point.

Among the Semites, as elsewhere, primitive man 'feels himself to be environed by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power' (p. 54).

Such men ascribe to all material objects a life akin to their own; an unseen life is supposed to inhabit the heavenly bodies (sun, moon, stars) and natural objects upon earth (animals, trees, stones, wells,

brooks). Thus, these sacred objects come to be thought of as living beings, persons—in other words, they are personified. This process was not confined to objects; it is also found in connexion with forces and activities—*e.g.*, winds and diseases.

'Wherever the spontaneous life of nature was manifested in an emphatic way, the ancient Semite saw something supernatural' (*ib.* p. 184).

All this, however, is instinctive and unconscious, and so to be distinguished from the deliberate, elaborate personification of later Semitic theology.

(a) *Babylonia and Assyria*.—This primitive form of personification was doubtless found in the early stages of Babylonian religion. Thus A. H. Sayce:

'Deep down in the very core of Babylonian religion lay a belief in what Professor Tylor has called animism. It belonged to the Sumerian element in the faith of the people, and, as we shall see, was never really assimilated by the Semitic settlers.' Sayce, therefore, does not regard this primitive personification as an original element in Babylonian religion—a view not generally held and by no means certain. We need not, however, discuss the point, for, as Sayce says: 'In spite of Semitic influences and official attempts to explain it away, it was never eradicated from the popular creed, and it left a permanent impress upon the folk-lore and superstitions of the nation' (*The Religions of Ancient Egypt and Babylonia*, Edinburgh, 1902, p. 276).

Traces of it abound in Babylonian and Assyrian remains. Many of the innumerable demons are personifications of diseases, winds, etc.—*e.g.*, Namtar, the demon of plague, and Ashakku, the demon of wasting disease (M. Jastrow, *Rel. of Babylonia and Assyria*, p. 260).

(b) *Syria and Palestine*.—There was much in common between the primitive ideas of the Aramæans, Canaanites, Israelites, and other inhabitants of Syria. Probably our evidence for Israel is wholly derived from a period subsequent to the settlement in Canaan; it is especially difficult to decide which elements of the popular religion are characteristic of Israel and which are borrowed from the Canaanites, but we need not discuss the problem here. What Israel appropriated of this kind was congenial to its religious temper and in accordance with the principles of its primitive faith. The natural objects which we find sacred in Israel had doubtless been sacred earlier to the Canaanites, but Israel had known such while it was still a group of nomad tribes. Among these are the wells, trees, and stones associated with the patriarchs, and the pillars, stone *maṣṣēbhāh* and wooden *dāshērāh*, erected at the sanctuaries, notably Jachin and Boaz that stood before Solomon's temple (1 K 7²¹). A typical instance is the *maṣṣēbhāh* at Bethel, associated with Jacob (Gn 28²²). Originally the stone itself is the house of God (*Bēth Elōhīm*); the spirit, the *genius loci*, actually dwelt in the stone, was the stone personified. So, again, Robertson Smith:

'The old Hebrew fables of trees that speak and act like human beings (Jg 9^{8a}, 2 K 14⁹) have their original source in the savage personification of vegetable species' (p. 133).

This ascription of personal qualities to natural objects easily passed to a somewhat higher stage in which spirits were thought of as embodiments of the life supposed to dwell in natural objects and phenomena—the spirit as distinguished from the stone in which it dwelt.

(c) *Arabia*.—Similar forms of thought can be traced in the remains of pre-Muhammadan Arabia, and still survive in the East.

2. *Later developments*.—So far we have been speaking of the naïve personification of primitive peoples, but by a gradual transition it becomes more conscious and elaborate. We need not commit ourselves to the complicated theories of Winckler, Zimmern, Jeremias, etc., as to the wholesale dependence of the developed religion of Babylonia and Assyria on astronomy, but there can be no question that these systems are largely dependent on the personification of heavenly

bodies and phenomena, of natural objects, processes, and forces. Such personification in some cases originated in the primitive animism; in others it may have been suggested by it. Note, *e.g.*, the fact that the animals that furnish names and imaginary outlines for the constellations of the zodiac appear in mythology as monsters in the train of Tiamāt, the dragon of the abyss. The personifications connected with the greater deities probably represent a more advanced stage of thought.

Tammūz is 'the personification of agricultural activity' (Jastrow, p. 58). Shamash was 'the personification of the sun *par excellence* and the sun as a whole' (p. 68). Ea was the personification of wisdom. Anu, 'from being merely the personification of the heavens, . . . is raised to the still higher dignity of symbolizing, as Jensen puts it, the abstract principle of which both the heavens and earth are emanations' (p. 155.f.)—obviously not a primitive idea.

Such examples might be multiplied almost indefinitely.

3. *Eponymous ancestors, etc.*—There is also another species of personification, according to which a deity or legendary hero originates through the personification of a city, tribe, or nation. Possibly the Assyrian deity Ashur is an example of this.

According to Jastrow (p. 195), 'one is bound to confess that the evidence does not warrant us in regarding Ashur as anything but the patron of the city of Ashur. Nowhere do we find any allusion from which we are justified in concluding that he originally represented some elemental power or phenomenon.'

Others, however, regard Ashur as a form of the name of an ancient deity, after whom the city was named. In any case, this kind of personification was common among the Israelites and Arabs, and, indeed, among primitive nations generally. A frequent example is the setting forth of the political, racial, and geographical relations of peoples in the form of genealogies of persons. Gn 10 is a striking illustration; the geographical contiguity, and possibly also the political connexion of Ethiopia, Egypt, and Canaan, are indicated by speaking of them as 'brothers.' In the same way, the narratives of the patriarchs are largely tribal history in the form of accounts of persons; it is impossible now to say how far this method has been carried. According to some, Israel and the Twelve Patriarchs are 'eponymous ancestors.' How this method was understood by the ancients is doubtful. Skinner writes:

'When a writer speaks of Lydians, Lybians, Philistines, etc., as "sons" of Egypt . . . it is difficult to think . . . that he believed the Lydians to be descended from a man named "Lydians" . . . ; and we may begin to suspect that the whole system of eponyms is a conventional symbolism which was as transparent to its authors as it is to us. That, however, would be a hasty and probably mistaken inference. . . . On the whole it is safer to assume that, in the mind of the genealogist, they [the names] stand for real individuals, from whom the different nations were believed to be descended' (*ICC*, 'Genesis,' Edinburgh, 1910, p. 190).

It is not, however, safe to lay down any general rule; there are instances where it is clear that the writing of tribal history in the form of personal narrative is a mere convention. For instance, when Jg 1⁸ states that 'Judah said unto Simeon his brother,' it is clear, both from the context and from the chronology, that the writer cannot mean that the ancient patriarch Judah said to the ancient patriarch Simeon (see also the present writer [*Chronicles*, London, 1894, p. 876] on 1 Ch 7^{20a}). Possibly Skinner's words are specially applicable to genealogies.

4. *Influence on theology, etc.*—It is important to recognize that personification, being closely connected with anthropomorphism and anthropopathism, has exercised great influence on both popular religion and official theology. This being a matter where language largely controls thought, the relations between persons and other personal qualities and activities have been automatically transferred to the deities, to their relations with one another,

and to their relations with their worshippers, individual and collective. The various Semitic gods have their wives; the Babylonian Nebo is the son of Merodach. The more important the deities, the more various are the relationships ascribed to them: the Babylonian Ishtar is the daughter, sometimes of Sin, sometimes of Anu; according to Jeremias (*OT in the Light of the Anc. East*, Eng. tr., i. 127), Ishtar is variously the bride, wife, mother, or sister of Tammüz, besides having other lovers. Relationships arise out of political changes; when two cities are connected by conquest, alliance, or amalgamation, the god of the one may become the master, husband, or father of the other. Similar relationships arise between eponymous ancestors: thus, when the tribe of Joseph was divided into Ephraim and Manasseh, Joseph was said to be the father of Ephraim and Manasseh. Similarly, the deity is said to be the father, mother, or husband of the people. So Jahweh is the father (Hos 11¹), or the husband (2¹⁶), of Israel.

5. Personification of divine attributes.—Again, there is the personification in Jewish literature of the attributes, activities, and manifestations of God, and perhaps even of abstract qualities. In the later books there is doubtless pure literary personification, consciously used as a figure of speech and nothing more (see below on 'Wisdom,' etc.). But figures are apt to be popularly understood in a literal instead of a literary sense, and what is merely personified to the man of culture is a person to people generally. The most notable examples are the spirit of Jahweh, the Word, and Wisdom.

The ideas connected with the spirit (*rūah*) of Jahweh would be partly determined by the fact that *rūah* in the concrete meant 'breath' and also 'wind,' and that man had a *rūah* both in the sense of 'breath' and in that of 'principle of life,' etc. These facts would make for understanding the spirit of Jahweh as an emanation or manifestation or even a part of Jahweh. But other passages speak of the spirit of Jahweh in terms commonly used of persons; in the early literature it 'rushes' or 'leaps' upon men; in Gn 1² the spirit of Elohim broods over the waters as a mother-bird over her young. In Is 48¹⁶ RV we have: 'The Lord Jahweh hath sent me, and his spirit,' which is sometimes understood as AV, 'The Lord God, and his spirit, hath sent me'; but both text and meaning are doubtful. On such passages Piepenbring writes:

'It is evident that in these passages the spirit and the word of God are personified, but that these personifications must be placed on the same level with others of the same kind' (*Theol. of the OT*, Eng. tr., p. 251).

The OT passages just referred to dealing with the Word are numerous—e.g., Ps 33⁶: 'By the word of the Lord were the heavens made.' The advance of the Word, through personification, to the status of a person belongs chiefly to post-Biblical Jewish literature, in which the Jewish idea is influenced and ultimately dominated by the Logos of Greek philosophy. Thus in the Targum of Onkelos the action of God is frequently ascribed to the Word (*mēmra*); e.g., Ex 19¹⁷, Moses at Sinai brought forth the people to meet the Word of God. Again in Philo the Logos is 'Son of God,' 'God,' 'high priest,' 'archetypal man' (B. F. Westcott, *Gospel of St. John*, London, 1908, p. xxxiv). But in these matters Philo, Jew though he was, was the disciple of Plato rather than of the Rabbis.

In the OT and the Apocrypha the tendency to personify is most strongly marked in connexion with Wisdom, *Hokhmāh*, Sophia (Job 28, Pr 8, Wis, *passim*, Sir 24, Bar 3²⁻²⁷). In some of these passages Wisdom seems to be spoken of as a person (cf. Marti, *Gesch. der isr. Religion*, p. 328, with

special reference to Wis 7^{22a}), as 'Hypostase' representing the aggregate of the divine attributes (cf. also Pr 8³⁰, where Wisdom is made to say of the time when Jahweh created the world: 'Then I was by him, as a master workman'). Similarly, in the *Secrets of Enoch*, xxx. 8, Wisdom is commanded to create man. The identification of Wisdom with the Tōrah (Sir 19²⁰ etc.) exemplifies a tendency to personify the law which is more marked in later Judaism. Thus W. O. E. Oesterley:

'The idea of imputing personality to the Tōrah . . . receives actual expression in *Shemoth Rabba*, c. 29, where it says that the Tōrah stands before the Holy One and intercedes for Israel' (*Jewish Doctrine of Mediation*, London, 1910, p. 69).

In some directions the process upon which we have touched reached its climax in the Chaldean doctrine of the Trinity; and, in a very different way, in the Gnostic systems, with their æons, Sophia, Nous, etc.; and the Jewish counterpart of Gnosticism, the Kabbalā, with its *esfirōth*, or emanations, Wisdom, Intelligence, etc.

6. Various examples.—In view of the elasticity of the idea of personification and its frequent use as a literary figure, it would be easy to multiply further examples, but it may be sufficient to mention a few which possess special interest.

We note first various terms for God or for activities or attributes of God which are sometimes spoken of in a quasi-personal fashion: 'the glory of Jahweh' (Ezk 10⁴); 'the divine name' (Ex 23²¹); 'the divine presence,' lit. 'face,' *pānim* (Ex 33¹⁴). In the Rabbinical literature we find 'the Name' (*sh'mā*), 'the Place' (*māqōm*), and 'Heaven' (*shamaym*). In this connexion we may also mention the *sh'khināh* and the *bāth qōl*. *Sh'khināh*, 'dwelling,' as an abstract noun, is used with great latitude; it is sometimes the radiant manifestation of God in the concrete 'dwelling,' the Tabernacle, *mishkān*, but it is by no means confined to this usage.

It is sometimes practically equivalent to *MEMRA*, *Λόγος*, but we may distinguish between them by regarding the one as the medium of a *passive*, the other of an *active*, manifestation: the one as creative, the other as 'overshadowing' or 'indwelling' (C. Taylor, *Sayings of the Jewish Fathers*², Cambridge, 1897, p. 44).

The *bāth qōl*, 'the daughter of the voice,' is a name for a species of oracular utterance, supposed to be heard by men:

'Every day Bath Qol goes forth from Mt. Horeb, and makes proclamation and says, Woe to the creatures for contempt of Torah' (*Pirqe Abhōth*, vi. 2).

The voice from heaven in Mk 1¹¹ would have been described by the Rabbis as *bāth qōl* (cf. 'Daughter of Zion,' for the city and its inhabitants [Is 1⁸ etc.]).

The 'angel of the Lord' (*mal'ākh Jahweh*) may possibly be regarded as in some sense a personification of a manifestation of Jahweh; perhaps, too, at some stages of thought, angels and demons, together with the Muhammadan *jinn*s, may have been, or been regarded as, personifications of natural objects or forces, like the *numina* of primitive religion whom they replaced. Satan, at any rate, has at times become the personification of the powers of evil, and this view does not seem foreign to some aspects of Semitic thought.

The suggestion is sometimes made that Aaron (*Aharōn*) is simply the personification of the Ark (*Ārōn*), and this is not impossible.

A curious example of personification is found among the Falashas, or Abyssinian Jews; they worship the Sabbath as a goddess.

A beautiful example of purely literary personification is Ps 85^{10a}:

'Mercy and truth are met together;
Righteousness and peace have kissed each other.
Truth springeth out of the earth;
And righteousness hath looked down from heaven.'

LITERATURE.—Morris Jastrow, *The Civilization of Babylon and Assyria*, London, 1915, pp. 190-236, *Hebrew and Babylonian*

'Geist, heiliger,' 'Weisheit,' 'Wort Gottes.'

W. H. BENNETT.

PERU.—Our knowledge of the religion and mythology of Peru is gleaned chiefly from the writings of its Spanish conquerors, in whose records we are confronted with a bewildering array of religious types—animism, stone-worship, totemism, and fetishism appearing singly and simultaneously in different areas. A pantheon more or less developed exists side by side with these, and, if certain writers are to be believed, even monotheism and agnosticism made some headway in Incan times.

If it be admitted that the first four classes alluded to all fall to be included under the head of animism, then we may say that at the period of its destruction Incan religion had succeeded in evolving a pantheon possessing at least several anthropomorphic figures from an animism which still flourished side by side with it. This circumstance should render Peruvian religion a study of profound interest to students of comparative religion, as it exhibits a phase of peculiar value to the student. Moreover, there is perhaps no mythology in which compound myths exhibiting definite religious strata are so well exemplified.

At the time of the Spanish conquest Incan animism had reached the agricultural stage. The food compact with the crop-gods was not so well marked as in the case of ancient Mexico, but, although human sacrifice was rare, it is a mistake to consider it as altogether absent from Peruvian ritual. It is only reasonable to suppose that totemism, some relics of which remained, had preceded this agricultural cult, but there is perhaps no progression existence of type in early religion, and two types may exist side by side and even overlap. Be that as it may, we are informed by Garcilasso de la Vega¹ that in 'the idolatry of the first age' each district, family, village, and house possessed its own god, each different from the others, and that these were generally material objects, such as herbs, plants, trees, mountains, caves, precipices, large stones, small pebbles of different colours, and animals—jaguar, puma, bear, ape, fox, lynx, and cougar. The list includes examples of fetishistic, animistic, and totemistic worship, the first of which certainly survived until late times. Caves and precipices were worshipped as *paccariscas*, or places of origin, plants as the homes of animistic spirits, stones as fetish objects, and animals as totemic eponyms.

All things sacred were known to the Peruvians as *huaca*. The most common visible objects of veneration among the agricultural portion of the population were the *ecompas*, or gods of the irrigation channels to be found in every maize-field. The *compa* was sacrificed to at the planting of the seed and earnestly invoked during the growth of the plant, and no type of pagan worship was extirpated with greater difficulty. Others called *huancas* were situated in each plantation and were carved out of stone to represent a gigantic corn-stalk, which was placed there for the purpose of encouraging the plant to grow to the greatest possible size. 'Maize-mothers' were known as *saramama*, 'potato-mothers' as *acsumama*, and 'cocoa-mothers' as *cocamama*. These remained

mere rustic fetishes and did not blossom into anthropomorphic gods of vegetation.

This arrestment was probably due to the fact that throughout Peru there existed a definite conception of a universal spirit of animated things (*Pachacamac*) and the close association of this conception with those of a creator-god (*Pacharurac*) and a ruling or directing god (*Pachayachachic*).

The *Pachacamac* was the great spirit from whom proceeded the lesser spirits of animistic type who inhabited the various vegetable plants, whilst his consort *Pachamama* was supposed to have originated all those who haunted larger physical objects such as mountains and rivers. *Pachacamac* came to be identified with the creative agency (*Pacharurac*) from the circumstance that the function of both was regarded as the bestowal of the breath of life. He was represented in the *ceoricancha*, or temple, at Cuzco by a stone statue in the form of a man, and his evolution into the form *Pachayachachic*, in the late Incan period, may safely be ascribed to the growth and stability of Incan rule. Indeed, Inca *Pachacutic* built for the new god a separate shrine at Cuzco, known as the *Inisurcancha*, in which he is said by Molina to have placed a golden statue of the universal deity, thus, perhaps, attempting to further a monotheistic ideal. Older forms died hard. *Viracocha*, a deity representative of water and its powers of fertilization, was sometimes identified with *Pachayachachic*, and is perhaps anterior in origin to the cult of *Pachacamac*, as was *Con*, or *Cun*, the thunder-god of the Collao. Fish deities were also prominent in the coastal districts.

Sun-worship.—It remains only to mention sun-worship in a sketch of a religion which has already been dealt with in art. **ANDEANS**. The name 'Inca' means 'people of the sun.' They gave the sun an anthropomorphic shape, but did not derive racial or royal descent from him, calling themselves 'children of the sun' *honoris causa*; and it was only at a comparatively recent date that this connexion with the sun was embodied in a religious form, having probably been introduced by the great-grandfather of the *Apu-Ccapac-Inca*, who ruled at the conquest. The figure at Cuzco representing the sun was attired in the robes of a monarch, and a special ritual was attached to its worship. The warrior class practised a private and esoteric worship of the sun, totally distinct from the popular form, the idol which they adored being called *Huaina-Punchau*, 'the young sun,' representing an infant a year old moulded in solid gold.

LEWIS SPENCE.

PESSIMISM AND OPTIMISM.—These rival interpretations of existence have one circumstance in common: both are designated by superlatives; and the loose employment of the terms in ordinary phraseology renders it needful to point this out. To justify their use in a philosophical sense it is not enough that a given view of things should dwell by preference on their more forbidding or more engaging aspect respectively. The terms are more strictly opposed than this, and each is to be understood in its literal sense. For pessimistic theory this is the worst of worlds; if it were to be a world, it could not have borne to be worse than it is. Some rudiments of order and well-being Schopenhauer himself will allow to it, since otherwise it could not cohere or continue in existence at all. But, so much being granted, the contention is that its irrationality, misery, and worthlessness could not be more than they are. And optimism also expresses itself in the same unqualified way, maintaining that all is for the best in this best of all possible worlds.

¹ *Historia general del Peru*, Lisbon, 1617, bk. 1. ch. ix.

The facts on which the former of these views rests are many and undeniable. Whatever a maturer reflexion may suggest, man and his environment do not, superficially regarded, seem to be well fitted to each other. By the essential conditions of his existence man is subjected to hindrance and disappointment, to suffering, decay, and death, and necessarily his awakening consciousness is painfully arrested by such experiences. An anxious and resentful attitude to life may be said to be the natural reaction of the mind's first contact with reality, and spiritual growth thereafter to signify, at least temporarily, a deepening sense of the unsatisfying nature of the world, its instability, its evanescence, and the inconsideration which it manifests for ends humanly felt to be desirable. Hence not only the elegiac note which pervades so much of the world's most moving literature, but also the strain of world-weariness present in the thinking of every people which has risen above the most elementary level of culture. Every age supplies its instances, more especially among the poets, from Homer, who, for all his healthy-mindedness, can find it in his heart to say that 'there is nothing more wretched than man of all things that breathe and are' (*Il.* xvii. 446 f.), and Sophocles, from whom is wrung the cry that 'not to be born is the most to be desired; but, having seen the light, the next best is to go whence one came as soon as may be' (*Oed. Col.* 1225 f.), to our more passionate modern singers of the pitiless sway of wrong and pain and death. And yet such utterances may be expressive merely of a subjective attitude or mood which is transcended in a larger view. The writer, while not fundamentally rebellious, may derive a pensive satisfaction from the indulgence of morbid feeling, and may even find life worth living while he displays before the world the pageant of his bleeding heart. Or, again, his seeming despair may bring otherwise its more express correction with it. The Hebrew teaching on life, *e.g.*, owing to the intensity of the religious belief present throughout, is in the main of a finely robust and hopeful temper, yet in one signal instance it betrays a different character. Koheleth takes rank as one of the classics of the literature of reflective melancholy; nowhere are the bewilderment, dismay, and exhaustion of human nature, baffled by the contradictions of its lot, realized more poignantly. Nevertheless, there is no sign of spiritual collapse in the book. The conclusion reached does not suggest either the despairing or the immoral mind. On the contrary, the ground-tone of the writer's view is furnished by the spiritual tradition which he has inherited. His faith, though semi-paralyzed, holds out, and at least a working solution of the world-riddle is arrived at: if man do not ask too much from life, a sober degree of worthiness may be found in it still. And ultimately his chastened trust in existence expresses itself thus: 'Fear God, and keep his commandments, for this is the whole duty of man; for God will bring every work and every secret thing into judgment, whether it be good or whether it be evil.'

For the most part, then, the instinctive sense of the incongruity between the spirit and its environment, together with the depression of feeling thus occasioned, does not in point of fact give rise to the sceptical view of life, but is, consciously or unconsciously, taken up into a more comprehensive estimate of things. Where, however, this is not the case, the result is pessimism, the doctrine that existence is fundamentally and essentially evil. The theory is found both in Eastern and in Western thought. Optimism, on the other hand, in the proper sense of the term, belongs to one special period in the development of the latter only. It

will be convenient to deal with the various phases of each in the order of their historical appearance.

1. **Buddhist pessimism.**—In its earliest form pessimism appears, singularly enough, as the characteristic and determinative feature of a popular religion. As a doctrine of redemption Buddhism starts from a comprehensive assertion of the evil and pain inherent in human existence. Life is misery, misery undiluted and unrelieved, from which there is no deliverance so long as personal consciousness persists. This grievous condition is not accounted for by anything external to life itself. It cannot be construed as penal, nor is it consequential upon anything else. Human agents, it is true, may themselves, in some degree, add to its burdensomeness; as, similarly, they may lighten it. But in the main it is life itself that is at fault. Its radical conditions do not permit of happiness, and, if its sorrow is to be cured, these must first be altogether altered or removed.

Little is to be said for the suggestion that would trace this belief to an experience of accumulated distress which had during long ages oppressed the Indian mind, and finally generated so despairing a conviction. Historical evidence is entirely lacking; and, besides, so deeply considered an attitude to existence could scarcely be the outcome of accidental circumstances. Its roots are to be found in that monistic tendency of thought which made its appearance so early, and which is expressed in the *Upaniṣads* with so rigorous finality. If only the *ātman* (*q.v.*) is real, it follows that existence otherwise must be illusory and evil. In the language of the Vedānta philosophy it is *avam*, 'emptiness,' 'vanity'; it is *māyā*, 'mirage.' To think otherwise is the supreme error and the source of all further error and sin. On the other hand, to realize this truth is wisdom and salvation. He is a fool who takes the reflexion for the substance, and expends himself on objects essentially shadowy and deceptive. The instructed man knows better. How the world around him came into quasi-existence, indeed, he comprehends no more than another: it is a spectral projection, a shadow cast by the sole divinity, an evil dream which even so is powerless to disturb the blissful repose in which Brahman is wrapped eternally. Yet the wise man is at least aware of its unsubstantial and evanescent character, and, being disillusioned, may cherish the hope of ultimate escape from the meshes of its infinite deception into the unbroken peace of the one-and-all whence he came.

Now from such a doctrine the pessimistic judgment upon life is a direct, if not a necessary, inference. The pantheism which once and again has emerged in the history of European thought has tended for the most part to the enrichment and glorifying of existence. Identifying God with the world, it has greatly quickened the instinctive sense of the wonder and beauty of nature and added a new sacredness to life in its meanest forms. But the Hindu mind—not in all its phases, but prevalently—solved the problem of the one and the many in the more strictly logical or acosmistic fashion. For it the world is pure appearance; it is unreal, phantasmal, wholly lacking in validity and value. The creation, or rather the emanation into being, of nature and man is the fundamental mystery and catastrophe. As making up the varied, ever-perishing scene that offers itself to perception, they must be conceived to be in a state of diremption from that to which they properly belong or in which they inhere. And while, accordingly, essential deep distraction is seated at the heart of the world, pervading its members in every part, this rises into consciousness in man, in whom the phenomenal world pronounces judgment upon itself as altogether worthless and wrong.

It is important to note that to the speculative ideas involved here early Buddhism was professedly indifferent. In the eyes of Gautama, as would appear, all dogmas of the thinkers were vain: for himself he sought only a practical *askesis* by the adoption of which the soul might effect its emancipation from life's ills. Nevertheless, the ultimate presuppositions from which his doctrine is derived are unmistakable; and further, just in so far as he departs from these does its pessimistic character become still more pronounced and thoroughgoing. Thus from the metaphysic of the past he discards entirely that idea of an absolute reality of the world, the inner core or substance of all phenomena, which, indeterminate though it was, had seemed to offer the mind something positive to rest in, and retains only the correlative thought of the instability and evanescence of the finite. The original illumination which broke upon him under the *bo*-tree already betrays this: 'Coming to pass, coming to pass—at that thought there arose in me a vision into things not called before to mind' (*Digha-Nikāya*, ii. 1); and to the same effect is the saying which tradition reports to have been his last, and which summarizes all his teaching: 'That which came into being dissolves into non-being again; work out your own salvation' (*SBE* xi. [1900] 114). That is, the apprehension of the impermanence of things is fundamental in the system. It is indeed the sole philosophical principle on which it is all built up. If earlier reflexion had asserted the being that is behind all becoming, the Buddhist doctrine maintains that the only reality of being is becoming—no sooner has anything begun to be than it has begun to lapse into non-being again. Hence its insistence on the weary round of birth, old age, and death which all life treads perennially. In other words, life is change; mere change or process unqualified, aimless, and endless. Again, if Gautama ignores the conception of man as properly a portion or spark of the infinite, pure spirit therefore, unconditioned and free, and achieving his destiny only in returning to the central fire or focus of being whence he came, all the more does he lay stress upon the view (which also belongs to the psychology of the *Upaniṣads*) that, as the subject of a time-and-space experience, he is 'wholly made up of desire,' with the corollary that peace is to be attained only through its extirpation. This, indeed, is cardinal with Gautama. The 'four excellent truths' are little more than an elaboration of the position, setting forth with the usual Oriental cumbrousness of phrasing that all experience whatsoever, including as it does an element of appetition always, is of the nature of suffering; conscious life is a restless striving, an insatiable thirst or craving, the sole remedy for which lies in 'letting desire go, expelling it, separating oneself from it, giving it no room.' And in one further particular the positive yet free relation of Buddhist teaching to the past, as also the enhanced gloom attaching to it thereby, deserves to be noted. As incorporated in a system otherwise so spiritual and rarefied, the transmigration idea in Hinduism is clearly a survival from a ruder time, its retention probably representing the attempt to do some sort of justice to those indestructible convictions of personal identity and moral retribution which a self-consistent pantheism would contradict too violently. But in the Buddhist doctrine even this accommodation to ordinary human instinct is still further attenuated and reduced. The notion of the self having been surrendered, no use can any longer be made of a conception which suggests, in however illusory a manner, a continuous substrate of consciousness passing on from life to life; that of the transmission of the ethical result or outcome of ex-

perience takes its place; and the prospect that opens before the individual is that of an infinite succession of lives, each determined in character, according to the laws of an inherent necessity, by the quality of the deeds done in the preceding, until the *karma* (*q.v.*) involved is exhausted, and with the breaking of the chain of existences liberation from the burden of being is achieved.

Of the three conceptions just referred to it might be hard to say which is the most fitted to suggest a despairing estimate of life. Plainly there is a close affinity between each and the other two, and together they yield a view of existence the most essentially sad and sceptical that has ever been accepted by mankind. It is true that the Buddhist scheme contains elements of spiritual value and attractiveness, and without these its power and vogue must have been unintelligible. The desires of average human nature are so largely foolish and hurtful that no well-considered method that aims at their repression could fail to rid experience of many ills. In particular, it was nothing less than a moral discovery of the first order that led Gautama to substitute for the senseless austerities of Brāhmanism a regimen of internal purification and self-discipline as the 'path that leads to the extinction of desire.' The ethical is the universally human, and doubtless it was in virtue of the emphasis which it laid on the excellence of the ethical element in experience, especially in certain of its most gracious and winning forms, and on the accessibility of these to the lowest *Sūdra* in the land, that the doctrine achieved its astonishing success at the first and has since proved capable, in versions however adulterated, of satisfying the needs of so large a portion of the race. That in the effort to reach his ideal a real measure of happiness is also open to the Buddhist disciple cannot be denied. The way to *arhat*-ship is always pleasant, in the sense that at every step pain is more completely left behind; there are lives to be passed through, especially in one or other of the seven heavens recognized by the system, as the individual fulfils his appointed course, which are full of happy experiences; and *nirvāṇa*, that 'gain which no other gain surpasses,' is hailed from afar as a joy beyond compare. Yet all this cannot conceal the essentially negative character of the conception of existence involved. In truth, it is not, as will be seen later, peculiar to Buddhism to seek to combine a relative optimism with a philosophy of being which is profoundly unbelieving and hopeless. It remains that life is desire, and desire is pain, and only where both are at an end is the craving of the soul at rest. On these terms literally no definable good is left to be the object of pursuit. Condemnation has been passed upon all. Even the morally good is not good absolutely; ultimately it also proves a hindrance, since in its most passive forms a tincture of desire is apparent and life and individuality still assert themselves. Only with their cessation is the goal attained. Of the resultant state, *nirvāṇa* (*q.v.*), all that is really predicable is that it is devoid of those elements of experience which give life content and significance. The last thread which bound the soul to the world of activity and change has been destroyed; and, if it is at peace, the meaning is that it has made good its escape into a region or condition from which consciousness itself has disappeared and where being and non-being are indistinguishable.

So subtle and profound, then, is this Oriental pessimist philosophy. It is a dogmatic pessimism, not so much basing itself upon an inductive survey of experience and a comparison of its pleasures and pains as concluding from its inherent nature that all its conditions are out of joint, and that the

outcome, so long as it shall last, can be only suffering and frustration. The modern version of the creed, being conceived in another milieu, presents necessarily somewhat different features. Nevertheless, in essentials the two do not vary greatly. In certain cardinal features the resemblance is almost startling.

2. The optimism of Leibniz.—European pessimism is preceded historically by its opposite. Optimistic theory represents a phase of 17th and 18th cent. thought, and is found in two main forms. On the Continent its classical exponent is Leibniz, and to him its definition as a doctrine is due. In England it appears in a more diffused shape, characterizing the attitude and spirit especially of the Deistic school and finding a more casual expression in various writers of the age. By Leibniz himself, however, it is not always set forth in the same manner, nor would it be fair to gather his views from the *Theodicee* alone. That treatise, originally composed for the edification of Queen Sophia Charlotte of Prussia in 1710, is essentially popular in character and cannot be rightly understood unless in conjunction with his more expressly philosophical writings. In this connexion the *Système nouveau de la nature et de la communication des substances* (1695), the *Monadologie*, and the *Principes de la nature et de la grâce fondés en raison* (both published in 1714) require to be taken into account.

Leibniz's was essentially a catholic mind, and it has been truly said that harmony is the dominant idea of his philosophy. In early life he had been fascinated by the mechanical doctrines of the current Cartesianism; later he learned from his study of Plato to regard final causes as no mere human imagination projected on things, but as objectively founded; and, in effect, his effort is to combine the ætiological and teleological aspects of existence in a unified scheme. Its formal starting-point is a criticism of Spinoza's notion of substance. Leibniz agrees with Spinoza in regarding substance as that which is independent of all else, so that its characters must be determinable from itself alone; but there agreement between the two thinkers ends. In Leibniz's view the conception of existence as essentially one is a pure abstraction and no more helpful for the understanding of the world than is the atomic hypothesis of Cartesian science itself. Reality is a manifold. It is constituted of particulars or unities of being, each of which is substantial as being independent of the rest and intelligible through its own inner nature, and from each, indeed, could it be understood rightly, the whole of existence might be construed. Further, each is active. For the real is not, as Spinoza taught, essentially passive. Substance, on the contrary, denotes capability of action, and the monads, to use Leibniz's technical term, are centres of living force in which being and work are one. They are to be construed on the analogy of that one among them of which we have the best and most intimate knowledge, namely, human personality, and must be conceived as being all more or less both perceptive and active. These ultimate constituents of things, in short, are so many points of view from which the world may be regarded or so many special forms in which it is mirrored or expressed. And, seeing that, although thus independent of one another, 'having no windows through which aught might come in or go out,' the monads nevertheless make up a coherent whole, it follows that a superior principle of combination must needs have brought this to pass. In the organic unity of experience a 'pre-established harmony' stands revealed; or, in other words, in the constitution of the world as a system of elements connected by physical laws,

together with the fact that all individuals agree in the main in the representation which they form of it, there is already implied the existence of a power of wisdom and goodness on which all depend and in which the various perfections of the creatures are present in an eminent degree. How their relation to this principle is to be understood is nowhere clearly said. If the monads are, indeed, 'simple substances' in the sense described, how can they proceed from a creative power, whose beneficent purposes they are to observe? And if, on the other hand, they are emanations from His being rather, 'the continual out-flashings (*fulgurations*) of His divinity from moment to moment' (*Monadologie*, § 4), do they not at once relapse into mere appearance, as on Spinoza's view? That Leibniz understood himself to have avoided the pantheistic conclusion is plain: he expressly repudiates the doctrine of an *anima mundi* as incompatible with the freedom and worth of the individual. But the ambiguity remains one of the outstanding difficulties of the Leibnizian system, only veiled by a profuse employment of theological language not conducive to speculative clearness.

For present purposes, however, it is more necessary to observe the tendency to self-realization which he finds characterizing existence everywhere. This pertains not only to all actual forms of being, but to those also which never emerge out of the region of mere possibility. Since possibility, in all its infinite variety, is not just nothing, it must be credited with a degree of being, or at least with a *nisus* in that direction. In the case of necessary truths, indeed, the sole test of whose objectivity is the absence of contradiction, to be possible ensures existence; but with contingent truths it is otherwise. The ground of their reality lies elsewhere. The concrete fact or event being finite does not explain itself, and can just as little furnish a true or ultimate explanation of anything else. In itself it may be reckoned arbitrary, and, abstractly considered, it and its opposite are equally possible. But they are not equally possible in conjunction, or 'compossible.' An actual world composed of a multitude of diverse elements must be the result of a selection made among all the conceivable configurations of being according to the law of sufficient reason; or, to express the matter in religious terms, among the infinite number of possible worlds eternally embraced within the divine thought the actual existing world represents that one which has been chosen by the divine will, and brought into being by the divine power, as the most fitting and best ('le plus convenable'). Hence, though the existence of the world constituted as we find it cannot be shown to be a metaphysical necessity, yet not only its non-existence but also its being constituted otherwise is morally unthinkable. God necessarily wills in accordance with His wisdom and goodness; and the universe which we know, though but one of an infinite number conceivable, is nevertheless that one among them which could not but be.

One further feature must be taken account of in order to reach a right understanding of Leibniz's unqualified faith in existence. The monads, it is obvious, differ qualitatively from each other, and especially in respect of their fundamental characteristic, the clearness or obscurity of their perceptions. Highest of all among them are those which are termed minds (*esprits*), although whether, on the general principles of his philosophy, Leibniz is entitled to consider this type of monad generically distinct from every other is more than doubtful. Nevertheless, they are consistently so regarded, no doubt in view of those ethical interests of the individual which he is everywhere so anxious to conserve. To them is ascribed the power of con-

sciously apprehending not merely the world but also the Power whence the world has sprung, so that, if souls in general are living mirrors or images of the universe of created things, human minds are also 'images of the Deity or Author of Nature Himself,' capable of knowing the system of the universe and to some extent of imitating it through spiritual creations and activities of all sorts, each mind being 'a small divinity in its own sphere.' To God, therefore, intelligible natures are related, not as the parts of a machine to its inventor (as is the case with the other constituents of creation), but as subjects to a monarch, or, rather, as children to a parent who seeks to reproduce in them his own perfection. To this under His guidance all things minister. Just as efficient and final causes are found to imply each other, so does there appear a perfect harmony between the physical and moral orders. Nature itself 'leads to grace, and grace by the use it makes of nature brings it to perfection' (*Principes*, § 15). In fine, existence in its deepest interpretation is a City of God, under whose perfect government, as at once architect of the mechanical universe and moral lawgiver and king, good and evil conduct are rewarded with unflinching justice, and not merely the advantage of the whole but the absolute well-being of the individual also is secured infallibly. Human shortsightedness, it is true, must often mar the vision.

But 'if,' to quote the conclusion of the *Monadologie*, 'we could sufficiently understand the order of the universe, we should find that it exceeds all the desires of the wisest men, and that it is impossible to make it better than it is, not only as a whole and in general but also for ourselves in particular, if we are attached, as we ought to be, to the Author of all, not only as to the architect and efficient cause of our being, but as to our master and to the final cause which ought to be the whole aim of our will, and which can alone make our happiness' (tr. Latia, p. 271).

There is here, it will be understood, no desire to ignore or minimize the known evils of the world. On the contrary, evil is held to be inevitable. Thus, God alone finds the reason for His existence within Himself, and contains an independent fullness or perfection of being; the created world, consisting of a vast congeries of elements differing in respect of the adequacy with which they express the totality of existence and all inherently craving an ever fuller expression of it, involves imperfection—evil in this sense—in its warp and woof. And this in truth, urges Leibniz, is the whole significance of the conception. Evil is nothing positive or real, nor is there, properly speaking, a principle of evil any more than of cold or darkness. It is a defect or a negation. Such perfection as the creatures exhibit in themselves and in their conduct comes directly from God; their imperfection is merely privative. Even moral evil partakes of this character. The activities of the monads result from their perceptions, and it is because these perceptions are so often at fault that the former go astray. It is not ignorance alone, then, but (moral) error and malice also that 'formally consist in privation': the creature in causing sin is 'une cause déficiente'; while, as for the physical evils with which the world doubtless abounds, they are the necessary penal consequence of sin under a divine government which everywhere makes nature subservient to righteousness, although to our limited vision the immediate connexion of the two may not be always apparent. Evil, that is, as a thing reprehensible in itself and casting a reflexion upon either the power or the goodness of the Creator, disappears. In any case there is a vast overplus of happiness in the world; and, for the rest, the 'evil' to be found in it is justified. Certainly, the non-existence of a creaturely world is conceivable, as involving no

self-contradiction; on the other hand, it would contradict the necessity which an infinite power of wisdom and goodness is under of expressing itself in a world reflecting its own perfections. But of such a world limitation or imperfection is a necessary feature, and that evil in this sense should be eliminated therefrom is inherently impossible. All that can be legitimately asked is that it should be controlled by the good and made to serve its ends, and that the case indeed stands thus there can be no doubt at all. The law of the sufficient reason itself ensures it, and experience 'ordinarily' furnishes confirmation. Evil, in short, is a necessary ingredient in the actual goodness of the world, as the sweet becomes insipid without an admixture of the bitter and discords are necessary to richest harmonies. The existing combination of things is best. Remove any most sinister evil visible in it, and it would no longer be the world which, all things considered, is the most desirable. It might have contained no Judas, but how then should the Saviour have died? In other words, the world is a progressive achievement, in which an element of necessary limitation is always present, and from it the utmost to be expected is that the divine power will at no point suffer real defeat, but will everywhere overcome evil with good.

3. *Deism*.—To a dogmatic optimism of this kind speculative thought in England has no parallel to show, nor would it be easy to trace there any distinctively Leibnizian influence at work. Nevertheless, contemporary English rationalism exhibits broad affinities with the corresponding Continental tendency, and both alike find the optimistic attitude and temper congenial. In both an unhesitating confidence is placed in human reason; the Cartesian test of logical clearness is erected into a supreme standard of truth, at the expense, as a later age would say, of those deeper intuitions of the soul to which alone final reality is revealed; philosophy is treated with scholastic assurance as the handmaid of religion; and the ultimate truths, whether of the one or of the other—really they are identical—are held for a body of doctrines logically demonstrable. On these terms scant justice is likely to be done to those elements in experience which threaten the reasonableness of the universal scheme, and just this is found to be a prevailing feature in the thinking, whether theological or non-theological, of the age. Deism (*q.v.*) entertains the most complacent views of existence. Of that characteristic phenomenon of the Illumination a crude apriorism may be said to be the foundation. Subsequent writers had learned from Locke to be distrustful of innate ideas, but no more than Locke himself had they attained to a consistent experientialism. No conception is more characteristic of their thinking than that of an all-comprehending harmony in existence which (they will admit) an imperfect experience could never of itself furnish, but for which they claim that it is at least illustrated by experience everywhere. So Shaftesbury speaks throughout of a 'coherent scheme of things,' this 'mighty union' or 'consistent fabric,' whose orderliness is 'abundantly confirmed' by all that we see 'in every rank and order of beings to the remotest spheres,' apparent defects or irregularities being the necessary accompaniments of phenomena which are only parts of a greater whole and disappearing in a larger view, which in its present state, however, the human mind may not always be able to take. Bolingbroke and others follow him here, and detailed support is furnished for the affirmation of the beneficence of nature by the natural theologians, such as Derham and Ray, who handle the argument from final causes in the most naively anthropomorphic manner. So, too, as regards human

nature: the microcosm reflects the symmetry of the macrocosm. Failure to maintain internal harmony, indeed, is a serious and frequent fact; the passions break loose and play havoc with the soul's health and peace. But this represents no schism within the soul itself; it is due to ignorance, which enlightenment will remove. The disorder, then, which we witness, whether in the physical or in the moral world, is in neither case anything positive. In the one it is an illusion arising from our incomplete understanding of what is so vastly beyond us—

'All Nature is but Art, unknown to thee;
All Chance, Direction which thou canst not see'
(Pope, *Essay on Man*, ep. 1. l. 289 f.).

And in the other a better understanding of our own being would enable us to avoid that disproportionate indulgence of its various impulses which inevitably entails the hurt and ruin of the whole. Essentially, then, whatever is right.

'The gen'ral Order, since the whole began,
Is kept in Nature, and is kept in Man' (ib. 171 f.).

Ultimately, the position is scarcely distinguishable from Spinoza's own. Through its doctrine of God as revealed exclusively and sufficiently in nature deism inevitably leaned in this direction; and in Pope's shallow and pretentious piece the creed of the time once for all assumes that semi-mystical, but essentially naturalistic, form in which the ills of life are pantheistically explained away.

4. Transition to modern pessimism.—English deism, however, in the nature of the case proved to be a transient phase of thought. It was in no sense a constructive movement, but represents a traditional orthodoxy with all its more vitalizing truths eliminated; and the century which gave it birth saw also its disappearance. Various circumstances conspired to bring about this result. After all, the watchword of rationalism was a zeal for knowledge ('Sapere aude'), and, as the investigation of nature took a wider range, phenomena disclosed themselves on every side to which the current apologetics were altogether inadequate. The eudemonism, also, which characterizes in some sort the ethic of all the contemporary schools, orthodox and free-thinking alike, provoked its inevitable reaction, and a deeper analysis of human nature, illustrated in one phase by the cynicism of Mandeville and Swift and in another by the profound seriousness of Butler and William Law, brought to light features of moral experience which could not be ignored. Nor must the historic Lisbon earthquake of 1755 be forgotten—a catastrophe which gave so rude a shock to the easy-going geniality of the age and left its mark upon the thinking of many of its foremost minds—

'Tout est bien, dites-vous, et tout est nécessaire.
Quoi ! l'univers entier, sans ce gouffre infernal,
Sans engloutir Lisbonne, eût-il été plus mal ?'
(Voltaire, *Poème sur le Désastre de Lisbonne*).

But above all is to be reckoned here the influence of David Hume (q.v.). Against his searching inquiry into the validity of human knowledge the philosophy of the day was powerless, nor from this quarter was any justification forthcoming of the actual ills of life as his dispassionate scrutiny laid them bare. With the *Treatise of Human Nature* and the *Dialogues* a chapter in the history of European thought and feeling about existence definitely closes. The famous 'four evils' passage is fatal to all such vindication as could then be offered for a reasoned contentment with the order of the world. Another explanation, furnished perhaps from the side of 'revelation,' Hume himself professed to be ready to accept, but to the human mind 'unaided' the world-problem was insoluble. We have no line by which to measure it. In the main experience teaches that it does not

work to the production of happiness, and for the rest we must hold our judgment in suspense. It is 'a riddle, an enigma, an inexplicable mystery.'

5. The pessimism of Schopenhauer.—It is to this British scepticism that the pessimistic doctrine of later times is, at least indirectly, due. To the Kantian criticism of experience Schopenhauer owed his emancipation from the 'wickedness' of the Leibnizian representation of the world as fair and good, and, when he says this, he refers, of course, to the metaphysical presuppositions on which the representation rests. In the period of his 'dogmatic slumber' Kant had himself leaned in that direction (see the essay on *Optimism* of 1795). In its more characteristic phase also his philosophy had undertaken to preserve for man an apprehension of ultimate truth sufficient to justify faith and hope; and later the Hegelian endeavour had been so to develop the doctrine of the *Critique* that thought is constitutive of experience as to claim for existence a completely rational character and for 'evil' a necessary place in the evolution of the Idea. Nevertheless, the withdrawal of reality from the grasp of reason remains the cornerstone of the critical system, and to this feature of it Schopenhauer attaches himself resolutely. Already in his early *Fourfold Root of the Principle of Sufficient Reason* (1813) he had maintained that the intelligence, in all its various activity, is inadequate to the attainment of ultimate truth, and in his classic treatise the severance of the two is carried out rigidly. The inner substance of things is hidden from us. We never perceive reality, but only appearance. Space, time, causality itself, belong to the phenomenal region, and to apply such categories—or any others—to the thing-in-itself is to impose upon the matter of knowledge a form which is foreign to it and to distort it fatally. Thus 'life and dreams are leaves of the same book.' The veil of *māyā*—Schopenhauer is fond of the Indian terms—blinds the eyes of mortals, deceiving them with an illusory representation of existence which is no other than a mirage. And yet, it is added, if we will be content with that which is not properly knowledge but rather supra-rational intuition, a certain sense of the very truth of things is not inaccessible to us after all. We are 'let into the citadel by trickery.' In immediate feeling, namely, we realize our innermost self as will, and, could we know other things with a like directness, we should be constrained to conceive them similarly. Not that such a notion can adequately represent the absolute nature of the world. Will suggests causation, and causation is merely subjective. As predicated of the totality of existence, will must be taken for a general concept, construed through its highest species. But, in default of a better—and force, energy, and the like are far less satisfactory—we may legitimately apply it to the determination of the substance of things, and sum up the world accordingly in the formula 'Idea and Will'; i.e. *my* idea, together with the One-and-All of infinite, endless, aimless activity and desire.

Thus Schopenhauer solves the problem which Kant gave up. If it be said that this is not will as commonly understood, the objection cannot be gainsaid. Yet Schopenhauer's system hinges upon its being conceived in just this character. Reality has no part or lot in reason. Intelligibility belongs to the phenomenal alone. The ultimate is 'absolutely groundless'; apprehensible, if at all, by means of this inner volitional faculty through which it most intimately reveals itself; and interpretable, therefore, as an indeterminate craving, a blind, insatiable striving, or hunger for being, which surges up unceasingly in us and in all things, and which we and they truly are. And with this

the essentially deceptive and worthless nature of life is at once given. True, the appearance of a spiritual consciousness, able to pass such a judgment on that which gave it birth, is nowhere accounted for. Admittedly it has enkindled itself in the human brain in a manner quite inexplicable. Here, indeed, is the true 'fall' of man, which has been followed by more than all the unhappy consequences of the Biblical story. With its emergence the entire illusion of existence necessarily arises. Once for all change and multiplicity have arrived, the *principium individuationis* has begun to weave its endless spell, and in the shadowy panorama thus evoked Schopenhauer, curiously enough, recognizes the working of reason freely. For nature's immanent teleology, *e.g.*, he has a frank and appreciative eye. The unity of the will as thing-in-itself secures that the parts of the world shall be thus inter-related, and in particular expresses itself in those successive grades of being which constitute an ordered series culminating in man. Yet this rational quality attaches merely to the shimmering illusion which we take for the world of time and space; behind it reality retains its inherent character, essentially contrary to intelligence, a-logical. The fact is apparent in man, in whom the will's self-objectification is complete and the secret of the world is declared—man whose doom it is to furnish the final illustration of the will's intrinsically nugatory character and to toil and yearn in a shadow-world of mere appearance after that which for ever eludes him.

What function, then, is to be assigned to human intelligence in the economy of things? Schopenhauer's reply is twofold. On the one hand, it serves to discover the sorrowful truth as to the essential character of experience. In the dawn of experience we are deluded by the fancy that existence is desirable and good, but from a belief so shallow the development of reason delivers us. To its wide-opened eye life presents a scene of meaningless monotonous labour, pursued to-day as yesterday and accomplishing mere disappointment and weariness. Not the most favoured can be designated happy; life swings between the poles of desire experienced and desire attained, *i.e.* between the pain of empty craving and the still more unendurable pain of satiety and ennui, and the bitterest complaints of a Byron or a Leopardi are justified. Nay, psychology demonstrates how well-grounded these are by showing that of the two emotional elements of which our life is made up only pain, not pleasure, is positive. Of pleasure we are aware only in the moment of its gratification; it dies in the birth, and its place is taken by want or yearning. From the nature of the case, accordingly, man is the victim of an undying ache, his pleasures are the alms thrown to the beggar, keeping him alive to-day that his misery may be prolonged till to-morrow. On the other hand, the intelligence which thus lays bare life's inward character avails likewise, in a true degree, to afford deliverance from its restless torture. Once awake to the illusory character of the world and of the satisfactions which it offers, the soul may make shift to effect its escape from the whole *māyā* world, and this it achieves, in the case of the more highly gifted natures, in æsthetic contemplation and enjoyment. The universality of the object with which art confronts the mind opens a way of salvation. In admiration of the beautiful in its ideal forms personal feeling, prejudice, and desire disappear; the individual, losing his individuality, becomes pure subject of knowledge, 'will-less, painless, timeless'—subject and object are one. And with this comes emancipation. Reason, no longer the servant of the will, devising means for the fulfilment of its impulses

and furnishing ever renewed illustration of the wretchedness attending the futile task, has become its vanquisher. The gnawing of desire is allayed. The wheel of Ixion stands still. The nature, if not in bliss, is at peace.

And yet this, happily, does not exhaust the power of reason to effect the soul's release from the misery of which it has rendered it aware. The way of æsthetic appreciation is, as Schopenhauer acknowledges, for the few; and even so it conducts them only to a momentary halting-place in the tread-mill round of experience, the satisfaction which it yields being always the more brief in proportion to its purity. But in morality, a passive and ascetic morality, a more catholic and abiding redemption is attainable. Human nature, indeed, is of itself a mass of egoistic impulses, and the ordinary virtues are only more or less refined forms of selfishness. Nevertheless, all human egos, by right of a common origin, have a latent sense of kinship, and this may be developed and expanded by reflexion. Of a *summum bonum* in the light of which to order life there can on this system be no word at all. Yet metaphysically man is a moral being; on the phenomenal side of his nature subject to necessity and a creature of mere greeds and whims, he is, more truly understood, a part of the great totality of existence, free as constituted properly of will, and fulfilling himself in sympathy, self-sacrifice, and love. The ultimate issue is self-denial in the form of denial of the will to live, and at this point religion comes in to confirm and make finally effective the moralist's teaching. Condemning the world wholly and insisting on the necessity of re-birth, it delivers man finally from his selfhood and unites him with that from which he came. In its fullness such a consummation, it must be allowed, only beckons him from afar. Nor can its very character be truly desecrated by us. To speak of it with the saints under the denomination of ecstasy, trance, illumination, and the like, is to feed the mind with one last illusion: how name an experience from which the whole conditions of intelligent apprehension, including the distinction of subject and object itself, have been removed? The soul has reached *nirvāṇa*, a state to be described only by negatives. It is the region of 'the relative nothing.' And accordingly, as its author acknowledges, this philosophy closes in a universal nihilism.

'If we have recognised the inmost nature of the world as will and all its phenomena as only the objectivity of will . . . we have no desire to evade the consequence that with the will's denial and surrender all those phenomena vanish. That constant struggle and effort, without end and without reason, at all the grades of objectivity, in which and through which the world consists; the multifarious forms succeeding each other in gradation; the whole manifestation of the will; and, finally, the universal forms of this manifestation, time and space, together with its last fundamental form, subject and object—all are abolished. No will; no idea, no world' (*Die Welt als Wille und Vorstellung*, Eng. tr., i. 530f.).

6. Hartmann.—Fatal as are the metaphysical flaws in the view now sketched, one merit at least must be allowed to it. To Schopenhauer belongs the credit of a resolute attempt to replace the unknown thing-in-itself of the Kantian philosophy by a principle positively revealed in experience, and, had he construed the Will which sustains and informs the world on any tolerable analogy with that of whose working we are aware in ourselves, he might have ranked as one of the founders of that ethical idealism which in modern days has been found the best speculative support to faith. His refusal, however, to concede to this last ground of the world any share in reason necessitated the sceptical conclusion, and proved, indeed, too violent a contradiction to be maintained. On these terms how account, *e.g.*, for the organic

teleology of nature, of which Schopenhauer himself makes so much? Or for those typical forms of things in the contemplation of which he finds for the soul a respite from its unrest? Or for the emergence of reason upon the scene at all? As though, observes Hartmann, the only thought in the universe had arrived there by chance! For himself, most convinced of pessimists as he is, Hartmann sees the clear traces of intelligence at work everywhere. No natural theologian has ransacked the world more thoroughly to discover fresh illustrations of it. In nature, animate and inanimate, instances, he urges, abound; in man himself also, alike on the physical and on the spiritual side of his being; and in the human world of language, custom, polity, and religion which he has slowly built up around him. Above all does the order pervading the world betray itself in history, which for Hartmann is no mere spectacle of meaningless change, but an impressive march of events, not unhindered, yet sure, to a definite goal. Yet reason in all this, it is maintained, does not work self-consciously, but rather after the manner of instinct. In its conscious form in man it proclaims itself a faulty and feeble instrument for the attaining of its ends; in the world—and in the subconscious region of human experience also—it is unaware of its own procedure, and operates the more infallibly on that account. At the heart of existence, in short, is a great Unconscious, which, as universal immanent providence, unwearyingly, without error or hesitation, fashions all phenomena and guides all issues to their predetermined end.

The Leibnizian flavour of such a view seems tolerably pronounced, and indeed Hartmann cordially adopts the position that of all worlds this is the best—could a better have lain in the omniscient Unconscious, it would have come to pass instead of the present one. Much of his ethic, too, is couched in the same paradoxical strain. The ascetic solution of the moral problem has no more contemptuous critic. From Schopenhauer's premises certain of his disciples had drawn the conclusion that virginity and suicide alone opened a way of escape from life's ills, to which Schopenhauer's reply had been that the denial of the will to live must include the refusal not only of its sorrows but of its joys. Hartmann, however, teaches a more robust doctrine. He would reconcile men with life, and bids them lose themselves in the service of the whole. To make the ends of the Unconscious his own is the individual's all-comprehending duty, and for the toil and sacrifice required of him he is to find support and impulse in mystical communion with the supreme power whose servant he is. Hartmann is very much in earnest about these views, as his various writings on ethics and religion show, and aims professedly at nothing less than the engendering of the resolution to lead a truly divine life, in which each finite task of the earthly course shall be transfigured in the divine light (see the *Phänomenologie*, Berlin, 1879, *passim*).

Nevertheless, although the best that is possible, the world is not on that account necessarily good, and on the basis thus laid down Hartmann endeavours to rest a demonstration, more sweeping than Schopenhauer's own, that life is an essentially undesirable thing. The proof is partly experiential. Happiness is that for which all things strive. Nothing 'so affects the world-essence in its inmost core,' nor is anything else discoverable which could be regarded as a final end. But happiness remains for ever beyond us. Pleasure, it is true, is a positive element in feeling, and only a shallow psychology could have led Schopenhauer to make the contrary assertion. Yet, when the pleasures and pains of life are summed and compared,

the latter predominate vastly. The individual's life on earth is a prolonged disappointment; its fairest flowers and fruits wither as he plucks them. Equally illusory is the notion that satisfaction is attainable in the hereafter, since experience, so long as it remains conceivable at all, always retains this deceptive character. Nor does devotion to the cause of the world avail to bring true contentment, the world itself being doomed to ever-increasing suffering. True, the world advances, but with its advancement come the multiplication of its pains and an enhanced sensitiveness to them. Evolution, therefore, is no cure. We must forward, yet here is our curse. And, if in the acceptance of the end of the Unconscious lies a destiny indeed to be coveted by us, this is because the Unconscious, in His unswerving guidance of the world, is aiming at no positive consummation of its age-long labour, but rather at its redemption from all effort and desire and the infinite frustration to which these necessarily lead.

Just this, Hartmann argues, is the case, and, in support of the dismal estimate of life to which a survey of its facts has led, he adds a metaphysic of his own. Alike in Eastern and in Western pessimism, it will have been observed, the root of the world's sorrow had hitherto been found in the existence of the individual; only with his disappearance may this be healed. And probably this thought is always implied in the pessimistic doctrine. But Hartmann gives it a turn of his own. Individuation for him also is an unsolved problem; the creation of a world of finite things can only be rated a wholly inexplicable blunder. But at least the Unconscious 'foresaw' the possibility of its redemption. Within His nature are embraced both idea and will; in other words, He is all-wise as well as all-powerful, and guides the world which blind will has originated with a skill which never fails. In particular, He brings consciousness upon the scene with a view to the world's salvation. How it is accomplished is again mysterious: the self-contained peace of the Unconscious is interrupted by an idea which 'falls upon it as from the skies.' But with this the critical step has been taken. The more consciousness deepens and expands, the clearer and more commanding becomes the discovery of life's essentially evil and futile character, and with the progress of intelligence and the evolution of mankind the conviction may be expected to spread and take possession of all men, until by a common act of will the race decrees its own extinction, and along with that the disappearance of the world-system of which man is the consummation. So existence should relapse into the Unconscious again. What the unconscious idea never could have attained, to wit, the emancipation of the will, together with the entire creaturely world to which it has given rise, from its unblessed condition, consciousness, when developed to the full, either in humanity or in a race of supermen who will succeed us in this planet, shall have secured, 'hurling back' in this way the total volition of the world into nothingness, so that the world-process ends without a residuum left from which to set out once more. Thus pessimism is reconciled with optimism. This is the best world possible—such a world, namely, as attains salvation, not one whose torture is perpetuated for ever.

7. Critical remarks.—It is not possible to examine separately the various doctrines sketched above; in so far as they represent divers types of philosophical theory their detailed criticism falls beyond the scope of this article, and Leibniz's theistic apologia is dealt with elsewhere (see art. THEODICY). There need be no hesitation, however, in asserting that the metaphysic on which the pessimist

view is founded is an impossible one. No coherent account of things can be erected on the presupposition of their inherent irrationality. All that can be meant is that, in the world as known to us, there is much that baffles intelligence and which we never succeed in bringing into line with our desires, and so much may be admitted freely without accepting the pessimistic conclusion. Indeed, neither inference, the optimistic as little as the pessimistic, is capable of being sustained. It is a mere extravagance of speculation to contend that this is either the best or the worst of conceivable worlds. How shall the human mind, which is but one of its innumerable constituents, rise to a point of view from which to judge the universe as a whole and relatively to anything else? The standard by which to try its worth must necessarily be furnished from within itself; nor may we go further than to say that, tested so, existence is, on the balance perhaps, desirable or the reverse. It must be acknowledged, further, that in the judgment which asserts this there is always a subjective element, with regard to which nothing more can be said. It is a value-judgment, and values can only be asserted, not proved. In the controversy as to the goodness of the world, that is, there comes a point at which discussion is closed. If that which to one disputant is good to the other is merely evil, what can further argument avail? It is always possible to deny the worth of that which the world generally has agreed to hold most worthy, and to consider it to be the aim of all praiseworthy effort to arrest the wheels of progress and to empty life of desire. And to such a contention what answer can be given? Unless, indeed, that the light is sweet and it is a pleasant thing to behold the sun, and that it is just by those interests and ideals which the pessimist despises that men live and in them is the life of the spirit.

At the same time, two general remarks may be offered with regard to this whole mode of appraising existence. It will have been noticed that the standard applied throughout has been broadly the eudæmonistic one. On both sides it has been assumed that the supremely desirable thing is happiness. The universe is to be judged by the measure in which it lends itself to its production, and all that remains is to interrogate experience as to this and register the finding reached. But this in itself would seem an impossible task. It may be prosecuted so far, indeed, and the result may not improbably be to furnish the pessimist philosophy with a partial justification. It is at least well to be confronted with the facts of existence, and to the more searching examination of nature and humanity by later times it is due that the flimsy geniality of the deistic mood can never return again. Yet it must always be beyond us to cast up the sum of the pleasures and pains of the universe and weigh them against each other; and in our own human case the inherent futility of the attempt to estimate in this way the worth of life becomes more than ever apparent. Here these elements of emotional experience prove extraordinarily elusive, and even dissolve into one another in the most baffling manner. From pain itself a singular satisfaction is not seldom derived. Effort and labour, hardship and danger, self-abnegation, martyrdom, and death are what prove able most of all to summon forth men's energies and to yield them what they crave, plainly implying that pleasurable feeling is at most only one element in the object of desire. In truth, the pessimist's inventory of life's disadvantages and drawbacks is manifestly at fault. Experience candidly examined discloses compensations of which he fails to take account, and, above all this, that the possession of a 'good will' infinitely outweighs, and is altogether incom-

parable with, the indubitable ills to which he points.

That it should leave no room for the recognition of such a factor in experience, or, in other words, for the appearance of free ethical personality in the world, is a further and final defect in the pessimist view of things. Such a creed is necessarily monistic, and monism is incompatible with all those interests in the light of which alone existence can be rightly judged. It is indifferent whether, as in the case of the doctrines adverted to, the monism be of a spiritualistic order or take the shape of that scientific naturalism which is perhaps still more widely accountable for the despairing strain to be detected in modern thought and literature. In either case the essence of the world permits of no disintegration of its unity, and individuality, human or other, has no reality or rights at all. As against all such metaphysical perversity the soul must ever assert her own supremacy. Free intelligent personality is the highest form of being accessible to us. In it alone is a medium furnished through which to construe the cosmic process, and only when viewed in relation to its perfecting does that process become intelligible or even tolerable. Even so it may be impossible to say why human nature should be fashioned thus—why the whole creation should groan and travail in pain together in order to the manifestation of the sons of God. It is enough that that supreme result is being achieved. Amid the world's evanescence, unreliability, and manifold suffering the production of moral character goes steadily forward, the soul being, as Boehme says, 'bruised and pressed and set to endure much, yet is it the servant in God's vineyard which prepareth the precious wine of righteousness to be drunk in His Kingdom.' Nor is it known what righteousness is unless it be acknowledged that no age-long, heaviest cost should be too great a purchase-price to pay for its realization.

LITERATURE.—For Buddhist pessimism see ASCETICISM (Buddhist), BUDDHA, and literature there referred to, esp. H. Oldenberg, *Buddha*, Berlin, 1881, Eng. tr., London, 1882. Leibniz's optimistic doctrine appears in his philosophical writings generally, of which there are many edd. (the latest by C. J. Gerhardt, *Die philos. Schriften von G. W. Leibniz*, Berlin, 1875-90). The *Monadologie*, with certain shorter pieces, has been translated by R. Latta (Oxford, 1898), who adds a useful exposition and notes. English optimism is most clearly defined in Lord Shaftesbury, *Characteristics*, London, 1711, and Lord Bolingbroke, *Collected Works*, do. 1758-64, and is treated in all histories of philosophical and religious thought dealing with the period (e.g., G. V. Lechler, *Gesch. des englischen Deismus*, Stuttgart, 1841, and Leslie Stephen, *Hist. of English Thought in the 18th Century*, London, 1876). The classics of modern European pessimism are A. Schopenhauer, *Die Welt als Wille und Vorstellung*, Leipzig, 1819, 1859, Eng. tr. by R. B. Haldane and J. Kemp, London, 1883-86, and C. R. E. von Hartmann, *Philosophie des Unbewussten*, Berlin, 1868, 1882, Eng. tr. by W. C. Coupland, London, 1884. Histories of Philosophy and of the Philosophy of Religion devote more or less space to the subject, and monographs on special aspects of it are numerous. Among them may be mentioned J. Sully, *Pessimism, a History and a Criticism*, London, 1877; E. M. Caro, *Le Pessimisme au 19ième siècle*, Paris, 1878; E. Dühring, *Der Werth des Lebens*, Breslau, 1865; W. Gass, *Optimismus und Pessimismus*, Berlin, 1876; J. Volkelt, *Das Unbewusste und der Pessimismus*, do. 1873; A. Dörner, *Pessimismus, Nietzsche und Naturalismus, mit besonderer Beziehung auf die Religion*, Leipzig, 1911. See also artt. GOOD AND EVIL and THEODICY.

ALEX. MARTIN.

PESSIMISM (Indian).—1. Types of pessimism.—Three types may be distinguished: environmental, temperamental, and philosophical. The first is due to the hardships of one's surroundings, the trying nature of the climate, etc.; the second to the tendency, temperamentally, to look upon the dark side of things; and the third to one's philosophy of life. Three kinds of pressure, then, may weigh down the human spirit and make its mood and outlook pessimistic. Moreover, men may be pessimistic concerning either the life which is or the life which is to come, or concerning both.

The most hopeless pessimism is when neither this world nor the next is regarded as of any value, when 'vanity of vanity' is written upon all that is. Such is the pessimism of the Chārvākas, the Indian analogue of the Cyrenaics.

2. Causes of Indian pessimism.—As to the fact of Indian pessimism there is no doubt; Indian literature is a sufficient proof. But as regards its cause or causes there is much doubt and discussion. Some scholars hold that the cause is environmental.

'India herself, through her climate, her nature, and her economic conditions, furnishes reasonable ground for pessimism' (Bloomfield, *Religion of the Veda*, p. 264).

'When we come . . . to consider the imaginative and intellectual faculties, the influence of environment is no less important. The great majority of the population inhabits the plains. . . . Nature here displays herself in her more ruthless moods—torrential rains at one season, scorching heat in another, hailstorms or earthquakes, outbreaks of disease the dangers of which are intensified by the neglect of sanitary precautions habitual to the people. Congestion of population in many parts involves a struggle for bare existence which begins with childhood and ends only with the grave. This condition of things encourages a pessimistic mode of belief, an apathetic submission to the spirits, mostly malignant, which are believed to control human life. A powerful priesthood and the bondage of caste repress originality of thought and freedom of action. Hence comes the habitual melancholy of the people of the plains which strikes every observer' (W. Crooke, *Natives of Northern India*, p. 141.).

There is some foundation, too, for holding that, as the fusion of the invading Achæans and Dorians with the Minoans of the Mediterranean may have helped to mould the artistic temperament of the Greeks, so the fusion of the invading Aryans with the aboriginal Dravidians may have helped to produce a melancholy temperament. It is certainly true that the history of the Indian Aryans from the beginning of the Vedic age down to the great *Upaniṣads* may be characterized as a movement from optimism to pessimism. And there were other changes scarcely less significant. Phallic worship is scorned in the *Rigveda* (VII. xxi. 5, x. xcix. 3), but later it becomes common. There is no clear trace of transmigration in the *Rigveda*, but by the time of the *Upaniṣads* it is a fundamental article of faith. These changes in mood and worship and doctrine require explanation. The climate and life of India may have gradually affected the temper of the invading Aryans without appreciably diminishing their powers of thought.¹ Some facts of modern India strengthen this possibility: Kipling's *Kim* is a picture (quite true to life in particular instances) of a European lad born in India who so felt the lure of Eastern ways that he became the disciple of a wandering Tibetan monk. The Anglo-Indian population are especially open to such influences and not infrequently dabble in the magic practices of India. In their case not only the influence of environment but also that of blood seems to tell. But Indian pessimism presents itself not primarily as a feeling of world-weariness due to the pressure of an untoward environment, nor as a temperamental tendency to look upon the dark side of things, but rather as an articulated system of thought, the product of Indian metaphysical speculation. Such is the opinion of Oldenberg and Barth, and in fact of most scholars. But such speculation may have had its roots in a trying environment or in a bias towards pessimism due to a melancholy temperament.

3. Psychology of Indian pessimism.—There are three antitheses which are significant for pessimism:

¹ 'Die Trennung der Inder von den Iranern war für die nach Südosten ziehenden der Verzicht oder der letzte abschliessende Schritt zum Verzicht auf die Theilnahme an dem grossen Wettkampf der Völker gewesen, in welchem die gesunde Männlichkeit der westlichen Nationen herangereift ist. In der üppigen Stille ihres neuen Heimatlandes haben jene Arier, die Brüder der vornehmsten Nationen Europas, mit der dunkeln Urbevölkerung Indiens sich vermischend, immer mehr die Charakterzüge des Hinduismus in sich entwickelt' (Oldenberg, *Die Religion des Veda*, p. 2).

mism: (a) false knowledge, or illusion, *versus* true knowledge, or reality; (b) unpleasant feeling, or suffering, *versus* pleasant feeling, or bliss; and (c) wrong volition, or evil, *versus* right volition, or good. The intellectual and the emotional antitheses alone have significance in Hindu thought. Bondage is due to nescience (*avidyā*), and nescience manifests itself in suffering. In other words, what on its intellectual side is false knowledge is on its emotional side suffering. Such is the teaching of virtually all the six systems of Indian philosophy. The same connexion between the intellectual and the emotional is indicated in the famous definition of Brahman as reality, thought, and bliss (*sachchidananda*). The third antithesis, the ethical, is the one emphasized in Hebrew and Christian thought. The doctrine of personality, which is the doctrine of the will, has received scant justice in India. Of the three directions of mental function—cognition, feeling, and willing—the Indian systems of philosophy have to do with cognition and feeling, with the first predominantly, with the second to a less extent, but with volition hardly at all. Volition, the crown of the whole mental process, is largely left out. Hence Indian mental life, being divorced to a considerable extent from healthy volition, has been marked by extravagant thinking and morbid feeling. Volition, while having its roots in knowing and feeling, should react upon them in the way of criticism. Only a strong volitional life, whether individual or national, can prevent thought from being erratic and feeling from being morbid. Now, according to Indian thought, bondage is defined as false thinking and unpleasant feeling, but not (except perhaps in the case of Buddhism) as wrong willing. That is, bondage is defined in intellectual and emotional, but not in ethical, terms. Herein lies the great difference between Indian and Hebrew thought. In harmony with the emphasis in India on knowing and feeling is the fact that Indian thought is in general rationalistic and Indian life not infrequently hedonistic. The poles of Indian experience seem to be the rationalistic calm of the ascetic philosopher, on the one hand, and the hedonistic excess of the wealthy prince, on the other. The pessimism of the ascetic philosopher is due to his feeling of the worthlessness of the phenomenal world as contrasted with the changeless bliss of the *ātman*; that of the wealthy prince, to the feeling of satiety and disgust due to unbridled excess. Bhartṛhari's *Satakas* are a good illustration of the latter. The failure of the Indian mind rightly to estimate the importance of volition may be due partly to the influence of climate. In reference, further, to the relation between knowing and feeling, it is well known that cognition usually precedes feeling, and feeling colours cognition. We see a picture and admire it. We hear a discord and loathe it. But sometimes even prior to cognition there is present a great mass of feeling, whether pleasant or unpleasant, which furnishes the atmosphere in which, so to speak, cognition does its work. Nothing can easily make a man pessimistic who looks at things through the atmosphere constituted by a pleasant feeling tone; and, on the other hand, nothing can easily make a man optimistic who looks at things through the atmosphere of an unpleasant feeling tone. What has apparently taken place in India is this. Cognition, having to do with uncomfortable environmental conditions, has been accompanied by unpleasant feeling; and, on the other hand, a melancholy temperament, possibly the fruit of the fusion of Aryan and Dravidian in India, has been the medium through which the Hindu people have looked at the facts of life. Neither thinking nor feeling has been tested and controlled by willing. The result is that in India we have a reasoned

[illegible]

ated. There are many things which tend to break its force. No one can be a pessimist (except in theory) when life is joyous and hopeful; and the people of India have, on the whole, their share of the natural joys of life. Then, too, all theistic and devotional movements tend to be optimistic,¹ such as the various *bhakti* movements and the theisms of modern India—e.g., Islām, Sikhism, Christianity, the Brāhma Samāj, the Ārya Samāj, etc. In the case of the Ārya Samāj the pessimistic influence of the doctrines of *karma* and transmigraton is more or less counteracted by the acceptance of theism. It is the same in the case of Islām, where the belief in fate is robbed to a considerable extent of its sting by a belief in Allāh, the author of fate. In creating an appreciation for things belonging to this world, such as good government, freedom, equality, education, social reform, good bank deposits, etc., the British Government has exercised very great influence. The effect of Christian missions has been equally conspicuous in helping to produce an attitude of optimism.

7. Chronology of Indian pessimism.—One of the most striking contrasts in the history of thought is that between the optimism of the Vedic age and the pessimism which gradually settled down like a pall upon the spirit of India and finally obtained its creedal statement in Buddha's doctrine of suffering. The Rigvedic age was an age of appreciation of the good things of life, and of strenuous effort to secure them. The interesting thing is that the growing appreciation of the value of the present life, now observable in India, marks a kind of return to the spirit of the *Rigveda*.

Thus there are three stages in the history of Indian pessimism: (a) from optimism to pessimism, the movement extending from the *Rigveda* to the great *Upanishads* (c. 1400–800 B.C.); (b) pessimism attaining in the 5th cent. B.C. its climax in Buddha's four noble truths (800 B.C.–A.D. 1800); (c) from pessimism to optimism, the British Government and Christian missions (A.D. 1800 to the present time).

however, far from placing him above the canons, was a special reason why he should observe them and cause others to do the like. They added that the bishops are by divine right leaders in the Church; that their connexion with their own Church can be broken only by death, by a legal judgment in conformity with the discipline of the Church, or by a voluntary and canonical resignation; that, speaking for themselves, they had always during their exile cared for their dioceses; and that the new concordat was in their judgment more likely to destroy than to benefit religion. Several other bishops agreed to this memorial. Next, 38 bishops in conference in London addressed a canonical remonstrance to Pius VII. on 6th April 1803. This document is not merely a work of learning and eloquence, but an important official utterance, in which these prelates, appealing to Scripture and tradition, develop the principles set out in the memorial of 1801. These bishops, then, continued to administer their dioceses through priests who shared their convictions in regard to the concordat. It is these 'Anticoncordataires' who were henceforth called the Petite Eglise.

The members of the Petite Eglise, and especially the priests, were subjected to many persecutions and annoyances from the government, both under Napoleon I. and under Louis XVIII. and Charles X. Gradually the clergy of the Petite Eglise diminished in number. It is remarkable that the bishops ordained no priests, believing perhaps that the concordat would not last long. The last survivor of these prelates, Alexandre de Chémines, bishop of Blois, even refused to ordain some candidates who were presented to him, because they held Jansenist opinions. Some groups in the Petite Eglise were imbued with the latter ideas, while others were extremely opposed to them.

After 1830, when the clergy were reduced to the bishop of Blois (de Chémines) and some priests, the question arose whether, in view of the fact that the pre-concordat bishops were dead, the bishops of the concordat ought not to be regarded as lawful. A negative answer was arrived at, on the principle that, the apostolic succession having been broken, the effects of the rupture were enduring. The decisions of ancient councils were also appealed to. One of these, held at Benevento in 1087 by Pope Victor III., had decreed as follows:

'The sacraments of penance and communion are to be received only at the hands of a Catholic priest; if none such is to be found, it is better to remain without communion and to receive it invisibly from our Lord.'

And this soon became the state of the members of the Petite Eglise. By death and defections their numbers gradually diminished, so that towards the end of the 19th cent. there remained no more than a few groups in France, and one in the Belgian diocese of Malins.

The largest group is that of Deux-Sèvres and La Vendée. This has more than 3000 members, and is growing. Its centre is a hamlet of Plaine-lière, a commune of Courlay (Deux-Sèvres). Here there is a large church where laymen sing the offices in Latin, according to the ancient liturgy of Paris, and read instructions in French. Every Sunday 600 or 700 worshippers, and on high festivals as many as 2000, attend service.

The congregation of Lyons has also a place of worship where divine service is held in French, according to the ancient liturgy of Lyons. This group, although greatly reduced, still has some hundreds of members at Lyons and in the neighbourhood. In 1869, when the Vatican Council was sitting, these two congregations petitioned Rome for the recognition of the pre-concordat bishops, as the condition of their own return to the Roman obedience; but the attempt failed: and the

Council, by declaring the pope to be immediately the bishop of each diocese, laid down a principle the direct contrary of that by which the opponents of the concordat had been guided.

The congregations of the Charollais (Saône-et-Loire) and of Fareins (Ain) contain about 300 persons each; those of the Isère and the Hautes-Alpes contain each scarcely 30 persons; that of the neighbourhood of Fougères (Ille-et-Vilaine) is reduced to a few persons; that of Massat (Ariège) is almost extinct; and the congregation at Mont-Saint-Jean (Sarthe) has joined the Church of the concordat, with the exception of a few old people.

The members of these groups read privately in their own homes, in French, the offices of the Church, generally according to the ancient liturgy of Lyons, and, in addition, the Holy Scriptures and works of piety. Each house has a private chapel, jealously screened from vulgar eyes. It is, indeed, a tradition among the Anticoncordataires, except those of Deux-Sèvres and La Vendée, that their religious practices must be veiled in mystery. This is no doubt a consequence of the persecutions which they had to endure in the first half of the 19th century.

With all of them the only sacrament administered is baptism. This is given by a member of the community chosen for the purpose. The same member conducts funerals, reciting the ancient liturgical prayers of the Church, and also presides at marriages. Children are taught the ancient diocesan catechism by their own parents, who also prepare them for a first (spiritual) communion. They all strictly observe the old festivals abolished by the concordat, as well as the days of fasting and abstinence, according to the usage of the ancient Church. Some of them have desired the re-establishment of the ecclesiastical ministry, but the greater number appear not to feel the want of it, and seem almost to regard their present condition as the normal one.

The members of the Petite Eglise lead an industrious, simple, and peaceable life, which wins the respect of their neighbours. Their morality is generally high. They number in France at the present time over 4000 individuals.

GEORGES VOLET.

PEYOTE RITE.—'Peyote' is the name of a small cactus plant (the *Anhalonium* or *Lophophora* of systematists), found along the lower Rio Grande and southward in Mexico. It resembles a radish in size and shape, only the top being visible above the ground. The white blossom is later superseded by a tuft of white down, which is sliced and dried into the so-called 'button,' which alone is eaten north of the Mexican boundary, while south of it the entire plant is sliced, dried, and used in decoction. The peyote must not be confounded with the mescal or magney cactus.

Much more widely diffused nowadays than the peyote plant is the peyote cult, which has spread northward so as to reach the Kiowa, Comanche, Arapaho, Cheyenne, Pawnee, Omaha, Winnebago, and Oglala Dakota. Among the Winnebago it has caused a schism, the peyote-worshippers being sharply distinguished from and even hostile to the believers in the traditional Winnebago religion. The feature that is naturally shared by all the tribes mentioned is the eating of the peyote button, which produces a distinctive sensation of spiritual

exaltation. The Arapaho form of the ceremony may be described as fairly typical.

The ceremony is held in an ordinary lodge at night. One man acts as leader, moulding the rite according to a dream or a vision experienced during some previous performance. In this way individual modifications are introduced though the essential features persist. The number of participants varies; thus, on one occasion there were only three devotees, while on another there were about a dozen, including some Cheyenne visitors. The worshippers enter the lodge after dark and begin by eating four buttons each, the average number for each individual throughout the night being twelve, with a maximum of thirty or forty. The time is spent singing round a small fire, between which and the rear a simple sort of altar is made on the ground. Only one participant sings at a time, to the accompaniment of a gourd rattle shaken by himself and a drum beaten by his neighbour. After four songs the instruments are passed to the next performer, and thus each has his turn. The songs refer to the peyote, the birds regarded as its messengers, and the night, but towards morning they turn to the morning star and the end it brings to the performance. The worshippers eat, leave the tent, and spend the day reclining together in a comfortable spot, with occasional singing and rattling but no drumming. During this day new songs, suggested by the nocturnal experiences, are often composed. At noon a meal is served, at which a single spoon must be used by the entire company. At dark the meeting breaks up. The proceeding is regarded as an occasion of peace and good-will, and possibly for this reason knives and other sharp instruments are barred from the ceremonial lodge. The objects used in the cult have a peculiar decorative character—e.g., yellow is the predominant colour, the feathers used being those of the yellow-hammer and other species of woodpeckers.

The peyote rite has been of special interest to ethnologists because it has spread in so recent a period that the conditions of its diffusion have sometimes come under their direct observation. It has thus been possible to note in this instance the circumstances favouring the assimilation of a new religious practice, the influence of religious leaders, the conflict and harmonization of new and old conceptions. All this has been most suggestive as to the rise and spread of ceremonialism generally. On the whole, it appears that even the bolder ceremonial innovators cannot lift themselves by their bootstraps, but automatically conform to certain pre-existing ceremonial routines current among their people. Thus, a recent Arapaho modification of the peyote cult adapts the rite to a new purpose, that of curing the sick; but the processes adopted are those which the Arapaho ordinarily employ in the treatment of patients. Similarly, the Winnebago have not only adopted the peyote cult but incorporated with it various Christian doctrines and practices; nevertheless the organization of the ceremony conforms closely to the ancient ceremonial system of the tribe. A cult, in other words, may indeed be borrowed, but in the borrowing it is almost invariably cast into a different mould, that of the borrowers.

R. H. LOWIE.

PHALLISM.—Phallism may be defined as the worship of the reproductive powers of nature symbolized by the organs of sex. A very large share of the worship of relatively primitive and even advanced societies has been claimed for a cult which appears to us, in a high state of civilization, to be strange and repulsive. And all sorts of figures, whether engraved or plastic, have been pressed into the service of the theory as more or less disguised sexual symbols. It is obvious that the mere fact that a cult is remote from our ideas of worship, that it is repugnant to our manners, and that the objects of adoration seem to us to have no element of divinity is no reason for denying its existence or its real importance as a social bond; so many and so various, often so grotesque

and cruel, have been the modes in which human beings have conceived and approached the higher powers.

Worship may be said to be the ritual presentation of offerings supposed to be specially grateful to the divinity, or object of adoration, accompanied by obeisances and other acts designed to express humility and subservience, and usually by the utterance of sacred formulæ—praises, prayers, thanks, or narrative. It is the suitable honouring of a power from which good or evil has been received and may be expected or dreaded in the future. It is addressed not only to what we should call gods or spirits, but to any object which the worshipper may consider to be, or to represent, a power which he has reason to fear, to which he is indebted, or from which he may hope for favours.

In India 'the soldier worships his sword, the cultivator his plough, the moneylender his ledger' (H. H. Risley, *People of India*², London, 1915, p. 235; cf. J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, Oxford, 1906, p. 568). Among the Ewe of what was German Togoland the weaver worships his loom, the smith his anvil (J. Spieth, *Die Ewe-stämme*, Berlin, 1906, pp. 309, 443). In ancient Greece 'the sceptre of Hephaestus was worshipped in Lebadea. . . . A legend tells how Aeneas set up a spear in the market-place, and bade the people worship it' (W. H. D. Rouse, *Greek Votive Offerings*, Cambridge, 1902, p. 375).

In these cases the object worshipped seems not to be regarded as a symbol, or as the outward and visible form of any indwelling divinity, but to be honoured for its own sake. The rite is more or less simple. Where it is addressed to any higher power it is analogous in framework, though it may be more splendid and elaborate.

Worship is thus an expression of religion. For religion no satisfactory definition has yet been propounded; no form of words hitherto invented will in all circumstances distinguish it from magic. But for our purpose we may regard religion, in accordance with common usage, as concerned with the relations between men in general, or a tribe or family, on the one hand, and, on the other hand, higher powers which, so far as they are personal, are endowed with free will, and are to be approached with reverence, with offerings, and with prayers which they may or may not grant. Such powers, though frequently capricious and cruel, are amenable to appeal. They are held to prescribe rules of conduct which, beginning in the lower culture as ritual, tend more and more as civilization advances to shed their ritual character and become truly ethical. Magic, on the contrary, conveys the notion of power, however acquired, wielded by the magician as his own, and not as that of a higher being. The co-operation of higher beings, when necessary, is obtained by spell. Compliance with the call is then not dependent on their goodwill; it is compulsory. The tendency of religion is social, of magic anti-social. The one is usually open, public, recognized, and approved by society, and tends to strengthen social bonds. The other is apt to be used for private ends of malice or gain, is usually secret, forbidden, disruptive. This definition, however, cannot be insisted on as a mathematical formula. In practice it is found that no religion is free from magical practices, and that magic often appropriates and adapts the ceremonies of religion. In the higher religions—Christianity and Muhammadanism—it has appeared as an anti-religion, having its own divinities and worship in pronounced hostility to the dominant cult. Indeed, in the form of 'black magic'—i.e. magic hostile to members of the same community—it is everywhere reprobated and repressed (see the present writer's *Ritual and Belief*, London, 1914, p. 66 ff.).

1. **Symbols.**—Men everywhere have desired and attempted to imitate in art any interesting object, and to represent in a visible and tangible form

ideas either imagined or drawn directly from external nature or from daily intercourse with their kind. It is natural that, when their power over their materials had so far advanced as to delineate even roughly the human form, any member or attribute on which it was intended to fix attention should be exaggerated. This tendency, applied for the purpose of satire, is the essence of the art of caricature. In religious matters it has given to an Indian idol its multiplicity of heads and hands—a clumsy symbol of power that has been taken over and even exaggerated by Tibetan Buddhism—and has produced the Ephesian 'many-breasted Artemis.' The same tendency has emphasized the sexual organs of various divinities in many parts of the world, such as, in ancient times, the images of Priapus, and the Hermæ set up at the boundaries of a territory or of private property. Priapic or ithyphallic figures are, in fact, common to the lower culture. They are found wherever man has attempted to sculpture the human form, whether to represent deities proper or the dead. The size of the phallus in many cases has no special intention, beyond that of expressing the sex represented, and may arise from want of skill on the part of the uncivilized artist. In some instances the intention is declared (though with more than doubtful truth) by the natives to be simply that of causing ridicule and amusement, as a caricature does (K. de Zwaan, *Die Heilkunde der Niasser*, Hague, 1913, p. 65). In general, it has beyond dispute a deeper significance; the exaggerated organs are intended to represent for cultural purposes the powers of reproduction, paternity, fertility, the powers that multiply the people and provide abundance of cattle and crops and all other things necessary for prosperity. Priapus was worshipped as a god of fertility, giving increase of flocks, watching over gardens and fruit-trees, bedewing them with friendly showers, and caring for the bees (Pausanias, IX. xxxi. 2; Vergil, *Ecl.* vii. 34, 26, *Georg.* iv. 110 ff.). He was reckoned the son of Aphrodite. His worship was a late introduction into Greece, perhaps from Lampascus on the Hellespont, where, according to Pausanias, he was esteemed above all the gods. When it penetrated to Rome, he was identified with Mutunus, an indigenous phallic god; and his statues, in the shape of Hermæ, represented him as bearing fruit and a sickle or cornucopia. The ancient Teutonic deity Frey, or Frisco, was the giver of abundance, presiding over rain, sunshine, and the fruits of the earth. Adam of Bremen, speaking of Upsala, says that he dispensed peace and enjoyment to mortal men, that his image was represented with a very large phallus, and that at marriages sacrifices were offered to him (*Descriptio insularum Aquilonis*, 26, quoted in J. Grimm, *Teutonic Mythology*, tr. J. S. Stallybrass, London, 1880–88, pp. 212, 1354).

In the E. Indian Archipelago ithyphallic statues are frequently found. Among the Nuforese of New Guinea there is in every village a house that serves the double purpose of a temple of ancestors and the sleeping-place of the youths and unmarried men. From the description of that at Dorei we learn that the posts on which it is supported are adorned with human figures, or with those of crocodiles, snakes, and fishes. All alike are said to represent ancestors, whose respective names they bear. Both the male and female figures have exaggerated pudenda. Moreover, on the eastern and western sides of the building, and outside it, are two pairs of rude wooden statues, each pair representing a man and a woman in the conjugal act. Beside the pair on the western side is the image of a child lying on its back. Other parts of the building also are adorned with suggestive carvings

(G. A. Wilken, *Verspreide Geschriften*, Hague, 1912, iii, 213 f.). The people of Nias, an island off the coast of Sumatra, are in the habit of representing their *adu*, or supernatural beings, by means of wooden images. In many of these the male sex is emphasized in the usual way. When a man dies, such an image is carved in his honour, and is called an *adu zatua*. Offerings are made to it; and the Niasese are accustomed to implore it for a numerous offspring. When a child is born, a thank-offering is presented. Before the dwellings of chiefs and persons of rank stones are erected in honour of deceased members of the family. They are called *gowe salawa*, and are sometimes in human form, sometimes in that of a phallus. The Battak of Sumatra pray to the images of their long-dead ancestors for offspring. These images are ithyphallic. Among the Baré'e-Toradja in Celebes buildings described as temples for the souls of those who have fallen in war also contain ithyphallic figures, and in almost every temple of importance female breasts and genital parts of both sexes have been found represented on the supporting columns. In the village temple of Langgadopi sexual intercourse was represented by the union of the detached organs. The natives, it is true, declared that such figures had no meaning save to delight the eyes. But they were accompanied by images of crocodiles, the symbol of bravery; and bravery and fecundity are the highest of savage virtues, ensuring as they do the continuance of the stock and the prosperity of the community (de Zwaan, pp. 18, 62 ff., citing Adriani and Kruijt, *De Baré'e-sprekende Toradjas*, Hague, 1912). We can have little doubt therefore that all these cases are associated with a cult of fecundity under phallic symbols. This is made very clear in the case of the festival of Upu-lero (see below, p. 822 f.) as it is celebrated in the Babar Archipelago.

An emblem of the generative and creative force of the sun, in whose honour the feast is held, is erected, in the form of a standard flying a pennant of white cotton, almost 5 ft. long. The pennant is cut in the form of a man bearing, fastened to it, a stuffed phallus and testicles—an apt suggestion of the orgies enacted below (*AE* viii. [1895] 134).

Throughout the Slave Coast of W. Africa the worship of a divinity named Legba or Elegba is prevalent.

Among the Ewhe his image 'is made of red clay, and rudely represents the human figure, generally male, rarely female, and always entirely nude. It is always represented as squatting down and looking at the organ of generation, which is enormously disproportionate. . . . When female, the figure is provided with long pointed breasts, and the other necessary adjuncts' (A. B. Ellis, *Ewe-speaking Peoples of the Slave Coast*, London, 1890, p. 41 f.). Among the neighbouring Yoruba the (masculine) image of Legba 'is found in front of almost every house, protected by a small hut roofed with palm-leaves.' 'He is supposed always to carry a short knotted club, which, originally intended to be a rude representation of the phallus, has, partly through want of skill on the part of the modellers of the images, and partly through the growing belief in Elegba's malevolence, come to be regarded as a weapon of offence.' Ellis further notes: 'In the case of Priapus we find a similar connection between the phallus and a cudgel. See Catullus, xx., "The Garden God"' (*Yoruba-speaking Peoples*, London, 1894, p. 65).

Certain of the Shintō gods of Japan are ithyphallic. They are represented in wood and stone, and are the object of offerings and worship (W. G. Aston, *Shinto*, London, 1905, pp. 71, 188 ff.). Whether similar deities were honoured by the ancient Gauls we do not know. It is certain that in the Middle Ages, and since, in various parts of France and Belgium, ithyphallic saints have been worshipped for the purpose of obtaining offspring or curing impotence and sexual disease. Perhaps the most famous of these was St. Foutin (whose name is variously spelt), by tradition the first bishop of Lyons. His cult was wide-spread in the south of France. When, in 1535, the Protestants took the town of Embrun, they found among the sacred relics of the principal church an object said to be

his phallus. Its extremity was reddened by the libations of wine offered to it by women in need of his help. Further north a similar divinity was honoured in the diocese of Bourges under the name of Guerlichon or Grelichon, at Brest under the name of Guignolet, and (without enumerating others) there was one said to be called Ters, whose figure appeared over the gateway to the church of St. Walburga, in the Rue des Pêcheurs at Antwerp (J. A. Dulaure, *Des Divinités génératrices*, Paris, 1905, p. 204 f., ch. xii.; E. S. Hartland, *Primitive Paternity*, 2 vols., London, 1909-10, i. 63; both citing various authorities). In Italy at Trani during the Carnival a priapian figure called *il santo membro* used to be paraded through the town (Dulaure, p. 219). On Trendle Hill, just above the village of Cerne Abbas in Dorset, an ancient figure known as the Cerne giant, 180 ft. long, is cut in the turf. It is represented as flourishing a club in the right hand (cf. the club of Legba). It is nude, with very distinct and exaggerated sexual organs. Like the White Horse of Berkshire and other effigies cut in the turf of the chalk hills in the south of England, it used to be cleaned and put in order every seven years. This custom exhibits the importance attached to it by the villagers, and seems to point to a religious origin.

Naturally it is less easy to represent the female figure with a corresponding exaggeration. At Ephesus Artemis as the female principle of fertility, the All-mother, was represented with many breasts. The Yoruba on the Slave Coast of W. Africa have a goddess in the form of a pregnant woman, who is invoked against barrenness and difficult labours. She is probably identical with Odudua, the earth-mother, generally depicted as a seated mother holding a child—a common emblem of such a divinity. She is the patroness of love, and many stories are told of her adventures and amours. On the doors of her temples, as well as on those of her male counterpart Obatala, the phallus and *kteis* (the female emblem) in contact are often carved (H. H. Ploss, *Das Weib*, Leipzig, 1891, i. 439, citing, without a reference, Bastian; Ellis, *Yoruba-speaking Peoples*, p. 41 f.). Female figures, however, with the organ of sex exaggerated are by no means unknown in various parts of the world.

On the Congo, e.g., 'In the forests between Manyanga and Stanley Pool it is not rare to come upon a little rustic temple, made of palm-fronds and poles, within which male and female figures, nearly or quite life size, may be seen, with disproportionate genital organs, the figures being intended to represent the male and female principle. Around these carved and painted statues (previously described in similar terms by the author quoted, p. 164) are many offerings of plates, knives and cloth; and frequently also the phallic symbol may be seen dangling from the rafters. There is not the slightest suspicion of obscenity in all this; and any one qualifying this worship of the generative power as obscene does so hastily and ignorantly. It is a solemn mystery to the Congo native, a force but dimly understood; and like all mysterious natural manifestations, . . . it is a power that must be propitiated and persuaded to his good' (H. H. Johnston, *The River Congo*, London, 1884, p. 406; *JAI* xiii. [1883-84] 478). We are, indeed, expressly told not only that this worship 'is not associated with any rites that might be called particularly obscene,' but also that 'on the coast, where manners and morals are particularly corrupt, the phallus cult is no longer met with' (Johnston, *loc. cit.*).

Nor are such female effigies confined to the pagan natives of tropical wilds. They were frequently carved on churches in the Middle Ages. Many have been preserved until recently in Ireland, as, e.g., on a doorway at Cloyne Cathedral, Co. Cork. The Royal Irish Academy in Dublin possesses a very good specimen removed from a church. They are known to Irish antiquaries by the name of Sheila-na-gig. Most of them, however, have now been destroyed under ecclesiastical influence. On this side St. George's Channel they are very rare. One remains as a figure in a corbel-table around the beautiful little Norman church at

Kilpeck, in Herefordshire, close to the Welsh border. There is said to be another in Cornwall.

But the representation of the detached organs of both sexes, often called, from their common designation in India, the *lingam* and *yoni*, is very widely distributed. Several examples have already been incidentally mentioned.

Pausanias observes that at Cylene 'the image of Hermes, which the people of the place revere exceedingly, is nothing but the male organ of generation erect on a pedestal' (vi. xxvi. 3). Similar objects were from remote times common in Italy. Down into the Middle Ages ceremonies appear to have been performed in connexion with them. Ecclesiastical legislation prescribes a penance of bread and water during three Lenten for any one who shall perform incantations to the phallus ('praecantaverit ad fascinum'), or indeed any spells (*praecantationes*) save the Creed (*symbolum sanctum*) or the Lord's Prayer (anon., *Essay on the Worship of the Generative Powers*, appended to R. Payne Knight, *Le Culte de Priape*, Luxembourg, 1866 [original Eng. ed. 1786], p. 121, citing *Judicia sacerdotalia de criminibus*, vii. 35). This legislation was repeated by councils and synods to the end of the 14th century. Ex-voto stones at Roman settlements and forts in England and Scotland have been dug up, bearing phallic figures (ib. p. 117).

At Isernia, in the Abruzzi, Saints Cosmas and Damian, usually invoked for all sorts of diseases, and being in the official calendar represented more decently than the French saints just mentioned, found their medical practice concentrated almost entirely on the gratification of the feminine desire for lovers or for children.

At their feast on 17th Sept. their relics were carried in procession. The fair which was held on the occasion was attended by people from all the villages round. Maidens, married women, widows, and *donne di piacere* wore each a distinctive dress. Objects in wax representing the parts affected and for which relief was desired were sold at the fair, and were afterwards kissed and reverently presented, together with an offering, in the vestibule of the church. Inside the church the suppliant who suffered from any ill presented himself or herself to a priest at the high altar and then and there uncovered the part of the body afflicted, which the priest anointed ceremonially with consecrated 'oil of Saint Cosmas.' Although the waxen effigies offered for sale represented various members and organs of the body, little trade was done in anything but phalli. Women were the chief suppliants; and in effect the whole proceeding centred in sexual matters. The ceremonies continued to be performed until the year 1780, when, the attention of the Government having been called to them, they were summarily stopped (letter from Sir William Hamilton to Sir Joseph Banks, enclosing and commenting on a letter from an Italian correspondent, prefixed to Payne Knight's book; the illustration of the votive effigies shows most realistic figures).

It would seem that votive offerings like those of Isernia were not unknown in antiquity; for Payne Knight (pl. iii.) figures a gem from the Townley Collection portraying a scene which is unmistakable. Nor is it only at Isernia that such votive offerings have been known in later times. Models in wax of either sex were offered to St. Foutin at Varailles in Provence in the 16th century. They were suspended from the ceiling of his chapel, and were so numerous that when the wind stirred them they struck against one another, to the disturbance of the devotions of the faithful (Dulaure, p. 205; anon., *Essay*, in Payne Knight, p. 132; both citing *Journal de Henri III. Confession de Sanci*, v. i. 22, and the notes of Le Duchat on the chapter in question).

Cakes in phallic form were among the sacred objects carried about in Greece at the Thesmophoria, and in the *ἄκρον*, or basket of first-fruits, at the Orphic rite of the Liknophoria, as well as at marriages. They were included in the mystic food partaken of by the women at the Halos. They were, there can be little doubt, part of the *sacra* presented to the *μῶναι* in the Eleusinian mysteries (J. E. Harrison, *Prolegomena to the Study of Greek Religion*², Cambridge, 1908, pp. 122,

518, 522, 530 ff., 148, 151, 154, 157; cf. Clem. Alex. *Protrept.* ii.). At Syracuse, on the day of the Thesmophoria, cakes of sesame and honey representing the female sex, and thence called *μύλλαι*, were carried about and offered to the goddesses—probably Demeter and Kore (Athenæus, xiv. 56; Farnell, *OGS* iii. 99, and the authorities there cited). The Romans made cakes or loaves in the form of either sex (Martial, iv. 69, ix. 3); and similar cakes are said to be still, or to have been within comparatively recent times, made in various parts of France, doubtless on certain festival occasions (Dulaure, p. 195; cf. F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 438). Cakes shaped like the female breast were borne by the chorus of women who followed the bride and sang her praise at a wedding in Sparta (Athenæus, xiv. 54).

On the posts of the houses raised in honour of fallen warriors by the Bare'e-Toradja in Celebes representations of women's breasts and sexual organs are found. The case of the village temple at Langgadopi, where the organs of both sexes were shown in the act of union, is probably not singular (de Zwaan, p. 63). In S. Celebes a favourite object of worship is Karaeng lowe (a name signifying 'great lord'), who is not regarded as a god in our sense of the word, but as a powerful spirit. He is figured usually under the form of *lingam* and *yoni*, though there is at least one example of his image in ithyphallic form and made of gold. It has been supposed that he is no other than the Hindu god Siva, imported by way of Java; but this is very doubtful. Incense and candles are burned before him; and he is served by special priestesses, called *pinati*. Once a year a great feast is celebrated in his honour at Gantarang keke, at the first full moon after the end of the fast of Ramadan. Karaeng lowe dispenses good and evil fortune. Life and death are said to be in his disposal. The sick seeking restoration to health, the would-be mother seeking a child, the trader seeking fortune, the gambler luck, the farmer a good harvest, all turn to Karaeng lowe with vows that he may grant their wishes. Nor will they willingly anger him by neglecting to fulfil their vows, lest he should manifest his wrath by sending disease or misfortune upon them (A. C. Kruijt, *Animisme in den indischen Archipel*, Hague, 1906, p. 500; Wilken, iii. 263). He is thus not merely the giver of increase, but a being who holds a general power of good and evil, luck and unluck. And the fact that the name of Karaeng lowe is also applied to the regalia or palladia of a kingdom is possibly significant of the genetic connexions of a mighty, though subordinate, divinity. An ithyphallic god with similarly extensive attributes was formerly worshipped by the Uliasiwa, one of the two tribes of Ambon and Uliasa. It was called Butu-Uliasiwa, 'the phallus of the Uliasiwa,' and was represented by an idol 7 ft. high. Despite the efforts of the Dutch Government at repression of idolatry, it was cherished by the people, as the cause of the fruitfulness of their women and the bestower of good fortune at sea and victory over their enemies, until in 1856 it was discovered in the inaccessible hiding-place to which their pious care had transferred it (Wilken, iii. 236).

Fetishes in phallic form are in use among the Bayanzi, on the eastern bank of the Kwilu in the Congo basin. They are made of clay moulded on wooden cores and adorned with feathers. Female emblems, but of more conventional shape, were also found by E. Torday. Both male and female emblems are propitiated by the sacrifice of a cock. Kola is chewed, and the juice expectorated over them. Torday seems to have witnessed the cere-

mony by a chief, whose prayers were usually for the fertility of his wives and slaves (*JRAI* xxxvii. [1907] 141).

Such fetishes (whose shape, however, is not delineated) were found by Grenfell among the E. Bakongo, of which we are told 'not that the representations of the generative powers, male or female, were worshipped, but that these rude images were the abiding-place of a spirit-force which, if rightly propitiated, would promote fruitful intercourse between men and women' (Johnston, *George Grenfell and the Congo*, London, 1908, ii. 638 n.). In Dahomey, among the true negroes, 'every street from Whydah to the capital is adorned with the symbol, and the old ones are not removed' (H. M. Westropp, and C. S. Wake, *Ancient Symbol Worship*², New York, 1875, p. 46, quoting Burton). East and west from Dahomey along the Slave Coast 'the phallus is seen everywhere, in front of houses, in the streets and public places, sometimes alone, but more frequently in connection with the image of Legba, to whom the organ is sacred, and whose principal attribute is the exciting of sexual desires.' Both the Ewe and the Yoruba 'attribute sexual desires to possession by the god'; and he removes barrenness. The knotted club which among the Yoruba is placed in the hand of his image has already been referred to (Ellis, *Ewe*, pp. 41, 44, *Yoruba*, p. 66; cf. the club of the giant of Cerne Abbas, above, p. 817^b).

In the old Shintō religion of Japan the use of the detached phallus was frequent. It was set up everywhere along the roadsides (Aston, p. 71 f.; cf. *NATURE* [Japanese], II. 7).

In identifying phallic symbols other than realistic representations, however, the greatest circumspection is required. All sorts of objects have been claimed as phallic by writers whose imagination outpaces proof. Some actual or fancied resemblance has been too often deemed adequate evidence, without showing the beliefs attached to the object, or the rites performed in relation to it. We may begin with some emblems the meaning of which is not in doubt. Around the Mediterranean Sea in antiquity the fig (perhaps from its shape, whether compared with the male organ or the womb, or, like the pomegranate or the fir-cone, from the number of its seeds) was a favourite emblem of fecundity; and artificial phalli were often formed of fig-tree wood.

'The peach is in China and Japan the acknowledged representative of the *kteis*, as the pestle and the mushroom are of the phallus' (Aston, p. 189).

Aston also notes that, though the meaning has now been forgotten, the Japanese term *wo-bashira* ('male pillar'), from its shape, is applied to the terminal post of the railing of a bridge, or of the balustrade of a staircase; and that the same term is applied to the end-tooth of a comb. In India the *lingam* is a common cultual object. It is the emblem of the great god Śiva, and is usually represented united with the *yoni* as 'a smooth round black stone, apparently rising out of another stone, formed like an elongated saucer, though in reality sculptured from one block of basalt' (E. Sellon, *Mem. Anthropol. Soc.* i. [1865] 327). Such a representation is a mere conventional symbol, no more than remotely recalling the creative and reproductive attributes of the god, and can awaken no erotic thoughts in the worshipper's mind. Miniature copies of this emblem are worn by devotees in their hair or round the arm or neck. The followers of Viṣṇu paint on their foreheads the *namam*, or emblem of the god, consisting of three lines, a perpendicular line in the centre and an oblique converging line on either side, sometimes abbreviated to a single red perpendicular line, and sometimes figured as a trident. The *namam* is the sign of the female sex (Dubois, p. 112). The Hindus themselves seem early to have felt the need of explaining the *lingam* as the emblem of Śiva. To this end a not very creditable story of the god is related in various places of the *Purāṇas* (*ib.* p. 629).

Throughout the northern and eastern shores of the Levant and its islands and neighbouring countries in ancient times a usual sacred symbol was a pillar or pole, called in the Bible respectively

maṣṣēbhāh and *āshērāh*. These objects do not appear to have been peculiar to any one deity, but to have been an ordinary divine emblem. Originally in all probability a rude stone, or the unshaped trunk of a tree, they were developed in course of time with increasing mastery over materials into conical forms, into obelisks, columns, or masts, and further adorned with sculptures, painting, and draperies. From this aniconic form the Greeks and Romans evolved the statue, the intermediate form of which—a head and bust descending to a merely squared base—is familiar in the representation of many divinities, especially Hermæ and boundary-stones. It has been contended that these pillars and poles are phalli. In aid of the contention are the express words of the author of the *de Dea Syria* (xvi.), who so describes the obelisks or columns in the vestibule of the temple of the goddess at Hierapolis. He adds that they bear the inscription: 'I, Dionysus, dedicated these phalli to Hera, my stepmother.' This only proves that under Greek influence later times identified the objects as phalli, and ascribed their erection to a god in whom they recognized the son of Semele, himself a late adoption into the Greek pantheon. It cannot prove (though it satisfied the author of the treatise) by whom, or with what intention, they were erected. In fact, all the evidence obtainable goes to show that these obelisks or poles were erected indifferently in connexion with the worship of any deity, whether conceived as male or female, not excluding even Jahweh Himself (*EBi*, s.v.; art. *MAṢṢEBHĀH*, vol. viii. p. 487 f.; cf. Robertson Smith, *Rel. Sem.*², London, 1894, p. 188 f.). In the same way our own maypoles have been called phallic emblems upon the slenderest grounds. There is evidence that megalithic monuments, whether shaped by art or not, or even natural rocks and other objects of a suggestive form, have been taken for phalli, or at least thought to have procreative power. But the application to them of the phallic idea is not necessarily primitive. Ancient it may be and sometimes undoubtedly is. It is more likely to be a specific outgrowth of a vague and general sanctity and power once ascribed to them, which has developed all the more fully, since every other attribute of divinity has been lost, and worship in the strict sense of the word has been diverted in other directions. Their frequently gigantic size and the mystery, nameless awe, and surmise that hung about them after their original purpose had been forgotten would be potent aids to such a development.

One emblem of wide currency appears fairly certain. A mode of producing fire early adopted, and widely prevalent even yet among savage races, is that of the drill. Fire is made by rapidly rotating a stick of hard wood upright upon a piece of softer wood lying on the ground and held firmly in its position by the foot. The action is so suggestive, and the result is so analogous to life and so mysterious, that it need not be wondered at that the two sticks have been usually called the male and female sticks respectively, and that their use has almost universally received a sexual interpretation. As the author of the anonymous *Essay* already quoted points out, the use of the fire-drill long survived in W. Europe, where it was applied for the purpose of obtaining need-fire (*q.v.*), as a protection for cattle on the occasion of an epidemic, or for lighting the midsummer and other fires. Need-fire was prohibited by that name in the Capitularies of Karloman, king of the Franks, along with other pagan rites (anon., *Essay*, in Payne Knight, p. 153). It is still used by many peoples when sacred fire is necessary for ritual purposes.

In Egypt the monuments yield many priapi

figures. Osiris as the principle of life is often thus represented. The well-known story told by Plutarch (*de Is. et Osir.*) of the search by Isis for her husband's missing member, when after his murder and the cutting up of his body by Typhon she had collected all the rest, is the mythological form in which the reverence for his phallus is accounted for. Not being able to find it, she caused a wooden surrogate to be made. But, beyond the realistic representations of the phallus, it has been suggested that the Egyptian *tau* cross (like the similarly shaped hammer of Thor) and the symbol known as the *crux ansata* are emblems of the same object. Of this there is no direct or cogent proof. The cross in various forms is a widely distributed symbol in both Eastern and Western hemispheres. It has been claimed to be everywhere phallic; but real evidence in support of the claim is, generally speaking, still to seek. On the other hand, it is the simplest symbol that can be found, and may be (and doubtless has been) made to do duty for many purposes. Likewise the crescent moon, the horse-shoe, and other such figures have been insistently presented as emblems of the corresponding female organ, usually with as little justice. It is true that many things in nature and in art do lend themselves by form or use to such an interpretation, and probably have been sporadically and occasionally accepted. He who is preoccupied with the subject will see phallic emblems everywhere. But a wise scepticism will insist on proof, not merely of sporadic and obscene, but of serious and cultural, or at least magical, employment.

2. **Ceremonies.**—Phallic ceremonies are very numerous. Some of them have already been incidentally referred to.

The population of Mārwar in Rājputāna fear a *bhūt*, or malignant spirit, called Nathurām. 'This Nathurām is said to have been a scamp from some part of the North-Western Provinces [now called the United Provinces] who settled in Mārwar and seduced many Marwari ladies, until he was detected and put to death. Then he became a malignant ghost, and began to torment wives and children; and now his spirit can be appeased only by the most obscene songs and gestures performed by the Marwari women. . . . No household can be without an image of Nathurām,' which is vaguely described as nude and 'of a monstrous and disgusting appearance.' 'On the night the bride first visits her husband an image of Nathurām is placed beside her couch. Barren women and those whose children do not live look to Nathurām for deliverance from their troubles' (*NINQ* iii. [1893] 92). He is, in short, as Crooke observes, 'a phallic fetish.' Nor is he by any means the only one in India. Among others, in Dhārwar women of the Ambig caste carry about an image called Jokamār, 'whose private parts are three times as large as the rest of his body,' and sing his praises in front of each house, getting in return small presents (*BG* xxii. [1884] 183 f.). In Upper Burma at the New Year feast 'an indecent figure' is paraded, and obscene antics are indulged in all along the route (*Gazetteer Upper Burma*, i. pt. ii. [1901], p. 440; the present writer is indebted to Mr. Crooke for these two references). At Roman marriages the bride was required to sit upon the image of Priapus (Augustine, *de Civ. Dei*, vii. 24; Lactantius, *Div. Inst.* i. 20). If we may trust an allusion by Arnobius (*adv. Gentes*, iv. 7), women already married sometimes performed the same rite. In India about Pondicherry, in Canara, and the neighbourhood of Goa, brides are reported actually to sacrifice their virginity to a similar idol of Siva (Dulaure, p. 86, citing Duquesne, *Voyage dans l'Inde*, ii.; Liebrecht, *Völkskunde*, pp. 397, 511, citing Linschoten and Barbosa). On the island of Java, at Batavia, an old and useless cannon, lying in a field, was regarded by the natives as a divinity in phallic form, and daily worshipped with offerings of rice and fruit, miniature sunshades, and coppers. It was held to cure sterility in women, for which purpose it was necessary to sit astride on it for some time. Women might be seen—sometimes two at once—dressed in their best and adorned with flowers, doing this at any period of the day. For years the priests encouraged the practice, to their own pecuniary benefit, until at length the cannon was removed by the Dutch Government (*JAI* vi. [1876-77] 359).

It is clear that practices like these are intended to secure offspring. They are a magical proceeding to obtain fecundity. And it is not unnatural that they should develop into a more effectual proceeding, in which the god is represented by his priest. There is no record of such an evolution in Rome; we may be quite sure that the Christian

Fathers would have seized upon it with pious alacrity as a weapon against the heathen if they could have done so. But in India the practice is not unknown. The most famous example is that of the temple of Jagannāth in Orissa (Dubois, p. 602; cf. F. Bernier, *Travels in the Mogul Empire*, London, 1891, p. 305). Elsewhere in India it is enough to subject a barren wife to the embraces of any chance stranger (often more than one), in pursuance of a vow to that effect. The occasion is usually that of some religious festival (Dubois, p. 596; *TES*, new ser., vii. [1869] 264).

In the *Jātaka* we are told how the righteous king Okkāka, in despair because his favourite wife Silavati was childless, sent her, magnificently arrayed, out into the streets on a certain day, as a religious act. There she was met by the great god Sakka, disguised as a Brāhman. With a touch of his thumb he rendered her pregnant of the future Bodhisattva (*Jātaka*, ed. E. B. Cowell, 6 vols., Cambridge, 1895-1907, v. 141).

This story probably gives us the clue to the meaning of a practice described by Herodotus and Strabo as taking place at the temple of Mylitta, in Babylon. Every Babylonian woman was required once in her life to prostitute herself there to the first stranger who threw a silver coin into her lap (Herod. i. 199; Strabo, xvi. 1. 20). A stranger was a person of unknown powers; he might even be, as in the tale from the *Jātaka*, a god in disguise. From this quasi-supernatural character generally attributed to him in the lower culture it would follow that intercourse with him might be productive of blessings. The greatest of blessings to women is fecundity. If, as is probable, the rite was a sacrifice of virginity at puberty, the woman was thus consecrated for married life, with its special duty of bearing and rearing offspring. A similar rite, it would seem, was practised in many other places, as far west as the Troad. It has been confounded with two other customs of the voluptuous East. One is that of dedicating girls at the temple of a divinity of fertility as prostitutes, whose gains went to the support of the worship and the priests. This seems, *e.g.*, to have been a feature of the cult of the Armenian goddess Anaitis (Strabo, xi. 14. 16). There are indications that it was not unknown even in worship of Jahweh. It is still largely practised in India, and is preceded by a solemn ceremony in which the new recruit to the service of the deity is 'married' to him (authorities numerous; see Dubois, pp. 310, 584; A. M. T. Jackson and R. E. Enthoven, *FL Notes*, ii. (Konkan), Mazgaon, Bombay, 1915, p. 74; *Ethnog. Survey of Mysore*, Bangalore, 1906, ii. 8 [Holeyacaste]). The other custom was that by which a girl earned her dowry by prostitution. This is said to have been followed in Lydia, on the island of Cyprus, and elsewhere. It was not a religious practice, but was perhaps a survival of the social arrangements of ruder races. Girls among many of such races are before marriage accorded complete liberty, of which they take full advantage, ultimately wedding one or other of their lovers (the subject has been recently fully discussed; see artt. *PROSTITUTION*; *GB*³ pt. iv., *Adonis*, *Attis*, *Osiris*, London, 1914, i. 37 n., 57 ff., 70 ff.; W. M. Ramsay, *Cities and Bishoprics of Phrygia*, Oxford, 1895, pp. 94, 115, 135; L. R. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 268 ff.; F. Cumont, *Les Religions orientales dans le paganisme romain*, Paris, 1907, pp. 143, 286; *MI* ii. 444; E. S. Hartland, *Ritual and Belief*, p. 266 ff.).

The priapic deity of the Slave Coast, Legba, has, like some of the Eastern gods just referred to, women called his 'wives,' who are dedicated to his service, and give themselves indiscriminately to his worshippers at the time of the celebration of his mysteries. The excesses committed on these occasions are, we are told, 'of a nature which does not admit of any description.' 'At the commencement of the ceremony the priests cause the worshippers to drink a mystic draught, containing powerful aphrodisiacs. The mysteries invariably take place at night, and usually in the "bush," at some little distance from human habitations' (Ellis, *Ewe*, p. 44; cf. A. J. N. Tremearne, *The*

Tailed Head-hunters of Nigeria, London, 1912, p. 205). Indeed, the god is held to cause erotic dreams by consorting in his own person, either in male or in female form, with women or men during their sleep. His sacrifices are 'cocks, dogs and he-goats, chosen on account of their amorous propensities; but on very important occasions a human victim is offered' (Ellis, *Foruba*, pp. 67, 68). When implored to remove barrenness, 'a sacrifice is offered, and the worshipper anoints the organ of the figure with palm-oil, in order that the required fertility may be attained.' On festival occasions the phallus is borne aloft in procession with great pomp, 'fastened to the end of a long pole. The worshippers dance and sing round it, and the image is waved to and fro, and pointed towards the young girls, amidst the laughter and acclamations of the spectators. Sometimes the phallus is concealed by a short skirt, or petticoat, which a man causes to fly up by pulling a string' (Ellis, *Ewe*, p. 44; cf. *Foruba*, p. 65).

An officer of the French marine reports having witnessed, in 1787, a festival in the kingdom of Congo, when masked men executed a pantomime, carrying an enormous priapic figure worked by means of a spring (Dulaure, p. 41, citing L. de Grandpré, *Voyage à la côte occidentale d'Afrique*, l. 118). Higher up on the river Congo, between Isangila and Manyanga, there is a species of worship reminding us of the cult of Cybele in Greece. Its ministers are eunuchs, and it is intimately connected with a reverence for the moon. 'When the new moon appears, dances are performed by the eunuchs, who sacrifice a white fowl—which must always be male—in its honour. The bird is thrown up into the air and torn to pieces as it falls to earth. I was told that in former days a human victim was offered up on these occasions, but that in later times a white fowl had been substituted' (Johnston, *River Congo*, p. 409). Further details on this cult, which is said to be 'a vague phallic worship,' are much to be desired, in order to arrive at an accurate estimate of its extent and meaning. It would seem, however, to be an orgiastic cult, similar in some respects to that of Attis.

Further north, among the Ekoi of Nigeria, there is a *juju* named Eja, whose festival, celebrated at the time of new yams, is the chief festival of the year. Amaury Talbot, who inquired into it a few years ago, compares it to 'the old Adonis-Attis-Osiris worship.' He says: 'The ecstatic frenzy of the dancers, the trances into which some of them fall, and the jealousy with which all strangers are excluded, show that this ceremony holds a very special significance.' The cult is supposed to produce plentiful harvests, and 'also to protect human beings, farms and cattle from damage by lightning and thunderbolt.' It is said to have been brought from the interior of the continent, and to have been held every two years. To ensure the continued efficacy of the *juju*, however, sacrifices must be offered every two years. For this celebration 'medicine' is necessary—presumably to doctor the worshippers, a very common practice in Africa. Of the medicine the most essential ingredient is the sexual organ of a human being slain for the purpose, or by the act of removing the organ. The Ekoi prefer a female victim. But the rite is known elsewhere; and in the neighbouring Cameroons men are also sacrificed. Eja being a *juju* of fertility, it should be added that one of the chief ceremonies at the festival is the offering of firstfruits; and until it comes round neither *fu-fu* (yams and other things beaten up into a paste) nor fresh yams may be eaten (P. Amaury Talbot, *In the Shadow of the Bush*, London, 1912, pp. 74-78). The character of the cult leads to the suspicion that it culminates in sexual intercourse; but Talbot reports no evidence of this.

There seem to have been more than one god of fertility in ancient Egypt. This is not to be wondered at. The religion, like the State, was an amalgam. The gods of the petty States absorbed into the kingdom were similarly absorbed into the pantheon. Either they were recognized as identical with those of the State-religion, or, maintaining an independent existence, they became the special divinities of certain nomes. The chief god, in later times at all events, was Osiris, who, whatever else he may have been, was a god of vegetation, a god of creative energy who renewed the life of all living things. To this his myth, his pictorial representations, and his ritual unmistakably point. In all these his phallus was emphasized. Herodotus relates (ii. 48) that on his festival priapic images were carried about the villages by the women. They were each about a cubit in height, with a phallus almost as large as the rest of the figure, and worked by strings. We may assume that the antics performed with them by the bearers were substantially the same as those on the Slave Coast and in the Congo. Osiris was identified by the Greeks with their own divinity Dionysus, a god of similar character, to whom similar rites were performed. These were probably Osirian mysteries; there certainly were mysteries connected with the worship of Dionysus. In the latter, as well as in

his worship outside them, the phallus was carried about and prominently exhibited (Clem. Alex. *Protrept.* ii.; Arnobius, *adv. Gentes*, v. 28, 39). Dionysus was not indigenous to Greek soil. He was an intrusive deity, probably from Thrace, whose cult was accepted in Greece only after considerable opposition. His worship was celebrated at the festivals by men and women with orgiastic rites, in the course of which victims offered in sacrifice were torn in pieces and devoured raw, and the devotees indulged in sexual intercourse. The excitement, heightened by cries, wild dancing, and draughts of wine, was credited to possession by the god himself. Under cover of darkness (for night was the season when the performances culminated) all sorts of excesses were committed. Whatever was done in this mad rout, the votaresses acting under the inspiration of the god were held not to have sacrificed their modesty (Euripides, *Bacchæ*, *passim*). Such a cult, it is obvious, was of barbaric origin. In this connexion it must be remembered that the Greeks had themselves emerged from a low state of civilization, and still retained many and startling survivals of that condition. The savage orgies introduced from Thrace and elsewhere found willing and powerful allies in the barbarous elements yet struggling in the midst of a growing culture. Thus reinforced, their victory was inevitable, whatever the better minds thought of them. They held the immense advantage that they provided an outlet for religious excitement, largely wanting in the more staid and regulated worship of Greece. The memory of the conflict passed away into the region of myth, whence it continued to exercise an influence, by no means negligible, in favour of the cult on the superstitious of all classes. It is probable, however, that contact with Greek thought and institutions refined and softened the ritual, purging it of its grosser elements.

A performance much modified, but containing some genuine hints of the barbarous archaic ritual, still takes place in the neighbourhood of Viza, the old Bizye, the capital of the Thracian kings.

Christians of the Greek Church are the actors. It is performed on the Monday of the last week of Carnival. Two *kalogéri* play the chief parts, disguised with head-dresses made each of an entire goat-skin without the horns, but stuffed with hay and falling down over the face, thus forming a mask, with holes cut for the eyes and mouth. One of them carries a mock-bow, the other (the principal personage) wields a wooden phallus. Two boys dressed as girls are called *κορίτσια*, or in some of the villages *νύφες* ('brides'). There are also *κασιβέλοι*, or gypsies, among the performers. Another man personates an old woman, called the Babo (cf. Baubo), carrying a doll (*Λαλιτρί*) in a basket on her arm. This part in some places is taken by one of the *κασιβέλοι*, who is dressed as a woman. Another of these gypsies, with the assistance of his wife, forges a ploughshare. The play includes the pursuit and marriage by the chief *καλογέρος* of a *κορίτσι*. He is subsequently shot by his male companion, and mourned by his bride and other actors. The preliminaries of burial are gone through; but he suddenly jumps up and comes to life again. The rites of the Greek Church are parodied both in the marriage and in the funeral. A house-to-house collection by the *καλογέροι*, dancing with the *κορίτσια*, begins the masquerade, while on the straw-heaps in front of the houses the *κασιβέλοι* and his wife carry out from time to time an obscene pantomime. After the ploughshare is supposed to be finished, ploughing is represented. The plough is drawn contrary to the course of the sun round the village square. When the play was witnessed by E. M. Dawkins in 1906 at Haghiolos Georgios, two of the *κορίτσια* were harnessed to the plough. They were led by one of the *καλογέροι*; the other *καλογέρος* was at the plough-tail. In front marched the *κασιβέλος* and his wife with long rods; but after the second circuit of the square they were themselves harnessed to the plough. A man scattering seed followed, amid cries of 'May wheat be ten piastres the bushel! Rye five piastres the bushel! Barley three piastres the bushel! Amen, O God, that the poor may eat! Yea, O God, that poor folk be filled!' The evening was spent in feasting on the presents collected during the day (*JHS* xxvi. [1906] 191 ff.).

It can hardly be denied that in this carnival custom we have the survival of an archaic agricultural ritual. Its object evidently is to obtain a plenteous harvest and probably increase of men

and cattle. Of the orgies of which we read in the Dionysiac cult the remains are here decayed, but unmistakable. Dawkins points out that the *καλογέροι* wear padded backs and that the *καταίβελοι* bear wands suggesting that the victim was originally beaten. The slayer even yet pretends to lay the slain *καλογέρος*. And Dawkins conjectures with probability that the latter represents the Thracian Dionysus, and that the part was once taken by a human victim put to death in downright earnest.

Compared with the Dionysiac rites, those of the Thesmophoria were from our point of view innocent. The Thesmophoria were celebrated by women alone, in honour of Demeter and Kore, in the autumnal month of Pyanepsion. Swine were offered in sacrifice. Phalli and snakes made of dough were carried about and dedicated to the goddesses, together with fir-cones as emblems of fertility and the remains of the sacrificed swine, by being thrown into the *μέγαρα*, or underground vaults appropriate to them as earth-goddesses. Men being excluded, there was no sexual indulgence; but there was flying—coarse and indecent chaff—between the participants. This ribaldry was part of the ceremonies; it was prophylactic, or intended 'to stimulate the fertilizing powers of the earth and the human frame.' Such was indeed the object of the entire ritual. Primarily agricultural, it was connected with the autumnal sowing. And its limitation to women probably relates back to that earliest stage of agriculture when the labour was done entirely by women. But, as elsewhere, the idea of vegetable fecundity was inseparably mixed up with that of human beings. The fasting and abstinence from sexual relations required on the part of the celebrants doubtless were directed to this double end (*CGS* iii. ch. ii.; J. E. Harrison, p. 120 ff.).

Less important than the Thesmophoria were the Haloa—like the former, an Attic festival. Their centre was at Eleusis. The festival, we are told, was held on the threshing-floor; and it seems to have been an autumnal celebration which had been displaced to mid-winter. Originally in all probability dedicated to the goddesses Demeter and Kore, as symbolizing the fruits of the earth, it has been conjectured that its displacement was due to the intrusion of Dionysus, who received divine honours together with the goddesses on the occasion. However this may be, men played very little part in it. The offerings were bloodless, therefore consisting of vegetable products, and were presented by the priestess. The sacred symbols of both sexes were handled, the priestesses secretly whispered into the ears of the women present (the men were absent) words that might not be uttered aloud; and the women themselves indulged in jests and flying similar, it would seem, to those of the Thesmophoria. The feast culminated in a banquet set out by the archons, but partaken of by the female celebrants alone. The banquet included cakes shaped like the symbols of sex (Harrison, p. 145 ff.; *CGS* iii. 45 ff.). At Greek marriages the rite of carrying the phallus in the *λίκνον*, with other emblems of reproduction and plenty, was doubtless a charm to produce these results.

The Eleusinian mysteries were deeply penetrated by Dionysiac influence; and disgraceful things are said to have been done at them, as the Christian Fathers do not fail to remind their opponents. The most recent researches of scholars, however, have failed to discover, among the fragmentary hints supplied by ancient writers, any certain evidence of practices grosser than those of the Thesmophoria and the Haloa. In the worship of the Great Mother, introduced from Phrygia, and certain other foreign cults the sexual idea was

prominent, though in the case of Cybele the orgies seem to have taken an ascetic and unnatural development. Aphrodite was one of such alien goddesses; and her cult, in some places at all events, was of a most voluptuous description. But we need not here follow the matter into detail.

In Rome Tutunus or Mutunus, otherwise Fascinus, later identified with the foreign god Priapus, was a very ancient divinity. He was represented under the form of a phallus. His office, it was said, was to avert evil and evil spirits; to this we shall return below. Another god, Liber, was held to preside over fertility, including the cultivation of the vine and the increase of all fruits of the field, as well as of animals. He was worshipped in connexion with Ceres and Libera, feminine deities having a similar office, and, like Tutunus, was represented as a phallus. An indigenous Italian divinity, in course of time he was identified with Bacchus. St. Augustine hints at licentious rites, and quotes Varro as an authority for the celebration of his cult at cross-roads. At his festival his image was mounted on a car and carried round the cross-roads in the country, and thence into the city. At Lavinium the feast lasted for a month, during which a kind of Saturnalia prevailed. The image was then brought through the forum into the temple of the god, and the most honourable matron placed a wreath upon it before the assembled people (*Aug. de Civ. Dei*, vii. 21). Libera was identified with Venus, and represented in the temple by the image of the female organ. The excesses of the Bacchanalia at length compelled the senate to suppress them in Rome (*ib.* vi. 9).

Sexual excesses on such occasions were, no doubt, like those of the archaic Dionysiac worship in Greece, of a ritual character. Rites of this kind betray their origin in savagery. It is probable that they were unknown to few of the European peoples of antiquity; but we have little or no evidence of the fact outside the Balkan Peninsula and Italy. Throughout mediæval Europe the various spring festivals seem to have been similar. Of some we have definite evidence to this effect. Of others it is only a matter of inference from the remains in modern times. History affords no account of their origin; they dated back to 'a time whereof the memory of man runneth not to the contrary'; and such a time was one of barbarism. They were joyous, mirthful occasions, on which young men and women took a prominent part, mingled and paired off. Though these feasts and merrymakings may not have been always directly connected with agriculture, they were celebrated with the effervescence and abandon of renewed life and enjoyment, when all nature was reviving from its wintry death; and they commemorated, if they did not promote, that revival. There can be little doubt that they culminated in orgies generally recognized and tacitly permitted (W. Mannhardt, *Baumkultus*, Berlin, 1875, ch. v.). This was, indeed, one of the charges brought by the English Puritans against the May-day festivals (anon., *Essay*, in Payne Knight, p. 153, quoting P. Stubbes, *Anatomic of Abuses*, London, 1583).

Analogous customs are still or were lately in existence in the south-western islands of the E. Indian Archipelago.

The inhabitants of the islands of Leti, Moa, and Lakor pay divine honours to Upulero, Grandfather Sun, and Upunusa, Grandmother Earth. They are two spirits residing in the sun and earth respectively. Every year at the easterly monsoon the *numu*-tree (a species of *Ficus*) changes its leaves. It is then that Grandfather Sun comes down to fertilize Grandmother Earth. For this purpose he descends into the sacred *numu* of the village-community; and under this tree a great feast is held. The organization of the feast is a weighty matter of State; for it lasts a whole month. Pigs are contributed by the members of the community according to their ability, to be

slain in honour of Upulero, and afterwards eaten by the partakers of the feast. Thrice in varying terms during the feast the village priest calls upon Upulero to come and eat and drink; the pork and the chickens, the cooked rice and the drink, are ready. In return he is asked to give all good things to his expectant children, and to increase the number of the nobles and of the people. He is besought for ivory and gold, he is prayed to fill the fishing-boats, the paddy-baskets, the sago-vessels, to multiply the goats and pigs, to give food and drink, and to cause children to be safely brought into the world. Dances of various kinds (among which one is danced by women alone, and another—the *pisang*-dance, emblem of the *lingam*—by men alone)—are performed to the accompaniment of drums that hardly cease day or night. The people await with expectation the coming of Upulero to fertilize Upunusa, and share in his enjoyment. Formerly at least, while the feast lasted the men and women had unrestricted access to one another (J. G. F. Riedel, *De sluit-en kroesharige Rassen tusschen Selebes en Papua*, Hague, 1886, p. 372).

Every year when the *sāl*-tree is in blossom the Orāons of Bengal celebrate the marriage of the earth-goddess with Dharme, the sun-god (see ORAONS, § 6).

But not every licentious rite can be accurately described as phallic worship. Many are purely magical.

Among the Nāga tribes of Manipur a month after the paddy is sown, and again before the firstfruits are cut by the village priest, a *gemma*, or general tabu, accompanied by a festival, is held, when a 'tug of war' takes place, the women and girls pulling against the men and boys. The object of this is said to be to take the omens for the future of the crop. More probably it is intended to assure its future. The rite is attended by considerable licence (T. C. Hodson, *Nāga Tribes of Manipur*, London, 1911, p. 168).

The licence attending puberty ceremonies in various parts of the world is often great. It is sometimes ceremonial, as among the newly-made adults on emerging from the rites in many Bantu tribes. Even in such cases it cannot be called religious without an abuse of terms. It is rather a first assertion of adult life, a testing of new conditions, physical and social, at the most a magical proceeding to ensure fertility. Some sexual rites are prophylactic in intention, and will be considered later.

The ancient Nicaraguans, in whose ordinary life sexual relations were fairly strict, were reported to hold a yearly festival at which women were permitted to give themselves up to any men they chose (J. G. Müller, *Amer. Urreligionen*, Basel, 1867, p. 663). A hint is given by Dumont in the 18th cent. of a similar practice at the harvest festival of the Natchez, in Louisiana. This, however, seems to have been confined to the youth of both sexes, and may have been no more than an example of the ordinary courting customs (quoted by J. R. Swanton, 43 *Bull. BE.*, 1911, p. 121). In both cases details which would have enabled us to judge of the meaning of the festival are lacking.

The tribes of the N. American Plains, at any rate, had ceremonies, known as the Sun-dance, which were definitely religious. They were lengthy and elaborate, extending over eight days. We possess an excellent account of them by G. A. Dorsey. He witnessed them on more than one occasion.

The Sun-dance is performed by the Arapaho in accordance with a vow made by a member of the tribe at some crisis of his life. The entire community joins in the performance. A great lodge is built, every portion of which with its accessories is symbolic. One of the chief functionaries is the Lodge-maker, and another is his official 'grandfather', called the Transferrer. At a certain point of the performance the Lodge-maker's wife and the Transferrer leave together the Rabbit-tipi, a lodge where the secret preparations are made for the dance. Deliberately, solemnly, and in ritual order they prepare for this duty. Each is clad in a single robe, all other clothing being removed. While a sacred song is sung and intense emotion prevails in the lodge, they pass out by a sunwise circuit over the fumes of rising incense and proceed to a spot a short distance away. It is midnight. After a few moments' prayer, in which they both emphasize the fact that they are about to do that which had been commanded at the time of the origin of the ceremony, and that what they are about to do is in keeping with the wish of their Father, the woman throws her covering on the ground and lies down on her back. The Transferrer, standing by her side, prays and offers her body

to Man-above, the Grandfather, the Four-Old-Men, and various minor gods. It is difficult to suppose, after this preface, that actual intercourse did not follow in former times; and it is to be gathered from the statement of one of the priests that in fact it took place. But it is averred that it is now prohibited—that abstinence is necessary, else 'the connexion does not benefit the people'; although it is admitted that 'the temptation is great.' During the act of intercourse, whether real or only symbolical, the Transferrer places in the woman's mouth a piece of root, which he has brought from the tipi, and which represents the seed or food given by the All-Powerful (Man-above). On her return to the tipi she transfers it to her husband's mouth directly from her own. Re-entering the tipi, she says, addressing him, 'I have returned, having performed the holy act which was commanded'; whereupon he and the other dancers thank her and pray for her success. The rite is repeated on the second night following with similar formalities. It is a dramatic representation in intimate relation with the myths of the tribe. The Transferrer represents Man-above, while the woman represents the mother of the tribe. 'The issue of their connexion is believed to be the birth of the people hereafter, or an increase in population. It is also a plea to all protective powers for their aid and care.' Thus it has a potent influence on the well-being of the people (*Field Columbian Mus. Pub.*, Anthropol. iv. [1903] 173, 101). We are told by another authority that 'at the sun-dance an old man, crying out to the entire camp-circle, told the young people to amuse themselves; he told the women to consent if they were approached by a young man, for this was their opportunity'; and he deprecated jealousy on the part of husbands. The old women, moreover, at such dances encouraged the girls to licence (A. L. Kroeber, *Bull. Amer. Mus. Nat. Hist.* xviii. [1902] 15). The Cheyenne had an analogous rite at the Sun-dance (G. A. Dorsey, *Field Columbian Mus. Pub.*, Anthropol. ix. [1905] 130). It was also comprised in some other of the sacred ceremonies of the Arapaho and other tribes—perhaps taken over from the Sun-dance (Kroeber, pp. 193, 200, 226; *Anthropol. Papers, Am. Mus. Nat. Hist.* i. [1908] 244).

On the other hand, the Buffalo-dance of the Mandans can only be designated as magical. Its object was to obtain a plentiful supply of buffaloes, the mainstay of Indian economy. It was part of a great annual religious celebration, including solemn prayers and offerings to the 'Great Spirit' and other supernatural powers, and the young men's puberty ordeal of abstinence and tortures.

The entire series lasted for four days, during which the Buffalo-dance by eight men, disguised in buffalo-skins and horns, and imitating in their movements a herd of the animals, was repeatedly performed. On the last day, while they are thus dancing, there enters to them a grotesque and horrible personage, naked and covered with black paint of charcoal and grease, who, careering about, scatters terror and dismay among the spectators. He is provided with a wooden phallus of colossal dimensions, and a buffalo's tail. At first he pursues the women, but is ritually foiled by the intervention of the master of the ceremonies, armed with the sacred medicine-pipe. After repeated onsets of this kind he turns his attention to the eight buffalo-dancers and enacts with four of them as cows the part of a rutting bull. This appears to exhaust him. The women and children, then no longer afraid of him, crowd around and hustle him, the women dancing up to him and challenging him with lascivious attitudes. He is thus driven away, the phallus being ultimately wrested by one of the women from his body (to which it was affixed by a thong) and carried in triumph into the village. There from the roof of the medicine-lodge 'she harangued the multitude for some time, claiming that she held the power of creation and of life and death over them, that she was the father of all the buffaloes, and that she could make them come or stay away as she pleased.' This gives the clue to the real meaning of the weird figure, whom Catlin, in describing the scene, takes to be 'the Evil Spirit.' Having possessed herself of his distinguishing implement, she temporarily assumed his character, she claimed his power, she became 'the Father of all the Buffaloes.' In that capacity she stopped the dance and ordered the tortures to be commenced in the medicine-lodge. In exchange for her trophy she received from the master of the ceremonies the handsomest dress in the tribe, and was appointed to 'the envied position of conductress of the Feast of the Buffaloes, to be given that night' (G. Catlin, *N. Amer. Indians*, new ed., London, 1876, i. letter xxii. and *folium reservatum*).

In this extraordinary scene we clearly have a pantomimic representation of a magical nature; for to its strict observance the Mandans attribute the coming of buffaloes to supply them with food during the season. The performance was, in short, believed to ensure the multiplication of the animals so necessary to the life of the tribe. Catlin, preoccupied with the dance and with the horrors of the medicine-lodge, says nothing of a scene during the same festival witnessed by Lewis and Clark some thirty years earlier. Various young married men offered the use of their respective wives to certain elders in place of a doll which

the latter were about to embrace, and regarded their acceptance as a great honour (M. Lewis and W. Clark, *Exped. to the Source of the Missouri*, reprint, London, 1905, i. 210). The account does not fully elucidate the intention of this rite. It is treated as if it were the only rite of importance at the feast. But the writer was not himself an eyewitness; he writes from the report of companions. We may conjecture that its object was similar to that of the Babylonian and Indian customs already mentioned. Such an object in the mind of a savage would not be inappropriate to the Buffalo-dance. Indeed, the proceedings of the women at the corresponding feast among the Hidatsa recall to another writer the women at the temple of Mylitta (Dorsey, *11 RBEW* [1889-90], p. 505, citing Maximilian, Prince of Wied). More obscure is the meaning of the medicine-dance, celebrated by a Mandan desirous of doing honour to his 'medicine' or fetish. A dance by the young unmarried women was part of the ceremonies, in the course of which they challenged and received in public the embraces of the youths (Lewis and Clark, i. 211).

It is thus apparent that what we call licentious rites are by no means always to be described as worship. They are ritual performances, but probably in the vast majority of cases they are intended to serve what may more properly be called magical purposes. Mimicry, either of the procedure or of the result to be attained, is one of the most widely adopted of the processes of magic. It has been fully expounded and abundantly illustrated by Frazer in *The Golden Bough*. Worship, however, has been so widely mixed with magic, especially in the lower culture, that it is not at all times easy to distinguish them. And, where magic relies to any extent, as it often does, on the assistance of supernatural beings, mimicry may be interpreted as an acted prayer, intended to make clear to the being whose aid is sought exactly what services are required. It is especially noteworthy that licentious rites are frequent (if a stronger word may not be used) at agricultural festivals. Nor is it overstating the facts to say that such rites are most fully developed and practised by a settled agricultural community. At agricultural festivals the gladness for the opening spring or the gathered harvest finds overflowing expression, the hopes, the aspirations for future increase of men, cattle, and fruits of the earth are uttered in a crescendo of acts as well as words; dancing and alcohol powerfully contribute to an excitement of growing intensity; and worship becomes an orgy.

Indeed, a recent investigation of the aboriginal tribes of Mexico goes farther, and attributes literally and physically the continuance of the Tarahumares to their agricultural festivals.

The national drink of the tribe is *tesvino*, an intoxicating liquor made from Indian corn. It is 'an integral part of the Tarahumare religion. It is used at all its celebrations, dances, and ceremonies.' At the festivals food and drink are offered to the gods, speeches are made, and dances performed. 'While the dancing and singing, sacrificing and speechmaking are going on, the people behave with decorous solemnity and formality. The ceremonies are never interrupted by unseemly conduct; everybody deports himself with grave sobriety, and refrains from loud talking and laughing, and from making any disrespectful noise. But after the gods have been given their share, the people go in, no less energetically, for enjoying themselves.' It is, in fact, the avowed aim and intention of everybody to get drunk; and the drinking ends in a sexual debauch. 'Under the influence of the liquor, men and women rapidly lose that bashfulness and modesty which in ordinary life are such characteristic traits of their deportment. . . . Aside from social and religious considerations, the drinking of *tesvino* is a vital factor in the national life of the tribe. Incredible as it may sound, yet, after prolonged and careful research into this interesting psychological problem, I do not hesitate to state that in the ordinary course of his existence the uncivilised Tarahumare is too bashful and modest to enforce his matrimonial rights and privileges; and that by means of *tesvino*

chiefly the race is kept alive and increasing. It is especially at the feasts connected with the agricultural work that sexual promiscuity takes place' (C. Lumholtz, *Unknown Mexico*, 2 vols., London, 1903, i. 253, 350 ff.).

But sexual indulgence in a ritual form occurs on other occasions.

Thus at the time of the blossoming of the rice, and for the purpose of increasing the yield, in some districts of Java, the owner of the rice-field and his wife run round it naked, and then and there unite in conjugal embraces (Wilken, iii. 41). Among the Pipiles of Central America, after four days' abstinence, the husband and wife on the night before planting indulged their passions to the fullest extent. This was 'enjoined . . . by the priests as a religious duty, in default of which it was not lawful to sow the seed.' 'Certain persons are even said to have been appointed to perform the sexual act at the very moment when the first seeds were deposited in the ground' (*GE3*, pt. i, *The Magic Art*, ii. 98). On the other hand, on the islands of Ambon and Ulisse, in order to promote the fertility of the cloves, if a poor crop be threatened, the man goes to the plantation by night, alone and naked, and there stimulates coition with one of the trees, crying out 'More cloves!' (Wilken, iii. 45).

These performances are unaided by festival stimulus. They are an obvious application of mimetic magic to agricultural purposes, or are intended, as Wilken suggests, to excite the sexual passions attributed to the growing crops regarded as living things, and so to promote their fecundity (iii. 175). In Java, at the ingathering of the rice, bundles of ears are tied up to represent a bridal pair; and the harvest is carried out with the ceremonies of a marriage (*ib.* 41; cf. 175).

The Egyptian procession of women in honour of Osiris, to which reference has already been made, seems to have been at least tinged with worship. As described by Herodotus, it was led by a flute-player; and the women followed, singing the praises of the god. They carried priapian figures, worked by means of strings. We may suspect from this description that in origin it was a magical rite, which had grown up independent of strictly cultural associations. The influence of such associations may have purified it of its grosser features; for the historian gives us no hint of sexual licence on the occasion. In India, where Siva is worshipped under the form of the *lingam*, the idol has a purely conventional shape, and is not of itself suggestive of sexual ideas. Siva seems to have been a non-Aryan deity, adopted subsequently to Vedic times into the Hindu pantheon. There he has obtained a highly exalted position. His worship has spread more or less throughout India. The Saivas do not connect his symbol with eroticism; indeed, an erotic tendency is markedly absent from his ascetic cult (art. HINDUISM, vol. vi. p. 701; cf. Sellon, *Mem. Anthropol. Soc.* i. 327), though it is said that certain sectaries among the worshippers of Vishnu, by whom the female emblem is honoured as the manifestation of the power or energy of the god in female form, and the Vama-charis, who worship the female counterpart of Siva, at times indulge in an orgiastic *maja*, comparable to the worst things recorded or imagined of Eskimo feasts or the nocturnal revels of medieval witches (Dubois, p. 286; *Census of India, 1911*, Report, xvi. 76). These rites may be survivals of an aboriginal practice; they may, on the other hand, be an abuse of comparatively modern date. In this connexion it is not important to mention the fact to which Crooke calls attention, namely, that, if phallic practices—and indeed phallic worship in general—be a non-Aryan cult, it was by no means universal among the aboriginal races of India.

Whatever be the case of the Vaisnavite and Vama-chari practices, phallic rites, as we have seen, were an ancient institution in Rome; but the worst excesses seem to have arisen after the importation of foreign deities, and perhaps as part of the depravation of manners among certain classes of the population at a time of increasing luxury

and leasure. The Roman god *Fascinus* was served by the Vestal Virgins as priestesses (*HN* xxviii. 7), whose rule of chastity was proverbially strict. The rites of the Bona Dea probably had relation to the promotion of fecundity of the earth and of women, as part of the general prosperity. They were celebrated by women alone; and, though we gather that they were more or less orgiastic, it was only after the admission of men in the early days of the empire that disorders resulted (*L. Preller, Röm. Mythologie*³, 2 vols., Berlin, 1881-83, i. 403). We must, however, be on our guard against supposing that all the Roman rites in honour of fertility were originally what we call innocent. We have little or no direct evidence on the subject. But we cannot be far wrong in thinking that, not only in Rome but throughout Italy, the festivals of Liber and the Saturnalia (held at the completion of the sowing) conformed to similar festivals elsewhere in including sexual relations, which were, in origin at all events, magical in their object. Attention has been already called to the probably similar character of the May-day and other celebrations of mediæval Europe.

Reference has also been made to megalithic monuments. Evidence of their use as phallic representations is particularly abundant in France and the neighbouring countries. On many of these stones, as well as on certain natural rocks, women desirous of children or of being married rub themselves. Sometimes the husbands take part in the ceremony. Nor is it confined to stones and rocks; trees of suggestive appearance or statues of saints and other objects are equally resorted to for this and similar practices, and are doubtless equally effective. Menhirs, indeed, are frequently the centre of rites, such as dancing, singing, and kissing, which can be nothing else but survivals of religious observances. Some of them have been surmounted by a cross, and thus (possibly, too, with other rites) consecrated to Christianity. The legends that have gathered round consecrated and unconsecrated alike bear witness to their pagan origin, and to the enduring devotion of the peasantry, which has here and there conquered the aversion of their spiritual guides and compelled a compromise with the old heathenism. The population was converted only by slow degrees to a higher religion. The ancient sanctity of these objects, the potency once ascribed to them, would linger on, though with decreasing influence. Their shape would alone remain to fix the speculations of generations that had forgotten the religious beliefs and the plenitude of the rites of their forefathers. Round that shape the vague remains of those primitive beliefs would crystallize and be expressed in tale and superstition, sometimes thinly overlaid by Christianity, but more often sturdily independent of it. Elsewhere in Europe and the surrounding islands, and in many other parts of the world, analogous rites for the cure of sterility are, or have been, performed. They frequently exhibit a mixture of magic and religion profoundly interesting to the student of anthropology (*Hartland, Primitive Paternity*, i. 124 ff., and the authorities there referred to). The illustration of the subject belongs to the consideration of sympathetic magic rather than to the present inquiry. It is enough to observe in this place that it is but one application of a wide-spread notion that contact with something to which sacredness or power is for any reason attributed will result in conferring an appropriate benefit. Where in the progress of civilization the practice of endeavouring to secure fertility in this manner has been abandoned, survivals in jest or proverb are often found. Thus at Cerne Abbas, if an unmarried girl becomes pregnant, the current ex-

pression is, 'She has been sitting on the giant.' In the same way, in Provence, a girl was said to have offered her virgin robe to St. Foutin (anon., *Essay*, in Payne Knight, p. 134).

Another magical proceeding is the employment of phallic figures as amulets. It was well known in classical antiquity, and many such amulets for personal wear, especially from Italy, are still extant. The priapic form of boundary-stones is probably due to a belief in its prophylactic value. This form, or perhaps the god whom it represented and embodied, was held to have power to avert evils of various kinds, as well as to ensure fertility. Negatively considered, indeed, to ensure fertility is to avert evil. An emblem of fertilizing power, the phallus was the foe of sterility, of death, and of all the ills that flesh is heir to. It protected fields and vineyards alike against birds and human thieves and the subtler influences that withheld the fruit or spoiled the crops. It was sculptured on the walls of buildings, as at Alatri, near Rome, where it is still to be seen, but where, by a revulsion of custom, it has long been a semi-religious practice for the inhabitants to go out *en masse* to mutilate the figures on Easter Monday (*A. J. C. Hare and St. C. Baddeley, Days near Rome*⁴, London, 1906, p. 140). Yet the same inhabitants doubtless commonly carry it as a talisman on their own persons. The emblem has also been found scratched on Roman buildings in Britain. The continued belief in its apotropaic power seems to account for its appearance on the doorways of the cathedral at Toulouse and other churches in France (anon., *Essay*, in Payne Knight, p. 124) and a corresponding belief for the Sheilana-gig in these islands. The same reason possibly accounts for the 'pillars pers axelessness' which Clement of Alexandria (*Stromatept.* iv.) twits the heathen with setting upon their houses and guarding with scrupulous care. The passage as it stands appears to extend to other images and mythological pictures; but we must perhaps make allowance for the author's puritanical bias and controversial purpose and for his rhetoric. So the phalli reported to have been brought away by those who were initiated into the mysteries of Aphrodite at Cyprus were probably amulets securing the protection of the deity (*ib.* ii.; *Arnobius, adv. Gentes*, v. 19). Small medals in lead bearing phallic representations have been found in the Seine; they seem to be identifiable as amulets (anon., *Essay*, in Payne Knight, p. 137).

The furniture of ancient tombs frequently includes phalli—perhaps to ward off evil from the dead (a striking example from Egypt is mentioned in Dulaure, p. 43). Large stones of phallic shape have repeatedly been found in graves of the Viking age, in Norway, both on the numerous fiords and inland. Some of them are preserved in the museum at Christiania. Their exact purpose is unknown; but it has been conjectured that they were in fact phalli, and were intended to serve a similar purpose to that of the smaller objects in the Mediterranean area (the writer is indebted for this information to the late Dr. Henry Colley March, who had examined the stones and discussed their intention with the curator of the museum). On the other hand, it may be that they are to be classed with the 'pillars of whiteness' frequently set up on barrows in Scandinavia, which were probably connected with ancestor-worship, and may have been, as their shape suggests, phalli (*Goblet d'Alviella, The Migration of Symbols*, Eng. tr., London, 1894, p. 107).

The phallus broke through witchcrafts. Against the evil eye it was potent. Therefore victorious generals had the image of *Fascinus* before their cars in their triumphal processions in Rome. From

the use of the symbol at Rome the god *Fascinus* probably acquired that name, and the word *fascinum* ('enchantment,' 'witchcraft') became an ordinary word for the phallus. Even to-day, in Italy and other Mediterranean countries, the figure of a phallus is among the commonest amulets worn by men, women, and children, though often disguised as a closed fist, with the thumb protruding between the first and second fingers. In this form it is called the *fico*, or 'fig'; and the action of forming the *fico* is a customary prophylactic improvised against a suddenly suspected witchcraft, such as an assault of the evil eye (*q.v.*). In Minahassa (Celebes) the same gesture is made. It is not only a defence from, but also a defiance of, the evil eye. By an extension of the idea it becomes a defiance of a human opponent in a quarrel; on the island of Ambon, when men are quarrelling, one of them will uncover his sexual organ as a challenge to the other (Wilken, iii. 318)—probably, with its innuendo of magic, all the more deadly. In India a tiny plate of gold, called the *tali*, shaped like the leaf of the Indian fig-tree, and representing the phallus, is tied about a woman's neck at her marriage. When, in the 18th cent., Roman Catholic missionaries endeavoured to substitute the cross, they met with such resistance among their converts that they were forced to a compromise: the *tali* was still permitted to be worn, but a cross was engraved upon it (Dulaure, p. 81, citing Sonnerat). On the island of Nias the centre of the panels composing the walls of a house is filled with a sort of rosette; but very often the rosette is replaced by a phallus, more or less disguised, but still recognizable. When an epidemic ^{of cholera} ~~is~~ ^{is} ~~out~~ ^{is} in a *kampong* (whence our word *compolawer*—an enclosed family settlement, grotesque and fish-like figures are set up at the entrances to neighbourhood *kampongs* to frighten away the evil spirit causing the sickness. Often these figures are adorned with extraordinarily large organs of sex. In the northern district of the island the sexual organs forming part of the image of the *adu* (which, as we have seen, is ithyphallic) are avowedly emphasized to frighten away the hostile spirits, rather than as a symbol of fecundity or an amulet against the evil eye (de Zwaan, pp. 66, 64).

These purposes, however, are not incompatible with one another.

Just as the phallus came in the ancient world to have a much extended significance, in Japan, from representing the generative or procreative power, 'it has become the symbol of the more abstract conception of lusty animal life, the foe to death and disease. Hence its use as a magical prophylactic appliance. In Shinto this latter principle is much the more prominent. It is embodied in the name *Sahe no kami*, which means "preventive deities." The application of this epithet is clear from the circumstance that in a *norito* [liturgical prayer] they are invoked for protection against the "unfriendly and savage beings of the Root Country," that is to say *Yomi* or *Hades*. These by no means imaginary personages . . . represent, or rather are identical with, diseases and other evils associated with death and the grave. Epidemic and contagious diseases are specially intended. Hence the *Sahe no kami* are also called *Yakushin*, or "Pestilence Deities," meaning the Gods who ward off pestilence, a phrase wrongly taken in later times to signify the Gods who produce pestilence" (Aston, p. 137).

We have seen that the peach is in Japan the representative of the *kteis*. In conformity with this symbolism peach-wood staves were used in the demon-expelling ceremony on the last day of the year. At the festival in honour of the *Sahe no kami*, or phallic deities, held at the first full moon of the year, boys used to go about striking the younger women with potsticks employed in the making of gruel on the occasion. This was held to ensure fertility. The sticks were of willow, whittled near the top into a mass of adherent shavings; and it is suggested with probability that they had a phallic significance (Aston, p. 189 f.). The Ainu, the Arunta of Central Aus-

tralia, and other peoples, it is true, use similar wands in their sacred ceremonies apparently without any phallic meaning. The practice at the Japanese festival, however, coincides with that of the *Luperci*, who pursued and struck women with thongs of goat-skin for a fertilizing purpose. It resembles also that of striking women and girls with willow- or birch-twigs at various modern European festivals. About Roding in the Upper Palatinate the bride is thus struck as she walks up from the church-door to her seat at the marriage service (Hartland, *Prim. Paternity*, i. 103, citing authorities). It is reasonably clear that in all these cases the intention is to promote fertility. This intention is quite certain if we compare with these rites one reported from the Konkan, Bombay Presidency, India.

We are told that the Konkan villagers on the day of an eclipse 'strike barren trees with a pestle, in order that they may bear fruit and flowers. A barren woman is also beaten with the same motive.' Presumably it is meant that the woman is beaten with the same instrument as the trees. The pestle is obviously regarded as a phallus (Jackson-Enthoven, *FL Notes*, ii. 9, recording a report by the schoolmaster, at Kalse, Ratnagiri).

Phalli were used with ritual significance by the heathen Norsemen. An ancient poem in dialogue still exists in which is delineated a ceremony apparently performed in the family of a *karl*, or peasant-farmer.

The goodman himself, his wife, son, and daughter, and the thrall and bondmaid take the phallus in turn, each repeating an appropriate stave or spell, and handing it on to the next. Three guests, however, are present; and one of them, unknown to the goodman, is the king, St. Olaf. When it comes to his turn, he seizes the object and casts it to the dog, to the no small consternation of the goodwife. With the family's recognition of him the poem breaks off abruptly (G. Vigfusson and F. Y. Powell, *Corpus Poet. Boreale*, 2 vols., Oxford, 1883, ii. 380).

Such objects seem to be included in those denounced in the Scandinavian Church law under the name of *bloeti*, 'hallowed thing' or 'talisman' (*ib.* i. 408). Their precise use is, however, uncertain.

The origin of the wide-spread custom of circumcision and of the related mutilations of the sexual organs, both male and female, has often been discussed (see art. CIRCUMCISION), and needs no more than a passing notice here. These rites are unquestionable evidence of the preoccupation of the savage mind with sexual matters. Whatever other motives may have contributed to their institution, there can be no doubt that they are above all a preparation for adult life—that is to say, for the sexual life—and are intended to facilitate the procreation of children. This was, of course, in normal cases quite needless; but the practice had regard not merely to individual convenience and comfort, but also to the wider interests of society. As a social act, it is found connected with religion in very rudimentary grades of civilization. In the lower culture generally it is performed on a number of patients at the same time, at or near adolescence, and avowedly as an initiation into adult life. Instruction in their future duties, and in fact the whole moral code of the tribe, but especially in relation to sexual matters, and in the religious traditions and sanctions which form the tribal belief, is commonly an important part of the proceedings. The religious element, to be sure, in this definite form is not invariably found; but, where the practice survives into a more advanced stage, a distinctly religious motive is usually imputed.

Among the Ewhe and Yoruba of the Slave Coast it seems to be an act of sacrifice to *Elegba* (Ellis, *Ewhe*, p. 43, *Yoruba*, p. 66). A similar rite was enacted by the Totonacs of E. Mexico on presentation of the infant boy in the temple on the twenty-eighth or twenty-ninth day after birth; and Acosta states generally of Mexico (perhaps meaning the city and dominant tribe of the country) that the mother brought the child to the priest in the temple, and that he made a small cut in the ear and in the prepuce (H. H. Ploss, *Das Kind*, Leipzig, 1884, i.

856f.). But the accounts do not clearly show the extent of the operation. Among the Hebrews it certainly was a religious ceremony; moreover, the importance attached to the male organ was such that oaths were taken upon it, and that admittance to the national religious privileges was debarred to those who were not circumcised, and to those whose organs, on the other hand, were not perfect in every other respect. Among the Muhammadans (as probably among the ancient Arabs) circumcision is likewise a religious rite. In Arabia at the present day it is performed at a festival, formerly, there can be little doubt, of a licentious character, and probably a survival of the spring festival in which the ancient Semitic mother-goddess was honoured (G. A. Barton, *A Sketch of Semitic Origins*, New York, 1902, pp. 89, 110). Circumcision takes place among Muhammadans at an early age, and it is not now, whatever it may have been in 'the times of ignorance,' in strictness a puberty rite. But it may be noted that puberty rites are very commonly the occasion of licentious outbursts and miscellaneous sexual commerce.

3. General considerations.—The various practices, then, commonly and collectively known as phallic worship are a congeries of rites partly cultural and partly magical. While many of them are easily distinguishable into these two classes, many, on the other hand, are on the border-line between cult and magic. Religion and magic alike originate in the emotional nature of mankind, rather than in the reasoning faculties; and only in the highest civilizations, if completely even there, are they separated.

In savage and barbaric stages of culture sexual matters are discussed with more openness than with us. They are taken more as a matter of course. The literature of every country discloses how long this habit may persist into the higher civilization. Greater or less laxity of sexual morality, despite individual jealousies, is likely to be an accompaniment of this freedom of speech. It is notorious, in fact, among a large number of peoples. Races, to be sure, differ in this respect. Some are comparatively cold; among others erotic passion is a prominent characteristic, impelling them to continual gratification and change of object. That it should frequently be encouraged and consecrated by religion is only what we might anticipate. Thus it comes about that religious festivals—prepared for by days or weeks of anxious observances, fasting, and asceticism, during which the emotions are gradually excited and wrought to a high tension—culminate in a recoil of wild indulgence of the pent-up passions. The community comes together in general assembly on such occasions. The social instincts are gratified, and the imagination and the feelings are stimulated, by the dances and other ceremonies performed and witnessed in common. All the physical needs, all the desires previously repressed, are satisfied; and, since sexual impulses are as crude and almost as powerful in primitive humanity as the craving for food, their unrestrained indulgence is parallel with the unlimited eating and drinking on these occasions. This consecration of outbursts of debauchery by religion, when once it has taken place, preserves them for long periods as a physical and social pleasure and, more, as a religious duty, amid the changes of culture and growing refinement of manners.

While a dispassionate view of religion refuses to identify it with sexual and amatory passion (see art. FEMALE PRINCIPLE), these are, notwithstanding, intimately related. Emotion, once excited in any direction, is often either diverted into another or carries with it in its vehemence objects not at first contemplated—nay, even fills and overflows all the channels of life. The very strength of sexual passion, upon which the continuance of the race depends, renders it peculiarly liable to attract and unite with religious emotion. That it has done this in all historical ages is shown not merely by phallic practices and the use of phallic emblems such as we have considered, but equally by the sensual or the ascetic excesses into which

religious fanaticism almost everywhere falls. The crazy votaries of the Mother of the Gods, who in her honour deprived themselves of their manhood, were the subjects of sexual obsession no less than the worshippers of Anaitis or Eleggba. Vowed celibacy, whether solitary or in communities, of all religions is preoccupied with the sexual idea. It leads to nauseous developments, like those of St. Teresa or St. Catharine of Siena; or human nature gives way under the strain to unregulated physical satisfaction of the very passions which it has endeavoured to suppress. Through intense erotic passion in its higher manifestations, as through intense religious passion, there runs a rich vein of mysticism. The religious devotee and the lover are alike impelled to union with the object of devotion—union which is envisaged as more than corporeal, loftier, more intimate, merging the being in that which is so eagerly adored. All others are renounced, contemned. In religion, where the object is by the nature of the case incapable of possession, of appropriation, the worshipper has no means of complete satisfaction of his passion. Especially where the object is conceived as of the opposite sex, his passion in extreme cases becomes monomania. Even where it falls short of that, it often drives him to extravagances and fantastic surrogates for the satisfaction which is denied him. The lives of ancient hermits, the annals of the cloister, as well as the history of many a Christian sect, bear abundant witness to the evil; and Christianity has had no monopoly of it.

Save in a few instances, however, such as the worship of Cybele, the eroto-religious fervour in paganism exhausts itself in occasional orgies. In the intervals the worshippers are sane; the intoxication past, they resume their normal selves. Usually intermittent outbreaks are sufficient to satisfy the human craving for excitement. When sexual passion is crude and easily expended on other objects, and when the religious ideal is child-like and undeveloped, so that the divinity is imagined as quite apart from humanity and without any intimate sympathies with the individual worshipper, but rather as the ruler of a tribe or community, sexual passion does not morbidly and continuously project itself into the religious sphere. The periodical religious orgies afford ample scope for the gratification of the sexual instinct beyond the normal indulgence. In that stage sexual and religious mysticism asks no more than the belief that the orgies are an imitation, a dramatic representation, of the divine procedure, or an assistance to it—in either case a religious duty—and a social enjoyment crowned with the privilege of sharing it in some sense with the god.

For illustrations of the stage in question we may refer to the festivals in honour of Grandfather Sun and Grandmother Earth in various E. Indian islands and to the Sun-dance of the tribes of the N. American Plains. The worship of the old Semitic mother-goddess and of the cognate divinities of S. W. Asia seems to have been not dissimilar. To this type we may probably also refer the ancient Thracian worship of Dionysus. When by a missionary movement he entered Greece, his cult became more individual; it was raised to a higher plane and refined; Orphic influences and speculations, originating perhaps in Crete, gave it a new tone and content.

The divinity associated with these periodical orgies, as soon as he has assumed definite characteristics, is found to be one among whose attributes fertility is prominent. To him the mild and genial sunshine, the rains and revival of nature, all the conditions of the fruitfulness of earth, the increase of food, and the multiplication of the people are

ascribed. His worship is directed to obtain these blessings, without which life is impossible. The rites are not confined to prayer and sacrifice, as to a strictly personal being. What we call magic mingles with these and rivals them in potency. It is, in fact, an essential part of the performance. The social gatherings and the rites are no doubt far older than the divinity, far older than any practical aim beyond that of pleasure and gratification. They were in their rude beginnings an expression of the emotions of the community before the divine personality was dimly imagined. His worship and symbols have grown out of them. The process was probably unconscious. Many generations may have elapsed before a motive less vague than social enjoyment was evolved for the periodical reunions. But, when man's curiosity about himself and his surroundings led him to discover the connexion of sexual passion with the mystery of birth, then the dance, the rhythmical cries, and the sexual indulgence practised in the assemblies of the group would be fitted with a deeper meaning. They would be held to arouse the emotions and kindle the appetites of the animals and the crops, more or less personalized and interpreted in human terms, or to act as spells directly on them; or they would become appeals to, and perchance a species of co-operation with, the higher powers conceived as ruling the course of nature. Social amusement would thus be transfigured into obligation, and the welfare of the community would be held to be dependent on its punctual observance.

A cult like this is apt to become specially developed in a population dependent for the supply of food and other necessities and comforts of life on some form of agriculture, though not, as we have seen, exclusively confined to these. Its rites relate to the immediate needs of the community. Their symbols are drawn from those needs. The festivals are held at periods when the chief labours of the year are about to be undertaken or are just completed—before sowing, in the interval between sowing and harvest, and after the crops have been gathered in. These are the times when the collective emotions are liveliest and the pause in the collective labours gives opportunity for feeling the awakening influences of the spring, the anxiety for the success of the operations of the year, or the satisfaction, gladness, and sense of security of the results. It is no wonder that they overflow in words and actions repressed (it may be sternly) at other times, and regarded with disgust by a civilization that has risen above such coarse and brutal exhibitions. For what an experienced observer says, describing the harvest festival in Borneo, is of wide application:

'The whole festival is a celebration or cult of the principle of fertility and vitality—that of the women no less than that of the *padis*' (C. Hose and W. McDougall, *Pagan Tribes of Borneo*, 2 vols., London, 1912, i. 112).

Some of these festivals took the form of a sacred marriage—a marriage, i.e., of the god and goddess of fertility, such as the marriage of the sun-god and earth-goddess celebrated by the Orôns and in the E. Indian Archipelago.

'At Calah,' once the capital of Assyria, 'the marriage of the god Nabu appears to have been annually celebrated on the third of the month Iyyar or Airu, which corresponded to May' (*GB*, pt. I, *The Magic Art*, ii. 130). The marriage of Zeus and Hera was performed annually in various parts of Greece. In India, in the Salem district of the Madras Presidency, the Malayâls, a Tamil tribe, celebrate the marriage of their tribal god, Sarvarâyam, with the goddess of the Cauvery river. This union is supposed to fertilize the cultivated lands of the tribe (*FLN* xxii. [1911] 229). Among the Bambara of the Niger basin in W. Africa the male and female idols are believed to couple at the time of the annual sacrifices offered before the rainy season (J. Henry, *L'Âme d'un peuple africain: Les Bambara*, Münster, 1910, p. 151). Frazer suggests that the King and Queen of the May at European spring festivals are relics of a similar ceremony. In this connexion it is interesting to note that at the Holi

festival, a peasant celebration of a similar character, in Gujârât, a mock-marriage is performed between 'two poor stupid persons' dressed as bride and bridegroom (Jackson-Enthoven, *FL Notes*, 'Gujarat,' *Mazgaon*, Bombay, 1914, p. 158). Whether Frazer's conjecture be correct or not—and it is not unfeasible—we frequently find in such ceremonies the part of the goddess played by a mortal woman. In Athens Dionysus was married every year to the queen, the wife of the king archon. Probably the annual spring festival in Scandinavia, when the image of Frey was drawn round the country in a waggon, accompanied by his young priestess, who was called the god's wife, was a similar rite (Grimm, *Teut. Myth.* i. 218; *GB*, pt. I, *The Magic Art*, ii. 143). The Blackfeet of N. America are said to have married the sun every year to the moon, represented by a maiden or a woman who had had only one husband. The Algonquins married their nets to two young girls of six or seven years of age (thus securing that they were virgins); and the Hurons adopted the custom from them (*GB*, pt. I, *The Magic Art*, ii. 146 f.). These are evidently rites to secure fertility and plenty. As might be expected, the consummation of the divine union often comes to be enacted. It was so in the case of Dionysus in Athens; 'but whether the part of the god was played by a man or an image we do not know' (*ib.* p. 136). Among the Orôns the priest and his wife represent the divine personages. Jagannâth's bride is put into the god's bed, and a Brâhman is said to join her there, to play the god's part.

A further stage is reached when the god is provided with a permanent wife or wives.

The ancient Egyptian queen was held to be wedded to the god Ammon, who approached her in the likeness of her earthly consort, the Pharaoh, as Uther Pendragon approached Igrayne and the hero Astrabakus the wife of Ariston, king of Sparta. Similarly, in Babylon a woman was kept in the lofty temple of Bel as his wife. 'The Indians of a village in Peru have been known to marry a beautiful girl, about fourteen years of age, to a stone shaped like a human being, which they regarded as a god (*huaca*). All the villagers took part in the marriage ceremony, which lasted three days, and was attended with much revelry. The girl thereafter remained a virgin and sacrificed to the idol for the people. They shewed her the uttermost reverence and deemed her divine' (*ib.* p. 146).

In such cases the provision of a wife was probably looked upon as an ordinary duty to the god, who was thought of in anthropomorphic terms. Such wife frequently became his priestess. And the relation between the god and his wife may not always have been the direct cause of fertility or other blessings to the worshippers, though doubtless the neglect to provide a wife would have aroused the divine resentment.

In India, where prostitutes are attached to a temple, they are first married to the god. The Kaikôlans, a caste of Tamil weavers, deem it right that at least one girl in every family should be dedicated to the temple service. At Coimbatore the marriage ceremony is performed before the idol, presumably Siva. A Brâhman ties the *tali* upon her; and at night the god is represented by a sword, which is laid by her side before any one else is allowed to approach her. So realistically is the relation between the god and the girl conceived that at her death the idol, as her husband, has to observe the customary death-pollution; consequently no *pûja* is performed in the temple until her body has been disposed of (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, iii. 37 ff.). A ceremony widely practised in India is that of marrying *Vispu* to a *tulsi*-plant, or of marrying an *asvattha*-plant to a *margosa*-plant, and so forth. This is performed by husbands and wives to obtain offspring (*Census of India, 1911*, Report, vii. 63, xvi. 176, xxi. 89).

Generally, when from various causes a pantheon develops, the individual divinities become more or less specialized, and the patronage of sexual love and human fecundity is often severed from that of the multiplication of flocks and herds and the seeds of the field. This has been the case with the Negro divinity Legba. In Greece the imported goddess Aphrodite tended in the same way to become the goddess of beauty and human love, obscuring the wider functions that she originally exercised and in many places continued to share with other divinities. In such cases the licentious rites are often emphasized and turned to uses involving more than a disregard—a conscious defiance—of all moral regulations. Societies deeply penetrated with this cancer are on the way to dissolution.

But a much more legitimate motive dictates recourse to these divinities. The desire for offspring, so vital to the species, is deeply imprinted in every normal individual. It is, indeed, limited by the necessity for finding room and subsistence. Where

this condition presses on the community, as among very low races and peoples hemmed in by geographical or political obstacles, it is counteracted by infanticide; but elsewhere it impels to reproduction. Women as well as men, and even more than men, wish for children. Nowhere is the wish more in evidence than among patrilineal peoples, where women are held in esteem according as they are, or are not, blessed with children, and it is a reproach to a married woman to be childless. So strong is the desire for offspring that a man often cares not who has begotten the children reckoned to him. He will marry a woman who has proved her capacity for childbearing, in order to obtain not only the children she may hereafter bear, but those she has already borne. He will subject his wife to other men's embraces with perfect indifference, so long as the children resulting become his, or even for the purpose of thus acquiring children. In such a community, it need hardly be said, the issue of adultery—i.e. the wife's connexion with a man unlicensed by the husband—is usually claimed by the latter, though he may dissolve the marriage or punish the wife even with death. Here, then, resort to divinities of fecundity to procure offspring is natural and, granted their ability to bestow it, reasonable. Wherever the desire for children is strong, such resort is witnessed in custom and told in story. Ancestor-worship lends itself to the practice. An ancestor who founded or continued the family is interested in its permanence. If he be possessed of power, which his worship presumes, he will, when properly approached, exercise that power to grant increase to his seed. It is, therefore, not without significance that his image should be, as in some cases we have seen it to be, represented in ithyphallic form.

The rites employed to attain the object are, as we have learned, very various. Vows, prayers, and offerings to the god are things of course. When he is in phallic form, he is embraced; and for this purpose many objects are deemed phallic that were not so intended. A human representative may play the part of the god. Mere contact with a sacred object is often sufficient. Phallic amulets are everywhere in request. They may be placed in or about the dwelling, or, more likely, are worn on the person, so as to secure continuous contact. Special kinds of food, or food prepared with special rites, may be prescribed, or the drinking of, or bathing in, various liquids (Hartland, *Prim. Paternity*, i. ch. ii. f.). These and other methods are mainly magical, and often have little or nothing directly to do with worship in the strict acceptance of the term. In either case recourse is had to the mysterious—a region in which worship, magic, and medicine are as yet hardly distinguished.

Examples have already been given of the sexual act in relation to agricultural rites. At festivals the object of sexual licence, in the promotion of general fertility, the revival of nature, and the germination of the fruits of the earth, is sometimes obscured by the social character of the occasion. This is not the case where conjugal relations are ordained for the express purpose of assisting the growth of crops. But the magical influence of the sexual act is deemed powerful over a much wider sphere. Many ceremonies must be performed only by virgins, or by persons who have abstained for a period from intercourse with the opposite sex, and who are consequently held to be in a state of ritual purity.

Contrary to this, the Akamba require the head of the village and his wife to cohabit on the second and fourth nights of their preliminary occupation of the new site, when the village is removed (C. W. Hobley, *Ethnology of A-Kamba and other E. African Tribes*, Cambridge, 1910, p. 58)—probably a rite intended to lead to all sorts of good luck. Among the same

people the father and mother must cohabit two days after their child's circumcision; otherwise the father cannot go and drink beer at the feast, and the child's wound will not readily heal (*ib.* p. 69). In the month of January the Bechuana hold a general assembly of all adult males, on a day fixed by the chief, at the great kraal of the tribe. Certain ceremonies, apparently of a purificatory nature, are performed; and they are repeated by each man upon his own family at home. That night every man ritually sleeps with his chief wife. If he is away from home and unable to return, the year will probably be a year of calamity for him, and his chances of surviving it are slight. When he returns, he cannot cohabit with his wife until after the next year's ceremony. The danger rests not only upon him, but also upon her, if the ceremonial cohabitation be omitted. She may, however, call in the assistance of another man, in case of her husband's absence; and she is perfectly free from blame in so doing; but the husband is under a grave interdict until an elaborate ceremony has been performed over him by the medicine-man (*JAI* xxv. [1905] 311). Nor is a sexual rite of this kind confined to the Bantu race. It is difficult to say whether the Todas of the Nilgiri Hills are, like the Bantu and their congeners the true Negroes, specially libidinous. It is certain that their sexual morality is very low, and that there is no word for adultery in their language; the evidence, indeed, points to a total absence of the concept of adultery, despite the fact that there are recognized husbands and wives. The Todas are composed of two non-exogamous divisions—the Tartharol and the Teivaliol. The latter is the most sacred institution known to them. It comprises a herd of buffaloes with a number of dairies and grazing districts tended by dairy-man priests. These dairies belong exclusively to one or other Tarthar clan, but the *palol*, or priest, must be a Teivali. He must be celibate. If he holds office continuously for eighteen years, he performs ceremonial intercourse completely naked on an appointed day with a Tarthar woman, chosen by himself and brought for the purpose into a neighbouring wood. Intercourse during the day-time is ordinarily accounted immoral, but it does not seem to disqualify him for his priestly duties. That the act has some ritual value seems clear, from the very fact that it is directly contrary to the moral and religious usages, but it is not known exactly what its value is (W. H. R. Rivers, *The Todas*, London, 1906, pp. 529, 83, 103).

When a sexual act which infringes the accepted morality has no ritual value, it is often held to produce evil results on the weather or the harvest, blighting the crops and causing sterility of women and of cattle, and other misfortunes (Frazer, *Psyche's Task*, London, 1913, p. 44 ff.; *GB*, pt. i., *The Magic Art*, ii. 107 ff.). So much importance is attached in the lower culture to the act of sexual union.

Whatever may be the exact import of the Toda rite, the apotropaic intention of the rites just previously cited is manifest. The same is to be said of a certain Australian rite.

When the Kurnai of Gippsland saw the *aurora Australis*, 'they thought it to be *Mungan's* fire, which might burn them up. The old men then told them to exchange wives for the day, and the *Bret* (the dried hand of one of their dead kinsfolk) was swung backwards and forwards with cries of "Send it away!" (A. W. Howitt, *Native Tribes of S.-E. Australia*, London, 1904, p. 277). These are obviously magical proceedings to avert the danger.

In the course of this article we have referred to several dances and other ceremonies in which the actors who were charged with the priapic performances were masked. Possibly our own Jack-in-the Green is a survival of such a figure. In these cases the personages represented appear to be spirits of fertility, and their actions to be intended to bring about by sympathetic magic the impregnation of nature, the reproduction of men and beasts and fruits of the earth.

The *καλογέροι* in the modern Thracian performance are disguised with goat-skins. In the Mandan dance the performers are buffaloes. Among the Karayas of Brazil, who live largely by fishing, a man is reported on such an occasion to have been masked as a dolphin with a gigantic phallus (*Anthropos*, vii. [1912] 208, citing P. Ehrenreich, *Beiträge zur Völkerkunde Brasiliens*, Berlin, 1891, p. 35).

In each case the supernatural being represented takes the shape of the creature whose multiplication is of the greatest importance to the community. In this way he embodies the reproductive power and process in general.

Such presentations are not confined to seasonal festivals and rites at the opening or close of agricultural or hunting labours. Perhaps the last connexion in which we should look for them is that of death rites. In various parts of the world,

however, the sexual act is associated with the customs observed on the occasion of a death. It is very commonly tabued for a certain period either to the relatives or to the entire neighbourhood. But sometimes ceremonial cohabitation is enjoined.

When a man dies among the Akamba, his father and mother, if living, must on the third day have conjugal relations, prior to their ritual purification and to the resumption of normal relations by the other men and women of the village (Hobley, p. 67). A missionary, describing a mourning ceremony which he had witnessed among the Baronga about Delagoa Bay, tells us that at a certain stage an elderly woman came forward singing licentious songs and mimicking the coitus amid the plaudits of the assembled women; and 'another old woman of at least seventy years of age followed her, and running with a mincing gait through the place, was uttering words of the same kind.' Junod's comment is interesting: the period of mourning, he says, is a marginal period, according to van Gennep's significant terminology, between two normal periods of social existence; and these phases of life are marked for the Bantu by this strange contrast—prohibition of sexual intercourse and a shameless overflowing of impure words and gesticulations.' The final rites purificatory of the death-pollution include ritual coition between the respective husbands and wives, after which ordinary life is renewed (H. A. Junod, *The Life of a S. African Tribe*, 2 vols., Neuchâtel, 1912-13, I. 160, 162-166). On the Asu Islands it is customary to exhume the corpse after a certain period, sometimes as long as three years, and to clean and prepare the bones for their permanent deposit in a cave. Until this is done the widow wears mourning garb and may not leave the house. The decayed corpse is brought down to the beach. The inhabitants of the village are there assembled. All the mourning clothes of men and women, together with the corpse, are burned. The men carry a wooden phallus, the women a *kitei*. Singing all sorts of obscene songs, they leap round the flames like demons, thrusting the phallus into the *kitei* and imitating the movements of copulation. The object of this is said to be to incite the widow to cohabitation, or to intimate to her in a forcible manner that she is now at liberty to marry again (Riedel, p. 268). Beyond this, however, it is probable that the ceremony is a formal resumption of the normal life of the village and a spell to stimulate reproduction. On the Upper Aiary, in Brazil, a German explorer witnessed a few years ago a mourning dance by masked figures representing spirits, who attacked and stormed the dwelling of the deceased to the no small terror of the women and children. Ultimately the wild scene ended in laughter; and there followed dances by masqueraders disguised as various animals. In one of these all the performers took part. They were provided with disproportionately large phalli, with which they mimicked the act of copulation—a proceeding regarded by both the actors and the spectators in a thoroughly serious fashion. The explorer concludes that it was intended to produce fertility in human beings, animals, and plants alike, in the whole settlement—'an idea,' he says, 'full of deep moral import and quite free from indecency in our sense' (T. Koch-Grünberg, *Zwei Jahre unter den Indianern*, 2 vols., Berlin, 1909-10, I. 133 ff.).

Thus the sexual organs as the great instruments of reproduction are the enemies of sterility and death; and as such they are exhibited and employed, actually or by symbol—that is to say, magically—to counteract the depredations of mortality. For the same reason they are regarded as having prophylactic virtue against all sorts of evil influences. The destructive attacks of evil spirits and the more insidious blasting power of the evil eye are alike subdued by them. This general prophylactic virtue accounts for the common use of priapic figures and ithyphallic statues, whether of gods or of ancestors. Much more than the specific gift of offspring or of abundant harvests was expected of the personages thus represented, whether gods or ancestors. They were often tutelary divinities, warding off all kinds of evils. Here we have, there can be little doubt, an explanation of many rites in various parts of the world to be performed naked.

Pliny tells us that in his time it was believed that storms could be diverted and driven away by a woman simply uncovering herself (HN xviii. 23). In order to secure his seed against the depredations of birds, in some of the Saxon settlements in Transylvania the farmer is recommended to go to the field before sunrise and, stripping naked, walk round the crop, ending by repeating a Paternoster. Then, dressing again, he must kindle some sulphur-fumes, take an ear of corn in his mouth, and return straightway to the house without speaking to anybody. Elsewhere it is the farmer's wife who performs the ceremony, holding a candle in her hand. Against smut or damage by hail she also walks naked round the field by night at the first full moon after sowing (H. von Wislitzki, *Völksglaube der Siebenbü. Sachsen*, Berlin, 1893, pp. 127, 129). Among the Tsöl tribe in Morocco, when rain is wanted, women go to a redred place where they cannot be seen by men, and play,

completely naked, a certain game of ball with wooden ladies. The game itself has a magical effect here and elsewhere; but its virtue is emphasized by the nakedness of the players (E. Westermarck, *Ceremonies and Beliefs in Morocco*, Helsingfors, 1913, p. 121). In the Trichinopoly district of S. India, 'when the tanks and rivers threaten to breach their banks, men stand naked on the bund and beat their drums; and if too much rain falls naked men point firebrands at the sky. Their nudity is supposed to shock the powers that bring the rain, and arrest their farther progress' (ib. p. 130 n., quoting Thurston, *Omens and Superstitions of Southern India*, London, 1912, p. 306). The Orâons and Mündâs of the Chotâ Nagpur plateau perform the yearly ceremony of driving away from the village the evil spirits that cause cattle disease. It takes place at night. All the young unmarried men (who, because unmarried, are presumed to be virgin and therefore possessed of 'greater soul-power than married men') are the performers. They are naked, and with sticks in their hands, bellowing like cows, and breaking to pieces the earthen pots which they find in front of the houses, they chase the demon, represented for the nonce by the village cattle-herds, across the boundary to the next village (JRAI xlv. [1914] 344). In Russia the peasant girls, clad only in their shifts, with loose hair and barefooted, ward off the cholera from their village by dragging a plough round it at midnight (an example is recorded in *Daily Chronicle*, 3rd July 1905). Here the one remaining garment left to the girls appears to be a modern concession to decency. In the same way it seems probable that originally the Luperci in Rome ran round the base of the Palatine stark naked, to perform the *lustratio* of the city. Throughout the E. Indies a woman who dies in childbirth is the object of great dread. She becomes a powerful and malicious spirit. She misleads wayfarers, she attacks pregnant women and those in childbirth, she seduces and emasculates men. Special precautions are taken against her. In the Philippines a Tagala husband whose wife is in travail mounts on the roof of his hut with his sword, shield, and spear, completely naked or with only a loin-cloth, while sundry friends surround the hut below similarly accoutred. They rage, they lunge, they hew the air, holding that by this fury and their nakedness they will frighten the *patianak*, as this malignant ghost is there called, and drive her away. Wayfarers who have lost the right path, believing that their misfortune is due to the *patianak*, 'strip themselves and uncover their genital organs, whereby the *patianak* is terrified and no longer in a condition to lead them astray' (Wilken, iii. 319). It has been suggested that the *patianak* has a more than ordinary fear of the phallus, because that was the cause of her pregnancy and therefore in the long run of her death. The inference does not seem necessary. The relation to the catastrophe, which the *patianak*, like all ghosts of persons dying violent deaths, so bitterly resents, may have laid stress in popular belief on the terrifying power of the phallus, though there is no direct evidence of this. It is enough that she is a hostile spirit, a spirit of sterility and destruction; against such the phallus is a defence and a countervailing power.

There are, of course, many rites performed in a state of nudity, for which other reasons may be assigned. It is not intended here to suggest that all cases of ritual nudity are to be accounted for by the apotropeic power of the sexual organs, which is manifested in the foregoing illustrations.

To define the geographical limits of phallic symbols and ceremonies is not possible in the present state of our knowledge. Their range is wide. They owe their inception to emotions which are the necessary outcome of the animal part of our nature. The probability is, therefore, that they are well-nigh universal in the lower planes of culture, even where they have not hitherto been recorded. And they are long preserved in spite of the growing refinement of the general advance of civilization. In some cases this is due to the fact that they have become interwoven with a definite religion. In other cases they are an atavistic reversion generated by intense religious emotion. More often they persist in the shape of spells and amulets. Magic, like religion, deals with the fears, the hopes, and the desires of mankind. Religion, becoming more and more sublime, leaves the baser elements of which it has been purged to magic, which, on the other hand, becomes more and more degraded. The worship of the sexual organs, or of deities or nature-powers under their form, is, so far as our information goes, an uncommon phenomenon. Prominence of sexual attributes in an object of worship from whom fertility and plenty are expected by the worshipper is more frequent, whether that object be conceived as god or as ancestor. In such a case phallic rites may or may not be part of the cult, but perhaps are hardly ever unmixed with

magic. Magic, indeed, is the predominant element in phallic rites; in the vast majority of such rites all trace of worship strictly so called is wanting. When magic becomes an outlaw from society, as it does in the higher cultures, one of the chief means by which it maintains its existence is the ministry to sexual impulses. Love-spells and philtres are a large portion of its stock-in-trade; rites and amulets to obtain children are hardly less in request in many communities. These spells, rites, and amulets are generally phallic, and often obscene and repulsive. Their consideration belongs rather to magic and witchcraft than to phallic worship, and it has been possible to give only very few illustrations here.

Wide-spread, however, as are the practices with which this article is concerned, and intimately as they are related to some of the deepest emotions, it is worth while to remind ourselves that they form a portion only of the history of religion. The caution is the more necessary since the subject exercises such fascination upon some minds as to have given occasion to the taunt that no one who studies it remains sane. Concentration of attention is apt to cause any subject to assume an importance which it may not in itself deserve. The sexual element is indigenous in human nature. But it is only one element, and its direct influence on religion may be exaggerated. There are many departments of life, and a variety of human interests, desires, and aspirations, represented by cults in which the sexual element has normally little or no share; and they increase with the progress of civilization and the intellectual expansion of mankind. Religious conservatism may preserve the sexual element for a time in a cult inherited from savagery. In the higher religions it lingers chiefly in the negative form of asceticism, rising at times into delusion and monomania, or in other equally abnormal manifestations of fanaticism.

LITERATURE.—The literature of the subject is voluminous. Some of the most important works have been indicated throughout the article. In addition to them the following may be consulted: Clifford Howard, *Sex Worship*, Chicago, 1902; J. G. R. Forlong, *Rivers of Life*, 2 vols., with separate chart, London, 1883.

Among various German works there is an art. by F. Maurer, in *Globus*, xcii. [1907] 256, entitled 'Der Phallusdienst bei den Israeliten und Babyloniern.' It contains a good summary of what is known or alleged relating to phallic worship among the ancient Babylonians and Israelites.

E. S. HARTLAND.

PHARISEES.—Some difficult problems arise in connexion with the earlier history of Pharisaism which cannot be said yet to have been definitely solved. An attempt will be made in this article to give some indication of these and of the important discussions that have been devoted to their elucidation within recent years. See also art. SADDUCEES.

1. Origin and name.—As an active movement Pharisaism emerged from the Maccabæan conflict with surrounding heathenism, and became quiescent only after the annihilation of the Jewish national life in the reign of Hadrian; that is to say, its activity extended over a period of nearly three centuries, from the reign of John Hyrcanus (135–105 B.C.) to A.D. 135. The Pharisees already appear in the reign of Hyrcanus as a powerfully organized party (Josephus, *Ant.* XIII. x. 5–7), and no doubt were in existence even earlier (*ib.* v. 9). Their general aim was to continue and make effective the work which the earlier teachers of the Law had begun, viz. the application of the Tôrâh to the practical affairs of everyday life. But Pharisaism, though dominantly legalistic in character, was more than mere legalism. As Elbogen¹ has pointed out,

'The Pharisees are usually described as the party of narrow legalistic tendencies, and it is forgotten how strenuously they laboured against the Hellenizing movement for the maintenance of *monotheism*; it is forgotten that they built up *religious individualism* and purely *spiritual worship*; that it was through them more especially that *belief in a future life* was deepened; and that they carried on a powerful *mission* (propaganda). They are represented as merely the guardians of the Pentateuch, and the fact is overlooked that they no less esteemed the Prophets and Haglographa, and were not less careful to make it their duty, in the weekly expositions of the Scriptures [in the Synagogues], to preach to the people the *truths and hopes of religion* out of these books.'

In the famous passage of Josephus referred to above the rupture between the Pharisees, already a powerful party, and the governing authority, represented by the ruler, is placed by Josephus in the reign of John Hyrcanus. According to the story, the breach grew out of an incident at a banquet given by the ruler, when a Pharisee was indiscreet enough to suggest that the ruler should divest himself of the high-priestly functions and content himself with the civil government. When pressed to give a reason, the Pharisee is said to have mentioned a rumour (which was in reality baseless) that the mother of Hyrcanus had been a captive.¹ The result was an open rupture, and Hyrcanus is alleged to have withdrawn from the Pharisaic party, of which he had been hitherto a zealous member. In the Talmud, however (*T. B. Qiddushin*, 66a), the story is referred to Alexander Jannai (Jannæus), who reigned 104–78 B.C., and this is probably its correct setting. The reign of Hyrcanus, as Josephus himself says, was peaceful and happy, while that of Alexander Jannai was characterized by war and bloodshed, and also by violent conflicts with the Pharisees. As Israel Friedländer says,²

'The whole story points clearly to the unfortunate conditions as they existed in the time of Jannai and, when looked at in this light, the Talmudic account, though curtailed in some parts, receives its proper historical setting such as we would seek in vain in the version of Josephus.'

We may conclude, then, that the Pharisees first appear as an influential party under that name in the reign of John Hyrcanus; that the latter ruler favoured them throughout his long and prosperous reign, and was under their influence; and that the breach between the party and the ruler took place in the reign of 'King' Alexander Jannæus. We need not follow the later fortunes of the party in detail, their persecution under Jannæus and triumph under his widow, Queen Salome Alexandra (reigned 78–69 B.C.). For a long time they continued to exercise great political power, not always, perhaps, wisely. The separation of the high-priesthood from the kingship may be traced to their influence. In the so-called *Psalms of Solomon* the impression produced by the terrible events that followed the break up of the Hasmonæan dynasty and the intervention of the Romans under Pompey, who massacred thousands of the Jews in Jerusalem, is reflected in a Pharisaic writer. The psalmist evidently regards the bloody chastisement which the Jews had to endure at this time as proceeding from the hand of God. It was the punishment inflicted on the people for having acquiesced in the usurpation by the Hasmonæans of the royal dignity which had been reserved for the Messianic prince of the House of David. The Jewish scholar Moritz Friedländer, in his stimulating and suggestive work, *Die religiösen Bewegungen innerhalb des Judentums im Zeitalter Jesu* (Berlin, 1905), takes a very unfavourable view of the Pharisees of this period and later down to the time of the destruction of Jerusalem (A.D. 70), regarding them as

¹ This would be a legal disqualification for the high-priesthood.

² 'The Rupture between Alexander Jannai and the Pharisees,' in *JQR*, new ser., iv. [1913–14] 444. The whole article is important.

¹ *Die Religionsanschauungen der Pharisäer*, p. 2. The italics are Elbogen's.

a narrow legalistic party, who were corrupted by being mixed up with politics. This is hardly just to the party as a whole. Doubtless there was an extreme element, represented later by the Zealots, who took an active, and sometimes sinister, part in political movements. But there also existed a large section who were truer to the ideals of their spiritual ancestors the Ḥasidim, or 'pious,' who were primarily interested in the maintenance and furtherance of religion as they understood it, and, so long as those interests were not menaced by the political régime, were content to leave politics alone.

The explanation of the name 'Pharisees' is a difficult and unsolved problem. The Hebrew form of the name, *pērúshim*, apparently means 'separatists,' and, if originally given, as seems probable, by opponents, may have been intended to brand the party as disloyal, those who separated themselves from loyal obedience to the king. Or it may have originally meant 'the expelled' or 'dismissed,' viz. from the Sanhedrin. It seems probable that a division did take place in the Sanhedrin by which it became finally separated into two groups or parties, the Sadducees (=the priestly group) and the Pharisees (=the lay members of that body representing the popular party). Later the Pharisees, accepting the name, seem to have given it a different meaning, viz. those who separated themselves from the wicked Sadducees.¹ Kohler² explains the name as meaning "'one who separates himself," or keeps away from persons or things impure, in order to attain the degree of holiness and righteousness required in those who would commune with God.' He cites in support of this explanation the term *pērúshuth*, which means 'abstinence' or pious self-restraint. But, on the face of it, this meaning has all the appearance of being secondary, and it is to be noted that the Rabbinical literature itself uses the term *pērúshim* in the sense of 'seceders.'³ Another and most ingenious explanation is that proposed by Leszynsky in his work on the Sadducees.⁴ Leszynsky argues that the Pharisees were in no sense a 'separatist' party, as is commonly assumed, but arose from the ranks of the people as the champions of popular religious custom. So far from separating themselves from ordinary life and affairs, they flung themselves with fierce energy into these. Against them were arrayed the Sadducees, opposing to their oral tradition the written Tórâh. The opposition, of course, affected only certain specific points, but on these the Pharisees did not hesitate to exalt their own tradition, even when this was in apparent conflict with the written word of the Law. Leszynsky explains the name 'Pharisee' as connoting originally 'expounder' or 'interpreter' rather than 'separatist.'⁵ It is supposed that the party came to be called 'expounders' or 'interpreters' (*pērúshim*) as the result of a long dispute. For a long time controversy raged within the Pharisaic party on the issue whether the oral tradition should be adjusted to, and find its justification in, the written Law. At first the section of the Pharisees opposed to this policy triumphed; but after the time of Simeon ben Shetah (flourished before and after 78 B.C.) the policy of linking up the oral tradition

with Scripture prevailed. Leszynsky finds support for this view in an obscure passage of the Mishnâh (*Hag.* ii. 2) which he explains in an ingenious manner of his own. The name 'Pharisee,' according to this view, means 'interpreter' (of Scripture) in the interests of the oral traditional Law. It did not originally denote the whole party who championed the oral Law, but only a section of it. Their original name was 'Ḥasidim,'¹ but in time, when the new policy prevailed, the name 'Pharisees' naturally attached itself to the whole party. A not inconsiderable difficulty attaching to Leszynsky's theory is that the form of the word *pērúshim*, which is passive, does not lend itself easily to the meaning 'interpreters.' On the whole, the explanation proposed by Lauterbach, that the name = 'seceders' or 'expelled' (viz. from the priestly Sanhedrin), is most probable. It suits admirably the historical circumstances of the time when the Pharisees first emerge into prominence as an active and influential party. According to Lauterbach, the original name of the Pharisees for themselves was 'the wise of Israel' (חכמי ישראל).² Another name, used by the Pharisees among themselves, was *hābēr*, 'colleague' or 'fellow-member.' This connoted membership of a close association, or *hābūrâh*, to which only those were admitted who 'in the presence of three members, pledged themselves to the strict observance of Levitical purity, to the avoidance of closer association with the 'Am ha-Areẓ [i.e. those living outside the standards of the Law], to the scrupulous payment of tithes and other imposts due to the priest, the Levite, and the poor, and to a conscientious regard for vows and for other people's property.'³ But it is doubtful how far, if at all, such an organization existed in Palestine before A.D. 70.

2. Antecedents and development.—It has already been pointed out that the Pharisees carried on, and made effective, the work which the earlier teachers of the Law had begun, the application of the Tórâh to the practical affairs of everyday life. This earlier class of teachers of the Law went by the name of 'the Sōfērim,' being so called because they taught the people out of 'the book of the Law' (*Sefer ha-tórâh*). Their teaching was based directly on the simple and plain text of the Law, no doubt with a certain amount of interpretation and explanation, but all of the simplest character. The period of the Sōfērim came to an end with Simon the Just (the first of that name), about 300–270 B.C.⁴ It therefore ceased just about the time when Greek influence had begun powerfully to affect Jewish communal life in Palestine, and new conditions had begun to grow up in the life of the people.

The period during which the Sōfērim controlled the religious teaching and exercised supreme authority in regulating the religious affairs of the community thus covered the Persian period and the transition period that followed. During this time the circumstances of the Jewish community in Palestine underwent no great changes.

'The Book of the Law accepted from Ezra by these early founders and organizers, with the few simple interpretations given to it by the Sōfērim, was therefore sufficient for almost all the needs of the community throughout the entire Persian period.'⁵

² Art. 'Pharisees,' in *JE* ix. 661a.

³ Cf. T. B. *Pes.* 70b, where 'the argument of seceders' is referred to, i.e. those who have left the college and established a school of their own.

⁴ *Pharisäer und Sadduzäer*.

⁵ The term פָּרֻשִׁים is constantly used in the Rabbinical literature in the sense of 'explain' or 'make explicit' (cf. פִּירוּשׁ, 'explanation'). Just as פָּרַשׁ = פָּרַשׁ and פִּירוּשׁ = פִּירוּשׁ, so פָּרֻשִׁים = פִּירוּשִׁים (i.e. 'interpreters'), according to Leszynsky.

¹ The Ḥasidim ('Assidæans') appear as an organized party in the early Maccabæan period. They are mentioned in 1 Mac. as strict observers of the law (245), and abstainers from things unclean (162r). Possibly these Ḥasidim are referred to in some late Psalms (e.g. 149).

² Cf. also the constantly recurring expression in the early Rabbinical literature חֲסִידֵי חֲכָמִים, 'the disciples of the wise.'

³ Kohler, in *JE* ix. 661 (citing *Dem.* ii. 8).

⁴ In *Pirgê Abhōth*, i. 2, he is designated as being 'of the last survivors of the men of the Great Synagogue,' i.e. he belonged to the last of the Sōfērim.

⁵ Lauterbach, in *JQR*, new ser., vi. 84.

No doubt slight changes did develop in the inner life of the community, and these were reflected in new religious customs. But, as Lauterbach rightly points out,¹

'All these necessary modifications and even the few new laws [required] the Soferim could easily read into the written Law by means of interpretation, or even embody the same in the Book by means of some slight indications in the text itself. Thus they found in the Book of the Law all the teachings they required.'

The Soferim were able to do this because they were also the actual scribes whose business it was to prepare copies of the Book of the Law. If they desired to teach a certain law, custom, or practice, because they considered it as part of the religious teachings, although it could not be found in, or interpreted into, the Book of the Law, they would cause it to be indicated by some slight change in the text. . . . They did not hesitate to do so, because they did not in any way change the law as they understood it. The changes and corrections which they allowed themselves to make in the text were of such a nature that they did not affect the meaning of the passage, but merely gave to it an additional meaning, thus suggesting the law or custom which they desired to teach. In this manner they succeeded in grafting upon the written Law all these newly developed laws and customs which they considered genuinely Jewish.'

Simon the Just, the last of the Soferim († not later than 270 B.C.), was himself high-priest, and no doubt the body of teachers of which he was the head was mainly priestly in character and personnel. But after his death the activity of these teachers as an authoritative body seems to have largely ceased.

'Even the authority of the High-priest was undermined. . . . Laymen arose who had as much influence among the people and with the government as the High-priest, and they became leaders.'²

The old control over popular religious custom by the high-priest and the body of teachers under him—which had been possible while the community was stable and (to a large extent) self-contained—was no longer possible. New customs and practices gradually arose for which there were no precedents in the old tradition, or in the text of the Law itself, and gradually established themselves among the people. Still the need was felt for maintaining the authority of the Law and tradition, and so there arose a body of lay teachers, who privately devoted themselves to the study of the Law, which now became 'a matter of private piety, and as such . . . was not limited to the priests.'³ No doubt there were faithful priests who assisted this movement. Thus for some 70 or 80 years—from about 270 to 190 B.C.—there seems to have been a break in authoritative teaching. The text of the Law and the study of it were preserved during this interval by the piety of individual teachers, both priests and laymen. About 190 B.C., or a few years earlier or later, it is probable that this state of things was brought to an end by the organization of the Sanhedrin, an authoritative body consisting of priests and lay teachers, which was able to regulate officially the religious affairs of the people. It was their task to harmonize the laws of the fathers with the life of their own times; and this task had become exceptionally difficult because the new religious customs that had grown up among the people had now (owing to lapse of time) come to be regarded by them as traditional, and meanwhile, also, the text of the Law had become rigidly fixed—it was no longer possible to introduce slight verbal modifications, as the earlier Soferim had done. How was the problem to be solved? It was apparently in connexion with the issues raised by this difficulty that that division took place in the Sanhedrin which later led to the secession (or dismissal) from that body of those who came to be called 'Pharisees,' i.e., as explained above, 'seceders.' But before this critical state of affairs was reached, a long period of discussion and controversy seems to

have ensued. The priestly, at that time the most powerful, element in the Sanhedrin wished to maintain the sacred and obligatory character of the written Tōrah, as apart from the new religious customs. According to Lauterbach, they wished to give authoritative recognition to the latter by special decrees, issued and modified from time to time, to suit varying circumstances, by priestly authority in accordance with Dt 17⁸⁻¹². These decrees were not to be put on a level with the sacred text of the written Law, but were to be regarded as authoritative so long as they remained in force. On the other hand, the Hasidim, or members of the 'pious' party, largely represented by the lay teachers, in the Sanhedrin would not accept this solution. They were unwilling to recognize any such extension of purely priestly authority, and contended that their own authority as teachers was equal to that of the priests, and that all authorized religious custom must be based directly upon the Law or its equivalent.

'Acknowledging the Law of the fathers to be the sole authority, these lay teachers now had to find all the decisions and rules necessary for the practical life of their time contained or implied in the Law. They also had to devise methods for connecting with the Law all those new decisions and customs which were now universally observed by the people, thus making them appear as part of the laws of the fathers.'¹

Two methods, according to Lauterbach, were adopted to secure this result. One was to extend, by means of new exegetical methods, the system of Midrāsh, i.e. to deduce from the letter of the Law itself justification for particular rules and customs. This method was, as a matter of fact, adopted on a large scale and developed by the Pharisaic teachers, and has given birth to a vast hermeneutical literature. The methods used were, as is well known, highly artificial and complex.

The other method was to enlarge the definition of the term 'Law of the Fathers,' so as to mean more than merely the written Book of the Law with all its possible interpretations. In other words, it meant a declaration of the belief that not all the laws of the fathers were handed down in the written words of the Book, but that some religious laws of the fathers were transmitted orally, independently of any connexion with the Book.'²

This 'oral Law' (תורה שבעל פה), which later, in an expanded form, was embodied in the official Mishnāh, was regarded as coeval and of equal authority with the written Tōrah. Thus, according to Lauterbach, the oral Law is a figment invented by the Pharisees to lend authority to popular religious customs which had become established. However this may be, Lauterbach's reconstruction, sketched above, gives the best explanation that has yet been proposed to account for the somewhat complicated facts.³ It accounts for the separation of the Pharisees from the Sadducees (in the earlier Sanhedrin), and for their emergence as distinct and bitterly opposed parties at the time when their party names first emerge into the light of history; it also makes plain how this divergence had been prepared for by previous events and by the religious situation that had in consequence arisen.

3. Aims and religious position.—The age-long conflict between the Sadducees and the Pharisees was the most important factor in the development of Judaism. The Pharisees, as we have seen, were the champions of the oral Law which at first was quite independent of the written Tōrah, and was deeply entrenched in old popular custom and usage. On the other hand, the Sadducees mainly represented the old conservative positions of the priesthood, and inherited the tradition of the older scribism. The 'scribe,' as he is depicted in Sirach (c. 190 B.C.), is a judge and man of affairs, a cultivated student of 'wisdom,' well acquainted, of course, with the contents of the written Law, and

a frequenter of the courts of kings. He belongs to the leisured, aristocratic class, and is poles asunder from the typical Pharisee and teacher of the Law, who was drawn from the ranks of the people. It was in the reaction against Hellenism that Tōrah-study, among the people and in the sense explained above, was born. The public reading and exposition of it in the synagogues probably dates only from the Maccabean period. Both parties were compelled now to devote themselves to Tōrah-study in the new and exacting way demanded by the times, the Sadducees because, on their view, the Law was the only valid standard for fixing juristic and religious practice, and the Pharisees because it was necessary for them to adjust their oral tradition, as far as possible, to the written word. The first result of Pharisaic activity in this direction was the development of a remarkably rich and subtle exegesis. A further result was the evolution of new laws by exegetical methods.¹

The Pharisees were thus essentially a democratic party in the sense that they were themselves mainly drawn from the people and safeguarded the religious rights and privileges of the laity as against the aristocratic and exclusive priesthood. The reaction against the Hellenizing movement was largely strengthened by their work in succession to that of the earlier Ḥasidīm; they democratized religion by making the Scriptures the possession of the people, and expounding these in the weekly assemblages of the Synagogue. In marked contrast with those of the Sadducees, their judgments in questions of law were, as is well known, of a mild and compassionate character. When it is realized how they spent their energies without stint in the work of instructing the people in the Tōrah, and in bringing religion to bear upon popular life, their enormous influence with the people generally, to which Josephus testifies, is explained.

Josephus says that the Pharisees led the people, compelling even the priestly aristocracy to yield to them. 'Practically nothing was done by them [the Sadducees]; for whenever they attain office they follow—albeit unwillingly and of compulsion—what the Pharisees say, because otherwise they would not be endured by the people' (*Ant.* xviii. i. 4).

In manifold ways the influence of the Pharisees made itself felt upon the religious life and institutions of the people. The observance of the Sabbath and holy days was invested with special sanctity in the home. As at the sacrifices in the Temple, wine was used in honour of the day. 'Remember the Sabbath Day to keep it holy' was interpreted: 'Remember it over the wine,' and was embodied in the ceremony of *qiddūsh*, 'sanctification.'² They made the observance of these days popular, and succeeded in imparting to them a character of domestic joy. Whereas by the conservative priesthood such occasions were regarded mainly as Temple festivals, the Pharisees strove to bring them into the common life of the people. Their influence on the Temple services was also of a democratic character. They introduced the recitation of daily prayers beside the sacrifices (*Tamid*, v. 1), and founded the institution of the *Ma'āmādoth*, i.e. the deputation of lay Israelites which was present in the Temple at the daily sacrifice.³ They also proclaimed the doctrine that the priests were

but the deputies of the people (cf. Mishnāh, *Yōmā*, i.).

'While the Sadducean priesthood,' says Kohler, 'regarded the Temple as its domain and took it to be the privilege of the high priest to offer the daily burnt offering from his own treasury, the Pharisees demanded that it be furnished from the Temple treasury, which contained the contributions of the people.'¹

Further, they secured Temple sanction for certain popular customs which were not enjoined in the Law. Such was the great festival of the water-drawing at the Feast of Tabernacles, when a libation of water was brought in procession from the Pool of Siloam to the Temple and solemnly poured on the altar. It was, perhaps, originally regarded as symbolical of rain. During the feast, which lasted seven days, the libation of water was made each day at the time of the morning sacrifice, and it is to this custom that Christ implicitly refers in Jn 7³⁷ 'If any man thirst, let him come unto me, and drink.' This was one of the most popular of Temple ceremonies, and the Mishnāh referring to it and its accompaniments says:

'He who has not seen the joy of the water-drawing has never seen joy in his life.'

The Pharisaic institution of the *tēfillin*, or phylacteries, on the head and arm seems to have been devised as a counterpart of the high-priest's diadem and breast-plate, and to have been regarded as a consecration of head and arm; and in the same way the *mēzūzāh*, or door-post symbol, was regarded as symbolizing the consecration of the home. Both observances were, of course, derived from the text of Scripture (Dt 6⁸ 11^{1st}), and doubtless originally had talismanic associations; but these were, to a large extent, forgotten. The Pharisees strove to make their symbolism really religious. They also infused new and more specifically religious ideas into the observance of the old traditional festivals and solemnities. One of the most significant of these was their doctrine regarding the Day of Atonement. They boldly transferred the atoning power from the high-priest to the day itself, so that atonement might be effected apart from sacrifice and priest. The one indispensable condition was true repentance, on the necessity of which the Rabbinic literature lays the utmost stress. Similarly the New Year Festival (*Rōsh ha-shānāh*) became the annual Day of Judgment; and the Feast of Weeks, or Pentecost (originally a purely agricultural festival), became the Festival of Revelation, or the Giving of the Law. They also improved the status of women, relaxing the rigour of the old laws of purification, and, by the institution of the marriage-document (or settlement), protected the woman against arbitrary divorce. Their general aim, apparently, was to invest the woman in the home with as much dignity as possible. In consequence they enjoyed, as Josephus tells us, great popularity with the Jewish women (*Ant.* xvii. ii. 4). Among their other great achievements they fixed the canon of Scripture, built up the Synagogue service and liturgy, and established a system of religious instruction by means of elementary schools, supplemented by the Synagogue.

The enormous influence of the Pharisaic party on the religious life of the Jewish people in Palestine is thus clear; and it undoubtedly operated in the time of Jesus and the apostles. In the Synagogue and outside the Temple it was supreme. Even within the Temple it made itself seriously felt. Apparently, however, the Pharisees did not secure full control of the Temple ritual till the two decades that preceded the destruction in A.D. 70 (c. A.D. 50-70). Thus in the time of Jesus the Temple services were still mainly conducted in accordance with the old priestly traditions (though

¹ The thirteen exegetical principles of R. Ishmael (developed from an earlier nucleus attributed to Hillel) are set forth in S. Singer's *Hebrew-English Authorised Daily Prayer Book*, London, 1914, p. 13. They are explained and illustrated in M. Mielziner, *Introd. to the Talmud*, Cincinnati, 1894.

² For a description of this ceremony see W. O. E. Oesterley and G. H. Box, *The Religion and Worship of the Synagogue*, London, 1911, p. 376 ff.

³ Only a deputation was present in the Temple. The other members of the 'course' on duty who had been left behind in the towns and country districts assembled in the local synagogues (at the time when the sacrifice was being offered in the Temple) and engaged in prayer and the reading of Scripture (see *Ta'anth*, iv. 2, and cf. Schürer, *HJP* iii. 275 f.).

not, as we have seen, entirely). Both the Sanhedrin and the Temple were still dominated by the priestly aristocracy. This comes out very clearly in the details of the trial of Jesus, as narrated in the Gospels. The procedure adopted violated the canons of the criminal law accepted by the Pharisees, and embodied in the Mishnāh.¹ It is clear enough from the Gospels, indeed, that the chief actors in the tragedy were the members of the high-priestly party.

The Pharisaic ideal was the exact opposite of what is understood by 'progress' in the modern world. While in modern life the tendency is to secularize ever more and more all departments of human activity, the Pharisees consistently strove to bring life more and more under the dominion of religious observance. But observance—ceremonial—was valued mainly because of its educational worth. By carefully formed habits, by the ceremonial of religious observance, religious ideas could be impressed upon the people's mind and heart. But the outward was, at any rate ideally, subordinated to the inward. Thus in the prescriptions that occur in the Mishnāh and Tōseftā regarding prayer the necessity of conscious direction of the thoughts to the objects of the prayer (*kavvānāh*) is insisted upon. Nor is it clear that the Pharisees put all the requirements of religious observance on exactly the same level, and made no distinctions. The essential marks of their piety are well summed up in a Talmudic passage as follows:

'Three distinguishing characteristics mark the people of Israel—compassion, humility, and the practice of benevolence (acts of kindness).'²

The three purely religious duties which were most emphasized have been combined in a phrase which has become a commonplace in Pharisaic (Rabbinical) literature: 'penitence, prayer, and charity' (תשובה, תפלה וצדקה); these 'avert the evil doom.' 'Charity' (צדקה) is one of the 'good works'—a *mišvaḥ* in fact—which are a prominent feature in Pharisaic piety.

4. The Pharisees in the NT.—It must not be supposed that Pharisaism, during its active period, was all of one type. It was, as a matter of fact, sharply divided into opposing sections or 'schools.' Probably these divisions are not exhausted by the opposing schools of Hillel and Shammai. There were doubtless apocalyptic Pharisees, as well as others who strove to relegate apocalyptic to the background. Before A.D. 70 Pharisaism of various shades was struggling for supremacy. The later Rabbinism has absorbed its spirit, but breathes a serene atmosphere. It is less polemic in character, and doubtless had itself been to some extent influenced by the elements which opposed the earlier Pharisaism. Among these, as we have seen, one of the most important was the party (or parties) of the Sadducees. But it is necessary also to remember the presence of warring schools among the Pharisees themselves, if we are to estimate the NT evidence rightly. There was certainly an extreme and fanatical section, to be found, it would appear, among the school of Shammai (though not embracing all Shammaites), which was open to the charge of formalism and hypocrisy. Pharisees of this type were severe and exacting in their requirements, and bitterly narrow and exclusive. It seems probable that it was against this section that the polemic in the Gospels was primarily directed. Jesus denounced this hypocritical section of the Pharisees. The Talmud³ also denounces them. But on the other side were the mild and peace-loving disciples of Hillel.

A brief examination of one of the Gospel accounts

¹ See esp. the tractate *Sanhedrin*.

² *T. B. Yebhāmōth*, 79a.

³ In the well-known passage in *T. J. Berāk. ix. 14b*, which classifies Pharisees into seven classes, five of which suggest faults (including grave hypocrisy).

will serve to illustrate what has been said. That Jesus came into conflict with the scribes and Pharisees is attested very clearly in the oldest tradition of the Synoptic Gospels. Two specific instances of points of conflict of great importance are given, viz. the question of vows (a son by pronouncing the word *gorban* being permitted to relieve himself of the duty of helping a parent [Mk 7¹⁻¹³]), and a question of ritual purification, the obligation, viz., to wash the hands before meals (Mk 7¹⁻⁵). To the historicity of both these accounts strong objection has been raised on the Jewish side, it being alleged that the Pharisees could never have tolerated such a breach of the moral law as neglect of duty to parents on the ground of tradition; and, further, that the laws of purification did not apply to the ordinary layman in daily life at all, but only on the rare occasions when he visited the Temple.⁴ Otherwise they were obligatory only on the priests.

It is not possible to discuss these points fully here. But something may be said on the question of the ritual hand-washing. It is noticeable that the rebuke by Jesus of the Pharisees as described in Mk 7 is directed against a hypocritical section (v. 6, 'you hypocrites'). These are represented by 'certain of the scribes which had come from Jerusalem,' i.e. probably a deputation of the Shammaite party. The Shammaites were aggressive and exacting, and their influence up to the time of the catastrophe of A.D. 70 seems to have been in the ascendant. Later the milder party of Hillel triumphed, and the oral Law, embodied in the Mishnāh, was revised in accordance with Hillelite views. It is probable that in the time of Jesus the question of ritual hand-washing was a party one, and that Jesus Himself strongly opposed the Shammaite view. In fact, the impression is almost irresistible that the denunciations of the Pharisees occurring in the Gospels are directed primarily against a Shammaite section, and that the incident described in Mk 7 is an episode in the controversy between Jesus and the Shammaites. In confirmation of what has been said of the party-character of the point at the time presupposed in the Gospel account, it is interesting to note that, according to the Talmud (*T. B. Shabbāth*, 14b), the duty of ritual hand-washing formed one of the 'eighteen articles' which the Shammaites forced with such violence on the Sanhedrin in the stormy years that immediately preceded the conflict with Rome in A.D. 66-70.⁵

The great danger inherent in a legalistic religion is undoubtedly that of formalism, externalism, unreality; and this defect unquestionably manifested itself in certain phases of Pharisaism. But the Pharisaic religion never failed to produce genuine examples of profound piety, while its positive achievements in the domain of religious institutions were astonishing.

Pharisaism was essentially legalistic in character. To the Pharisee the Law and its prescriptions were the supreme embodiment of the divine Will and divine revelation. No doubt Pharisaism by its exegetical methods succeeded in adapting the Law to the requirements of living conditions. But the adaptation and modification were legalistic in character. They multiplied precepts and rules. Jesus, on the other hand, while maintaining the divine character of the Law, and even asserting its

⁴ Cf. A. Büchler, *Der galiläische 'Am-ha-'Araḥ des zweiten Jahrhunderts*, Vienna, 1906, p. 131 ff.

⁵ For a full discussion of both questions see the writer's art. 'Recent Literature on the Pharisees and Sadducees,' in *RThPh* iv. [1908] 139 ff. That the neglect by Jesus' disciples of the practice of ritual hand-washing was not a departure from general lay usage may be inferred from the Gospel account itself. No protest was raised against it, apparently, till a deputation of scribes from Jerusalem arrived on the scene; and what they objected to was that a teacher—a Rabbi—should permit his disciples to neglect the rite.

text against the developments of Pharisaic tradition, adopted a prophetic rather than a legalistic attitude to the Law itself. The Pharisaic attitude, while not deficient in inward strength and religious conviction, was bound to be somewhat unsympathetic to those who remained outside the Law's pale. A Jewish scholar has said:

"Only in regard to intercourse with the unclean and "unwashed" multitude, with the 'am ha-arez' ['people of the land'], the publican, and the sinner, did Jesus differ widely from the Pharisees."¹

This difference, however, is really fundamental. Such a transcending of the letter of the Law involved ultimately its supersession. In Palestine the hostility of the Pharisaic party, as a whole, seems first to have been aroused only when a section of the Christian sect became avowedly and explicitly antinomian in the person of Stephen; and even then the hostility was not extended to those Christians who wished to remain loyal to the Law.

5. The significance of Pharisaism in the history of Judaism.—As we have seen, Pharisaism was the dominant factor in the development of orthodox Judaism, which assumed a more or less permanent form in the Rabbinical system. Its relations with other parties during the two centuries before A.D. 70 were also of vital importance. What exactly the relation of Pharisaism was to the earlier apocalyptic it is difficult to say. The two types of thought and circles, though distinct and emphasizing the one the Law, and the other eschatological hopes, were not necessarily opposed, and were doubtless often combined in greater or less degree. It is significant that the Pharisees took over from the apocalyptists and made a firm position of orthodox Judaism the doctrine of the future life; they also admitted the apocalyptic book of Daniel into the canon. On the other hand, there was a certain anti-apocalyptic bias in Pharisaism, which showed itself later (c. A.D. 100) in the rejection of the apocalyptic literature of the earlier Judaism. In fact, Pharisaism was far from other-worldly in its outlook. Its main interest was to bring the sanctions of religion into this life. This tendency also appears in its Messianic doctrine, which it has impressed on all parts of the Synagogue liturgy. Its Messiah is not the transcendental and heavenly figure of some of the apocalyptists, but a purely human son of David. Pharisaism was the most vital factor in the development of the Judaism of the Talmud. But Rabbinic Judaism, in the form which it assumed from the 2nd cent. A.D., is not a mere deposit of Pharisaism. It is really a synthesis of the earlier Pharisaism and some of the elements that were in conflict with it. The final product was something richer and more serene than the struggling and confused elements, as they appeared before the process of fusion was complete.

It may be claimed, with some justice, that by Pharisaism 'the element of evolution and progress was injected into the Law. . . . It was due to this progressive tendency of the Pharisees that their interpretation of Judaism continued to develop and remained an ever living force in Jewry.'² Certainly the Pharisees erected a structure which has proved its strength by withstanding the shocks of time, and by its survival, so far as it has survived, in the Jewries of to-day.

PHILADELPHIANS. — The Philadelphians were a little group of mystics, in London, Holland, and Germany, who flourished from 1693 to 1703. Dr. John Pordage (1607-81), one of the Cambridge Platonists, and the author of *Theologia Mystica*, followed a temporary fashion and drew together several readers of Jacob Boehme. The Commissioners of Berkshire therefore ejected him from the rectory of Bradfield before the end of 1654, on charges of blasphemy, necromancy, and scandal in his life; at the Restoration, however, he re-entered. In this circle of followers of Boehme was Jane Lead (1623-1704), a widow of good family, who in 1670 began to experience divine openings and revelations, so that she, a living medium, taught by God's eternal virgin wisdom, superseded the dead Boehme. Soon 'The Philadelphian Society for the Advancement of Piety and Divine Philosophy' was organized, apparently on a microscopic scale. Nothing was written till 1681, when Mrs. Lead issued a little tract, *The Heavenly Cloud now Breaking*, followed in two years by a larger work, *The Revelation of Revelations*. This was published through Sowle, the Quaker bookseller—an obvious sign of a spiritual kinship. Francis Lee of Oxford (1661-1719) heard of the movement at Leyden, where he was studying medicine; he sought out Mrs. Lead on his return, became her adopted son, and, in accordance with a revelation, married her daughter. Soon he headed the movement, introducing Mrs. Lead to kindred spirits abroad, so that a sister society arose in Holland. He urged Mrs. Lead to write, and he himself edited the *Theosophical Transactions* of the society, which began to appear in 1697.

Mrs. Lead broke new ground in 1694 with another pamphlet, *The Enochian Walks with God*, in which she announced a fresh stage of revelation superseding her former deliverances, and declared that it was possible after spiritual death, and resurrection by the aid of the cherubim, to hold direct communion with departed saints as well as with Christ. Next year appeared *The Wonders of God's Creation manifested in the Variety of Eight Worlds*, of which she was only the 'subordinate author,' and in which, on divine authority, it was revealed that there are eight worlds, the visible universe being lowest, and four being sinless—Paradise, Zion, New Jerusalem, and Eternity, the source of all. In 1695 appeared *The Laws of Paradise*, or the Ten Commandments spiritualized. The fourth was interpreted as meaning that there was to be no reasoning but implicit belief in the revelation, and no working for a living but acceptance of whatever was provided, while the seventh forbade all conference on religion with any one but Jane Lead. In 1696, when the society was at its zenith, she began *A Fountain of Gardens*, which contains her recollections in old age of her spiritual experiences till 1686. This work extended to four volumes, the subsequent instalments appearing in 1696, 1700, and 1701. Two little tracts, *The Tree of Faith* and *The Ark of Faith* (London, 1696), described the flying ark navigated by the apostle John, which gathered the saints fit for transmutation. Mrs. Lead's first *Message to the Philadelphian Society*, also published in 1696, explained the seven churches and the seven sons of Jesse, and showed that Christ rejected Episcopalians, Presbyterians,

¹ Kohler, *JE* ix. 665b.

² Lauterbach, in *Studies in Jewish Literature in Honour of Kohler*, p. 198.

Independents, Baptists, Fifth-Monarchists, and Rome, choosing only the Philadelphian Society as free from all forms. The *Message* also enjoined organization, and repeated that to work for a living was wrong; the kings of the earth would send tribute. This bid for publicity won adherents, but attracted hostile comment and brought forth rivals, so that it was necessary to advertise what were the authentic works of Mrs. Lead. Monthly *Memoirs* were published, beginning in 1697.

A formal meeting was held at Westmorland House, when the society agreed not to separate from outward ecclesiastical connexions, but to superadd their own meetings. This was the custom of the religious societies then so familiar, out of which grew the Wesleys later on; it was Spenser's *ecclesiola in ecclesia*. In this way the growth of a German branch was facilitated; but it was contrary to the revelation to Mrs. Lead, and marks the repudiation of her sole claims. Another constitution, describing the order of worship, enjoined the reading of Scripture, silent meditation, and prophecy; it forbade argument or the stating of doubts in meeting; it was explicit that all members were equal, and that women must be modest if they took part. A pamphlet controversy led to explanations that the discipline of the society was borrowed from the Church of England and the Friends; that Scripture was accepted as the touchstone of alleged revelations, which cannot supersede or add to Scripture, but can only interpret it; that in case of conflict of alleged revelations the common sense of the society judged the genuineness and validity.

The revolt against Mrs. Lead and her son-in-law Lee was disastrous; the *Memoirs* ceased to appear, and the third *Message* shifted ground, declaring that the seven churches were now Jews, Romans, Greeks, Ethiops, Lutherans, French Reformed, and Vaudois. Two more works by the foundress of the society were published, *The Wars of David* (London, 1700) and *A Living Funeral Testimony* (do. 1702), but the movement was doomed. A confession is said to have been issued in 1703, but the government suppressed the meetings of the society, and no protest was published. The Dutch section formally severed connexion, and the English section collapsed with the death of Jane Lead in 1704. She had been quite consistent in her refusal to work, and her needs had been met by an annuity from Baron Kniphausen. The German connexion had introduced the society to the practical work of Francke at Halle, an account of which appeared in the *Memoirs*. It has been claimed that Lee persuaded Hoare and Nelson to acclimatize that work as the charity schools, but the claim is too high, for these were begun by Presbyterians in Southwark as early as 1687.

An ed. of the *Wars of David*, published in 1816, has many notes, extracts, and criticisms.

W. T. WHITLEY.

PHILANTHROPY.—1. Introduction.—Philanthropy is defined in *OED* as 'the disposition or active effort to promote the happiness and well-being of one's fellow-men.' It is closely akin to charity (*q.v.*), and may be regarded as charity grown up; i.e., the impulse to help the needy, which may be but a casual and superficial emotion, develops in some minds into a settled disposition and a steady life effort. The typical philanthropist

is a prosperous person who gives up a large share of his life to the work of improving the lot of his fellow-creatures. While charity concerns itself in the main with the present needs of individuals, philanthropy looks further, to the future as well as to the present, and seeks to elevate human life on a larger scale. It is specially characteristic of those societies that are called 'individualistic,' i.e., in which ideals of personal liberty make a strong appeal to the average person. Where the rights of the community over the individual are powerfully felt, as in the ancient Greek cities or in modern Germany, there is less call for philanthropy; it is to the community, organized in the State, rather than to wealthy individuals that men naturally look for the redressing of human wrongs. Further, philanthropy is usually the product of religious faith, and it is therefore affected by the kind of religion that prevails in a community. It is much more characteristic of Christian than of pagan societies, and of Protestant than of Roman Catholic or Orthodox. The reason doubtless is that Protestant societies are usually the more individualistic: where the Church idea is strong, and the sense of personal liberty weak, it is to the Church rather than to individuals that people turn for succour and support.

Philanthropy, then, is the outcome of the charitable impulse, when disciplined by reflective thought, in a strongly individualized society; but philanthropy, in its turn, under the criticism of reason, tends to merge itself in something larger still. The efforts to cope with social evils put forth by individuals, either alone or in voluntary association, are often found to fail; and it is seen that to be effective they must be undertaken by the community. The object is now sought to be attained through changes in the law and improved administration of the forces of society. The philanthropist becomes the reformer.

2. History.—A full outline of the history of the world's philanthropy cannot be attempted here; but we may illustrate a few of its features. It is in the Christian communities of the West, and particularly in the English-speaking countries, that philanthropy has been most highly developed; but it has long existed in the East also, quite apart from Christianity.

(a) *Chinese*.—In China, through the teachings especially of Confucius and Mencius, the virtue of benevolence has been recognized from very early times. They taught that the State exists for the promotion of human happiness; but neither central nor local authorities appear to have done much actively in this direction. There has, however, been much private benevolence, especially during the last two centuries; but this is scarcely noticed in the Chinese histories, which have been written in the main as chronicles of the doings of kings and emperors. Orphans and abandoned children have been cared for, and endeavours made from time to time to put a stop to the practice of desertion. Hospitals and alms-houses have been established. There is a Chinese poor law, which is stated to be on paper admirable but in practice almost a dead-letter, since no funds are provided by the State, apart from the land-tax, the proceeds of which, even under an honest magistracy, are usually required to meet the costs of local administration. In most of the Chinese cities there is a large amount of philanthropic work initiated and controlled by the people apart from, but not in antagonism to, the government; and these local charities are co-ordinated by institutions like the 'Hall of United Benevolence' at Shanghai, which dates from 1805. Some of these are using modern and enlightened methods; how far this is due to a growing acquaintance with Western life, through

the work of missionaries and others, it is not easy to judge.

A native writer says:

'Chinese philanthropy has reached the stage of systematization and institutionalism, and of adequate relief; but not that of the scientific prevention of destitution. . . . But the scientific stage is bound to be reached' (Yu-Yue Tsu, *The Spirit of Chinese Philanthropy*).

This may be true of some parts; in many others it certainly cannot be said that 'relief is adequate.' Beggars, lepers, blind and insane persons, often fail to obtain needed succour, either through the clans or the merchant guilds, which are supposed to care for their members.

That there is a fine philanthropic spirit at work among the Chinese people is clear from their success in putting down the use of opium, and also from the rapid progress of the movement for freeing women from the pernicious practice of foot-binding.

(b) *Indian*.—In regard to India, it is perhaps unnecessary to add to what has already been said under the head of CHARITY, ALMSGIVING (Buddhist) and (Hindu).

(c) *Greek*.—Among the Greeks philanthropy occupied but a minor place, whether in practice or in ethical theory. It was always assumed that the bulk of the hard manual work of the community would be done by slaves, whose fundamental needs were of course provided for; and, if distress came upon the citizens, the Greek mind naturally turned to the city-State, rather than to wealthy individuals, as the organ through which the trouble should be met. In the place of philanthropists we find legislators and statesmen like Solon and Cleisthenes, whose reforms were designed to lift up the poorer citizens and release them from their burdens. We hear, indeed, of rich citizens in Athens fitting out at their own charge vessels for the navy, and helping their poorer neighbours by portioning their daughters and sisters; yet Aristotle in his *Politics* (vi. 5, 132^a b) commends foreign examples of benevolence, implying that this was not a conspicuous virtue among his fellow-Athenians. What he desired was no ill-considered or spasmodic charity:

'The chief service rendered by Aristotle was to show that unless the purpose of civil and social life was carefully considered and clearly understood by those who desired to improve the conditions, no change for the better could result from individual or associated action' (C. S. Loch, *Charity and Social Life*, p. 84).

Thus the benevolence which he desiderates is the philanthropic rather than the merely charitable spirit.

(d) *Roman*.—What has been said about the Greeks applies in large measure also to the Romans. Philanthropy was not a characteristic Roman virtue, yet it burned with a very pure flame in the breast of Tiberius Gracchus, when he saw great estates in Tuscany cultivated by slaves and barbarians, while Roman citizens were idle and starving; and it drove him to reform of the land laws. His reforms and those of his brother Caius, for which they gave their lives, were in a measure successful; but the *lex frumentaria* of Caius, which gave to Roman citizens the right to purchase corn from the public stores at about half-price, began the demoralization of the Roman *plebs*. This illustrates one of the dangers of philanthropy, even when it takes the form of social legislation. Apparent success at the time may be achieved at the cost of grievous trouble in the future. The process of demoralization went on until the greater part of the Roman populace were enabled to live in idleness, depending on the *annona*, or free distribution of corn at the public charge; and no philanthropist could untie the fatal knot—for the Roman citizen was a voter, and thereby master of the situation. He would

support any one who would offer him plenty of *panem et circenses*.

Under the empire the Stoic faith, which fitted so well the ideal Roman character, drew some of the leading minds towards a wider recognition of the worth of manhood: 'homo sacra res homini,' wrote Seneca (*Ep.* xv. 3). This broadening of the sense of human brotherhood had its outcome in a distinct development of the philanthropic spirit. Hospitals of some kind, probably private infirmaries, appeared in the 1st cent. A.D.; and, with the desire to encourage the growth of population, several of the emperors formed endowments (known as *alimenta*) for the support of selected children of poor parents, entrusting their administration to local municipalities, and encouraging others to do likewise (see, further, CHARITY, ALMSGIVING [Roman]).

(e) *Jewish*.—Among the Jews the duty of kindness to the poor, the widows, and the fatherless was constantly enforced as a thing pleasing to God. But the nearest approach to anything that can be called philanthropy is perhaps to be found in the earlier prophets, who (from the time of Elijah's fearless denunciation of Ahab for his injustice to Naboth) pleaded the cause of the poor against their oppressors. The special contribution of the Jewish spirit (mainly through the prophets) was its insistence on the practice of justice and love as a vital element in religion: what Jahweh required of men was 'to do justly, and to love mercy, and to walk humbly with thy God' (Mic 6^s).

After the Exile the rise of the Synagogue was accompanied by the gradual development of a system of organized charity, for which the Jews are still remarkable. It is not surprising, after the treatment which they have received at the hands of Christians, that except to their own people most Jews are not much inclined to liberality.

(f) *Early Christian*.—It was through the ethical teachings of the prophets that a section of the human race was prepared for the coming of Christ, that the spiritual senses of a few were so trained and developed as to be able to appreciate and welcome the manifestation of divine and human love which Christ brought. It is this that makes philanthropy peculiarly a Christian product. Christianity broadened and deepened the spirit of love to man, as nothing else in human history has ever done.

The early Church felt that its Master had revealed both God and man: God as perfect love, stooping to unimaginable depths of humiliation for man's sake, and man, always and everywhere, gifted with the capacity to appreciate and respond to that love. Every man became a brother 'for whom Christ died.' Jesus, by His example even more than by His words, had broadened the bonds of brotherhood to encircle all mankind; He ate with publicans and sinners, disclosed His deepest teaching to sinful women, and taught that our 'neighbour' is the alien and the heretic if they need our help, that a kind act done to one of the least of His brethren is done to Him, that men are called to be 'perfect' by sharing the universal love of the Father of all. Love to man as man, the sense of universal brotherhood, the intuition of the oneness of humanity, became for the first time a guiding principle for ordinary men and women.

What Christ made of His followers is seen most clearly in the career of His great apostle, St. Paul, whose noble hymn in praise of love in 1 Co 13 rings true because he lived it out himself. His whole life after his conversion was one of philanthropy in its best and truest sense—self-dedication to the highest good of men. The early Church was a community of 'inspired' men and

women—inspired; above all, with a new experience and power of love. 'We know that we have passed out of death into life, because we love' (1 Jn 3¹⁴). The new order of relations lifted all human life to a higher level; it gradually made slavery impossible, raised the position of women nearer to equality with men, and led many of the most spiritually-minded Christians, during at least the first two centuries, to refuse to fight in the Roman armies, because they felt that all men were their brothers. Its most conspicuous triumph was won in the amphitheatre, where it put a stop to the gladiatorial games, thus countering the fiercest passion of the ancient world.

But the picture has its flaws. After the first glow had passed away, influences unfavourable to philanthropy began to make themselves felt. One of these was the absorption of the Church in the tasks of defining its creed and settling its organization. Another was the ascetic spirit, which is essentially self-regarding, and which tended to displace the spirit of love. A third was the notion, taken over from Jewish teachers, that almsgiving is a discipline good for the soul, which was so emphasized as to empty charitable deeds of all love, by making them a penance, whose main value was to the giver in the next world rather than to the recipient in this. And so the 'dark ages' do not shine when we search them for philanthropy. The idea that poverty was a divine ordinance—a fixed condition, to be relieved but not removed—robbed the almsgiving of the monasteries to a large extent of a really philanthropic purpose. Yet the spread of public 'hospitals' from the 4th cent. onwards—institutions founded for the help of the sick, the poor, the aged, and the orphans, sometimes with ecclesiastical money and sometimes by private benefactions, but always controlled by the Church—shows the presence of real solicitude for suffering humanity. The ransoming of captives, pagan as well as Christian, was largely practised, some of the bishops even, when their own wealth did not suffice, using the costly plate of their churches for the purpose. Great ecclesiastics frequently, at no little personal risk, interceded with barbarian invaders on behalf of humanity; St. Ambrose compelled Theodosius the emperor to do penance for his massacre of the Thessalonians. And all through the Middle Ages the Church strove, fitfully perhaps and with only partial success, to regulate commerce and industry in the interests of justice and human welfare. The philanthropic spirit is shown in the Christian society, even when we cannot single out the individual philanthropist.

(g) *Modern*.—Modern philanthropy, strictly so called, begins with the Reformation, and is exemplified most in the countries of N. Europe and America, where the Reformation took deepest root. In England the dissolution of the monasteries destroyed the whole organization of society so far as the relief of the destitute was concerned, just at a time when their numbers were increasing fast; and the Elizabethan poor laws mark the failure of private philanthropy to rise to the need. The outbreak of strange sects during the Commonwealth period included schemes of social regeneration, like that of the 'Diggers,' led by Everard and Winstanley, but more important was the rise of the Quakers, just in the middle of the 17th century. Their belief in the 'Light of God in every man' gave them a fresh intuition of human brotherhood, and sent them forth as sober apostles of love and justice among men. William Penn's colony of Pennsylvania was a great philanthropic achievement, specially remarkable, first as an experiment in entire freedom of conscience, and secondly for its security from attack by the Indians, who, as

long as the Colonial Government followed Penn's example of treating them justly, remained its warm friends and supporters. For seventy years the colony was free from attack by the Indians, though ungarded by fort or soldier. Then the 'Holy Experiment' came to an end, at the opening of the Seven Years' War in 1756. Positive orders were received from the British Government to arm the colony in defence against the French, and this drove the Quakers from power.

Remarkable among Quaker philanthropists was John Bellers (1654–1725), who is described by Karl Marx as 'a veritable phenomenon in the history of Political Economy' (*Das Kapital*, Hamburg, 1872–94, i. 2 515). He worked out with much shrewdness a scheme for Colleges of Industry, which afterwards influenced Robert Owen. The later Quakers became pioneers in various crusades, notably those against slavery, for the reform of prisons, for the humane treatment of lunatics, and for popular education; and all through its history the society has striven against war.

'There is no great work of humanity and mercy in which the Quakers have not had their share, and which finally is not rooted in that which Fox recognised as the power of the "Seed of God"' (P. Wernle, *Introd. to Germ.*, ed. of George Fox's *Journal*, Tübingen, 1903).

The close of the 17th cent. and the early years of the 18th marked a new departure in philanthropy: the beginning of 'societies' for carrying on religious and philanthropic work with money jointly provided. Among these were the 'Society for the Promotion of Christian Knowledge' (1698), the 'Society for the Propagation of the Gospel' (1701), and other missionary bodies. Several of the larger London and provincial hospitals date from this time, though St. Bartholomew's and St. Thomas's are much older. Guy's was founded in 1724, Westminster in 1734, and Winchester, the earliest provincial hospital, in 1736. In this particular matter England was behind several of the continental countries, particularly Holland.

From the 18th cent. onwards the formation of philanthropic societies has continually gone forward with all sorts of objects, among which we may mention as typical the printing and distribution of the Scriptures, popular education, the aftercare of prisoners, the prevention of crime by reformatories and industrial schools, the advocacy of temperance, the prevention of cruelty to children and animals, and the spreading of the principles of international peace.

3. *Philanthropy and the State*.—In most of the fields of philanthropic activity it is not possible to separate by any rigid demarcation the spheres of private and of State responsibility; there has been a constant tendency for work that is attempted by private persons or associations to be eventually undertaken by the State. The most conspicuous example of this is public education, which every one now recognizes to be a legitimate concern of the whole community. This tendency arises mainly from the discovery that private effort rarely accomplishes what is needed—whether through deficient or capricious financial support or because in some cases a power of compulsion is required which only the State can supply. Strong arguments can be adduced, on grounds of efficiency, for the State management, at the national charge, of hospitals, asylums, and the like—just as the government, in Germany and England, has undertaken the task of insuring its poorer members against sickness and old age. The task of philanthropists, in the present day, often is to get the community to shoulder its responsibilities for the weaker members of society; hence, as was said above, philanthropy becomes merged in social reform.

The special case of the reform of prisons, and of

penal administration generally, illustrates well the relation between philanthropy and the State. In the 17th cent. the State took no responsibility for the management of prisons or for the support of prisoners; its task was done when, having convicted them of crime or debt, it handed them over to the jailer for a certain term of safe keeping, leaving him to get out of them or their friends what he could. The investigations of John Howard, which began in 1773, led him at once to advocate changes in the law—payment of salaries to jailers, abolition of fees, cleansing of prisons, classification of prisoners, separation of the sexes, and so forth. Some temporary improvement resulted; yet in 1813, when Elizabeth Fry began her visits to Newgate, the condition of many prisons was as bad as ever. Since that time it has been increasingly recognized, at least in Europe and America, that society itself has a duty to the law-breaker, and that, if it neglects that duty and simply contents itself with punishing him, in most cases he comes out of prison a greater danger to society than before he went in. Hence the demand that prisons shall be made, so far as possible, not merely deterrent but reformatory; that the criminal, after leaving prison, shall be given the chance of a fresh start in life, and shall be upheld and guided by those who have his good at heart; and that similar methods shall be employed with unhardened offenders, instead of sending them to prison at all. Experiments in the use of probation and conditional liberation on parole, under the care of special officers, have been made more freely and successfully in America than in Europe, but both are being cautiously introduced in England. Private philanthropy is not displaced, but is absorbed and directed. The State makes large use of the philanthropic earnestness of individuals, as probation officers and the like; but, unless the philanthropic spirit also animates the administrators of the law, the result is largely failure. The supreme need is the change of the bad will into the good will, and the development of character; and these are things that may be achieved by personal influence, but hardly ever by machinery, however perfect.

This opens up a large question—too large for more than mention here. If the State is compelled, even in its own interests, to care for the lives of those who break the law—to seek to find them suitable employment, and so forth—how can it rightly leave, to sink or swim in the surging sea of competition, the great majority who keep the law? Must not the process end logically in a guarantee that the State will find employment for all? The difficulties that attend such a guarantee have often been pointed out by economists, and we cannot here pursue the matter further. But this we may certainly say: that the State must seek not only to repress crime but to remove those elements in the life of the community that cause and encourage crime; and that in doing this it will continually need the help and guidance of philanthropists.

In various fields of social work there are advantages in experiments being made by private philanthropists before the State steps in. Even if their work is not fully efficient, premature State action may often turn out to have been misguided, and may do more harm than good. If, e.g., all the reformatories for boys had been managed by the State in the days when manacles and armed guards were thought essential for order and discipline, it is very doubtful whether, in spite of more adequate equipment, a military machine of that kind would have achieved even the moderate success which, with all their drawbacks, has been attained by the privately managed reformatories. It is, as has been said above, only through the free play of

personal influence that personality can be rightly developed.

4. **Extra-national philanthropy.**—A word may be added regarding philanthropic action by individuals or societies for the benefit of humanity outside their own country. The great missionary enterprise must be considered here; apart from it nearly all such benefit is necessarily sought through the agency of the State. The anti-slavery agitation is the greatest of these philanthropic movements. In this case the work of philanthropists has been mainly directed to securing the necessary changes in law, and to bringing continual pressure to bear on the government to secure, as far as possible, justice and right treatment for weaker peoples. The exploitation of the resources of the tropical regions of the earth by European and American capital opens up continual dangers of forced labour and other abuses akin to slavery, of which the Congo and Putumayo atrocities have been the most widely known; and there will long be a place for such philanthropy as that of the 'Anti-Slavery and Aborigines Protection Society.' Other movements that may be mentioned in this connexion are those for restricting the sale of intoxicating liquor among native races, and for the abolition of the Indian opium trade with China, which is now, happily, almost a thing of the past. In these cases the work of philanthropists has been to enlighten the public and to quicken the demand for legislation and effective government administration.

5. **War.**—The most pressing of all social problems at the present time is that of war, and for long years to come an urgent task for philanthropists and reformers will be to replace the spirit of national egoism by the desire to deal justly with all, and, as the outcome of this desire, to discover means by which mutual trust among nations may be established, and disputes may be prevented from giving rise to war. In this great task statesmen and philanthropists will need one another's help.

At the present day the alternative 'philanthropy or the State' has been transcended, and the problem is to find how the two lines of activity may best support each other.

PHILIPPINES.—See **INDONESIANS**, **MALAY ARCHIPELAGO**, **MALAY PENINSULA**, **NEGRILLOS** AND **NEGRITOS**.

PHILISTINES.—The Philistines (Heb. פְּלִשְׁתִּים; Gr. Φυλιστινῆς, Ἀλλόφυλοι [LXX], Παλαιστῖνοι [Josephus]) were a warlike people, established on the coast of Palestine, and at the zenith of their power during the early years of the Hebrew settlement.

1. **Origin, name, and history.**—We have but little material for a history of the Philistines outside the literature of the Hebrews, who, being their bitterest and most resentful enemies, paint them in the blackest colours. Criticism has therefore to be applied to the statements there contained.

Of the origin of this people the Hebrews had a vague tradition that they came from a place called Caphtor. The 'Casluhim' (whence went forth the Philistines) and Caphtorim are enumerated among the children of Mizraim, son of Ham, in a passage of the Table of Nations (Gn 10^a, 13, 14) attributed to the Jahwistic writer. The words in parentheses are probably a misplaced gloss, which ought to

follow 'Caphtorim.' Am 9⁷ speaks of the Philistines having been brought from Caphtor; Jer 47⁴ refers to them as the remnant of Caphtor, calling the place by a word ('i) which implies that it was on the sea-coast, if not an actual island. Dt 23²³ speaks of the Caphtorim, which came out of Caphtor, having destroyed the villagers of the neighbourhood of Gaza, and established themselves in their land—a geographical indication which equates the Caphtorim with the Philistines.

Besides the name Caphtorim, we find others in Hebrew literature that have every appearance of referring to the same people or, at least, to clans or other tribal subdivisions of them. Chief of these is כִּרְתִּים, 'Cherēthites' (1 S 30¹⁴, Ezk 25¹⁶, Zeph 2⁹). In the Ezekiel passage the Philistines and the Cherēthites are spoken of together. Elsewhere the Cherēthites are alluded to as part of the bodyguard of the early Hebrew kings, coupled with the name כִּרְתִּים, 'Pelēthites,' of which the only reasonable explanation that has been suggested is that it is a modification of the name of the Philistines used for the sake of the assonance. This royal bodyguard is thrice alluded to as the Carians (כִּרְתִּים), namely, in 2 S 20²³ [RVm], 2 K 11⁴⁻¹⁹—a fact probably something more than a mere accident.

The question of the origin of the Philistines is thus bound up with that of the identification of Caphtor. There is a place referred to on Egyptian monuments by the name *keftiu*, *keftyo*, first mentioned in inscriptions of the XVIIIth dynasty, which it is natural to compare with the Hebrew name. In the *Hymn to Amon*, under the guise of which Thutmose III. vaunts his mighty deeds, he speaks of smiting the west-land and causing terror to the lands of Keftiu and Asi. In the annalistic inscription on the walls of the temple of Karnak we read of ships of Keftiu, showing that it is a place on the sea-coast, like the Caphtor of Jeremiah. More important than these, we find in the tombs of the officials, notably in that of Rekhmara, vizier of Thutmose III., wall-paintings representing messengers from Keftiu and other places bearing tribute to the Pharaoh. This tribute, which *inter alia* takes the form of artistic vases of precious materials, we are now in a position to identify as belonging to the contemporary Minoan civilization, which had its centre in Crete. On this ground it has become generally recognized that Keftiu is to be identified either with Crete itself or with one of the neighbouring countries which enjoyed the benefits of the Minoan civilization. The obvious similarity of the Hebrew Cherēthites with 'Cretans' has long been recognized, even from before the days of scientific archaeological investigation, and has prepared the way for the general acceptance of this identification.

It may be said that the identification is so far certain that other identifications that have been suggested are rendered obsolete—such, *e.g.*, as the attempts made by various writers to find Caphtor in the Delta, or to prove for the Philistines a Semitic origin. On the other hand, there are still some difficulties not yet solved, chief of which is the origin of the *r* in the Hebrew name Caphtor, which does not appear in its apparent Egyptian equivalent Keftiu. Another difficulty is that Keftiu early disappears from Egyptian record, to be revived by would-be archaeologists under the Ptolemys, whereas the name is preserved by the Hebrews after the Egyptians appear to have forgotten it. To explain these points we must await further discovery.

Towards the end of the troubled 14th–12th centuries B.C., a period of great unrest in the E. Mediterranean, we begin to find mention of an indefinite number of small tribes who make their appearance in Egyptian records. These tribes bear

names easily identified with places and peoples in Asia Minor and the neighbouring islands. Thus the Tell el-Amarna letters tell us of the Lukku (Lycians), Shardanu (Sardians), and Danunu (Danaoi?). Ramesse II., in the great battle of Kadesh (1333 B.C.) against the Hittites, had to meet the first two of the above-mentioned peoples, who were leagued with his enemies, as well as the Dardanu (from Dardanus in the Troad), Masa (Mysians), Mawuna (Mæonians, but the reading is uncertain), Pidasu (people of Pedasus in Caria), and Kelekesh (Cilicians). Merneptah (1300 B.C.) was opposed by the Lukku and Shardanu in league with the Libyans, as well as the Ekweh (Achæans), Turisha (people of Troas), and Shekelesh (Sagalasians). And, lastly, in the inscriptions in the temple of Medinet Habu, built by Ramesse III. to commemorate his great victory over the allied tribes who came to invade Egypt, we hear once more of the Shardanu, Danunu, and Shekelesh, as well as of the Pulasati (Philistines), Zakkala, and Washasha (the last-named have not been satisfactorily identified). This is the first certain appearance of the Philistines, as such, in history, and is of great importance, as it gives us an explanation of their sudden appearance on the coast of Palestine.

The inscriptions in the temple record that in the eighth year of Ramesse III., the last great warrior-king of Egypt (c. 1192 B.C.), the north was disturbed, and bands of marauders, driven from their homes by troubles, began to raid the east and south, seeking a new dwelling. They flowed over the land of the Hittites, Syria, and Palestine, while at the same time a parallel expedition was advancing by sea, over Cyprus. Egypt was their goal; but Ramesse was ready for them, and in the inscriptions and engraved cartoons on the wall of his temple he describes his successful operations against them—notably the great sea-fight, the first event of the kind of which any pictorial record remains. Driven back from Egypt, the invaders established themselves on the Palestinian coast-line about the same time as (probably shortly after) the arrival of the Hebrews in the Hinterland by the desert route.

It is true, the book of Genesis (chs. 20, 21, 26) records certain events in which Abraham and Isaac are brought into contact with one Abimelech, king of the Philistines. In criticizing this cycle of tales we must bear in mind that the main incident is repeated in ch. 12, where, however, the king of Egypt takes the place of the Philistine king. The use of the word 'Philistine' in these stories is an anachronism, and none of the attempts that have been made to evade this fact is successful. Abimelech is a Semitic chieftain, and he is called a Philistine because his territory was in the region which was actually 'the land of the Philistines' at the time when the stories were first written down in their present form. The popular storyteller, who is responsible for them as we have them, was not troubled by the question of how far back in time the Philistine occupation may or may not have extended. Similar criticisms are applicable to the casual references to the Philistines in Ex 13¹⁷ 23³¹.

Passing over the very obscure story of Shamgar (Jg 3²¹ 5⁶) and the reference to Philistine oppression (Jg 10⁷), we find the first record of the inevitable collision between the Philistines and Hebrews in the epic of Samson. This remarkable series of stories weaves round the person of a single ideal hero the incidents of a guerilla border-warfare. They show the complete domination of the Philistines over the Hebrews, and the internal disunion of the Hebrew clans; for Samson's chief danger is not so much the prowess of his Philistine

enemies as the treachery of his own kinsfolk; the men of Judah would betray him, and he at last is delivered over by his Hebrew wife Delilah—for there is no evidence in support of the popular view that she was a Philistine.

Under the pressure of the Philistine domination the Hebrew tribes gradually became welded into one, and slowly and with many reverses succeeded in ultimately ridding themselves of the domination of the uncircumcised. The first campaign was disastrous for the Hebrews; the Ark was lost at Aphek (1 S 4); but an outbreak of bubonic plague caused the Philistines, in superstitious fear of the Hebrew deity who had plagued the Egyptians, to return it. A more successful engagement, in which the Philistines were discomfited by a great thunderstorm, is recorded in ch. 7. An index of the growing sense of tribal unity—the result of this Philistine pressure—is the Hebrew demand for a king which now began to be expressed. As soon as Saul was elected, his son Jonathan slew the Philistine governor of Geba; the Philistines came up against the Israelites to quell the revolt and met their rebellious serfs at Michmash, where, but for Jonathan, they would have crushed them. In a later battle, at Ephesdammim (1 S 17, 2 S 23¹⁸, 1 Ch 11¹⁸), David first distinguished himself, though the Goliath story is probably here out of place. Notwithstanding these Israelite victories, and the occasional raids carried out by David, the end of Saul's reign saw the Philistines as strong as ever. After Saul's death David reigned as king over the southern tribes at Hebron, doubtless under Philistine vassalage, while Ish-Baal, Saul's son, ruled in the north, presumably in the same subject condition. The assassination of Ish-Baal opened the way for David to add his rival's kingdom to his own, capturing the citadel of Jerusalem that had hitherto stood as a non-Hebrew wedge dividing the two groups of Hebrew tribes. Fearing that David would become too strong, the Philistines came up against him; but vainly. Three battles are recorded as having taken place in David's reign—one at Baal-Perazim (2 S 5¹⁷⁻²¹), one at Geba (2 S 5²²⁻²⁸), and one at some unknown place, possibly Gath (2 S 8¹), in which the power of the Philistine people was broken beyond recovery, as is shown by the remarkable fact that they made no effort to recover their lost power during the troubles that darkened the end of David's reign. Nor did they take any conspicuous advantage of the internecine dissensions between Judah and Israel. In fact, they practically drop out of history after the reign of David, and are principally referred to as composing the bodyguard of the king (Cherethites and Pelathites, or Carians, as in the passages already cited) or the guards of the Temple (Ezk 44⁷, Zeph 1^{8c}). Almost the only sign of rallying is a temporary revival under Ahaz (2 Ch 28¹⁸), suppressed by Hezekiah (2 K 18⁸).

The annals of the Assyrian kings from Hadad-Nirari III. (812-783) down to Assurbanipal (began to reign 668) give us a few further details of conquest, and of feeble attempts at revolt promptly and ferociously suppressed. It is noteworthy that nearly all the persons mentioned in these documents in connexion with the Philistine cities have Semitic names, the only exception being a king of Ekron of the time of Esarhaddon (681-668), by name Ikausu, evidently the old Philistine name Achish. According to Neh 13²³⁻²⁴, the 'speech of Ashdod' still lingered at the time of the return from the captivities.

2. Land.—Jos 13³ limits the Philistine territory to the strip of coast-line from Ekron down to the Shihōr (the modern Wadi el-Arish, on the Egyptian frontier), lying between the sea and the foot-hills

of the Judæan mountains. At the greatest extension of their power, however, they must have held a much wider territory. The Golénischeff Papyrus shows us the Zakkala, probably near kinsmen of the Philistines, established at Dor, just south of Mount Carmel; and yet farther north the Phœnicians display peculiarities which distinguish them from all other Semites (absence of circumcision and a cultivation of maritime enterprise) and which are probably due to the influence of this people. The Philistines at the beginning of Saul's reign have governors at Gibeah and at Geba, near Jerusalem, and at the end of it are able to set up their trophy at Beth-Shan—which, if it is really the modern Beisan, implies a command of the whole plain of Esdraelon.¹ The command of the sea-coast gave them enormous commercial advantages, especially when we remember that the chief trade-route—from Egypt to Mesopotamia—passed through their territory, and that one of their chief cities (Gaza) was the natural market-place for the Arabian trade. The maritime plain possesses, moreover, natural fertility far beyond the greater part of the Hinterland; the Shunammite sojourned during the seven years' famine in the land of the Philistines (2 K 8³).

3. Organization.—In their political organization the Philistines show peculiarities that distinguish them from all the Semitic tribes to which the OT introduces us. These are governed by kings or chiefs, absolute despots within the limits of the tribes over which they are set. The Philistines, on the other hand, have no king over the whole nation (the Abimelech of Genesis is the *exceptio probans regulam*), but are governed by a council or oligarchy of lords called by the technical term *seren*, plur. *serānīm*, each of them dominant in one of the five metropolitan cities Gaza (Ghuzzeh), Ashdod (Esdud), Ashkelon (Askalun), Gath (probably Tell eš-Sāfi), and Ekron (commonly identified with 'Akir), but acting in concert for the common good of the nation. The king of Gath seems to have been, at least in the time of David's exile there, in the position of *primus inter pares*, but his colleagues can, and do, overrule his decisions when they consider them undesirable. The people, too, enjoy much more freedom than the slave-subjects of the ordinary Eastern despot. They dare to 'summon' their lords, when the presence of the Ark leads (as they suppose) to the outbreak of plague, to decide what should be done; and even in the time of the Assyrians we read how the Ekronites deposed and imprisoned their lord, Padi, because he persisted in the unpopular course of submission to Assyria. All this indicates an essentially un-Semitic instinct for liberty which we might well look for in the descendants of those who in the Bronze Age developed the great Cretan civilization.

The nearest parallel to this system of government is to be found in Etruria, where the *lucumones* seem (so far as the materials at our disposal permit us to judge) to have been remarkably similar in their office and functions to the Philistine *serānīm*. It is one of several links which connect the Philistines and the Etruscans together, and which suggest that they are divergent branches of the same stock or of closely related stocks.

That their military forces were well organized is shown clearly by the Medinet Habu sculptures and by the frequent Biblical references to their war-equipment, especially their chariots (Jg 1¹⁹, 1 S 13⁵). In 1 S 29² we read of 'hundreds and thousands'—possibly an indication of some kind of regimental or legionary division of their armies.

¹ A place otherwise unknown, called 'Shen,' appears in 1 S 712. This is nearer the Philistine territory as usually defined, and might possibly be the Beth-Shan in question.

Of their domestic life nothing is known; but Samson could see and fall in love with his Timnathite wife; and (on the occasion of the death of the hero) the temple at Gaza contained men and women mingling freely together. These facts, so far as they go, indicate that women were not so jealously secluded as in a Semitic community.

4. **Language.**—Their language is almost totally unknown. The word *geren*, above quoted, is the only common noun that we certainly possess; its apparent relation with the Gr. *τύραννος*, a word of unknown etymology, has often been pointed out. Otherwise we have nothing but (1) an unintelligible magical formula, said to be Keftian, in an Egyptian papyrus— which, supplying the missing vowels, would be something like *senutiukapuwamantirek*¹—and (2) a number of proper names. An Egyptian school-exercise tablet, now in the British Museum, gives us the following as 'Keftian' names: Asa-huran, Nasuy, Akašou (= Achish), Adinai, Pina-ruta, Rusa, and Benešasira. The OT names a number of Philistines, but of these only Phicol, Achish, and Maach seem to bear non-Semitic names. Sisera, king of Harosheth, may perhaps have been of the Zakkala tribe; the name has some similarity, on the one side to Benešasira just quoted, and on the other to Badyra, king of Dor, in the Golenischeff Papyrus. Of the kings mentioned on the Assyrian tablets only one (Ikausu = Achish) bears a non-Semitic name.

5. **Religion.**—We read of several deities associated with the Philistines. According to Is 2^d, they were celebrated (like the Etruscans) for a skill in soothsaying. An ancient oracle of a god Baalzebub (*q.v.*) at Ekron was worked by them, and consulted on occasion even by Israelites (2 K 1³). The Semitic name of the god shows, however, that this was not a Philistine foundation, but that, when they became masters of Ekron, they took over what was probably its most lucrative industry. Another deity is called by the Semitic name Ashtoreth (*q.v.*); but, though in name the Philistine goddess is equated to the great Semitic goddess, the assimilation was probably not complete. An inscription exists at Delos, on an altar dedicated by an Ashkelonite, naming as the tutelary deities Zeus, Astarte of Palestine, and Aphrodite Urania, who is mentioned by Herodotus (i. 105) as a deity specially worshipped in Ashkelon. Lucian (*de Dea Syria*, 14) also shows us the two goddesses as kept apart—one of them in human form, the other with the tail of a fish, like a mermaid. The latter was also called Derketo, or Atargatis; and Diodorus Siculus (ii. 4) tells us a legend of her which links her with the Cretan Britomartis, in whom we may see the prototype of the Philistine goddess.

The head of the Philistine pantheon was Dagon (*q.v.*), a god who had temples at Gaza and at Ashdod. In the latter temple was an image of the god (1 S 5¹⁻⁶). There is really no evidence that, like Atargatis, he had a fish-tail, though this is currently believed; it probably rests on a false etymology of the name (Heb. דג, 'fish'). But Dagon (or Dagan) is not an exclusively Semitic god. He existed in Palestine before the coming of the Philistines, as is shown by the name Dagan-takala in the Tell el-Amarna letters, and by the occurrence of the place-name Beth-Dagan in an inscription of Ramessu III.; it also occurs not infrequently in Babylonian monuments. The name of the Etruscan culture-hero Tages suggests the possibility that, as in the case of Atargatis-Aphrodite, the Philistines brought with them a god having a name similar to Dagon, and confused

the two together. This explains why a comparatively obscure Semitic deity should have attained such an importance among the Ἀλλόφυλοι. Dagon continued to be worshipped under his own name down to the time of the Maccabees (1 Mac 10³⁸), and even in the 4th cent. A.D. he was not forgotten, for there can be little doubt that Marna (= 'Our Lord'), the great god of Gaza at that time, was Dagon. The destruction of the temple of Marna is the central incident of that most remarkable little work, the Life of Bishop Porphyrius of Gaza by the deacon Marcus. From this narrative we learn that human sacrifices had been offered to the god (PG lxx. 1240).

6. **Culture.**—The chief interest of the Philistines and the cognate tribes lies in this, that their history bridges the gap between the ancient civilization of the Bronze Age and the later civilization of the Iron Age. The two hundred years of overlap between the Bronze and the Iron Ages was a period of turmoil and confusion respecting the history of which very little is known. The Philistines and the Zakkala in the east, and the Turisha in the west, carried the Bronze Age traditions across this troubled time, to form the basis of new civilizations. How far they actually developed the iron trade is a question which we have insufficient materials to discuss; they have even been claimed as the inventors of the art of the smith (ZE xxxix. [1907] 334). And it is not impossible that they had a share in the evolution of the alphabet, the cornerstone of modern civilization.

LITERATURE.—F. Hitzig, *Urgeschichte und Mythologie der Philistäer*, Leipzig, 1845; K. B. Stark, *Gaza und die philistäische Küste*, Jena, 1852; A. Noordtzi, *De Filistinien, hun afkomst en geschiedenis*, Kampen, 1905; M. A. Meyer, *Hist. of the City of Gaza*, New York, 1907. In the present writer's Schweich Lectures on *The Philistines: their Hist. and Civilization*, London, 1913, an endeavour has been made to collect an exhaustive account of the facts known concerning this people, and a large number of references to books, papers, etc., will there be found, which need not be repeated here.

R. A. S. MACALISTER.

PHILO BYBLIUS.—Philo Byblius (Herennius) received his surname, Byblius, from the fact that he was born at Byblus (Gebal of the OT, modern Jebail), a city on the Phœnician coast north of Beirût. According to Suidas (*s.v.* Φίλων Βύβλιος), he was born in the reign of Nero (A.D. 54–68). Suidas states also that at the age of 78 in the 220th olympiad he assumed the name of his patron, Herennius Severus. By earlier historians this Herennius Severus was identified with L. Catilius Severus, who was consul in Rome in A.D. 119, and Philo's birth was dated A.D. 42, but the researches of B. Niese (*De Stephani Byzantii auctoribus*, Kiel, 1873, p. 26 ff.) have made it probable that Herennius Severus was consul in A.D. 141 and that Philo was born in A.D. 64. The figures for the olympiad are then incorrect. Although born in Phœnicia, he wrote in Greek, and attained eminence as a philologist, grammarian, and historian. Suidas calls him γραμματικός. In the reign of Hadrian (117–138) he was sent to Rome as an ambassador from the Phœnician cities, and succeeded in obtaining for Tyre the rank of 'metropolis' (Suidas, *s.v.* Παῦλος Τύριος). He remained in Rome and won the friendship of the consul Herennius Severus, from whom he received his surname of Herennius (Suidas, *s.v.* Φίλων Βύβλιος; Origen, *c. Celsum*, i. 15). Hermippus of Beirût was a pupil of Philo, and was introduced by him to Herennius (Suidas, *s.v.* Ἑρμιππος).

The names of the following works of Philo are known: (1) *Concerning the Reign of Hadrian* (Suidas, *s.v.* Φίλων Βύβλιος). This work is lost, and no fragments survive in other authors. (2) *Marvellous History*, in 8 books, mentioned by Philo himself in a passage preserved by Eusebius, *Præp. Evang.* i. ix. 82. (3) *Concerning Cities and the Illustrious Men which each of them has produced*, 30 books (Suidas, *loc. cit.*). Extracts from this have been preserved by Stephen of Byzantium in his geographical dictionary *Ethnika*. It was epitomized by Serenus (Suidas

¹ Of course we have no guarantee that this is really 'Keftian'; the Egyptian scribe may possibly use the word to denote something to him meaningless, just as we sometimes use the jocular expression 'double Dutch'.

s.v. *Σεπῆνος*), and extracts from this epitome have been preserved by the *Etymologicum Magnum*. (4) *Concerning the Acquisition and Selection of Books*, 12 books (Suidas, s.v. *Φίλων Βύβλιος*). The ninth book apparently was entitled 'Concerning Physicians.' It is cited by Stephen of Byzantium, s.v. *Κύπριος* and *Δυπάχιον*. The treatise *Concerning Things worth Knowing* (*Etym. Mag.* s.v. *γάρανος*) was perhaps part of the same work. (5) *Concerning the Language of the Romans* (*Etym. Mag.* s.v. *ἀλτήρ*). (6) *The Choice of Words* (*Etym. Mag.* s.v. *ἀβολήτωρ*, *αἰστος*, *ἀμνητος*). (7) *Epigrams*, 4 books (Eudocia, s.v. *Φίλων Βύβλιος*). (8) By far the most important of Philo's works was his *Phœnician History*, 8 books (Porphyry, *de Abstin.* ii. 56), or 9 books (Eus. *Præp. Evang.* i. ix. 31d). This purported to be a translation of the *Phœnician History* of Sanchuniathon. Extensive extracts from it are given by Eusebius (*Præp. Evang.* i. ix t.). It

is cited also by Origen, c. *Celsum*, i. 16, p. 334 (Ben.), by Johannes Lydus, *de Mens.*, ed. C. B. Hase, Paris, 1823, p. 274, and by Stephen of Byzantium, s.v. *Νίσιας* (see SANCHUNIATHON). All the fragments of Philo have been collected by C. Müller, *PHG* iii. 560-576.

LITERATURE.—Art. 'Philon von Byblos,' in J. S. Ersch and J. G. Gruber, *Allgemeine Encyclopädie*, Leipzig, 1847, pp. 427-435; art. 'Philo Herennius,' in *EBR*¹¹ xxi. 413; C. Wachsmuth, *Einführung in das Studium der alten Geschichte*, Leipzig, 1895, p. 406; E. Schürer, *GV*³ i. 71f., iii. 468; and especially the copious literature on SANCHUNIATHON.

PHILOSOPHY (Primitive).—Philosophy has many definitions, not a few of which would render such a phrase as 'primitive philosophy' contrary to sense; for they consider philosophy as a product of sophistication, consciously critical in character, the last and ripest fruit of studied experience. Certainly this is a just description of the thought of the great historical schools of Europe; but there is, none the less, a sense in which the word 'philosophy' can be justly applied not only to the stream of sophisticated reflexion which was born with Thales, but also to the more naive, but not less genuine, reflexion with which even the least traditioned of men consider the world about them. As inclusive of this unsophisticated thought, philosophy may be defined as the process and expression of rational reflexion upon experience—a definition which will be found applicable to the speculations of the sophisticated and the primitive man alike.

To be sure, 'system,' the very mark of sophistication, is not to be found in primitive thinking, except here and there by implication; but 'system' is by no means synonymous with 'rationality.' Further, that subdivision into fields or sciences which is the prime token of systemic philosophies is also wanting, though there is a sense in which we may speak of the ethics, psychology, and ontology, and even of the logic and epistemology, of the pre-critical period—viz. from the point of view of an observer who has made and learned the use of these distinctions, and now sees them in embryo in the speculations of men not yet conscious of them.

In the present article (which can no more than indicate a point of view) the various 'leads' of primitive speculation in the directions of the several sciences will be briefly sketched.

1. **Method.**—Consciously developed method is, of course, not found in unconsciously developed thinking, yet the main elements of all rational method—reasoning on the principles of identity and causality, the use of number, and the evaluation of sense-perception—are presented with a kind of elemental perspicuity that makes the study of primitive thinking at once fascinating and instructive.

A main and interesting characteristic of this thinking is its suspicion of sensation. Few things are to the primitive man merely what they appear to the senses; the realities of things are their powers, and these powers are rarely measured in physical terms. There is, indeed, a profound

analogy between a savage's conception of natural bodies and that of physical science: in each case the reality of the object is defined by the sum of its forces, never by its ostensible form; sense-perception is a guide to experience, but not a test of true being.

From this first fact follows the search of the savage after causes, which he is ever seeking to divine. His two great formulæ, 'post hoc ergo propter hoc' and 'similia similibus,' are in substance the same as the laws of causality and of identity; all that is needed to give them logical validity is quantification—the syllogism and the method of trial and error.

Of the weaknesses of primitive thinking the most important is the feeble use of number and mathematical relations generally. Nearly all peoples have some conception of number, both ordinal and cardinal, but their applications of this knowledge are most limited. The oldest of the sciences, that of the calendar, is certainly everywhere somewhat developed, and among barbaric peoples leads to important metaphysical theories; but, apart from this, the application of number-concepts to any body of facts is rare, and without such applications the perspective of science is impossible.

A second weakness is paucity of analogies. Human instincts and desires seem to form the primary group of analogies for savage reasoning. In line with the savage's fundamentally activist interpretation of the 'life of nature,' as we still call it. Along with this comes the immense group of analogies based upon the body and its functions: 'This corn is my heart, and it shall be to my people as milk from my breasts,' says the earth-goddess in a Siam myth (M. C. Stevenson, 'The Siam,' *11 RBEW* [1894], p. 39); and in primitive myth and rites generally it will be found that the head, the heart, the tongue, and the nutritive and sexual functions are the great fountains of similitude by which the world about man is brought within the scope of his understanding. This is no deep derogation, for the modern attraction and repulsion hark back to the primitive love and hate, while energy itself gets its common intelligibility from the human will; only the purifications of mathematics sublimate the human metaphor which is at the core of all science.

There are, of course, differences in the philosophical gift among primitive races and tribes, and between individuals of savage groups, as among civilized people. The Polynesian and the American Indian are clearly more speculative than are the black tribes of Africa. In N. America it is comparatively easy

to single out certain peoples with a marked gift for speculation—the Pawnee, the Navaho, the Bellacoola—and a tendency towards the systematization of thought. James Mooney (*14 RB EW* [1896], pt. ii, p. 775 f.) gives an interesting contrast of the philosophical and the practical types, from two associated tribes. 'The Cheyenne and Arapaho, although for generations associated in the most intimate manner, are of very different characters. In religious matters it may be said briefly that the Arapaho are devotees and prophets, continually seeing signs and wonders, while the Cheyenne are more skeptical. In talking with Tall Bull, one of the Cheyenne delegates and then captain of the Indian police, he said that before leaving they had asked Wovoka [the ghost-dance prophet] to give them some proof of his supernatural powers. Accordingly he had ranged them in front of him, seated on the ground, he sitting facing them, with his sombrero between and his eagle feathers in his hand. Then with a quick movement he had put his hand into the empty hat and drawn out from it "something black." Tall Bull would not admit that anything more had happened, and did not seem to be very profoundly impressed by the occurrence, saying that he thought there were medicine-men of equal capacity among the Cheyenne. In talking soon afterward with Black Coyote, one of the Arapaho delegates and also a police officer, the same incident came up, but with a very different sequel. Black Coyote told how they had seated themselves on the ground in front of Wovoka, as described by Tall Bull, and went on to tell how the messiah had waved his feathers over his hat, and then, when he withdrew his hand, Black Coyote looked into the hat and there "saw the whole world." It is worthy of remark in passing that maps or charts which show 'the whole world' are not infrequent among the N. Americans, their purpose being, as a rule, to show the 'way' by which the spirit may descend to the powers of the nether, or ascend to the powers of the upper, realm. Such maps are surely in the method of scientific cosmology.

2. *Theory of man.*—The primitive thinker measures the world about him in terms of his own mind and body: its conduct is actuated by desires and motives such as his, and its physical unities are set by his own bodily dimensions—finger, palm, hand, foot, and pace are all measures still in use, and the decimal system itself is but the mathematical apotheosis of our ten-digited hands. But this *homo mensura* standardization of experience becomes retroactive: when man measures the world in terms of himself, even unconsciously he is already analyzing his own being; he makes the panorama of nature his mirror and reflexion, and so comes eventually to self-revelation. Further, he expands his own nature in assimilating environment to it, and thus finds his inner self not only reflected in the outer world, but coloured by it.

Psychology is a science whose roots run very deep. In reading his motives into nature man has begun already the classification of his powers, and gradually this classification, unconsciously impressed on his mind, becomes assumed as his natural image. Doubtless the first distinction made is that of the 'life' from the body: the life represents feeling and conduct, the body mere form; and, as to savage man forms are always suspect, it is the life that is conceived to be the prime reality. But the life is not incorporeal; it is always associated with some bodily manifestation, of which the most common and elementary is the blood, the blood of life: 'But flesh with the life thereof, which is the blood thereof, shall ye not eat' (Gn 9⁴). Many American aborigines believe that potent or sacred stones, if broken, will bleed, as a broken body bleeds. After the blood, the breath is the most universal symbol of vital reality: 'And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul' (Gn 2⁷). The belief in a 'breath-body' or 'wind' life is nearly universal, attested, of course, by the outstanding fact that so many words for soul—*nephesh*, *psyche*, *pneuma*, *spiritus*, *anima*—rest their meaning on this metaphor. After blood and breath, the body's heat and its shadow—*flammula*, *umbra*, *simulacrum*—are the commonest images of its separable life.

Psychology is begun with this distinction of the active from the passive in man's being, of soul from body. The fact of death is certainly potent

in enforcing the distinction; and the antiquity of burial attests the depth of this impression. But deeper even than death is that consciousness of the active and impulsive power which man feels in himself and hence imagines in the raging winds and rushing waters of an unquiet world of nature.

With this first distinction made, others become easy. It is no uncommon thing, therefore, to find among primitives theories of man's constitution rivalling the Egyptian in complexity; mummy, genius, bird-soul, heart, form, shadow, soul, strength, and name represent an Egyptian dissection of the personality of the deceased, but the American prophet Keokuk taught his followers to pray for the heart, heart and flesh, life, name, and family souls; the Haida have two names for the embodied and one for the discarnate soul, while mind and ghost are still other entities; and the Iroquois distinguish mind, soul, ghost, life, brain, and strength—a classification which surely constitutes respectable psychology. The further discrimination, not of parts but of faculties, is well begun when bodily organs, especially the heart and the liver, are made seats or symbols of passion and appetite, memory and thought—a symbolism which the speech of civilization still retains (see artt. *LIFE AND DEATH, SOUL, SPIRITUALISM*).

3. *Theory of the world.*—Even Xenophon still speaks contemptuously of 'the thing the Sophists call "the world"' (*Memorabilia*, I. i. 11), and it is hardly to be wondered at that few primitive men attain Sophistic familiarity with the concept. The idea of a cosmos or a universe is a late achievement of reflexion; nevertheless, a conception of what might properly be called a 'world-house,' or perhaps the 'stage of life,' comes into definition far anterior to sophistication. Cosmology and cosmogony are both very primitive in origin; and in truth it may be fairly affirmed that the most advanced philosophies are as subordinate to cosmology as is the most primitive mythology; cosmology is the parent of ontology, and it is altogether probable that the 'scientific' cosmologies of to-day will appear to some future age as visionary as do the mythic world-views of the past to us.

Cosmology is essentially an effort to define the world of space. Its natural and nearly universal first form is of a world-tent or domed house, a circular plane surmounted by a hemispherical roof. But, since the imagination does not stop with the visible, a heaven above the firmament and a hollow beneath the earth are conceived, and may be multiplied into a series of heavens and hells, thus framing a storeyed universe. The plane dimension of the middle earth is itself divided. Man is a four-square animal; and, corresponding with his structure, the place of the rising sun becomes 'the before,' the south is 'the right,' the north 'the left,' the west 'the behind'; and so the four cardinals are established.

'The earliest orientation in space among Indo-Germanic peoples arose from the fact that man turned his face to the rising sun and thereupon designated the East as "the before," the West as "the behind," the South as "the right," the North as "the left"' (O. Schrader, *Indogermanische Altertumskunde*, Strassburg, 1901, p. 371). Evidence from Semitic tongues indicates the early prevalence of a like system, while in America there is an almost universal cult of the quarters implying the same conception; with the Zuñi, who have this cult highly developed, the east is always 'the before' (M. C. Stevenson, 'The Zuñi Indians,' *23 RB EW* [1904], p. 63). Determination of the four quarters necessarily involves the fixation of a middle place, or *pou sto*; hence the number of sacred cities which form 'the navel of the world'—Delphi, Delhi, Peking, Cuzco, Zuñi, and doubtless many others.

But the conceptual completion of the frame of the world is only a step to its endowment with moral values. The sky, as the source of light and warmth, becomes the giver of life, strength, goodness, and righteousness; personified, it is the Heavenly Father of all things. The earth, as the

bringer forth of life and nourishment, becomes the Great Mother, spouse of the lord of heaven; while within her dark body are concealed the pre-natal and post-mortem powers of the unborn and the buried—the beginnings and the ends of fate. The dark under world, too, is the source of all that is noxious and deadly, and hence the permanent abode of things evil. This is the primitive symbolism, but it still colours our thought and forms the very substance of our expression in the whole realm of moral philosophy.

Two types of human experience stand as the foundations of cosmogony. One is the sexual procreation of life. When the heaven is conceived as a father and the earth as a mother, the procreation of life from this primordial pair is the most natural of myths, its philosophic residuum being represented by the theory of cosmic evolution, and indeed by every vitalistic interpretation of nature. Again—the second type—the origins of the world are sought on the analogy of manufacture. A primal being is conceived who finds or gives off a substance from which creation is modelled or constructed. This—the rarer form in primitive speculation—is the prototype of mechanistic philosophies of nature; it represents, too, the type of theistic and transcendentalist philosophies, just as the image of the procreative pair stands for the philosophic doctrines of pantheism and immanence. Wide-spread, too, is the occurrence of a bi-sexed creator, signifying, perhaps, the earliest compromise between the eternally conflicting conceptions of the one of being and the many of becoming.

Of the first type of cosmogony Hesiod's *Theogony* is the outstanding example; and it is not unfair to assume that the prevalence of this conception accounts in no small measure for the characteristic evolutionism of Greek philosophy. The Hebrew Genesis illustrates the second form; and the third is perhaps best known in the Chinese doctrine of heaven and earth as proceeding from the Tien, the father-mother of the world. An American example, analogous to the Chinese, is presented by the Zuni: 'Awonawilona [He-She] conceived within himself and thought outward in space, whereby mists of increase, steams potent of growth, were evolved and uplifted. Thus, by means of his innate knowledge, the All-container made himself in person and form of the Sun whom we hold to be our father and who thus came to exist and appear' (F. H. Cushing, 'Outlines of Zuni Creation Myths,' *13 RBEW* [1896], p. 379). A second version (M. C. Stevenson, 'The Zuni Indians,' *23 RBEW*, p. 23) reads: 'With the breath from his heart Awonawilona created clouds and the great waters of the world.' A Pima myth shows extraordinary powers of conceptualization for a primitive people: 'In the beginning there was nothing where now are earth, sun, moon, stars, and all that we see. Ages long the darkness was gathering, until it formed a great mass in which developed the spirit of Earth Doctor, who, like the fluffy wisp of cotton that floats upon the wind, drifted to and fro without support or place to fix himself. Conscious of his power, he determined to try to build an abiding place, so he took from his breast a little dust and flattened it into a cake. Then he thought within himself, "Come forth, some kind of plant," and there appeared the creosote bush' (Frank Russell, 'The Pima Indians,' *26 RBEW* [1908], p. 206). The story goes on with an account of the creation of the heavenly bodies and earth's inhabitants, and contains the interesting suggestion of antipodes in the account of the departure of a part of earth's inhabitants, through a hole in its centre, to dwell on its nether side. Here we are almost in the realm of Milesian cosmology.

Cosmogony gives us the drama of creation; there is but one further step to complete the conception of the world in time. When to theogonic æons legendary and historic periods are annexed, the conception of ages of the world is attained; and, as most men find their present case sorry and dark, a future and golden regeneration is anticipated. Thus the acts of the cosmic drama are complete, though its measures remain to be set. They become set through the science of the stars. The stars are men's first vision of order, cosmos; and with the discovery of their orderly movements and periodical synchronizations they become, and the whole heaven becomes, the great wheel of destiny which measures out the slow repetitions of the world's recurrent drama. Nearly every people with any astronomy reaches this conception of a self-

repeating universe, passing through cyclic creations and destructions, whose terms are star-measured. That fate is interbound with this cosmic movement is but the inevitable inference of a being such as man, who cannot (and perhaps ought not to) see the world that contains him except as reflecting his moral nature. But, with such a conception reached, we are far on the way to the nebular hypothesis or the not less histrionic cycles of the Hegelian absolute idea (see artt. AGES OF THE WORLD, COSMOGONY AND COSMOLOGY).

4. Theory of conduct.—Our ideas of conduct are inferred from our conception both of man's nature and of the world's nature. The more primitive folk are, the more instinctive and habitual is their action; but there are probably no men who are utterly without some sense of the wherefore of action, and hence unacquainted with speculative morality. Religion might almost be said to represent man's sense of a world-sanction for his own ideals of conduct; certainly this is in some degree the explanation of the intimate union of religion and ethics, and again of the religious and ethical cast which every philosophy assumes. Customary morality explains the great mass of action in every grade of culture; but moral speculation—which to some extent is found everywhere—is the true source of our interest in morals.

Moral philosophy, as has been indicated, is outwardly imaged in cosmology and cosmogony; the light of heaven represents knowledge, justice, and goodness; the changeless stars represent remorseless destiny. But this outward image, just because it is beyond the control of man, becomes an object of reverence, a system of religious sanctions, rather than a problem for the will. That problem is set primarily by men's needs, especially by the great need of conforming human desire to its possible satisfactions. The recognition of this, far more than the blindness of custom and tradition, is the real source of that conservatism for which primitive people are noted; their conservative clinging to the ways of the fathers is a product, not of habit, but of intention, whose warrant is the justification which nature gives in giving life itself.

'We observe our old customs,' said an aged Greenlander to Knud Rasmussen (*The People of the Polar North*, London, 1908, p. 124), 'in order to hold the world up, for the powers must not be offended. We observe our customs, in order to hold each other up; we are afraid of the great Evil. . . . Men are so helpless in face of illness. The people here do penance, because the dead are strong in their vital sap, and boundless in their might.'

The same sentiment was expressed by a Hopi priest to J. W. Fewkes:

'We cling to the rites of our ancestors because they have been pronounced good by those who know. We erect our altars, sing our traditional songs, and celebrate our sacred dances for rain that our corn may germinate and yield abundant harvest' (*Annual Report of the Smithsonian Institution*, 1895, p. 6981).

Garcilasso says of his fellow Peruvians:

'It was an inviolable law among them never to alter the mode or custom of their province, no matter what example should come from elsewhere. . . . Hence the Indians, rigid in the following of their ancient customs, were astonished to see the Spaniards change almost every year their manner of living, and they attributed this inconstancy to an excess of pride and presumption' (*Hist. des Incas*, Paris, 1890, p. ix.).

Here surely we are already in sight of Heraclitus and the beginnings of Greek ethics:

'Those who speak with understanding hold fast to what is common to all, as a city holds to its law—aye, and more strongly, for all human laws are fed by one law divine, which prevails where it will, and suffices for all, and surpasses all' (frag. 114, in H. Diels, *Fragmente der Vorsokratiker*, 1², Berlin, 1906, p. 78).

See artt. ETHICS AND MORALITY.

LITERATURE.—See the literature under artt. referred to throughout the article.

H. B. ALEXANDER.

PHILOSOPHY (Buddhist).—I. Introduction: position of philosophy in Buddhism.—Philosophical inquiry was not a purely scientific matter in India. The knowledge of the nature of things was aimed

at, not for its own sake, but for a practical purpose. It was regarded as a factor in the great work of deliverance from transmigration. In Vedantism it is the factor of deliverance, for the very fact of knowing the true nature of the individual self—identical with the universal self—is deliverance. The position of philosophy in Buddhism is different.

At the beginning, at least, metaphysical knowledge was not an essential part of the Buddhist discipline. The True Law was a practical training and nothing more. In short, deliverance from suffering belongs to the saints; sanctity is deliverance from desire; deliverance from desire is to be reached by the life of a monk (*brahmacharya*), by a moderate asceticism coupled with meditations that foster distaste for pleasure; these meditations—on universal impermanence and decay, on death, on loathsomeness (*aśubha*)—are only the realization of the *vanitas vanitatum* of Solomon, a pessimistic view of life and of the world, but not a philosophical system. Sometimes, when questioned on the doctrine of *karma*, Śākyamuni answers: 'My doctrine is: "Do good actions, avoid evil ones"'—an uncompromisingly ethical standpoint, or, so to speak, a 'pure moralism.' Śākyamuni is not agnostic. The so-called 'agnostic texts' (see artt. AGNOSTICISM and NIRVĀNA) emphasize this characteristic of Buddhism, or rather—as there are many Buddhisms—reveal a Buddhism which is freed from any metaphysical surmise, which even strongly forbids any curiosity concerning the nature of soul and the state of a saint after death. According to these texts, such metaphysical questions, important as they seem to us and undoubtedly seemed to many Buddhists—to the compilers of the Scripture themselves—have no more to do with sanctity than purely cosmological problems and mundane science (*lokāyata*) in general.

A slightly different attitude is illustrated by some texts which we might style 'pragmatist,' texts according to which Śākyamuni purposely answered the philosophical questions in conflicting terms: he spoke sometimes as a believer in permanence (*śāsvata*), sometimes in favour of annihilation (*ucchheda*). The standpoint of the Master is that the training that leads to sanctity does not require truth, but useful statements, statements suited to the various dispositions of the hearers and to the general and conflicting instincts of humanity. In order to crush desire, a man must believe in succession that there is a soul and that there is no soul.

Evidence is not lacking that the teaching of Śākyamuni himself was agnosticism coupled with pragmatism; but it would be rash to make any assertion on this point. So far scholars are concerned, not with Śākyamuni's own teaching, but with the leading ideas embodied in the Scriptures.

And it is fairly evident that, from the earliest time, most probably from the beginning, Buddhism adopted¹ or worked out a philosophy which may be summarized as negation of the existence of a soul (technically, in Sanskrit Buddhism, *pudgalanairātmya*) together with the hypothesis of a composite self (*skandhavāda*). This philosophy is a translation, in terms of metaphysics, of the ideas of impermanence and insubstantiality which, from the point of view of agnosticism, were to remain the topics of moral and emotional meditation. We may state here again that the *māna* to which many *suttas* object is self-love, estimation of the self as good, better, best, bad, worse, worst, not the actual notion of self; that the notions of impermanence and insubstantiality which are essential to the religious training are the conviction of the evanescence of beauty, strength, and life, not the

theory of the composite and momentary character of things. But, notwithstanding the 'moralism' of certain monks and possibly of the Master, the historical circumstances being given, metaphysics could not be avoided. Some metaphysics is an essential feature of Buddhism; for it is admitted by all Buddhists that desire cannot be crushed, that desirable things cannot lose their attractiveness, so long as we admit that there is an 'ego' and a 'mine.'

Buddhists denied the Ego and, in consequence, had to exercise themselves to give an explanation of life and transmigration in terms of impermanence and selflessness. Buddhist philosophy was born, and developed a coherent system of 'phenomenalism' (the doctrine of the *Abhidharmas*). Phenomenalism, by a natural evolution, gave rise to various forms of nihilism or voidness (*śūnyatā*, so-called nihilism, or *Madhyamaka*; idealism, or *Vijñānavāda*).

These new doctrines are logically constructed and claim to be justified from the scientific point of view; but their maintainers believe that they are no less useful than true. Their usefulness is perhaps the best proof of their truth. The best reason that a Buddhist has for professing nihilism is that there cannot be real religious life (*bhikṣutā*), sanctity, or deliverance from desire as long as one admits the reality of phenomena (*Bodhicaryāvatāra*, ix. 40). The schools had not forgotten the Master's lesson of pragmatism.

2. Hinayāna or Abhidharma philosophy (pudgalanairātmya or phenomenalism).—The first philosophy of Buddhism, the philosophy of the Hinayāna ('Little Vehicle'), may be shortly described as phenomenalism: non-existence of a substance or an individual (*pudgalanairātmya*), absolute existence of the *dharma*s—small and brief realities which, grouped as causes and effects, create the pseudo-individuals.

This philosophy was at first far from perfect. It is the result of a long inquiry.

From the doctrinal point of view, it would perhaps be convenient to contrast (1) the unsystematic views that are expressed in the *sūtras* (*Suttantas*) and which may be described as 'a theory of the *skandhas*' (*skandhavāda*, a fictitious name), with (2) the developed system which is embodied in the *Abhidharmas* of the Sarvāstivādins (Sanskrit books, school of the *Vaiśāṅikas*, *Abhidharmakośa*) and which is discernible in extra-canonical Pāli works (*Milinda*, *Buddhaghosa*, *Abhidhammasaṃgaha*); this system is properly called *Abhidharma*.

From the historical point of view, there are strong objections to such a division. The fully grown phenomenalism is the legitimate offspring of the principles forcibly expressed in the oldest canonical books. No new idea has been discovered, but philosophers see more clearly what they mean; that is nearly all. Here we shall merely call attention to the chief topics of interest.

(a) At first no effort was made to work out a comprehensive and systematic exposition of the ontological or psychological principles; these principles were mere surmises and postulates rather than doctrines; they had not been studied enough to be fully understood; they lacked precision and remained, therefore, to some extent contradictory.

There is no self (*ātman*), person (*pudgala*), living being (*sattva*), or principle of life (*jīva*)—a flat negative not only of an unchangeable self as recognized by the Brāhmanic philosophies, but also of the substantial principle that the popular philosophy considers as a transmigrating entity, a soul different from the body. Man is a complex, composed of five *skandhas*—the material element, *rūpa*, or body, and four intellectual elements, *saṃjñā*, *vedanā*, *saṃskāras*, *viññāna*. The ego, or 'man,' is described in terms of its constitutive elements, and is compared to a chariot which lacks personality because it is composed. That is a 'static' point of view. In this compound the position of the intellectual elements is a subordinate one; they are given as a resultant of the material

¹ We cannot deal here with the indebtedness of Buddhism to Sākhya and Yoga philosophies. See SĀKHYA, YOGA.

elements, viz. the organs: 'The colour blue being given and the organ of the eye being also given, there arises a visual cognition (a blue image). That is 'sensationalism.' The intellectual cognitions (abstract ideas, judgments) are worked out by mind, which is a material organ too.

(b) The obvious and necessary conclusion of this psychology would be the negation of survival. But, as a matter of fact, Buddhists flatly deny the heretical theory of annihilation, destruction at death (*uchcheda*). Individual or personal permanence and responsibility through successive existences in the long journey of transmigration are strongly insisted on (see art. DEATH [Buddhist], KARMA).

(c) A conciliation between the negation of a soul or self, capable of survival, and the negation of annihilation is to be found in a 'dynamic' conception of self. Such a conception was brought about by the study of impermanence (*anityatva*) and causality (*pratityasamutpāda*).

(1) 'Impermanence' is, in some texts, almost a synonym of 'suffering' and 'selflessness.' Existence is suffering because joy does not last; body and mind are impermanent, and therefore are not a self, do not depend upon a self. But from the idea of impermanence issues the idea of momentariness, which leads to far-reaching conclusions. Impermanence, when predicated of things in general, does not mean momentariness. There is origination (*utpāda*), duration (*sthiti*), change or old age (*anyathābhāva*, *jarā*), and destruction (*nirodha*) of impermanent things in general. But the momentary character of a flame—the flame of a lamp is only a succession of flames, each of which lasts only an instant—and of thought (*chitta*) was recognized very soon:

'That, O monks, which is called mind, thought, cognition, keeps up an incessant round by day and by night, of perishing as one thing and springing up as another' (*Majjhima*, i. 256); whereas the body may last for a hundred years and more.¹ When once the notion of momentariness was reached, it inevitably made its way and took the place of the notion of impermanence. Now momentariness is quite naturally associated with causality. Momentariness and causality converge in continuity.

(2) *Causality*.—Buddhists first examined the cause of suffering (rebirth and death again) and expressed their views in the second truth: 'Suffering originates from desire.' They later expressed the principle of causality in the formula known as *pratityasamutpāda*, 'dependent origination,' a formula which seems to have been originally only a commentary on the second Truth (cf. *Suttanipāta*), and which, according to the scholastic interpretation, presents a summary of three successive existences of a man (cf. art. PATICCSAMUPPĀDA). It is given in the Scripture as an ontological and psychological theory. It is said to open a middle way between the two wrong ideas (or heresies) of permanence of the living being through consecutive existences and annihilation at death: the man who is reborn is not the dead man, but he is not different from this man; because he originates from this man. Coupled with the dogma of momentariness, the dogma of causality leads to the conclusion that the ego is not a static compound like a chariot, but a series (*samtāna*)—a living series of causes and effects. Everything, even material lifeless objects, will be understood as the series of its successive moments of existence. The series does not exist in itself; it is made up of small momentary entities, called *dhammas*. There is no thinker, but only thoughts; no feeler, but only feelings; *dhyaṇa* partly consists in dis-

cerning the successive ideas that present themselves without any reference to the ego as thinking.¹

'That only exists which is momentary' (*yat sat tat kṣaṇikam*). What is permanent—e.g., space, *nirvāṇa*—does not exist, is a mere name, a mere negation (*abhāva*).

(d) An obvious conclusion to be drawn, and one which was early drawn, from the theory of dependent origination is that the origination of cognition has not been scientifically explained in the *sūtras* (see above, p. 848*). A distinction is to be made between the cause (*hetu*) and the conditions (*pratyaya*). The flame of a lamp is apparently burning during three watches; but it is only a succession of flames. Each of these momentary flames (to put it otherwise, each moment in the existence of this flame that is burning during three watches) has for conditions the oil, the wick, and so on; but its cause is the preceding flame (or the preceding moment in the existence of the flame). To apply this theory to the causation of a cognition, a visual cognition is conditioned by the eye and the exterior object (the colour blue); but it is caused by the preceding cognition. The series of thoughts (*chittasamtāna*) goes on uninterruptedly through the successive existences; the death-consciousness is continued in a conception-consciousness (see art. DEATH [Buddhist]).

Pudgalavāda.—A small place must be given to the 'heretical' theory of a self—a theory which is much abused in the *sūtras* as well as in the treatises, both Sanskrit and Pāli, but which, nevertheless, was supported by the powerful sects of the *Sāpmiti*yas. There is a *sūtra*, the '*sūtra* of the bearer of the burden,' which states that the *pudgala* exists independently of the *skandhas*; that it 'shoulders' the *skandhas*, new *skandhas* at every birth, till it lays down the *skandhas*, i.e. obtains liberation. The explanation of the *Sāpmiti*ya school is that the *pudgala* is neither identical with nor different from the *skandhas*; that it is 'not to be expressed' (*anabhilāpya*), that nevertheless it exists and transmigrates. There are in the Scriptures passages where the relations of the feeling with the feeler, and so on, are expressed in the same terms; and the position of the *Sāpmiti*yas is not an impossible one. But in the light of other passages which state that there is no feeler, no eater, but only feelings, foods, we must admit that the Scripture, on the whole, favours the opinion of the schools who deny altogether the existence of a *pudgala*. We know the partisans of the *pudgala* only from the criticism of the 'orthodox' scholars, both Sanskrit and Pāli.

3. *Mahāyāna philosophy*.—(a) *Sūnyatāvāda* (*Madhyamaka system*).—(1) The real nature of things (*dharmatā*, *bhūtataṭhātā*, or, shortly, *tathatā*) is their being produced by causes and their being productive of effects (*pratityasamutpannatā*). The *Abhidharmikas* have stated this fact well. But they fail to see that what is produced by causes does not exist in itself, is without 'own nature' (*niḥsvabhāvatā*), is insubstantial or void (*sūnya*). Voidness (*sūnyatā*) is neither a principle immanent in things nor is it nothingness. On the contrary, it is the character of what exists, of the *dhammas*. Things are void because they are originated; voidness = origination, void = originated. Existence (*samsāra*) is an intricate succession of momentary things, or *dhammas*, which have not in themselves any *raison d'être*, and which cannot exist substantially by the power of their causes; for these causes are *dhammas* of the same nature, which do not exist in themselves. As it is said, 'From *dhammas* like a magical show (*māyopama*) arise *dhammas* like a magical show.' We should say, 'From contingent phenomena arise contingent phenomena.'

(2) Such is the common view of the *Mādhyamikas*. But there are many texts which would lead us much further: (a) the simile of the monk suffering from ophthalmia, who sees in his almsbowl hairs which do not exist, while a healthy monk sees these hairs as they are, i.e. does not see them; in the same way a saint who is free from illusion or nescience (*avidyā*) does not see the *dhammas*:

¹ C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1914, p. 98.

the correct knowledge—the knowledge of a Buddha—is a non-knowledge; (β) the criticism to which the notions of cause, of knowledge, of motion, etc., are submitted; by the four-branched syllogism it is shown clearly that a thing is not born either from itself or from another, or from both, or without cause. The consequence is that production is logically impossible; production does not support inquiry (*vichārāsaka*); therefore there is no production. Again, thought cannot know itself and cannot know another; and so on. Truth is silence.

(3) *The two truths*.—Phenomenalism is a psychological interpretation of life and consciousness in terms of 'negation of the individual' (*pudgalanairātmya*): life is a series of momentary phenomena originating in dependence one upon another. The Mādhyamika does not reject this doctrine, but claims to explain what phenomenalism really means—to point out its metaphysical aspect. He says that phenomena are only appearances, or, from the subjective point of view, experiences. Phenomenalism is the 'experimental' or 'erroneous' truth (*vyavahāra, samvṛtīsatya*); nihilism or voidness, negation of the reality of the *dharma*s (*dharmanairātmya*), is the metaphysical or absolute truth (*paramārtha*).

But everything happens as if things were composed of real and substantial *dharma*s; the illusion that we have of the happening of the phenomena is due to the very causes that, according to the phenomenalist, give birth to the phenomena. The Path of old remains safe (see art. NIHILISM [Buddhist] and below).

(b) *Vijñānavāda*.—It is difficult to give an account of the system of the idealists, Vijñānavāda, more exactly Vijñānamātravāda, Vijñāptimātravāda, Chittamātravāda, 'theory that there is nothing except cognition or thought,' also Svāsamedānavāda or Svāsamvittivāda, 'theory of self-consciousness.' The philosophers of this system have worked out quite subtle notions, and, moreover, we know from Tibetan authorities that they were divided into many branches and disagreed on important points. These Tibetan authorities are far from clear, while the original treatises, the larger number of which exist only in Tibetan and Chinese translations, have not yet been studied. Sanskrit, Brāhman, and Jain summaries do not touch the points in question. Therefore we must be satisfied with a general outline of the system—an outline which cannot be taken as definite.¹

VOL. IX.—54

(1) Some hypotheses may be offered on the origin of the idealist system.

(a) The phrase *manomaya* in the first stanza of the *Dhammapada*, 'All that happens (*dharma*) is the result of thought (*manas*), is made up of thought (*manomaya*),' does not mean 'consisting of thought,' but 'caused by thought, by mental action' (just as the *manomaya* body of the *bodhisattva* is not a spiritual body, but a body created by thought [see art. BODHISATTVA]). That is not technically idealism, but leads to idealism. It was admitted that the new physico-psychical organism which continues after the death of a man is 'created' in the matrix by the 'rebirth consciousness,' itself a product or a sub-product of a mental action; moreover, pleasant and unpleasant sensations during life are chiefly the reward of action (*vipākaphala*, 'fruit of ripening of action'), while the exterior causes of these sensations depend on action as 'fruit of mastery' (*adhipatīphala*); we should style them 'the delegates of the power of action,' just like the tormentors and the trees with swords for leaves in hell. It follows that the existence of exterior objects may be looked upon as a cumbrous hypothesis (see Vasubandhu's *Vimśakakārikā*).

(β) On the other hand, the Sautrāntikas (a branch of the later Hīnayāna) had studied the character and origin of knowledge. In opposition to the Vaibhāṣikas (= Abhidharmikas) and to the Mādhyamikas, they maintained that a thought can think itself, that thought has self-consciousness (*svāsamvitti*), for, though the end of a finger cannot touch itself, a lamp illuminates itself and another (*Bodhicharyāvatāra*, ix. 15); further, that the form of representations is given by the mind. This idealist theory of knowledge is compatible with realism; the Vijñānavādins, heirs of the Sautrāntikas, built upon it an idealist metaphysical system.

(γ) This system owes much to the Śūnyatāvāda (nihilism); in fact, it is a branch of nihilism; it differs from the numerous systems of idealism recorded in the history of philosophy both Indian and non-Indian. It is not satisfied with the negation of the exterior object; it denies the self, an individual generator of thoughts, as all Buddhists do; it applies a thorough criticism to the individual thoughts themselves. It maintains that the only *dharma*s (= things) are thoughts (idealism), and that these *dharma*s are not substantial (*dharmanairātmya*); that they are void. The voidness of the idealists differs from the voidness of the Mādhyamikas, the properly so-called nihilists. For the latter, voidness is the characteristic in things of being produced, while, from the critical point of view, no production is possible.

According to the idealists, 'for voidness to be a justifiable position, we must have, first, existence of that which is void, and, second, non-existence of that in virtue of the absence of which it is void,' i.e. existence of a receptacle, non-existence of a content, 'but, if neither exists, how can there be voidness? We wrongly superimpose the notion of a serpent on a rope: the rope exists, the serpent does not exist, the rope is void of serpent. In the same way, such "notes" or characters as form, etc., are commonly attributed to the things: the denotable properties do not exist, but the substrate of the designations exists' (*Bodhisattvabhūmi*, fol. 29^b f.).

The 'notes' wrongly attributed to the things are both what is called *jñeya*, 'knowable,' and *jñāna*, 'cognition'; the thing is an 'undenotable something.'

(2) To realize what the idealists understood by 'knowable,' 'cognition,' and 'undenotable something,' we have to study the three natures (below, β) to which the simile of a dream (below, α) is an easy introduction.

(a) The visions of a dream are independent of any thing 'to be seen.' The elephants which a dreaming monk sees entering his cell do not exist,

or, rather, do not exist as elephants. As far as it is a 'thing to be known' (*jñeya*), a 'thing to be grasped' (*grāhya*) or 'to be named' (*abhidheya*), the thing seen during sleep does not exist; it is only a product of the mind, a mental phenomenon wrongly made objective, the very 'form of elephant' (*ākṛti*) taken by a thought under the influence of the 'impression' (*vāsanā*) left by a visual knowledge.

Now what about the idea that the dreamer has of an elephant—the idea which he considers as a visual knowledge (*jñāna*), which 'grasps' (*grāhaka*) an elephant? This knowledge is in fact the same mental phenomenon, the same form of elephant taken by a thought. During sleep the visual knowledge that grasps an elephant, the mental knowledge that ascertains the qualities of this elephant and names it, cannot have more reality than the elephant itself. There is no knowledge (*jñāna*), since there is no knowable (*jñeya*).

The simile of a dream will help us to realize the nature of things. First, there is no matter (*rūpa*); there is nothing outside (*bahis, bāhya*) the thought (*chitta*) and the corollaries of thought (*chaitta*, pleasure, etc.); rather, outside thoughts, for there is not a thinking unity but only series (*saṃtati*, *saṃtāna*) of thoughts; so many series of thoughts, so many living beings (*sattva*).

(B) Secondly, every thought, except the thoughts of a Buddha, is to be looked upon from three points of view; technically it possesses a threefold nature or character (*svabhāva, lakṣaṇa*)—imagined nature (*parikalpita*), dependent or caused nature (*paratantra*), and absolute or metaphysical nature (*parinirvāṇa*).

i. *Parikalpita*.—A thought—i.e. an 'actual' or 'conscious' (*pravṛtti*) thought (see below)—presents itself as exterior to itself, as does, in a dream, the notion of elephant; it presents itself as an object of cognition, a knowable (*jñeya*). The wrongly objectified objects of cognition are said to be threefold: body and the organs (*dēha, āyatana*), the things (*artha, viṣaya*) to be known by these organs (*rūpāyatana . . . mana-āyatana*), and place (*pratiṣṭhā, pada*), the material universe (as a whole, *bhājanaloka*).¹ Inversely, thought appears as cognition (*jñāna*): (1) as visual cognition of a blue object; (2) as auditive cognition . . . ; (6) as mental cognition of the qualities of an object (the first *manovijñāna* of the Vijñānavādin list); (7) as an ego which knows (the second *manovijñāna*—*ahamdr̥ṣṭi*—*kṣiptam manas*).

In short, thought presents itself to itself as object (*grāhya*) and, at the same time, becomes cognition (*grāhaka*) of this object. The notions of being, non-being, essence, difference, number, etc.—in a word, what the Western philosophers style categories—originate from this opposition or duality (*dvaya*). Now this duality, which is the characteristic of every state of consciousness (*pravṛttivijñāna*), is real; our thoughts are really taking the double aspect of object and subject; this twofold nature of our thoughts is not an imaginary nature. As a matter of fact, we think dually. But this duality results from the fact that we consider as exterior and existing in themselves the so-called objects which are only forms of the thought, in the same way as a dreamer believes in the reality of the dream-elephants and thinks that he has a visual knowledge of elephants. This duality has no metaphysical *raison d'être*; it is worked out or elaborated by imagination (*parikalpa, vikalpa*), which imposes on thought the categories of object and subject, together with the categories of being, essence, etc.

Therefore thoughts (*chitta*), i.e. things, in so far as they are in opposition as object and subject, are said to be imagined (*parikalpita*).

ii. *Paratantrasvabhāva*.—We are now concerned with the question whence thoughts derive their origin, according to what law they appear in succession and in duality. Thoughts are not produced by exterior objects, as the old realist school believed: 'The colour blue being given and the organ of eye being also given . . . there arises an image of blue.' Nor are they produced by a self, as the idealist Vedānta would suggest. Nor are they autonomous (*svatantra*). They are dependent one upon another (*paratantra*); they are produced one from another.

Paratantra is almost synonymous with *pratityasamutpanna*, 'originated in dependence'; but there are conspicuous differences between the classical *pratityasamutpāda*, 'dependent origination,' and the causation which we are studying (sometimes styled 'subtle origination'), and these differences justify the use of a new phrase. The problem is somewhat obscure; but the present writer hopes that the following is a fair solution.

All the Buddhist philosophers—maintainers of the doctrine of *karman*—had to admit that thoughts, although momentary, do not perish altogether, but originate new thoughts, sometimes after a long interval of time (see art. KARMA, *nīṣyandaphala* and *avijñapti*). As long as they believed in the existence of matter (*rūpa*) and considered man as a physico-psychical complex, it was not difficult for them to explain the interdependence of thoughts. The six classes of cognitions (sense cognitions, eye, etc., and mental cognitions) had a material support and exterior excitants, and it was possible to explain all the psychological facts, including memory, with these six cognitions. But the idealists had to work out a system of psychology without the hypothesis of any material element. They say that the cognitions acknowledged by the realist schools, visual . . . mental cognitions, create 'seeds' (*bīja*) which will ripen in due time, without any interference except for the power of the *bodhisattvas*, into new visual . . . mental cognitions. Now these seeds are not a part of the visual . . . mental cognitions which arise in succession between the sowing and the ripening of the seeds; e.g., the cognition of blue which will emerge to-morrow in a certain 'series of cognitions' named 'I' depends on yesterday's cognition of blue, but its seed is not to be found in any of the cognitions of which I am conscious to-day. Therefore we must add to the sixfold cognition of the primitive psychology—to the sixfold cognition to be named 'actual cognition,' 'active cognition,' or 'state of consciousness' (*pravṛttivijñāna*)—another group of cognitions which the modern philosopher would style 'unconscious' or 'subliminal images'; these are the seed of actual cognitions; they are created by actual cognitions; beside and below the actual cognitions, they flow as a series of momentary subliminal images which proceed owing to an uninterrupted self-reproduction; this series bears the old supply of seeds, is enlarged by the sowing of new seeds, and will stop when the seeds have borne their fruit and no new seed is sown. It is known as *ālayavijñāna* or *ādānavijñāna*, 'store cognition,' 'receptacle cognition.'¹

iii. *Parinirvāṇasvabhāva*.—Thoughts are to be considered from a third point of view. The knowable (*jñeya*) does not exist as such, since it is only a subjective idea, an image, a thought that constitutes itself as an object. On the other hand, the fact that thought cognizes, i.e. recognizes itself as visual cognition, as mental cognition, as subject

¹ *Lankāvatāra*, p. 78; *Madhyamakāvatāra*, vl. 93; *Sūtrā-lampkāra*, xi. 40.

¹ See the writer's 'Note sur les cent Dharmaś,' *Muséon*, vi. 191.

of cognition, depends on the fact that it constitutes itself as an object. There is cognition because there is a knowable; there is designation because there is an image, i.e. an objectified designation. The two groups of terms, *jñeya-grāhya-abhidheya* and *jñāna-grāhaka-abhidhāna*, stand together, and, as the first is mistaken, the second too is mistaken. The duality object-subject is accidental to the thought, for it is produced by misconception or imagination (*parikalpa* or *vikalpa*).

In order to know what thought is metaphysically—what thought is in itself—we have to ignore, to put aside, duality. Freed from duality, thought is beyond the range of words; it eludes denotation, it is undenotable (*anabhihitāpya*); no character (*viśeṣa*) can be predicated of it; it can only be said to exist (*bhavyatv eva*). It is therefore defined as *vastumātra*, 'simply thing,' 'pure thing,' or a 'something' ('chose sans plus,' 'chose tout court'), or as *chittamātra*, 'simply thought,' 'pure thought,' since 'thing' and 'thought' are interchangeable notions.

In a Buddha imagination has come to an end. The thought of a Buddha—a non-cognition—is practically what all thoughts are metaphysically. To use a metaphorical phrase, our thoughts are soiled by cognitions which produce passions (*jñeyā-varaṇa*, *klesāvaraṇa*); we have to purify them (*vyavādāna*).¹

To sum up, a thought—e.g. an image of blue—is imagined in so far as it is both the object blue which we believe we see and a cognition of blue. It is dependent because it is produced by a preceding image of blue. It is a *something* of which nothing may be predicated from the metaphysical point of view, a substance which is accidentally, owing to an eternal illusion, constituting itself as object and subject.

4. Later philosophies: theism, pantheism (doctrines of immanence).—The phrase 'Buddhist pantheism,' like the phrase 'Christian atheism,' associates notions that are conflicting. But, if we are to consider Buddhism not as a doctrine but as a historical fact, there must be a place for the non-Buddhist philosophical views that developed in Buddhism—the more so because such views not only are dressed in Buddhist garb, but are to some extent the natural evolution of truly Buddhist theories.

There was in Mahāyāna an essential antinomy between the experimental and the absolute truth.² While the learned schools carried to their ultimate consequences the philosophical principles of the old creed and worked out systems of dialectical or idealist nihilism, a Buddhist religion has grown: Buddhas and *bodhisattvas* were universally looked upon as gods, almost eternal beings, providences. The learned schools admitted the quasi-divinity of the Buddhas, and the necessity of devotion and charity, as constituting the practical or experimental truth (*samvrttisatya*); but they maintained that the true religious life had to combine the practice of this truth with the meditation of voidness: voidness is the absolute truth (*paramārthasatya*). There cannot be true religious life (*brahmacharya*, *bhikṣutā*, *bodhicaryā*), there cannot be deliverance, as long as the faithful do not know that Buddhas are mere names; the enlightened devotee adores celestial persons whom he knows to be pure phantasms; the enlightened giver pities beings while knowing that they do not exist (*Vajrachhedikā*). Such a position can be saved only by sleight of hand, by sophistical and highly conventional contrivances (see art. NIHLISM [Buddhist]). As a matter of fact, a time comes when it is neces-

sary to make a choice between the two truths: to keep the absolute truth, and practise accordingly silence and apathy, or to admit the experimental truth as 'true' and have recourse to an ontology in accordance with it.

The chief factor in the development of theistic and pantheistic ideas in Buddhism has probably been the Brahman and Hindu milieu, the influence of the learned monism (Vedānta), and the yet more powerful influence of the popular and Tāntric Saivism. While theism (the worship of Amitābha) is very old, it is in the so-called Buddhist Tāntric literature (*mantranaya*, *vajrayāna*) that we find, together with a mass of theurgic practices, unmistakable affirmations of a system of immanence. Buddhist saints and deities, by an insensible progress or owing to a rapid naturalization, had come to be conceived under the familiar shape of the Hindu gods. But we are here concerned with the doctrinal aspects of the historical evolution and adulteration of Buddhism. Our problem is to elucidate by what doctrinal and verbal development the orthodox nihilism and idealism were apt to be reversed and turned into pantheism.

On the whole, we clearly see how Buddhist monism arose. The post-Vedic inquiry for being, permanent being, real being, had a legitimate conclusion in the absolute monism (*advaita*) of Saṃkara. Brahman is, but its true description is *neti neti*, 'it is not so, it is not so.' There is no relation possible between it and limited beings; i.e. no limited being exists. 'Ontologism' in its last phase is nihilism, for the *ens realissimum* is void. Inversely, the Buddhist theory of a becoming without being is apt to be reversed into monism. As regards details many conjectures may be made, some likely to be more or less justified.

(a) *The Mādhyamika tenets*.—From an absolute point of view (*paramārthasatya*), there is no difference (*nānābhāva*) among things and among the characters of things. Things are void (*śūnya*), like the daughter of a barren woman; characters are void, like the beauty of this unreal daughter. Things are void because there is no real origination of things—if no origination, no destruction, an eternal inexistence. There is no difference between existence (*samsāra*) and *nirvāṇa*: 'Not being produced (*anutpanna*), not being destroyed, things are from the beginning quiescent (*ādishānta*); they are really, naturally (*prakṛtyā*) in *nirvāṇa* (*parinirvṛta*). The Vedāntists (Saṃkara's school) sometimes use the same phrases to explain the nature of particular things; they borrowed these phrases from the Buddhists; possibly they borrowed also the doctrine of the non-existence of particular things; while the Buddhists—some Buddhists—went so far as to recognize in the *bhūta-tathatā* or *tathatā*, 'real nature of things,' or *dharmadhātu* or *bhūtakoti*, so many synonyms of voidness,³ a sort of 'void Brahman.'

(b) *Vijñānavāda; ontology*.—Genuine Vijñānavāda (works of Aśvaghoṣa, Asaṅga, Vasubandhu) is truly Buddhist, since it maintains the momentariness (*kṣaṇikatva*) and the dependent origination (*paratantratva*) of every thought. Nevertheless it is dangerously akin to Vedānta; the Tāntric school has interpreted it as a monism, and many modern scholars do so too.

The *ālayavijñāna* is somewhat like a soul, and we know from Tibetan authorities that the maintainers of the Hinayāna strongly objected to this 'new' *vijñāna*. It is a series of 'subliminal images'—a store of seeds that give birth to actual cognitions (*pravṛtti vijñāna*);⁴ it may be looked

¹ On the Vijñānavādin theory of purification see L. de la Vallée Poussin, *Théorie des douze causes*, Ghent and London, 1913, p. 65.

² Many of the Buddhist tenets were lacking in consistency. The idea of *nirvāṇa*, e.g., an 'unqualified deliverance,' was apt to be understood as immortal happiness or as annihilation.

³ See sources in *JRAS*, new ser., xlii. [1910] 817 ff.

⁴ See *Musson*, xii. [1911] 252.

upon as a thinking entity which manifests itself in a succession of thoughts.

On the other hand, to say that the true or metaphysical nature of things is thought, an uncharacterized thought 'which only is,' or, in the Vedāntic phrase, 'which is not so, which is not so' (*neti neti*); that this pure thought is defiled by nescience (*avidyā*) and all the passions that follow nescience; that, owing to defilement, it takes the aspects of knowable and knowledge and generates the whole of the particular cognitions; that it is apt to purify itself (*vyavadāna*) by an inverse process¹—that is pure Vedānta of Saṃkara's school.

Yamunāchārya, in his *Siddhitrāya*, compares the doctrine of Dharmakīrti, the avowed Buddhist (*prakāṣa buddha*): 'Although the pure intelligence is free from differences, it is characterized (or imagined), owing to erroneous views, as multiple: as knowable, knower and knowledge'—with Saṃkara's view: 'The pure reality is not the cause of the development [of names and forms], because it ceases not to be [what it is, i.e. it remains pure]: therefore it is illusion which is the mother of this distinction, knower and knowable.' Yamunāchārya concludes that Saṃkara is a Buddhist in disguise. Vijñānabhikṣu holds the same opinion for the same reason.²

The thought of a Tathāgata is undefiled, purified thought; the thought of a *prthagjana*—a man who has not 'seen' the Truths—and of any living being except the Tathāgata is defiled, unpurified thought; but for the defilement, the thought of a *prthagjana* is the thought of a Tathāgata.

This doctrine is embodied in the theory of the embryo of a Tathāgata (*tathāgatagarbha*), which is explained as follows in the *Laṅkāvatārasūtra*:

'There is an embryo of a Tathāgata, genuinely radiant and pure, endowed with the thirty-two marks, present in every living being, but, like a gem covered by dirt, covered by the corporeal forms, sensation, etc. (*skandha, āyatana, dhātu*), defiled by the wrong notions produced by lust, hatred and delusion; nevertheless permanent, firm, blessed, everlasting.'³

The compilers of the *Laṅkāvatāra* are careful to state that the dogma of the *tathāgatagarbha* is not to be understood in a heretical sense, that it is not like the theory of a universal and permanent soul (*ātman*), that it has been preached in order to introduce the heretics who believe in a soul into the Buddhist doctrine of soullessness (*nairātmya*); that the *tathāgatagarbha* really means voidness, *bhūtakoti, nirvāṇa*. But is it not a strange method of converting the Vedāntists, to teach them Vedāntism in Buddhist garb? Granted that the true meaning of the *tathāgatagarbha* is that every creature is an embryo of Tathāgata, i.e. a future Buddha, there may be doubt as to its obvious meaning.

(c) *The three bodies of a Tathāgata*.—Like Vijñānavādin ontology (the three natures and the 'pure thought'), with which it has strong analogies, the Vijñānavādin Buddhology has also been understood in a pantheist sense. This Buddhology, the origins of which can be traced in the Hinayāna *Abhidharma* and mythology, is explained in the dogma of the three bodies of a Tathāgata (*trikāya*). We shall deal (1) with the orthodox, or Vijñānavādin, conception of the bodies, and (2) with the pantheist, or Tāntric, evolution of this conception.

(1) Notwithstanding its mythological and devotional features, the Mahāyānist Buddhology is

¹ We know from Tibetan authorities that the Vijñānavādins disagreed as to the defilement: some held it to be real; some taught that it is illusory (cf. *advaita* and *viśiṣṭādvaita, māyā* and *viartavāda*).

not in conflict with the phenomenalist and nihilist principles of Buddhism. Like the *Abhidharma* Buddhology, it is not a theism, but only a hagiology, and a phenomenalist or nihilistic hagiology.

A Tathāgata, like any other living being, is an insubstantial compound and series of *dharma*s. (a) Among these *dharma*s there is a large number of thoughts or intellectual *dharma*s which are only to be found in Tathāgatas: supramundane (*lokottara*) knowledges, i.e. knowledges that are turned towards *nirvāṇa* (*ksayajñāna, anutpāda-jñāna, asaikṣī samyagdr̥ṣṭi*); the Tathāgata would disappear into *nirvāṇa*, but he chooses to keep his mundane *dharma*s—omniscience of every mundane thing, all-embracing and all-powerful compassion. (β) Moreover, a Tathāgata has a 'body'; i.e. some material (*rūpin*) *dharma*s are a constituent part of the compound which we call a Tathāgata. (γ) Lastly, he is able to create, in order to save beings, magical appearances—'doubles' of his body.

The phrase *dharma-kāya*, which originally designated (i.) the whole of the Scriptures, and (ii.) Buddha as law or Scripture incarnate, came (in *Abhidharma*) to be used to designate the collection of the spiritual *dharma*s owing to the presence of which a pseudo-individual is named Buddha. Every Buddha possesses the same supramundane *dharma*s; while Buddhas differ in merit, in duration of life, etc., they are endowed with the same *dharma-kāya*. In the same way monks (*bhikṣu*s), while differing one from another in many respects, possess (i.e. have as a constituent part of their pseudo-individuality) the same set of *dharma*s, called *bhikṣutā*, 'that which makes a *bhikṣu* a *bhikṣu*' (morality, the *saṃvara*, or vows of a *bhikṣu*, etc.).

The material elements in a Buddha were, from of old, styled *rūpakāya*, 'material body.' Mythological Mahāyānist styles them *sambhogakāya*, 'glorious or blessed body,' or *vipākakāya*, 'body of ripening.' The body of a Buddha is glorious, endowed with the thirty-two marks, enthroned in paradises where it is adored by celestial *bodhisattvas*. The so-called 'material body' of the man named Śākyamuni was not what we should call, in our phraseology, a 'body,' but only a magical double of the glorious body of a certain Buddha. Side by side with Śākyamuni there is an infinite number of such doubles, some Buddha-like (as Śākyamuni), some endowed with every sort of appearance. These magical creations are styled *nirmāṇakāyas*, 'contrived,' 'created,' or 'magical bodies.'

To sum up: a Buddha is a saint in whom we can, with the scalpel of dialectic, distinguish what Europeans call a 'soul'—a set of sublime *dharma*s, some of which are beneficial to himself (*svārtha*)—e.g., wisdom, meditations turned to *nirvāṇa*, some of which are beneficial to others (*parārtha*)—e.g., compassion and power corresponding to this compassion—and a 'body,' the fruit of his merits and former vows (*pranidhāna*), which sanctifies and ripens the blessed, while a number of magical appearances convert and save ordinary beings.

(2) An interpretation of the three bodies in terms of monism and immanence was very easy.

(a) The *dharma-kāya*—i.e. this set of *dharma*s that are the special *dharma*s of a Tathāgata—is realized in all the Tathāgatas. A Platonist would say that the Tathāgatas are so many copies of the *dharma-kāya*, that the *dharma-kāya* is an eternal essence which manifests itself in the Tathāgatas.

(β) The *sambhogakāya* depends on the *dharma-kāya*, as it is the fruit of the merit accumulated (*puṇyasambhāra*) by the future Buddha, this merit being in close relations with the accumulation of knowledge (*jñānasambhāra*) which results in the *dharma-kāya*. As a matter of fact, the *sambhoga-*

kāya is described in the *Tāntras*¹ as 'effluent from the *dharmadhātu*' (*'niṣyanda*), i.e. an 'emanation of the *dharmakāya*.'

(γ) The set of *dharma*s which characterize *bodhisattvas* as *bodhisattvas* and their visible bodies are, in the same way, imperfect copies of the bodies of a Buddha. The same process may be applied, *mutatis mutandis*, to every being. The *sambhogakāya* is described as the universal matrix, 'the place of origin of all beings' (*utpattisthāna*).²

Several scholars, among them D. T. Suzuki (pp. 61, 73, 231, 245, 255, 261), maintain that such an interpretation was the interpretation of the chiefs of the *Vijñānavādin* school, *Asaṅga*, *Asaṅga*, *Vasubandhu*, and they quote *sūtras* (*Avatamsaka*) which are supposed to embody it. The present writer believes that the only texts which are clear to this effect are *Tāntric* texts. But it would be a mistake to underestimate their value, as there are evidences of the antiquity of the pantheistic or theistic views (see art. *DOCTISM* (Buddhist)).

As observed above, the *tathāgatagarbha* and the 'pure thought' are very like an immanent unde-filed *dharmakāya*. *Asaṅga* states that there is not an *Ādibuddha* (see art. *ĀDIBUDDHA*), a primordial and eternal Buddha; every Buddha has been for a time a 'future Buddha' (*bodhisattva*) and, before becoming a future Buddha, was from the beginning an ordinary being. If Buddha is styled *svayambhū*, 'who exists by himself,' the meaning is that he has acquired, by himself, Buddhahood. But the refutation of the theory of a Buddha *per se* proves that such a theist theory had partisans. As a matter of fact, in the *Mahābhārata* (Wassilieff, p. 112) the Buddha is possessed of a pure self, of a permanent bliss, not of *nirvāṇa*.

For the theists, Buddha would be a Brāhmanic god. His *dharmakāya* (*Amitābha*) is a counterpart of Brahman; his *sambhogakāya* (*Amitāyus*) corresponds to Viṣṇu or to the celestial Kṛṣṇa; his magical apparitions (*Sākyamuni*, etc.) correspond to the *avatāras*.

Tāntrism (*mantrāyāna*, *vajrayāna*) is thoroughly immanentist and Śaivist. It is fond of *Mādhymika* formulas, and states, at every opportunity, that things are void. But voidness is the *ens realissimum*, is *ātman*, or *brahman*, and this *ātman* is styled *Vajrasattva*, a *Bhagavat* united to a *Bhagavatī* (= *śakti*). *Mantras* (formulas) and *vidhis* (rites) of different classes, especially erotic *vidhis*, quickly transform the devotee into *Vajrasattva*, or rather 'exteriorize' the *Vajrasattva*-nature that is immanent in every being, just as, in *Mahāyāna*, the practice of the 'perfect virtues' (*pāramitās*) develops the 'germ of a Buddha.'

Side by side with the doctrine of immanence, which is chiefly *Tāntric*, there are several forms of theism (monotheism and polytheism) coupled with doctrines of emanation. They may be styled Brāhmanic or Paurāṇic (*Svayambhū*-*purāṇa*, *Kārandavyūha*, *Mani bka bum*, etc.). Buddha is identified with Brahman; the 'magical bodies' with which he was credited in orthodox *Mahāyāna* are now living beings, born from the rays emitted from his body.

LITERATURE.—This is given throughout the article. See also P. Oltremare, *Les Variations de l'ontologie bouddhique: du phénomène au monisme*, Paris, 1916.

L. DE LA VALLÉE POUSSIN.

PHILOSOPHY (Chinese).—Although in philosophy the Chinese cannot vie with the great nations of thinkers—the Greeks, the Hindus, or the Germans—they may well be placed on a level with the Romans, and they surpass the Semitic peoples—the Arabs, Hebrews, and Persians. The Japanese are their disciples. We must bear in mind that they produced their philosophy almost entirely independently of alien influence. The Chinese always took more interest in practical

questions concerning the life and welfare of individuals and society than in purely theoretical ones, and in consequence developed fairly complete systems of ethics, whereas they did not advance far in metaphysics. Tradition, authority, and veneration of antiquity were so many chains and fetters impeding the flight of their speculative genius. They trusted too much in the wisdom of sages and worthies and too little in their own mental powers. Satisfied with the knowledge of their predecessors, which they did not dare to challenge, they imagined themselves to be in possession of the whole truth, and never thought of the many problems evolved in the West.

In the history of Chinese philosophy we can distinguish two distinct periods—ancient and modern—separated by an interval of stagnation. The former extends from remote antiquity to the 1st cent. of our era, comprising the *Chow* and the greater part of the *Han* dynasty; the latter begins in the 11th cent. and is known as the *Sung* philosophy, for it originated under the *Sung* dynasty and was carried on to the *Ming* epoch, when it stopped in the beginning of the 16th century. No further progress was made after the *Sung* philosophy had been more or less recognized as the official philosophy. Westerners are better informed on ancient Chinese philosophy than on the modern development of Chinese thought.

We find the first traces of philosophical speculations in the *Shu King*, especially in the chapter entitled 'Hung-fan.' The legendary emperor Yü is believed to have received it from heaven, and in 1122 B.C. the prince of Chi presented it to the founder of the *Chow* dynasty, Wu-wang. The language of this old document is very archaic, and it may well date from such an early time. During the 12th cent. B.C. the Chinese had already reached a certain height of civilization, and it is not surprising that the highest questions of human life should have presented themselves to their minds. The 'Hung-fan' deals with the five elements, the primary agencies of the universe, natural phenomena supposed to be connected with human fate, chronology based on the observation of the stars, the virtues and duties of the ruler, the various functions of government, and the different kinds of happiness and misfortune. In the short aphorisms of this treatise we have the germs of the later philosophy of nature, ethics, and political philosophy.

Another source of primitive Chinese philosophy is the *Yi King*, the chief text-book of divination, consisting of a series of hexagrams which have been explained in a fanciful way so as to yield a great variety of oracles. But it must be remembered that the passage usually quoted as containing the first reference to the cosmic dual forces, *yin* and *yang*, occurs in a late commentary ascribed to Tse-sse, the grandson of Confucius, not in the text. Nevertheless, it is probable that the dualistic theory of the *yin* and the *yang* was known before Confucius, at least its fundamental outlines. The dual forces precede the five elements, which are evolved from them. The *yang* is regarded as the bright, male, active, generative essence, the *yin* as the dark, female, passive, and receptive one. *Yang* is embodied in heaven and the celestial bodies, *yin* in earth with all her products. There is an interaction of both in thunder and lightning, in wind and rain, heat and cold, in the courses of the sun and the moon.

In ancient Chinese philosophy we have two distinct and opposed schools of thought, the one practical, realistic, and agnostic, the other idealistic and transcendental—Confucianism and Taoism. There are besides quite a number of independent philosophers, who hold views agreeing

¹ *Nāmasaṃgīti*, v. 79. ² *ibid.*, v. 60.

with neither the one nor the other of these schools, and whom we may denote as 'heterodox.' The preponderance of Confucianism is, however, so marked that, from a Chinese point of view, only Confucianism would be considered as orthodox philosophy, and Taoism would be heterodox. Foreigners do not accord this pre-eminence to Confucianism, and hold that both schools of thought have contributed equally to the formation of the Chinese mind.

1. **Confucianism.**—Confucianism may be called a philosophy or a religion, although it just lacks that part of religion which in our opinion is essential—metaphysics. Its founder, Confucius (551–479 B.C.), is neither a great philosopher nor a theorist in ethics, but a practical moralist who has impressed his countrymen by his personal character no less than by his common sense. He did not wish to propound new and original ideas, but to propagate those of the ancients, for whom he felt the greatest reverence, holding that his contemporaries had degenerated from the ideal state of civilization in primitive times. For this purpose he edited the old books supposed to contain the noble thoughts of former sages, which thus became the classical works of Chinese literature. As a teacher he inculcated practical wisdom, philosophizing with his disciples on all questions concerning the moral conduct of the individual and the good government of the State. His disciples took note of his characteristic utterances, which subsequently were published as the *Lun-yü*, or the *Confucian Analects*, and are our chief source of his teachings. He limits himself to ethics, refraining from all metaphysical speculations, in which he does not take the slightest interest. We do not know his reasons for this; he may have thought such speculations useless or transcending the human intellect. As regards popular beliefs and customs, he shows a benevolent neutrality. He advises his adherents to follow the old usages, sacrificing to the spirits and the souls of the departed as though they were present, and he believes in a superior being, whom he calls Heaven, and a just fate, but he positively declines to speak on supernatural things. It is not correct, therefore, to make Confucius responsible for the worship of nature—the old popular religion of China—and to call all these superstitious practices Confucianism. Confucius is merely concerned with ethical problems, as also is his follower, Mencius, and is utterly indifferent to all higher speculations, philosophical as well as religious.

The Confucian ethics are eudemonistic, for Confucius holds that by good actions one acquires happiness, whereas bad actions rouse the ire of heaven and bring down punishment on the guilty. In this respect he is a convinced optimist, in spite of all the unfortunate experiences which he underwent during his life. Man is in possession of a moral sense sometimes obscured by his passions, but he may overcome these by intelligence. Virtue is the *summum bonum* and the source of all happiness. It may be learned by study and self-culture. Every one should strive to become a *chün-tse*, a superior man who possesses the five cardinal virtues and all the accomplishments of a perfect gentleman. These five virtues are: benevolence, justice, decency, wisdom, and truthfulness. The cornerstone of Confucian ethics is filial piety (*q.v.*)—the love which children owe to their parents even beyond the grave, and on which is based ancestor-worship (*q.v.*). In close relation to this virtue is respect of seniors. Courage and loyalty to one's sovereign are likewise reputed virtues. For the sovereign, the parents, and the teacher one may eventually be obliged to sacrifice one's life. The five relations regulate the duties

between the different classes, which are: ruler and subject, father and son, older and younger brother, husband and wife, friend and friend. As a general principle applicable to all relations, Confucius established the Golden Rule: 'What you do not want done to yourself do not do to others' (*Anal.* xv. 23). That Confucius was not a narrow-minded nationalist may be gathered from his saying that 'All men between the four seas are brethren.' In politics Confucius advocates an enlightened despotism. Recent efforts of young Chinese to represent him as sponsor for republicanism have failed. The possibility of such an institution as democracy was not even thought of in his time. Confucius would have seen in it a subversion of all true relations. The prince has to work for the welfare of his people and to lead them to virtue by his good example. His subjects have to serve him and obey his commands. Government is not their business, but must be left to their ruler, who is appointed by heaven, and to his ministers. In strong contrast to Taoism, Confucius lays great emphasis on culture and study; even virtue can be learned.

In the *Great Learning*, a short ethico-political treatise ascribed to Tse-sse, the grandson of the sage, the self-culture of the individual has to start from an insight into the nature of things, followed by a study of ancient customs and literature. The individual thus having become cultivated, his whole family imitates him, and, when all clans and families are well ordered, the State is well governed. The ultimate aim is universal peace among all the nations.

The third classical text of Confucianism is the *Doctrine of the Mean*. The author, Tse-sse, first takes a somewhat higher flight, which in its wording at least savours a little of Taoism, describing the equilibrium of mind in its original state before its passions have been stirred. The rest of the book is in the less pretentious style of the *Analects*. See also artt. CONFUCIAN RELIGION, CONFUCIUS.

As Socrates found a Plato and Christ a Paul who explained and further developed the teachings of their masters, so Confucius found in Mencius (372–289 B.C.), the second sage, as he was called afterwards, his ablest exponent. In longer dialogues he defends Confucianism against the objections raised against it, with great dialectical skill and in a brilliant style, strongly contrasting by its vividness with the self-control and dispassionateness of his master. Mencius is a greater philosopher, a more profound thinker, and a better theorist than Confucius. He tries to deduct from general principles the conceptions which Confucius takes as given or self-evident. So he derives the four cardinal virtues—benevolence, justice, decency, and wisdom—from the feelings of compassion, shame, reverence, right and wrong. These virtues are innate in man, but he must preserve them by constant practice. Human nature is the gift of heaven, and therefore originally good, but it can be corrupted. Mencius himself originated a theory of passion-nature, dealing with human passions. His political views were much more democratic than those of Confucius. He ranked the sovereign below the people, and even admitted that a bad ruler might be assassinated by a 'minister of heaven.' See, further, art. MENCIUS.

With Mencius Confucianism was practically completed. Later Confucianists of the Han period, like Tung Chung-shu, Lu Chia, Chia I, Pan Ku, and Yang Hsiung, did not carry it much farther. For many centuries the question of the goodness or badness of human nature was hotly debated.

Hsün K'uang of the 3rd cent. B.C. held that the nature of man at his birth is evil, and that virtue is artificial, not natural. Otherwise he laid the

chief stress on the ceremonial side of Confucianism. He was of a practical and unimaginative turn of mind. Before Mencius was, so to speak, discovered by Chu Hsi, and raised to the rank of a sage, Hsün K'uang was on a level with Mencius in public estimation.

The philosopher Kao-tse, a contemporary of Mencius who quotes him, held that there is no difference between good and bad. Tung Chung-shu (2nd cent. B.C.) and Yang Hsiung (53 B.C.-A.D. 18) both assert that human nature is partly good and partly bad, and that the development in either direction depends upon environment.

2. Taoism.—Between Taoism and Confucianism there is the greatest possible contrast; they are, as it were, two different worlds. Whereas Confucianism teaches a practical morality, insisting on the different virtues, assigning to man his position in the family and the State, regulating his life in his diverse spheres by strict rules, and eschewing all speculations on the essence of things, Taoism turns away from this busy world, evincing a distinct ascetic tendency and endeavouring to grasp the primary cause of existence by intuition and mysticism. Hence it is not proper to maintain that both systems logically run together. A Confucianist may believe in the old philosophy of nature already in existence before the two schools were established, but this agreement does not remove the fundamental differences between the two rival philosophies, just as an idealist does not become a materialist by accepting the natural sciences based on materialistic principles. The Taoist writers themselves show their antagonism to the Confucian doctrine by their violent attacks on Confucius.

The Taoists claim the legendary emperor Huang-ti as the first advocate of their dogmas, and they often couple his name with that of Lao-tse. No sayings of Huang-ti are recorded, but it is not impossible that Taoist thought existed before Lao-tse, the founder of Taoism. Lao-tse is supposed to have been born in 604 B.C., so he would have preceded Confucius by half a century. The genuineness of his work, the *Tao-teh-king*, has been called in question by some sinologists, but on insufficient grounds. Many scholars regard Lao-tse's book as the most wonderful production of the Chinese mind; others hold that its value has been greatly exaggerated. Judgments will vary according as the critics themselves lean to pantheism and mysticism or are sober-minded and matter-of-fact. At all events the book seems to have a fascinating influence, which is shown by the fact that we have about fifteen or more translations, and they have not yet stopped. The best translations are those of Julien, Chalmers, von Strauss, and Legge.

Lao-tse's system is pure pantheism and mysticism, and is fully treated under the title MYSTICISM (Chinese).

The fundamental thoughts of Lao-tse were developed by later Taoist writers. The oldest of them is Lieh-tse, who lived in the 5th century. His existence has been denied by some sinologists, but it is well established by utterances of many ancient authors and by his work, which is much too original to be a later forgery. Lieh-tse is concerned with the philosophy of nature, and his doctrine has been characterized as naturalism. He regards nature as an eternal circle of growing and decaying caused by an occult force. Life and death alternate, but there is no absolute annihilation, no beginning and no end. Lieh-tse was aware of the so-called antinomies of time and space, and in contradistinction to Kant he holds that infinity alone is possible. All living beings, being created from the same primordial substance,

are nearly related, and there is no fundamental difference between man and animals. In a somewhat fantastical theory on the descent of man Lieh-tse gives a list of all our animal ancestors. He assumes an intuitive knowledge, independent of the senses, but the highest knowledge of *Tao* cannot be expressed by words. Through a concentration of will-power and a mystical community with *Tao* one may obtain magical forces, transcend the natural laws, and become an immortal.

Whereas Lieh-tse is chiefly interested in the philosophy of nature, Chuang-tse (3rd cent.) deals with the philosophy of mind. His writings are a mixture of mysticism and doubt, of seriousness and humour. He is as much a poet as a philosopher, a most ingenious thinker, more idealistic and abstruse than Lieh-tse, and consequently much harder to understand. According to Chuang-tse, our common judgments are wrong. A wise man discards all the contrasts based on sense-perception, even the difference between the perceiving subject and the perceived object. The ego and the world are one and the same. All contrasts are blended in *Tao*. This is what Chuang-tse calls the 'identity of contraries'—a theory scientifically developed in Schelling's philosophy of identity. If by mystical intuition the sage becomes one with *Tao*, he sees that a difference between subject and object does not exist. He severs himself from his own self and becomes a passive vessel of *Tao*, the mirror of the eternal. Knowing that *Tao* alone has real existence, he looks upon life as an empty semblance, as the phantasmagoria of a wild dream.

Han-fei-tse (3rd cent.) tried to utilize Taoist principles for the theory of government and the management of State affairs. His ideal is an irresponsible despotism. The ruler is not to act himself; he may enjoy the *wu-wei*, but he must have responsible organs to mete out rewards and punishments.

The work which goes under the name of Huainan-tse (2nd cent. B.C.), but perhaps was composed by Taoist adepts in his service, deals with the activities of the primary force and natural phenomena, and is our oldest source on Taoist cosmogony, astrology, and alchemy. In later Taoism these sciences are cultivated chiefly, and purely philosophic disquisitions are not much appreciated.

3. Heterodox philosophers.—During the latter part of the Chow dynasty there existed in China a very active literary spirit and many more schools of thought than Confucianism and Taoism, which alone survived and supplanted all the others. Of most of these heterodox philosophers only scanty remains are preserved, and it is difficult to know what their teachings really were.

Yang Chu (4th cent. B.C.) founded a school of pessimism and egoism. His bitterness is the result of the miseries of life, which in his opinion by far outweigh its charms. This world, where the virtuous are unhappy and the wicked thrive, cannot be governed by any higher ethical principle. Man should not strive for unattainable ethical ideals, thus losing the little enjoyment left him, but should live in accordance with his nature, making the best of his poor existence. He may help his fellow-creatures, but not to the excess of self-sacrifice, since his own sufferings are already hard enough. Yang Chu teaches the Horatian 'Carpe diem,' but, like Epicurus, deprecates all excesses and advises moderation and equanimity.

Mê Ti (4th and 5th cent. B.C.) was the counterpart of Yang Chu, an extreme altruist and optimist. He admitted the evils of the world, but held that their root was the want of love and sympathy for one's neighbours. Universal love

and self-sacrifice would cause all the calamities to disappear and re-organize society. Mè Ti attacks aggressive wars with the same arguments as are used by the pacifists of our time. The argumentation throughout his work, which has come down to us, is logical and well to the point. Owing to this doctrine of universal love, Mè Ti has been designated 'the Christ of China.' Like Yang Chu, he was vigorously condemned by Mencius, who feared that this doctrine would loosen the family ties, Confucianism according more love and sympathy to blood-relations than to strangers. Mè Ti favours equality of all citizens, and shows socialistic tendencies. He objects to luxury and extravagance, especially as often shown in funerals, and recommends economy. Rejecting the theory of a predetermined fate, he has a strong faith in the just rule of gods and spirits rewarding good actions and punishing bad. The school of Mè Ti split into three branches, but we do not know anything more about them.

Another school of thought that flourished between the 6th and 4th centuries B.C. was that of the dialecticians, or logicians, if we may use this term. The Chinese never have developed a complete science of logic, but we find some germs from which it might have been evolved. Yin Wên-tse (4th cent. B.C.) made some investigations on the parts of speech and their logical functions. With the dialecticians (*ming-chia*) the Chinese class the sophists (*pien-shih*). They are famous for their love of argument and for their strange sayings or paradoxes, which, however, hide deep truths. The earliest seems to be Têng Hsi (6th cent. B.C.), whose paradoxes do not differ much from those of the Taoists. He professes a peculiar theory of knowledge: instead of using one's own senses, one ought to see with the world-eye, to hear with the world-ear, and to think with the world-intellect—i.e., a mystical knowledge should be acquired by a complete identification of one's self with *Tao*, or the absolute.

The sophist Hui Shih (4th cent.) is known to us from Chuang-tse, who frequently disputed with him and speaks of him with great respect. Hui Shih must have been a prolific writer: his works are said to have filled several carts; it is the more to be regretted that a number of paradoxes recorded by Chuang-tse are all that we know of his work. From these aphorisms it appears that Hui Shih denies the reality of time and space, and attempts to dissolve all contraries. His starting-point, however, is not *Tao*, but the infinitely small and the infinitely great, from which Zeno and many other idealistic philosophers have tried to disprove the reality of our world.

We can form a fairly good idea of how Chinese sophists would argue from the few chapters of Kung-sun Lung (3rd cent. B.C.) which are still extant. In question and answer, thesis and anti-thesis, he proves that a white horse is no horse. His treatise on the 'hard and white' touches an important question of the theory of knowledge. He holds that the qualities of things, such as hard and white, have only an intermittent existence. When not perceived by us, they are in abeyance, they separate, or hide.

The last great thinker of the early epoch of Chinese philosophy is Wang Ch'ung (A.D. 27-97), who far surpasses Confucius and Mencius as a metaphysician. He regards himself as a Confucianist, but the Chinese usually take him for an eclectic, and we shall not be far wrong in calling him the greatest Chinese sceptical philosopher. He shows his scepticism and brilliant critical genius in exposing the errors and superstitions of his countrymen. His own philosophy is a kind of materialistic monism akin to that of Epicurus and

Lucretius. In his system the *yin* and *yang* are material substances, as water and fire. Their movements are spontaneous, subject to certain laws, but there is no intelligence, no superior being holding the universe in his sway. The *yin* forms the human body, the *yang* the soul. At death they are scattered again. The human soul is no more immortal than that of animals. Many reasons are given against the belief in immortality. Nevertheless, Wang Ch'ung believes in ghosts and demons as an effluence of the fiery *yang* fluid, and in other portents and omens produced in a natural way. He still clings to fate and predestination, but he has materialized fate, regarding it as a quantity of the original heavenly fluid with which man is imbued at his birth. Wang Ch'ung is much more critical and scientific than other Chinese philosophers, and, as far as possible, bases his arguments on experience.

From the time of Wang Ch'ung Chinese philosophy was in a state of torpor for nearly a millennium. Some philosophical books were written, but the writers contented themselves chiefly with expanding and commenting upon older works. It was the age of commentators, devoid of new and original ideas. Independent thought was smothered by the authority of Confucianism, which passed for the acme of wisdom, and which nobody dared to oppose. At last a new impetus was given to mental philosophy in the 11th cent. A.D. by the Sung philosophers.

4. Sung philosophy.—Chou Lien-ch'i (1017-73) was the first to revive the study of the philosophy of nature. Taking the commentaries of the *Yi King* as a basis, he wrote a very short monograph on the primary cause or the first principle, *t'ai-chi*, from which *yin* and *yang* were evolved, which produced the universe. Chou Lien-ch'i's ethics are quite Confucian, whence this whole school has been denoted as Neo-Confucianism. Chang Ming-tao and the two brothers, Ch'êng Hao and Ch'êng I, followed in the same line of thought, but were eclipsed by a pupil of Ch'êng Hao, Chu Hsi (1130-1200), the most illustrious of the Sung philosophers.

Chu Hsi began his work as a commentator. His commentaries on the four classics are excellent, and enjoy almost as much fame as the old texts themselves. His annotations on the writings of his four predecessors became the nucleus of his own metaphysical productions. He did not make a systematic digest of his system, but his disciples were in the habit of noting down the conversations that they had with their master, and Chu Hsi himself wrote innumerable letters to his friends and pupils, in which he discusses philosophical questions, replying to their inquiries, setting doubts at rest, or refuting objections. From these notes and letters we gather the impression that there was an active philosophical life in China during the Sung dynasty similar to that of the Greek philosophical schools. It was only after the death of Chu Hsi that all these notes and letters were collected and published. In 1713 all the philosophical writings of Chu Hsi were revised and systematically arranged by order of the Manchu emperor K'ang Hsi.

Chu Hsi's philosophy is dualistic and has been compared with Cartesianism. He supposes two fundamental principles, matter (*ch'i*) and reason (*li*), of which the latter takes precedence. They were already united in the primary cause or the absolute, from which the *yin* and *yang* and the whole universe were evolved. Wang Ch'ung knows but one materialistic principle; Chu Hsi acknowledges a spiritualistic one too. It produces life and the human mind, at least its superior part, intelligence. Death causes a dissolution of

the body and the mind, the one returning to earth, the other to heaven, whence they came. Immortality is out of the question.

This philosophy is known by the name *hsing-li*, 'human nature and reason.' It found so many adherents that in 1415 the third emperor of the Ming dynasty could make a collection of the principal writings of this character—a systematic digest embracing the works of 120 scholars. It is a complete philosophical encyclopædia with the following sections: cosmogony, spiritual powers, metaphysics, first principles, sages, literati, education, philosophers, successive generations, principles of rule, principles of government, poetry, and literature. This somewhat unwieldy compilation was revised in the 18th cent. by an imperial commission and abridged. The new publication may be regarded as a handbook of the official philosophy of China. It is Confucianism as interpreted by Chu Hsi and supplemented with metaphysics, in which the original system was deficient.

5. **Opposition to the Sung philosophy.**—The authority of Chu Hsi did not remain unchallenged. His opponents averred that he had misunderstood and misinterpreted the Confucian classics. Lu Chiu-yüan (1140–92) opposed him on the ground that Chu Hsi had exaggerated the importance of education from without and mere learning, and that the rectification of the heart was the chief thing. Self-cultivation and subjective education were alone essential. It must be admitted that Chu Hsi's highly-developed metaphysical system is alien to primitive Confucianism, which is only ethical.

The dispute went on, some scholars taking the side of Chu Hsi, others opposing him, others again endeavouring to reconcile the two conflicting views. Among all the antagonists of Chu Hsi, Wang Yang-ming (A.D. 1472–1528) is the most successful. He holds that the great learning of Chu Hsi is of no use, that he merely explains the words of the classical texts, but misses the meaning. His own purely idealistic philosophy is founded on the original nature of man as described in the *Doctrine of the Mean*. He vindicates for man a sort of intuitive faculty which may be obscured temporarily by passions, but is always there. It is the source of all knowledge, for it creates the external things and thus resembles the absolute of modern philosophy.

Both Chu Hsi and Wang Yang-ming were acquainted with Buddhist thought and to some extent were influenced by it. Their writings are much studied in Japan, where they became the heads of two rival schools of philosophy.

With Wang Yang-ming the productivity of Chinese philosophy again ceases, and it is passing once more through an ebb-tide at present. Signs of another renaissance, however, are not wanting. In recent years the Chinese have become interested in European philosophy, and it is to be expected that the many new ideas derived from this source will prove to them a stimulus to original research.

PHILOSOPHY (Egyptian).—I. The tradition.

—The Greek writers, from Homer and Herodotus downwards, are almost unanimous in their praise of the wisdom of the Egyptians, thereby perpetuating a firmly-rooted opinion of which far earlier testimony may be found in the Hebrew literature. At first, it is true, this wisdom is of a very ill-defined quality; in the book of Kings (1 K 4³⁰) it means proverbial lore, while to Homer (*Od.* iv. 229–232) it signifies skill in medicine. In later times, however, it becomes increasingly clear that what is meant is not merely mental attainments of a superficial and practical kind, but the possession of profound philosophical views. We have the authority of such writers as Diodorus, Plutarch, and Strabo for the fact that eminent Hellenic philosophers and statesmen like Solon, Thales, Pythagoras, Democritus of Abdera, and Plato sat at the feet of Egyptian priestly teachers, some of whose names have been handed down (conveniently collected in G. Parthey's ed. of Plutarch, *de Iside et Osiride*, Berlin, 1850, pp. 182–186); and in the works of Plutarch and Iamblichus we find many philosophical explanations that are attributed to the priests of Heliopolis, Thebes, and Sais.

2. **The native evidence.**—The study of the hieroglyphic literature cannot fail to dissipate completely this cherished illusion concerning the profundity of the Egyptian philosophy, though it must not be denied that the surviving evidence is exceedingly scanty and one-sided. To take an instance from a quite different sphere, it is known for certain that the Egyptians codified their laws; and yet not one scrap of a law-book has come down to us. Why, then, it may be asked, is it not justifiable to suppose that the Egyptians did possess profound philosophical systems, of which the written record, if ever there was any, is now lost? This supposition, it may not unreasonably be argued, is required to explain the Greek tradition.

No hypothesis of this kind is likely to win much support from hieroglyphic students, for, judged by Greek standards, the texts which we possess cannot conceivably be placed on any very high level. Most scholars would agree with the verdict that the Egyptians show no real love of truth, no desire to probe into the inner nature of things. Their minds were otherwise oriented: a highly gifted people, exhibiting talent in almost every direction, their bent was towards material prosperity and artistic enjoyment; contemplation and thought for their own sake—necessities to the peoples of Greece and India—were alien to the temperament of the Egyptians. Plato once liberates himself from the prevailing tradition to say, with much truth, that love of knowledge was the characteristic of the Hellenes, while the characteristic of the Phoenicians and Egyptians was the love of wealth (*Rep.* iv. 436).

This generalization, of course, is merely comparative; the Egyptians possessed a didactic

literature, which no doubt satisfied the same kind of need in Egypt as the works of the Greek philosophers and scientific men did in Greece; but it never rises above the immediate requirements of everyday life. There is nothing earlier than the Middle Kingdom; but from that period onward we possess books of maxims and counsels addressed by aged Pharaohs to their successors (*The Instruction of Amenemmes*, *The Instruction of Akhtot*), advice to magistrates about to take office (*The Installation of the Vizier Rekhmerê*), more general books of precepts (*The Instruction of Ptahhotpe*, *The Maxims of Any*), praise of the scribe's vocation, based on disparaging descriptions of other professions, books on medicine and mathematics, and lists of words classified according to sense. There are poems of sceptical tendency, dwelling on the brevity of life, and exhorting men to eat and drink, for they must soon die; and poems of opposite tendency, exalting death and the west, where deliverance from suffering may be found. One class of composition bears a superficial resemblance to the Platonic dialogues: a short narrative introduces a certain situation, the problem of which is then treated in rhetorical speeches. Among these are the conversation between a misanthrope and his soul on the value of life, the reflexions of a robbed peasant on human injustice, and the admonishments addressed by a sage to a lax king reigning over a ruined Egypt. None of these writings inspires us with a very great respect for Egyptian profundity of thought, though they display a certain practical perspicacity and worldly wisdom. Above all, they have often considerable poetical merit. In a word, they are to be compared with the Wisdom literature of the Hebrews, though they cannot be said to rise to the same heights of grandeur and spirituality.

The religious literature of Egypt shows a stronger leaning to speculation than the secular works, due to a confusion of contradictory myths and attributions which must have been intolerable to the more learned priests. Cosmogony has the same purpose as philosophy—an explanation of the universe; and in Egypt it might, under more favourable circumstances, have resulted in true philosophy. We have one exceptional inscription from Memphis, the late copy of a very early document, in which Ptah appears as All-creator: out of him arose Horus as 'heart' or 'understanding' and Thôth as 'tongue' or 'speech'; and from the interaction of these two, explained in some detail and with some subtlety, all things came into existence. This account has been recently shown to be only the variant of the old Heliopolitan dogma that received Atûm, the sun-god, as the Creator, aided by Hû, 'commanding utterance,' and Sia, 'understanding'—deities who were emanations of himself (see art. PERSONIFICATION [Egyptian], §(b) 3f.). Again, sporadic passages in the texts identify Osiris with water or vegetation, Seth with evil, Rê with light, and so forth; these rationalizations might, in more systematic hands, have become stepping-stones towards a philosophy like that of earlier Ionia.

About the year 1375 B.C. a religious revolution took place which completely contradicts all that has been said above concerning the Egyptian temperament, and which, unless the baseless theory that it was due to foreign influence prove true, can only be ascribed to the individual genius of a very exceptional man. Akhnaton, as he called himself later, was the son of Amenophis III., one of the most powerful of the Pharaohs, and of Queen Tiye, the daughter of a priest; his portraits represent him with an abnormally-shaped head on a deformed, emaciated body, whence some have imagined that he may have been an epileptic.

Already in the time of Amenophis III. we can detect a growing reverence for the sun as a celestial body, distinct from the traditional sun-god Rê-Atûm of Heliopolis; nor is it impossible, as J. H. Breasted has suggested, that the extension of the Egyptian rule both in Syria and in Nubia may have made felt the need of such a universal, omnipotent deity. Be this as it may, the propagation of the new cult was due to the fervour of the young king Akhnaton; not long after the beginning of his reign he broke completely away from the faith of his forefathers, forbade the worship of any other god than Aton, the solar disk, changed his name from Amenophis to Akhnaton ('pleasing to the Aton'), and moved his capital from Thebes, the town of the hated but powerful deity Amûn, to a new site near the modern village of Amarna in Middle Egypt. The suppression of all other gods thus created an exclusive monotheism, but the new religion was far more than the mere exaltation of the old sun-god in the place of a complex pantheon. Though temple-worship and certain externals of the old rituals persisted, the anthropomorphic form of the god was replaced by a mere symbol representing the ball of the sun spreading its rays, which are furnished with hands, in all directions; in the magnificent hymns addressed to the Aton all mythological traits are given up, and deep emphasis is laid on the life-giving attributes of light and warmth, to which all creation and all existence are ascribed. The intellectual character of the new faith is indicated by the name Sbôye, 'the doctrine'; never, perhaps, in the world's history, except in the French Revolution, has so radical an attempt been made to enthrone a philosophy in the place of religion. But the time was far from ripe, and 'the doctrine' barely survived its author; a generation later Theban Amûn is again all-powerful, and Egyptian religion has reverted to its traditional groove.

The Ramessid dynasties show no new rationalistic developments; the Theban priesthood grows steadily in power, and theology appears to submerge all secular interests. About 1100 B.C. the high priests of Amûn wrest the temporal power from the feeble hands of the Pharaohs, and under their weak rule is prepared a series of foreign invasions. At last Egypt becomes united again under a dynasty from Sais (XXVIth dynasty, 663–525 B.C.); this is a period of revival, when the art, the religion, and the political organization of the Old Kingdom are consciously copied, with little or no sign of innovation. Then comes the period of the Persian rule, followed by a momentary flickering up of the old native culture; after which Egypt passes under the sway of Alexander and his successors, when new intellectual influences are brought to bear on her.

Thus there was little scope, in the last centuries of Pharaonic rule, for the development of more truly philosophical standpoints. On the other hand, there are ample traces of a growing mystical tendency, due no doubt to the desperate difficulty felt by the exponents of so irrational a religion in keeping a hold on the popular faith. Enigmatic writing, increased symbolism, and the recrudescence of early animal cults are symptoms of the times; all these must have tended to enhance the awe with which the priests were regarded.

3. Explanation of the tradition.—The Greek tradition as to the wisdom of the Egyptians has its roots in the very real cultural achievements of that people in early times, coupled with the glamour of a high antiquity. Though our authorities for the facts may not be very trustworthy, it is quite possible that a number of Greek men of note went to Egypt and studied there. They could hardly fail to learn much, but what they

learned was less philosophy than the materials out of which philosophies could be constructed. The Egyptian religion, in particular, commanded the admiration of the Greeks, who mistook its crudities for disguised truths and its contradictions for paradoxes expressive of a deeper harmony. The wisdom of the Egyptians was mainly the wisdom of the Greeks read into the Egyptian myths. It has been truly remarked that, when the eclectic Plutarch discusses the character of the Egyptian gods, this agrees miraculously with the philosophy of Plutarch, and, when it is the Neo-Platonic writer Iamblichus, his account accords strangely with the philosophic outlook of Iamblichus. It is highly probable that the best-educated Egyptian priests of the Ptolemaic and Roman periods were imbued with Greek ideas, and imported these into the interpretation of their inherited religion. Thus Manetho (*q.v.*), who wrote a book in Greek about Egyptian religion (the *ἱερὰ βιβλία*), was, according to Plutarch (*de Is. et Osir.* 28), actually consulted by the first Ptolemy about matters connected with the introduction of the new god Sarapis. The introduction of this god was clearly an astute political move, an attempt to weld together Greek and Egyptian in a common worship; the outward appearance of Sarapis was entrusted to the skill of the celebrated Athenian sculptor Bryaxis, and similarly, it would appear, the determination of his spiritual characteristics was settled in co-operation by Manetho and Timotheos, a Eumolpid of Eleusis. About 300 years later the sacred scribe Chærëmon, an Egyptian, became the tutor of Nero; he wrote much on Egyptian topics, and is known to have been a Stoic.

The evidence that philosophy ever became, even in the Græco-Roman period, a characteristic attainment of the Egyptian priests is very slight. Clement of Alexandria, quoting from an apparently trustworthy source, quotes 42 books of Hermes, which, he says, were absolutely necessary to the training of the priests, and comprise 'all the philosophy of the Egyptians' (*Strom.* bk. vi. ch. iv.); among these are hymns and rituals, astrological, medical, and scientific books, and also works relating to the laws and the gods; there is nothing to indicate that they differed in their intellectual level from the books that have come down to us from this time in hieratic and demotic. In the temple of Edfu an inventory of the library is written upon the walls (see H. Brugsch, *Aegyptologie*, Leipzig, 1897, pp. 156-158), and proves even more disillusioning; most of the books named are magical treatises, together with a few rituals, catalogues, and astronomical books. The temple walls at this period are covered with masses of inscriptions, hymns, mythological matter, lists of places, lists of festivals, lists of temple property—nothing indicating a departure from earlier custom; indeed, the language of many of the texts suggests that they are transcriptions or adaptations of books dating from the New Kingdom.

4. Conclusion.—The depreciatory view of Egyptian intellectual achievement taken in this article has been imposed by the exaggerations of Greek tradition and the unfounded claims which modern occultism has based upon it. But for these, the luxury of a more sympathetic appreciation might have been permitted us. The proper standards of comparison are Babylonia and early Syria; here Egypt can hold her own. It is true that Babylon displays more method, more accuracy, more purely intellectual preoccupation; but she lacks the poetry and the artistic genius of ancient Egypt, and, in the sphere of religion, she has no such momentous event to record as the reform of Akhnaton.

LITERATURE.—For the tradition and criticism of it see W. Otto, *Priester und Tempel im hellenistischen Ägypten*, Leipzig, 1908, ii. 209-238; F. Cumont, *Les Religions orientales dans le paganisme romain*, Paris, 1909, ch. iv. For the native literature, besides more general works, see esp. J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York, 1912.

ALAN H. GARDINER.

PHILOSOPHY (Greek).—The drift of the pre-Socratic philosophies of nature was towards rationalism, positivism, and the mechanical explanation of the universe. They sought to replace anthropomorphic gods by material causes. They asked, as Grote would put it, not 'Who rains?' but, 'What is the cause of the precipitation of moisture?' The principle, 'Naught can come from or return to naught,' rigidly applied, excluded direct divine intervention. And the physician Hippocrates speaks in the spirit of this early 'positivism' when he objects to the term 'sacred malady' on the ground that all diseases are equally 'divine.' The open avowal of agnosticism or atheism, however, was reserved for the more forward disciples of the age of the 'sophistic enlightenment.' The chief pre-Socratics seem to have left room for the gods in their mechanical constructions, or at least to have 'accommodated' their language to popular religion. The saying, 'All things are full of gods,' is attributed to Thales (Aristotle, *de Anima*, 411^a 8; cf. Plato, *Laws*, 899 B), and Cicero (*de Nat. Deor.* i. 25), doubtless wrongly, ascribes to him the doctrine that God is the mind which fashions the world out of water. Cicero and the doxographers, indeed, make gods of the first principles of all the pre-Socratics. For them the successive worlds that issue from Anaximander's infinite are gods, and likewise the *aer* of Anaximenes, the fiery *corona* of Parmenides, and the reason (*voûs*) of Anaxagoras.

The name of Pythagoras (*q.v.*) is for us a mere symbol, standing in its higher interpretation for the ideas of immortality, metempsychosis, and the systematic, ascetic cultivation within the soul of an order, harmony, and purity, corresponding to the like qualities in nature and God, while to the populace it signifies mysticism, thaumaturgy, and the survival of primitive prescriptions and tabus in respect of food, dress, and the conduct of life. We know little or nothing of pre-Platonic Pythagoreanism beyond the allusions in Heraclitus and Xenophanes, and the undeniable influence of Pythagorean ideas upon Plato. But the subject has been hopelessly confused by the forged literature and tradition that attribute to Pythagoras himself all Platonic developments of possible Pythagorean suggestions.

The philosophic poet and satirist Xenophanes of Colophon is the first to assail popular anthropomorphism directly (J. Freudenthal, *Ueber die Theologie des Xenophanes*, Breslau, 1886). He will hear nothing of the mythological 'fictions of former men,' which are no fit theme of rational discourse:

'If horses and oxen had hands to carve and paint, they would represent their gods in equine or bovine shapes' (Diels, *Die Fragmente der Vorsokratiker*, i. 60). 'Homer and Hesiod have attributed to the gods all acts that are a disgrace and reproach among men—to steal, to commit adultery, and deceive one another' (ib. p. 59 f.).

With seeming verbal inconsistency he proclaims 'one god supreme among gods and men,' whom he describes in language that wavers between monotheism and pantheism. This deity may be variously conceived as the world, the unity of 'being,' or a monotheistic idealization of Zeus. Strictly speaking, it is impossible to reconcile, either in Xenophanes or in his successor Parmenides, the Eleatic pantheism and abstract monism with the retention of mythological language or the recognition of gods. But Parmenides' poem, like

Shelley's *Queen Mab*, begins with an imaginative flight through space under the guidance of a goddess. He speaks of love as first-born of the gods (cf. Hesiod), places at the centre a daemon who governs or guides all things, and, according to Cicero, gives the name of 'God' to the *corona* of fire that girds the heavens (*de Nat. Deor.* i. 11). See, further, IONIC PHILOSOPHY, vol. vii. p. 417 f.

The pregnant rhetoric of Heraclitus (*q.v.*) stimulates the modern imagination to the most varied interpretations. The third book of his work on nature is said by Diogenes Laertius to have dealt with 'theology.' He celebrates the eternal process, law or reason (*λόγος*). He describes God in pantheistic Emersonian antitheses as the identity of contraries (*Diels*², i. 90 ff., frag. 67). He contrasts the relativity and weakness of man with the divine to which all things are always fair and good (*ib.* frag. 102). He personifies eternity (*αἰών*) as a child playing at draughts with the world (*ib.* 52). He declares that the eternal wisdom is willing and unwilling to be called by the name of Zeus (*ib.* 32). Sprung from a priestly family and depositing his book in the temple of Artemis, he speaks with respect of the Delphic Apollo (*ib.* 93) and the Sibyl, whose enigmatic style resembles his own (*ib.* 92). But, without attacking anthropomorphism in the uncompromising spirit of Xenophanes, he fiercely denounces the ceremonial purification of sin by the blood of victims (*ib.* 5), and the orgiastic rites of the new Asiatic Dionysiac cults (*ib.* 15). And he expresses infinite scorn for the false teachers Hesiod, Pythagoras, Xenophanes, and Hecataeus (*ib.* 40, 57).

Empedocles (*q.v.*), as a philosophic poet, deified the four elements, the cosmic forces love and strife, and many other personified abstractions. His chief divinity seems to be the Sphaeros, or globular unity of the elements, from which all things are evolved, and which the Neo-Platonists accepted as a symbol of the absolute One. Some fine lines on the spiritual nature of the godhead, however, are referred by our sources to Apollo (*Diels*², i. 274, frag. 134). In his character of medicine-man, hierophant, and Pythagorean mystic, he taught doctrines of thaumaturgy, metempsychosis, and ceremonial purification, the compatibility of which with his philosophic system cannot be made out from the fragments.

The atomic philosophy of Democritus (*q.v.*) leaves no place for the concrete supernatural, and his explanation of the origin of religion in misunderstood allegory or in primitive man's fear of the thunder and the storm (*Diels*², ii. 30, frag. 75 f.) presupposes the unreality of the popular gods. Conventional references in the ethical fragments to God and the divine and to the love of the gods for just men are of no significance (*ib.* frags. 175, 217). More difficult to understand is the doctrine attributed to him of daemons or real aerial beings, beneficent and maleficent, long-lived but not immortal, from whom emanate images that penetrate the minds of men (*ib.* frag. 166). 'Telepathy' could as easily be explained by the atoms then as it can by the analogy of wireless telegraphy to-day. And it may be that Democritus, unable to reject the evidence for supernatural visions and prophetic dreams, invented this way of reconciling them with the atomic physics and psychology. Lucian (*Philopseudes*, 32), however, praises Democritus as the thinker whose adamantine faith in natural law rejects *a priori* the possibility of supernatural apparitions. And it is extremely probable that our authorities have given a superstitious colouring to some purely psychological theory of casual combinations of atoms finding their way into the mind. The interpretation of the prayer 'to meet with propitious visions' is

doubtful. In any case Democritus' daemons must not be confounded with the Epicurean gods who inhabit the interspaces of the worlds.

In contrast to these 'random speakers,' Aristotle (*Met.* 984^b 15) praises as the first sober utterance the proclamation of Anaxagoras (*q.v.*) that *vous*, or reason, originally set in motion and reduced to order the indefinite homogeneity of chaos. But he concurs with Plato (*Phaedo*, 98 f.) in the criticism that Anaxagoras failed to deduce the teleological applications of this principle and continued to explain all things by mere mechanism. In spite of this, attempts have been made to refer directly or indirectly to Anaxagoras the arguments from design attributed to Socrates in Xenophon's *Memorabilia* (F. Dümmler, *Akademika*, Giessen, 1889, sect. vi.). However this may be, the Athenian jurors who voted for the exile or death of Pericles' philosophic friend saw in him the representative of atheistic science which dethroned Helios and Selene and pronounced the sun merely a red-hot stone. And Plato, both in the *Apology* (26 D) and in the *Laws* (967 C), makes regrettable concessions to this prejudice.

In the loss of the writings of the sophists, we cannot reconstruct in detail the history of the 5th cent. enlightenment. But from Euripides, Aristophanes, Thucydides, and Plato it is amply apparent that all the ideas and tendencies of what we call an 'age of transition' were present.

The national and local festivals, cults, shrines, and oracles, the religion of the dead, and the worship of heroes still retained their hold upon the people. The immense place occupied by these things in the history of Herodotus may be held to indicate that the crisis of the Persian wars temporarily stimulated the popular faith in the supernatural. But the mythology of Homer and Hesiod was no longer credible to educated men. It offended the developed ethical sense of the pious. It had never really met the needs of personal and emotional religion. In response to this need the 6th cent. had witnessed, side by side with the development of philosophic rationalism in Ionia, a revival or new birth of mysticism and enthusiasm associated with the names of Orpheus, Musaeus, and Pythagoras, and the union in the Eleusinian mysteries of the worship of Demeter and Dionysus (cf. J. E. Harrison, *Prolegomena to Greek Religion*, p. 646 ff.). Modern critics style this movement a recrudescence of superstition or a spiritual awakening according as they are swayed by distaste for its irrational accompaniments or by sympathy for the underlying conceptions of salvation from sin, reconciliation with God through dramatized and emotional forms of worship, and faith in the revelation of a judgment after death.

The criticism of its fragmentary and doubtfully authentic literary remains must be left to the philological specialist (see *Diels*², ii. 163 ff.; E. Abel, *Orphica*, Leipzig, 1885; E. W. Maas, *Orpheus*, Munich, 1895; Rohde, *Psyche*; Harrison, *Prolegomena*², p. 455 ff.).

The great extant poets of the first half of the 5th cent. are neither philosophical rationalists nor corybantic revivalists; they are conservative reformers. Their endeavour is to preserve and purify the essential spirit of reverence and religion rather than either to encourage or satirize superstition, or to display their ingenuity in the attack or the defence of the mythological letter. This is the temper of Pindar, Aeschylus, Sophocles, and Simonides, whom Gomperz (*Greek Thinkers*, Eng. tr., ii. 13) therefore calls 'trimmers' and Matthew Arnold 'prophets of the imaginative reason.' In the next generation, more consciously and philosophically, this is the temper of Plato.

Meanwhile the 'enlightenment' proceeds, de

veloping every shade of critical and sceptical opinion. The chorus of Æschylus' *Agamemnon* (370) barely alludes to one who denied that the 'gods deigned to regard those by whom the sanctities of holy things were trodden under foot,' and the confident free-thinking of Sophocles' *Jocasta* seems to heighten, if not to motivate, the dramatic irony of the *dénouement*. But the disputatious personages of Euripides have all received the new education and, with little regard to dramatic verisimilitude or unity of æsthetic and religious impression, they bandy like shuttlecocks all the ideas which the philosophers, the mystics, or the sophists had put in circulation (P. Décharme, *Euripide et l'esprit de son théâtre*, Paris, 1893; A. W. Verrall, *Euripides the Rationalist*, Cambridge, 1895).

It is superfluous to demonstrate, after Grote, that the sophists (*q.v.*) were not a school of professed atheists, or that they often used conventional and edifying language about the gods. It is enough to observe that the general effect of their teaching was to unsettle the old bases of moral and religious conviction, while putting nothing in their place (Plato, *Rep.* 538 f.).

This was the practical outcome both of their philosophy of relativity and of a higher education devoted wholly to rhetoric and the plausible exploitation of opinion (H. von Arnim, *Dio*, Berlin, 1893-96, *Introd.*). In recognizing this fact and the reaction which it provoked in Plato, we need not apologize for their persecution by Athenian orthodoxy, or deny that their writings, if we possessed them, might reveal the elements of a constructive treatment of ethics and law on a purely scientific and positive basis. In fact, we have only fragments, titles, and conjectures. A treatise of Protagoras began with the words: 'Of the gods I cannot know that they are or that they are not' (Diels³, ii. 229). Tradition adds that the book was burned and the author exiled; and a fragment of Euripides' *Palamedes*, sometimes uncritically referred to Socrates, has been plausibly interpreted as an allusion to Protagoras (Gomperz, i. 440). In the Platonic dialogue which bears his name, however, Protagoras represents justice as the gift of Zeus to mankind, and says that man by reason of his divine kinship is the only animal who knows and worships gods. From this Gomperz (i. 449) infers that he doubted not the existence of the gods, but the alleged proofs of it. Similarly Prodicus, who speaks with edification of the gods in the apologue of the *Choice of Hercules*, attributed to him by Xenophon, is credited with a purely rationalistic theory of the origin of religion. Men personified and deified all that helped and hindered them (Diels³, ii. 274). From this it is but a step to the doctrine of Critias expounded in a fragment of the *Sisyphus* (Diels³, ii. 320). Religion is the invention of a prudent statesman who, perceiving that law restrains men only from open wrongdoing, devised the idea of gods who know our inmost thoughts and purposes. And in a similar vein a chorus of Euripides, while expressing scant faith in miracles, adds:

'But dreadful myths are conducive to the worship of the gods' (*Electra*, 743 f.).

'The younger wits teach,' says Plato, in effect (*Laws*, 889), 'that religion, ethics and law are late products of convention and do not belong to the nature of things.'

Law so analyzed ceases to coerce. The history of Thucydides exhibits naked human nature demoralized by war and pestilence and incoercible by any restraints human or divine. The intellectualism of the author views with cold contempt all appeals from the calculus of political forces to invisible and ideal realities. Or at any rate he represents this hard positivism as the prevailing temper of the age, and so prepares us to understand

the intensity of the reaction in Plato (see P. Shorey, 'Implicit Ethics and Psychology of Thucydides,' *Trans. of the American Philological Association*, 1893).

Of the religion of Socrates (*q.v.*) we know nothing except that he was condemned to die for corrupting the youth and introducing new gods, that he acknowledged the guidance of a familiar divine voice or inward monitor, and that by the testimony of Xenophon and Plato he worshipped the gods according to the law of the city and approved the consultation of the oracles in matters beyond the scope of human foresight. Xenophon's account is coloured by his apologetic purpose, and attributes to Socrates his own favourite beliefs and somewhat old-fashioned religiosity. The *δαίμωνιον* is a positive private oracle available for the practical concerns of friends, and not, as in Plato, the negative check of an inner spiritual tact. Socrates not only repudiates, as he does in the Platonic *Apology*, special doctrines of Anaxagoras, but holds that prying into the secrets of nature is offensive to the gods. And he elaborates the evidences of design in the cosmos and in the body of man, in discourses the details of which Xenophon may have transcribed from some follower of Anaxagoras or Diogenes of Apollonia (*Mem.* i. 4, iv. 3).

To the cheerful, conventional, and somewhat vague piety and the mainly ethical religion of Socrates, exhibited in his earlier dialogues, Plato (*q.v.*) adds as the years go on an ever-deepening aversion to the irreverent and irreligious spirit of the age. The feeling culminates in the formal refutation of materialistic atheism set forth in the tenth book of the *Laws*:

Religion is an essential bulwark of law and morality; no one who possesses a sound and vital faith in the gods can voluntarily sin. The conscious sinner must either deny their existence or their providence or believe that the divine justice can be corrupted by sacrifice or prayer. Atheism, however, is not always the offspring of licentiousness. It is in Athens the product of old books (886 C ff.) that teach false conceptions of the gods, or of new philosophies of nature that affirm that matter is the primal reality and that morality, law, and religion are not nature but art—secondary conventions of man. The argument from design is not in itself sufficient to refute this form of scepticism (886 A). It must be met by a demonstration that the first causes of motion, soul and the functions of soul, are necessarily prior in the order of nature to matter and its qualities. This principle established, we may remind the sceptic that atheism, a malady incident to pert youth, has never retained its hold on any man through life. Doubts as to the moral government of the world are to be cured by reflexion on our own insignificance and the small part of the total order which we behold. And the minute providence and unswerving justice of God may be deduced from the very idea of the divinity.

These pages contain the germs of all future theodicies, Stoic and Christian, from Cleanthes to Malebranche, Leibniz, Shaftesbury, and Pope. The honest sceptic who remains unconvinced by these arguments is confined five years in the House of Reformation and required to submit to instruction for the 'salvation of his soul.' If then still recalcitrant, he is put to death. This boutade is hardly to be taken seriously, though it has greatly agitated modern liberal Platonists such as Grote, Mill, and Gomperz. More significant is Plato's deliberate affirmation that the doctrine that the gods may be bribed by worship is worse than atheism. In the *Republic*, where the existence of the gods is assumed, the mythological religion of Homer is purified by theological canons to which all poets and teachers must conform: God is good and the author of good only (379 C; cf. Cleanthes' *Hymn*). God is unchanging and never deceives (380 f.). Plato will accept any 'accommodation' to popular religion that does not compromise essential ethical truth. In both the *Republic* (427) and the *Laws* (733 B-C) it is assumed that his city will have a polytheistic cult with temples, precincts, ritual, festivals, and hero-worship of good men

approved by Delphi. He himself speaks of the Hesiodic gods with thinly veiled irony in the *Timæus* (40f.), and in the *Phædrus* (246C) pronounces the very notion of an immortal animal a figment of the imagination. It is not true, as matter-of-fact interpreters affirm, that he believed in the literal divinity of the sun and the moon. He insists only that this universal frame, of which their ordered motions are so conspicuous a part, is not without an author:

'Either the soul which moves the sun . . . resides within the circular and visible body . . . or the soul provides herself with an external body . . . or thirdly she guides the sun by some wonderful power. . . . And this soul of the sun . . . whether taking the sun about in a chariot . . . or acting from without, or in whatever way, ought by every man to be deemed a god' (*Laws*, 898 E-899).

From this the Neo-Platonists easily deduced three solar divinities. But the plain meaning is that Plato would rather leave the people their naive faith in Helios and his chariot than have them imbibe virtual atheism from Anaxagoras' teaching that the sun is merely a red-hot stone. His temper is that of Matthew Arnold telling us that, 'compared with Professor Clifford, Messrs. Moody and Sankey are masters of the philosophy of history' (*God and the Bible*, London, 1894, p. x). His religion, if not the 'religion of all sensible men,' is that of all cultured latitudinarians from Plutarch to Schleiermacher and Matthew Arnold himself. He is not a dogmatic monotheist only because his 'accommodations' are to Greek polytheism and not to historical Christianity. He employs theistic language in the fluid rhetorical manner of Seneca and Emerson. His God is in ethics the transcendental sanction of morality, and in cosmogony the limited deity of Mill's posthumous essays—a demiurgic principle of order and harmony contending with recalcitrant 'necessity.' It is customary, however, to connect Plato's theology more closely with his metaphysics than is here done. God is identified with the idea of good or with the One (see Shorey, 'The Idea of Good in Plato's Republic,' *University of Chicago Studies in Classical Philology*, i.188, n. 2; T. Whittaker, *The Neo-Platonists*, Cambridge, 1901, p. 37). The goodness of God is the first canon of theology, and the Demiurgus transforms chaos to cosmos out of his ungrudging goodness (*Tim.* 29 E; Boethius, *Cons. Phil.* i. 8: 'insita summi forma boni'). It is entirely possible, then, that in mystical or emotional passages the 'good' in Plato may be intended to suggest God. But the idea of good has a definite logical meaning for ethics and politics (see SUMMUM BONUM), and it is confounding two different lines of thought to identify it with God. So of the One. The absolute metaphysical unity of the *Parmenides* resembles both the supreme god and the pure being of the ideas in that it is ineffable and admits no predicates unless it be 'existence.' But the identification of this One with Plato's God in Neo-Platonic speculation is wholly uncritical. To metaphysics also belongs the 'problem' of evil. God being the author of good only, evil must be derived from metaphysical (*Theæt.* 176 A) or from physical necessity (*Tim.* 48). The *Politicus* describes mythical cycles in which the world is guided alternately by God and, in reverse motion, by innate desire (272 E). A passage of the *Laws* (896 E) admits the Manichaean conception of an evil world-soul side by side with the good, and this is accepted by Plutarch as the authentic teaching of Plato. The freedom of the will is treated by Plato ethically, not metaphysically or theologically. 'Virtue is free' (*Rep.* 617 E), but vice is involuntary (see *AJP* x. [1889] 77). For the purposes of legislation he is a determinist (*Laws*, 861-864 C). Immortality is a rational hope (see Shorey, *The Unity of Plato's Thought*, Chicago, 1903, p. 41). The eschatological

myths of the *Gorgias*, *Phædo*, and *Republic* serve to confirm the hope and as supplementary sanctions of ethics (J. A. Stewart, *The Myths of Plato*, London, 1905). Immortality is 'proved' in the *Phædo* and *Republic* by supersubtle dialectic and in the *Phædrus* by the same argument that establishes the existence of the gods in the *Laws*—the priority of soul as the first cause of motion. The doctrine of daemons—first appearing in Hesiod, and elaborated by Xenocrates, Plutarch, the Christian Fathers, and the Neo-Platonists—is for Plato a mythological fancy (*Symp.* 202 E). Lastly, the ever-recurrent gloss that the ideas are thoughts of God is merely a plausible evasion of the difficulty of recognizing more than one form of absolute being, and a convenient syncretistic device for reconciling Plato with Aristotle.

That Aristotle (*q.v.*), like Shakespeare, recognized religion as a great fact, and that he paid formal respect to the established cult, hardly need be said (Décharme, p. 233; Zeller, *Aristotle*, Eng. tr., London, 1897, ii. 334 n.). His lost dialogues, composed under Plato's influence, dealt with the immortality of the soul (*Eudemus*) and the truths of natural religion. The origin of the belief in gods was traced to the phenomena of dreams and enthusiasm, and the argument from design was illustrated in a brilliant passage quoted by Cicero (*de Nat. Deor.* ii. 37). In the extant writings, however, there is little of Plato's unction, and nothing of Plato's fervent preoccupation with the reform of religion and its defence against the scepticism of the age. Personal immortality is nowhere affirmed (Zeller, ii. 133 f.), and, while the universal belief of mankind from of old is accepted as confirmation of abstract theism (*de Caelo*, i. iii. 6, ii. 12, *Met.* 1074^b), the 'rest,' he says almost in the tone of Critias, 'is mythical addition for the persuasion of the multitude and as a useful aid to the laws.' Aristotle's own 'scientific theism' (Zeller, i. 399) is an inference from his theory of the soul, his metaphysics, and his theory of the heavens. The key to his philosophy is the recognition of the irreconcilable conflict in his thought between empirical postulates and Platonic principles. The psychology of the logical works and of the *Parva Naturalia* is inductive and sensationalistic. Both the conceptual major premisses and the highest regulative 'principles' of syllogizing are derived by (a perhaps unconscious) induction from the impressions and memory-images of sense. The highest reason (*νοῦς*) is in fact practically identical with this faculty of generalizing induction peculiar to man. The *de Anima* rests the possibility of a separable soul (not the mere entelechy of an organic body) on the existence of a thought that is not thus dependent on sense, or on images derived from sense. As the analysis proceeds, this problematical thought is hunted from chamber to chamber of the subdivided soul, and finally takes refuge with the active intellect, which in the very act of thinking converts the passive intellect or potentiality of ideas into the direct contemplation of them. We may still ask whether the active intellect is anything more than a paraphrase for 'man thinking' and whether images of sense are not still the indispensable matter of the passive and, by consequence, of the active intellect. But, whatever our interpretation of the third book of the *de Anima*, there emerges from it the vague notion of a separable pure activity of thought, whether personal or pantheistic. So in the metaphysical theory of the universal. The empiric Aristotle rejected the Platonic ideas *in toto*: the universal does not exist before the particular, but in it, and is drawn thence by the inductive *νοῦς*. This suffices for logic and ethics. But Aristotle is unable or unwilling to apply this anti-Platonic

view consistently to the ultimate problems of metaphysics. The name 'first essences' (substances), no longer reserved for individual things, is now sometimes applied to abstract ideas. The universal, the abstract, the 'first essence,' is the 'form,' or actualization, the union of which with matter or potentiality is the particular. A doctrine of associationist nominalism might conceivably be stated in this terminology. But the scorned Platonism takes its revenge, and leads Aristotle in his search for the absolute to postulate a form divorced from matter—an actuality correlative to no potentiality. We need not ask whether this actuality belongs to certain ideas only or to all universals taken as pure abstract essences. We have at any rate the problematical conception of the absolute and unrelated existence of ideas, forms, or thoughts. Lastly, in his theory of the world Aristotle postulated an eternal finite order in opposition to the infinite series and the cosmic evolutions of the pre-Socratics. He is sometimes called an evolutionist. But this is a misconception or an equivocation. Every individual thing, institution, and art-form is indeed for him the highest development contained in its germ. But the germ itself is a product not of evolution, but of an antecedent perfected individual. His mind was closed to any conception of development which presented the picture of a different world from that which he had constructed. The chain of causation is limited by a finite space and a fixed eternal order. Within this order all changes are confined to the region below the moon, and are caused by the great revolution of the heaven and the obliquity of the ecliptic. The cause of these is the first and ultimate cause. Operating eternally and unweariedly, it cannot be material. It is pure actuality unmingled with potentiality. The convergence of these three lines of thought in the idea of God is indicated and assumed rather than explicitly stated in the *Ethics* and *Metaphysics*. God is pure thought and pure activity. His bliss from everlasting is the happiness of the thinker in the rare moments of highest contemplation (*Met.* 1072^b, *Eth. Nic.* 1178^b). The content of this thought is Himself—the pure essences of the thoughts that constitute Him. There is nothing else that He could think without derogation and subordination of the thinker to the purpose of his thought (*Met.* 1074^b 34). The universe is a harmonious whole, and, as Homer says, 'the rule of many is not good. Let one be ruler' (*ib.* 1076^a 4). The mode of God's operation on the world may be illustrated by love (*ib.* 1072^b 3). The beloved object moves, though unmoved itself, by the power of desire in the lover. God is the prime mover because He is the *primum amabile*. He is, in Dante's phrase, 'L'amor che move il sole e l'altre stelle' (*Paradiso*, xxxiii. 145). This is Aristotle's theism. Neo-Platonic syncretism identified it with Platonism by the interpretation that the Platonic ideas are the thoughts of God. To trace its further influence on mystic and speculative theology would exceed our limits. Nor can we do more than glance at the difficulties that it presents (Cicero, *de Nat. Deor.* i. 13). What is the relation of God, who moves the outer heavens, to the independent motor principles assumed to explain the movements of the planets? What ground is there beyond the system-building instinct for identifying the first cause of physical movement with the active intellect of the *de Anima*, or that with the 'first essences' of the ideas? Is God ignorant of particulars? Aristotle implies that He does not love man as man loves Him—the disproportion is too great (*Eth. Nic.* 1138^b 35). If His operation ceases with the rotation of the heavens, how can benevolent design be attributed to Him or to nature? But to ask these questions is to confine all metaphysical

theology within the limits set by the empirical understanding.

The post-Aristotelian philosophies are of more significance for the diffusion than for the origination of ideas. In the age of Epicurus and Menander the mythological religion of the city-State retained so little vitality that the populace of Athens could lodge a Demetrios in the Parthenon and welcome him to the city with a hymn that contrasted his present divinity with the dubious gods who dwell afar or heed us not. There remained for the populace foreign superstitions, mysteries, and coterie cults (P. Foucart, *Des Associations religieuses chez les Grecs*, Paris, 1873), and for the educated class moral philosophy, vague poetic religiosity, or scepticism. The comparison of Alexander to Bacchus, who also conquered India, and the various apotheoses of his successors provoked a formulation of scepticism which is of slight philosophic, but of considerable historical, significance. About the middle of the 3rd cent. Euhemerus published his tale of the island of Panchaia, and the 'sacred inscription' there discovered in which Zeus and all the house of Kronos are revealed as mortal kings deified by the gratitude or fears of their subjects. Euhemerus may have been, as Gruppe suggests, a mere romancing precursor of Lucian. But Euhemerism became for Greek sceptics, their Roman disciples (Ennius translated the book), the Christian Fathers, and the rationalizing philology of the 18th cent. a favourite 'key to all mythologies.' A second school of scepticism was the New Academy, which provided a convenient formula for noble Roman augurs who punctiliously performed every ceremony of the cult that made Rome great, but dismissed the dogmatic affirmations of natural theology with a smile (Cicero, *de Nat. Deor.* i. 22). But in the popular estimate the great school of irreligion was the Epicurean. The extant fragments of Epicurus manifest little of the passionate hatred of superstition which animates his Roman disciple, Lucretius. Yet it is perhaps implied in the reiterated affirmation that the only use of physics is to free us from the terrors of false religion. These terrors could not have been very real if we may accept Cicero's assertion that no old woman any longer feared the mythological hell from which the Epicureans promise to deliver us (*Tusc. Quæst.* i. 21). Cicero also makes merry with the ingenious theory of fainéant gods possessing a *quasi-corpus* and inhabiting the *intermundia* (*de Nat. Deor.* i. 26). And it is probable that few Epicureans took it seriously, though some found it a convenient defence against the charge of atheism, while to others it provided a refuge for the idealizing imagination and an object for the natural instinct of worship. Real impiety, they said, consists not in rejecting the gods of the vulgar, but in thinking unworthily of the divine. True and disinterested worship could be paid only to the gods of Epicurus,

'who haunt

The lucid interspace of world and world,—

Nor sound of human sorrow mounts to mar
Their sacred everlasting calm'

(Tennyson, *Lucretius*).

And thus they too composed formal treatises 'on piety' (Gomperz, *Philodemus $\pi\epsilon\pi\iota\ \epsilon\upsilon\sigma\epsilon\beta\epsilon\lambda\alpha\varsigma$* , Leipzig, 1886). But for all later antiquity the Epicureans, as opposed to the Stoics and Platonists, remained the great irreligious school of philosophy. If they did not reject the existence, they denied the providence, of the gods, which for emotional and practical religion amounted to the same thing. Lucian's Platonists, Stoics, and Pythagoreans treat them as pariahs, and his religious charlatans incite the populace against the atheists, the Christians, and the Epicureans.

Stoicism (*q.v.*) in the course of its secular development became all things to all men. The pantheistic world-god, the artisan fire working in the veins of all creation, could be virtually identified with the Platonic soul of the world, or could be described in the language of purest monotheism. The allegorical method whereby the gods of the mythology could be interpreted as parts, aspects, or functions of 'Zeus' or 'nature' veiled prudent accommodations, contented genuine, if not very perspicacious, orthodoxy, and gratified the permanent instinct of ingenious exegesis. Personal immortality, while not strictly compatible with the theory, was not explicitly denied. A temporary survival was sometimes conceded to great souls until the expiration of the cycle and the reabsorption of all things in the fiery world-god. This enabled Stoic writers of consolations (as, *e.g.*, Seneca) to portray the future bliss of the liberated soul as vividly as their Platonic rivals. The designation of the fiery world-god as Zeus, Providence, Destiny, Nature, the *λόγος*, made every topic of religious rhetoric or philosophic theodicies available to the long series of Stoic authors from Zeno to Cornutus who wrote on religion or on 'the nature of the gods.' In addition to this, Stoicism was an ethical religion tinged with 'cosmic emotion.' It became the expression of an absolute faith in divine providence and manly resignation to the order of nature that, however fatalistic in expression, never paralyzed the will. Of this ethical gospel the chief texts still vital for edification are the *Hymn of Cleanthes* (translated as a psalm in W. Pater's *Plato and Platonism*, London, p. 42), the *Letters* of Seneca, the diatribes of Epictetus, and the *Meditations* of Marcus Aurelius, which have been hyperbolically praised as the absolute religion—that which results from the sole fact of a high human consciousness face to face with the world (Renan, *Marc-Aurèle*, Paris, 1885, p. 272). But in these later developments Stoicism was already tinged with Platonism; and, with the revival of Greek literature in the second half of the 1st cent., Platonism tended more and more to become the religion of all educated men who did not adopt Christianity. This Platonizing religion has three forms.

(1) In the later Stoics it is the gospel of Socrates as set forth in the *Gorgias*, *Apology*, *Crito*, and *Phaedo*. The only certain good is the virtuous will. There is no terror for the wise man in the roar of the mob or the threats of the tyrant. For he is strong in the faith that Anytus and Meletus may kill him, but cannot harm him (*Apol.* 30 C). He is by definition a rational animal, and can obey no other principle in his soul but the voice of reason. Though he has good hope of immortality, he does not require that assurance to live and die secure in the conviction that the gods will permit 'no harm to come to a good man here or there.' These and similar Socratic sayings constantly quoted by Epictetus are the chief texts of all his preaching. The life of Socrates, he tells us, is proposed to us as a pattern, and in temptation or doubt we need ask only: What would Socrates have done?

(2) The more literary and avowed Platonists, of whom Plutarch, Dio Chrysostom, and Maximus of Tyre are the types, harp less insistently on these chief notes, and are more broadly interested in the Platonic philosophy as a whole—its refutation of materialism, its demonstration of the fundamentals of natural religion, its tolerance of all cults, its idealization of all symbols that can be dissociated from immoral suggestions. Plutarch toys with mysticism and allegory and his doctrine of daemons, but his personal religion is that of the broad church literary man who believes in God, hopes

for immortality, and, whether in the Roman empire or in the parliament of religions, deems it more edifying to dwell on the underlying unity of the religious spirit than with a Lucian or an Ingersoll on the incredibility of the mythological letter. And this, if we read between the lines, is the religion of Dio's discourse on the first idea of God, and of Maximus of Tyre's discussion of the lawfulness of image-worship.

(3) To a third type of mind the mystical and metaphysical side of Plato appeals most strongly. Beginning with the Neo-Pythagorean revival (see NEO-PYTHAGOREANISM), this form of Platonism developed until as Neo-Platonism (*q.v.*) it became the chief philosophy and religion of paganism in its final struggle with Christianity. Historically it is a form of Platonism; psychologically it is the expression of at least three permanent instincts and tendencies of the human mind: (a) thaumaturgy and the lower mysticism; (b) the higher mysticism and the delight in symbolism, allegory, and the ingenious exposition of sacred texts; (c) the dialectical analysis of the ultimate ontological presuppositions of religion.

(a) Superstition and miracle-mongering remain the same in every age and still conjure with the names of Plato and Pythagoras. We cannot stop to discuss the forged literature of Neo-Pythagoreanism or to describe the miracles of Apollonius of Tyana (*q.v.*), of the charlatans satirized by Lucian, and of the degenerate successors of Plotinus. It is to be noted, however, that the higher mysticism of the best writers was less infected with concrete superstition than we should infer from their language.

(b) The allegorical interpretation of sacred texts was a literary form common to the Stoics, Philo Judæus, and the Platonists, and by them transmitted to the Middle Ages and the Renaissance. It is incompatible with sound philological criticism, but not necessarily with sane and elevated morality or severe and ingenious dialectic. It is essentially the same whether applied to the text of Homer, the OT, or Plato; and the patient reader will find that in Philo, Plutarch, and Plotinus it is merely the fantastic garb of a Platonizing natural religion, associated with acute metaphysical speculations and accommodations to the symbols of historic paganism. To set forth Philo's doctrine of the *λόγος*, Plutarch's theory of the daemons and the evil world-soul, and the trinity of Plotinus exceeds our scope (see ALEXANDRIAN THEOLOGY, LOGOS, PLUTARCH, NEO-PLATONISM). One thought derived from the *Timæus* dominates Neo-Platonic theology. It is the idea that the ineffable supreme God delegated the work of creation (or a part of it) to His inferior ministers. In later developments these divinities in turn are elevated above contact with 'base matter' by a similar delegation to beings below them. Creation is further conceived as a timeless overflow and emanation of the plenitude of being, as the going forth of one that 'remains' (*μένει, μόνη*), as the radiance of a light that loses nothing by communicating itself. The application of these ideas by the allegorical method to the divinities of the Greek pantheon and the abstractions of Platonic metaphysics yields the various orders and hierarchies of gods, daemons, and angels multiplied by the piety and ingenuity of successive generations of Gnostics and Platonists. And in the lower plane of the 'surnaturel particulier' the worship of these deities suggested or veiled theurgy and miracle-mongering. How far the successors of Plotinus yielded to this weakness is a difficult question. There are traces of it in Iamblichus, the emperor Julian, and Proclus. But the stories told by Eunapius are to be received with caution.

Even in his account the students are always clamouring for a miracle, while the professors evade the test. Julian combated Christianity as the irreconcilable enemy of the mythology that had created Greek art and literature and the cult that had built up the empire of Rome. Their interpretation as allegories of Neo-Platonic philosophemes satisfied his heart and his imagination. But the rhetoric of his discourses on Apollo and the Mother of the Gods is perhaps no more to be taken literally than that of Renan's prayer to Athens on the Acropolis.

(c) However this may be, the more philosophic Neo-Platonists continued to speculate on the relations of the unknown God to the highest terms of Platonism—the Demiurgus, the One, the Good. Greek subtlety easily proved that these and all terms of human speech connote limitations and relations that cannot properly be predicated of the ultimate and absolute. God can be described only in negations, which, however, are to be understood in a honorific and not in a privative sense. As Thomas Browne puts it, 'Nothing can be said hyperbolically of God' (*Christian Morals*, pt. iii. sect. 2 [*Works*, ed. C. Sayle, London, 1904-07, iii. 483]; cf. Plato, *Rep.* 509). The outcome of this line of speculation is Damascius's doctrine of the unknowable, which differs only in its superior subtlety and consistency from that of Herbert Spencer. The predicate of unity, at least, he exclaims, is never denied by Plato. But even unity is in human speech a relative idea, and, as the *Parmenides* shows, transforms itself into multiplicity under close inspection. We cannot name or define God at all. We are conscious only of a travail of soul—*ōdis* (cf. *Rep.* 490 B). This is the end of Greek philosophy.

LITERATURE. — E. Zeller, *Die Philosophie der Griechen*, 5 vols., Leipzig, 1876-1909; T. Gomperz, *Greek Thinkers*, Eng. tr., 4 vols., London, 1901-12; J. Burnet, *Early Greek Philosophy*², do. 1908; A. B. Kriech, *Die theologischen Lehren der griechischen Denker*, Göttingen, 1840; L. Preller, *Griechische Mythologie*⁴, Berlin, 1884; L. Campbell, *Religion in Greek Literature*, London, 1898; E. Rohde, *Psyche*², 2 vols., Freiburg, 1898; P. Déchambre, *La Critique des traditions religieuses chez les Grecs*, Paris, 1904; J. Girard, *Le Sentiment religieux en Grèce*³, do. 1887; E. Caird, *The Evolution of Theology in the Greek Philosophers*, 2 vols., Glasgow, 1904; J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903; O. Gruppe, *Die griechische Culte und Mythen*, Leipzig, 1887; J. Oakesmith, *The Religion of Philarch*, London, 1902; C. C. J. Webb, *Studies in the Hist. of Natural Theology*, Oxford, 1915. Zeller and Gomperz give abundant references to the more special literature of Greek philosophy. All pre-Platonic texts are now most conveniently consulted in H. Diels, *Die Fragmente der Vorsokratiker*³, Berlin, 1912. See also the articles on mythological and religious subjects in Daremberg-Saglio, Pauly-Wissowa, and Roscher.

PAUL SHOREY.

PHILOSOPHY (Iranian).—It has been asserted by more than one competent scholar that Buddhism is not, strictly speaking, a religion, but a philosophy. Conversely, it may be maintained with still greater reason that Mazdeism, or the national cult of the ancient Iranian people and their descendants, is not a philosophy, but a religion. To put it otherwise, the Mazdean system, at least in its earlier forms, is a pure theology, which interests itself not at all with philosophical speculation. This has been well put by the most recent Parsi writer, M. N. Dhalla:

'The religious system of Zoroaster is theological rather than philosophical. . . . Philosophy attempts to give a rational solution, based on human observation and experimentation, of various problems, which religion claims to solve on the authority of prophetic revelation. . . . Religion has fixed canons, binding traditions. Its tendency is to put a lasting stamp on the doctrines for all times. It rests upon the teachings of a prophet, and nourishes them as an unchangeable heritage. Philosophy, on the other hand, progresses with the times, and ever encourages fresh inquiry. It always revolts from every kind of dogmatic teaching. . . . The utilitarian genius of the Persians led them to disparage metaphysical speculation as a vain attempt at the impracticable. Religion should be such that its ideals can be applied to our workaday world. Its

teachings should be applicable to the exigencies of daily life. . . . This is the characteristic of Zoroastrianism through its very simplicity' (*Zoroastrian Theology*, pp. 856-359).

These sentences express excellently the very genius both of the Mazdean faith and of the Iranian habit of mind. The ancient Iranian thinkers seem not to have troubled their minds at all with such problems of being or knowledge as underlie the Indian concepts of *māyā*, *karma*, *ātmān*, *samsāra* ('metempsychosis'), *nirvāṇa*, and the like. Indeed, few things are more surprising than the direct opposition which exists between the mental attitudes of the two most closely connected of all the members of the great Indo-European family—the Indian and the Iranian. The former, as is well known, is distinguished among all other peoples by its ineradicable love of metaphysical speculation, its groping after and brooding over the most abstruse problems of being, of knowledge, of psychology, as well as by its endless multiplication of philosophical schools; for, as Dhalla observes, 'there are as many philosophies as there are philosophers,' and 'these come and go, and with them the cradle of the speculative thought is ever swinging to and fro' (p. 357). The inevitable tendency of the Indian philosophizing is towards pantheism or monism, on the intellectual side, and towards pessimism, on the moral side. The Iranian tendency is the very opposite. Against the Indian pessimism we must set the irrepressible optimism of the Iranian mind. To the Indian thinker existence itself is an evil, and all his spiritual philosophy is directed towards deliverance from an endless series of re-births by a final cessation of all conscious personal existence, or even of existence itself. The Iranian looks for the full enjoyment of an active life here and a still happier continuance of life, conscious and intelligent, beyond the tomb. Against Indian pantheism is set the monotheism of the Mazdean system, tempered as it is in a peculiar way by a dualistic tendency (see DUALISM [Iranian]).

1. Earlier times.—In the Avesta itself, whether in its older or in its more recent strata, it is difficult to lay hold of anything that may be strictly called philosophical speculation, if by philosophy we understand, according to the definition of one authority, 'the science of the principles of being and of knowledge.' The Avestan system is presented frankly as a revelation from a supreme intellect to the human mind and heart. In the *Gāthās*, indeed, there are broodings and speculative questions concerning fundamental verities and moral problems. But they are all referred for solution, as in the ninth *Gāthā*, to the divine giver of revelation ('This I ask thee, tell me truly, Ahura' [*Yasna*, xliii. 1]).

(a) Being.—As regards the problem of being, the Avestan teaching is simplicity itself. Ahura Mazda is the one supreme eternal being, the creator of both worlds, the world of spirit and the world of matter. It is not necessary to dwell upon this first dualism of 'the two worlds,' but mention must be made of that other dualism which, at least in the later stages of Avestan development, so curiously modifies the characteristic monotheism of the Mazdean belief—the problem of the origin of evil. In the art. DUALISM (Iranian) the present writer has already set forth what seems the only tenable view of Zoroastrian dualism, and, although modern Parsis and even several Western scholars vehemently deny that Mazdeism is dualistic, he finds that the high priest, M. N. Dhalla, so often quoted, is at one with him in his interpretation of the theology in both the Avestan and the later periods. Dhalla writes:

'The arch-fiend who disputes the kingdom on earth with the Holy Spirit, Spenta Mainyu, or with Ahura Mazda, who intro-

duces discord and death in the world, who strives to thwart the purposes of God, is Angra Mainyu, or the Evil Spirit. *He does not owe his existence to the Good Spirit. He is independent. Consequently he is co-eval and co-existent, if not co-eternal with the godhead* (p. 48).¹

Moreover, this rival spirit has one distinct attribute of divinity in that he also is a creator. Not only moral and physical evils of all kinds, but also evil beings, whether demons (*daēvas*) or noxious animals (*xrafstras*), are his creatures. This dualistic teaching is the Mazdean solution of the perennial problem of the origin of evil. It has ever been one of the difficulties of reconciling the Avestan religious system with that of the Achæmenid kings, as preserved in their inscriptions, that there is apparently in the latter no mention of a dualistic creation or creator. Auramazda holds precisely the position of his namesake in the Avesta, i.e. that of supreme deity, creating and ruling all his creation by his free will (*vasnā*). Latterly, however, J. H. Moulton (*Early Zoroastrianism*, London, 1913) has suggested, not without plausibility, that the Angra Mainyu of the sacred books actually appears in the inscriptions under the term *Drauga*, meaning literally 'the Lie,' perhaps personified.

(b) *Asha*.—There is one transcendental concept in Mazdeism which suggests analogy with an Indian one—that of *Asha* (Old Pers. *Arta*), most frequently personified as the genius *Asha*, one of the *Amesha Spentas*, or archangels of Ahura Mazda's court. There is no doubt that we have here a concept which Dhalla rightly calls 'basic' in the system, and which corresponds even etymologically with the Sanskrit *rta*, or, again, is akin to *dharma*, i.e. the 'right order' both in the physical and in the moral universe—whether or not conceived as independent of the divine will it is difficult to determine. In the Avesta, whether as an abstract or as a personified name, *Asha* is almost exclusively conceived in the moral sense, as 'righteousness,' 'holiness,' the 'justice' of both the OT and the NT.

(c) *Fravashis*.—The only other Avestan concept which gives rise to some degree of direct philosophical speculation, especially in the later writings, is that of the mysterious *fravashis* (q.v.). These enigmatical beings have played a widely diversified part in the Zoroastrian system, and one which has constantly varied at different periods. As we find them, at least in the post-Gâthic period, they are something very different from the other spiritual beings of Ahura Mazda's celestial court. Whatever be their origin, whether originally conceived as spirits of the dead, or from whatever other source, there is little doubt that in the Later Avestan system they were conceived as celestial archetypes and antetypes of all good beings, somewhat after the style of the Platonic *idéas*.

'The *Fravashis* constitute a world of homonyms of the earthly creations, and they have lived as conscious beings in the empyrean with Ahura Mazda from all eternity. The multifarious objects of this world are so many terrestrial duplicates of these celestial originals. The *Fravashis* constitute the internal essence of things, as opposed to the contingent and accidental. Earthly creations are so many imperfect copies of these perfect types. The *Fravashis* are not mere abstractions of thought, but have objective existence and work as spiritual entities in heaven, like the angels and archangels, until they come down to this earth voluntarily, as we may infer through later statements in the Pahlavi texts. They migrate to this world, and are immanent in the particular bodies that come into being after their divine images. Everything that bears the hall-mark of belonging to the good creation has its *Fravashi*. Every object which has a name, common or proper, is endowed with a *Fravashi*. Ahura Mazda, the father of all existence, has his *Fravashi*, and so have the *Amesha Spentas* and the *Yazatas*. Even the sky, waters, earth, plants, animals, and all objects of the kingdom of goodness, are not without their

special *Fravashis*. Thus beginning from the supreme godhead down to the tiniest shrub growing in the wilderness, every object has this divine element implanted in it. It is only Angra Mainyu and the demons, who are evil by nature, that are without it' (Dhalla, p. 143f.). Moreover, 'when a child is born its *Fravashi* that has existed from all eternity now comes down to this earth as the higher double of the child's soul' (p. 144).

The latter concept strangely recalls one of the curious conceits of Maeterlinck in *The Blue Bird*.

(d) *Daēna*.—The last-quoted teaching forms the bridge by which to pass over from what we may term the ontology to the psychology of the Avestan teaching. Indeed, in so far as psychology is concerned with the analysis of the component elements of the non-material part of the human compound, Iranian thought seems to have been much addicted to such analysis at all epochs. As W. Geiger puts it, the psychology of the Avesta cannot be called either simple or primitive, but presupposes a certain amount of philosophical speculation.

'It is based upon the observation that man's spiritual activity expresses itself in manifold ways and that hence there exist in man a multiplicity of forces, each of which has its individual limited sphere of action. Moreover [this doctrine] is a specific product of the Iranian mind and scarcely admits any fundamental connexion with pre-existing conceptions and doctrines' (*Ostiranische Kultur im Altertum*, p. 298).

In the Avesta we find four or five such spiritual powers referred to. Of one of these, the enigmatical *fravashi*, we have spoken above. A scarcely less enigmatical term is that of *daēna*. In one sense this term indicates 'religion,' specifically the true faith, the Mazdean faith, like the Persian and Arabic *dīn*. But, in another and quite different sense, it is one of the human faculties, and is generally translated by modern scholars as 'conscience' (Moulton, 'self'). It has this peculiarity, which it shares with the *fravashi*, that it would appear to be, if not pre-existent, at least to some extent independent of the individual soul, and to live on after the dissolution of death. Moreover, as Moulton points out, perhaps a crucial difference between the two elements lies in the fact that the bad man as well as the good man has a *daēna*.

'The conception was probably suggested to Zarathushtra by his own philosophic analysis of man's personality: if he knew of the *fravashi*, apart from its connexion with ancestor-spirits, he presumably used another word to emphasize the fact that each man had his own individual responsibility, and an immortal *ego* within him which would pass on to weal or woe. The *fravashi* was too much entangled with mythology to suit him, and he had no use for a system which would not apply to all men' (Moulton, p. 264).

Geiger, on the other hand, looks upon the *daēna* as a kind of divine force, existing eternally, which cannot be affected in any way by the sins of man or by his death, though still able to exercise an influence on the soul after death. In a well-known allegory, perhaps the most beautiful passage in the Avesta, the *daēna* is presented in a manner somewhat reminiscent of the Indian *karma*.

The soul (*urvan*), wandering for three days after death, on the third day meets (in the case of the just soul) a wondrously beautiful maiden, stately, robust, and graceful, who in reply to his question declares, 'I am thine own good thoughts, words, and deeds, thy *daēna*'; and, when he asks her, 'Who hath made thee so great and fair?', the damsel replies that it is the man's own good life, his good thoughts, words, and deeds that have made her grow in greatness and beauty; and then proceeds to lead him into the celestial abode. The wicked soul similarly wanders for three days, but we do not find it meeting its *daēna*, at least in the Avestan texts, though in the later Pahlavi traditions a hideous old hag is represented as replacing the beautiful maiden described above. Possibly the latter conception has been excogitated subsequently for the sake of symmetry, as it does not appear at all in harmony with the original conception of the *daēna* (see *Vendidad*, xix. 26-34, and *Yasht*, xxii.).

(e) *Urvan*, *baodah*, and *ahū*.—Apart from the two powers or faculties so far described, we have the *urvan*, which seems to correspond specifically to our English word 'soul' (Dhalla, 'the ego proper, the real I-ness' [p. 144]). It is a moral power, by which man exercises his free choice

¹ Italics are the present writer's. On p. 86 Dhalla speaks of the 'highly developed type of dualism of the Younger Avestan period.'

between good and evil; it shares with the following element his responsibility, and so must undergo judgment and consequent reward or punishment after death. The *baodah* appears to indicate 'consciousness,' or perhaps 'intelligence,' and shares the responsibility of the *urvan*. Lastly, the *ahū* in its most general sense seems to mean 'life' or 'vital force' (or again 'nature'), which apparently comes into being with the body and perishes with it, and thus ranks as the lowest among spiritual faculties (see Geiger, p. 299 f.).

(f) *Man*.—The ethical conception of man in the Mazdean system through all epochs is clear and simple. Placed by the creative act of a supreme power in a universe in which exist both good and evil, whether in the moral or in the physical order, man has the power of choice—as we should say, free will—and according as he chooses and works in this life for the one or the other of these opposing forces he will have his reward or punishment, his happiness or misery, in the heaven of Ahura Mazda or in the hell of Angra Mainyu, in the former case at least, for all eternity. But here we touch upon a purely theological topic which need not be further pursued.

2. *Later times*.—During the post-Avestan times variously known as the mediaeval, patristic, or Pahlavi epoch—or, to be more definite, the Sasanian and post-Sasanian periods—a considerable amount of philosophical speculation appears in Zoroastrian literature. This is only natural, for it is well-known that Greek philosophers played no inconsiderable part at the royal court of Persia. Hence Greek speculation must to some extent have leavened the Iranian mind, and, indeed, we have many traces of this in the religious literature of the epoch. We have, moreover, direct evidence of it in the Syriac writings of Paul the Persian, who flourished at the court of the greatest of the Sasanid kings, Khosrau Anosheravan (more commonly known as Chosroes the Great, A.D. 531–578).

'There are some,' Paul writes, 'who believe in only one God; others claim that he is not the only God; some teach that he possesses contrary qualities; others say that he does not possess them; some admit that he is omnipotent; others deny that he has power over everything. Some believe that the world and everything therein have been created; others think that all things are not created. And there are some who maintain that the world has been made *ex nihilo*; according to others (God) has drawn it from a *ὑλη* (pre-existing matter)' (Paulus Persa, *Logica*, fol. 56 [ap. J. P. N. Land, *Anecdota Syriaca*, iv., Leyden, 1870]).

It might be suspected that in this passage, amidst general remarks on philosophical theories, Paul was speaking of the various doctrines scattered over the world, especially as he was a Christian and had studied the Greek philosophers in the schools of Nisibis or Jondishāpūr. But it must be remembered that the writer is directly addressing King Khosrau and quoting details which must have been familiar to him. It is therefore more probable that the author is describing opinions current in his time in the bosom of the Mazdean religion itself, and the existence of numerous schools of thought at the time is also manifest from the *Mainōg-i-Xrat* (i. 17). But, apart from Greek influences, this diversity of doctrine is a necessary consequence of the Zoroastrian dualism itself. This dogma, as we have seen, teaches the existence of an evil principle, distinct from and independent of the good principle—i.e. God, as we should say. Now this conception of the co-existence of two eternal principles, distinct from each other and possessing independent powers, is as repugnant to the human mind as polytheism itself. Sooner or later the mind will push its theories further until it finds repose in an original unity of principle. If this is generally true, how much more so for the Iranian mind, so passionately fond of systematization? Different schools had recourse to different

means of evading the difficulty. Some found the solution in a pre-existing indifferent and immutable being, from whom are derived both the good and the evil principles—a source of being, rather than a personal being, an eternal, divine source, an *Urgottheit*, as Spiegel calls it. This is Zrvan Akarana, 'Unlimited Time,' not infrequently confounded with destiny or fate. It is he who has begotten both Aūharmazd and Ahriman. This system is therefore monotheistic. Other philosophers maintain that the primeval principle is Aūharmazd himself, and attribute to him the two spirits, one good, the other evil. In this hypothesis God 'possesses contrary qualities,' according to the expression of Paul the Persian. As regards the Pahlavi writings, we seem to find in the *Dinkart* a real monotheism, possibly developed under Christian or Jewish influences; on the contrary, in the *Mainōg-i-Xrat* destiny and eternity play a preponderating part. Finally, in the *Ūlamā-i-Islām*, a small treatise of much later date, it is said that some consider Ahriman as a reprobate angel, but we do not know that this Christian idea can be traced to Sasanian times. Generally speaking, it is not easy to distinguish time (Zrvan) from destiny. The Armenian writer Eznik, a contemporary of the Sasanids in the 5th cent., writes:

'When there was as yet nothing, say the Magi, neither heaven nor earth, there existed a certain Zervan, whose name, when translated, signifies Fortune or Glory' (tr. ap. J. A. Gattegrias, *L'Arménie et les Arméniens*, Paris, 1882, p. 40).

Here Zrvan and destiny (Bakht) seem to be identical, as Theodore of Mopsuestia also affirms (*Ζαρούαμ . . . ὃν καὶ Τυχὴν καλεῖ* [δ *Ζαράδης*], ap. Photius, *Bibliotheca*, ed. Berlin, 1824–25, p. 63). The *Mainōg-i-Xrat*, as just said, develops this doctrine of eternity and destiny. Sometimes, however, they are separated.

'The affairs of the world all proceed through Destiny and Time and through the supreme decree of the self-existing Eternity, the king and lord of Long Time' (xxvii. 10).

Elsewhere it is said of Zrvan Akarana:

'He is imperishable and immortal; he is without grief, without hunger, without thirst, without affliction, ever living, sempiternal, whom no one can stay, nor remove his control from his affairs' (viii. 9).

Again:

'Destiny is that which is supreme over every person and over all things' (xxvii. 11).

One is tempted to believe that this Zrvan was considered by certain sects, not as the eternal source of all being, including Aūharmazd himself, but as a vast chaos, an infinite pre-existing matter, the *ὑλη* of Paul the Persian, 'out of which Aūharmazd has formed all his creatures.' In these speculations we seem to hear an echo of some of the Indian philosophical schools. That the idea of this primeval principle was mingled with that of destiny need not astonish us. Destiny plays a prominent part in all Oriental religions, all more or less inclined towards fatalism, and its effect is everywhere to disturb the idea of divinity. The notion of an inevitable *fatum*, a blind power which is even above the will of the gods, is not reconcilable with that of a true supreme being, especially like that of the Mazdean religion. But we must not expect to find too much consistency in these theories, because in that case we should have to exclude dualism itself. Nor can we be surprised to find this power, vague, mysterious, and shapeless, confounded with that other equally intangible and misty entity, Zrvan. The transition from one to the other is quite natural. From another point of view, that of the Avesta, which we also meet in Sasanian times in the *Bundahishn*, this infinite time is neither the source nor the creature of Aūharmazd, but rather one of his co-eternal attributes, for he is spoken of as 'endowed with boundless time' (*damān-i-akanārak-homand* [i. 3]). There is also a concept, which already appears in the Avesta as Thwasha (or infinite space), to which

likewise the idea of destiny seems to have been attached, and which appears to be identical with the Pahlavi *spīhr*, indicating the celestial sphere and even used in the *Mānōg-i-Xraθ* to signify destiny, just like the modern Persian word.

It is somewhat surprising to find that not only Eznik, but also—if we may believe another Armenian historian—the celebrated official edict of the prime minister of Yazdagird II. affirms that Zrvan existed before heaven and earth and begot two sons, the good and the evil spirits. If this edict is authentic, we must suppose that Zervanism had assumed the proportions of almost a State religion. Parsi writers, however, do not accept the testimony of the Armenian writers, though Dhalla adds:

'Be this as it may, it is certain that a sect of the Zarvanites, who evidently aimed at resolving the Zoroastrian dualism into monotheism by the apotheosis of Time, did flourish for a long time in Iran. Shahristani, who wrote in the early part of the twelfth century, attests . . . that he met the followers of this sect in his day' (p. 205).

The same writer points out that in several of the Pahlavi writings time and fate are indissolubly linked together:

'The movements of the heavens regulate Fate, and the planets and constellations are the arbiters of man's fortune. The good and evil stars determine man's lot, which is linked with the course of the stars' (p. 205 f.).

Among the various divergent philosophical schools of the period to which we are referring, two stand out conspicuously, because they are known by the names of their founders, who have ever been regarded by orthodox Zoroastrians as heresiarchs. The more famous of these was Mani, or Manai, who suffered death in A.D. 276, and whose eclectic system, based on materials drawn from Mazdeism, Buddhism, Christianity, and Gnosticism, was destined to play such an extraordinary part throughout the Roman Empire and even within Christianity itself, under the name of Manichæism. The other heterodox philosopher was Mazdak († 528), whose system was social and economic rather than metaphysical, and amounted to pure communism. See artt. MANICHÆISM and MAZDAK.

There is abundant material in the various books of the Pahlavi period for a study of the divergent schools of philosophic thought during the golden age of Zoroastrian faith. We may here condense a few of the principal notions. The *Dinkart*, in particular, frequently seems to develop a system of its own, especially on the side of cosmology. According to this, being (*yehevinishn*)¹ is the foundation of all creatures. From this indifferent foundation animated beings are formed in three stages: (1) the four elements, which are the basis of all matter; (2) a sort of vitality given to a mixture of these elements, which are organized in the form of bodies, and thus become living, though mortal; and (3) the spiritual parts, the *fravāhar* and the soul; these are added by the power of the creator, and so the human or animal compound is formed. This compound lasts till its dissolution by death, when the material portion, or body, dies by separation from the spiritual parts, the existence of which still continues.

Passing over the various theories concerning what we should now call 'natural science'—astronomy, meteorology, geology, botany, and zoology—as not strictly falling within our subject, we must say a word or two on some curious notions concerning anthropology. It is first laid down that man rules over the rest of the world (*Dink.* ii. 77. 2), and was the last of the creations of Aūhar-mazd. He was, in fact, the work of the sixth epoch of the creation (*Bund.* i. 28). Aūhar-mazd formed Gayōmart, a solitary male being, from the

earth. He being eventually put to death by the evil spirit, Ahriman, there was after a time produced from his semen, which had been absorbed by the earth, a double plant (*rivās*) having but one stem, and this plant, passing from vegetable to human form, became a male and female couple known as Māshya and Māshyōi, 'the reasoning faculty which is the soul (*nismo mano aīr rūbān*) spiritually entering into them' (*Bund.* xv. 5). The subsequent history of the primeval pair, their fall and progeny, so singularly like the account in Genesis, must not detain us here. Suffice it to say that the principal points that stand out in the whole legend seem to be (i.) the original unity of the race, (ii.) the mortal nature of man, (iii.) his original innocence, (iv.) his fall by the influence of the evil spirit, and (v.) his successive progress in the arts of life.

Psychological analysis is very greatly developed during the Sasanian and subsequent epochs. The spiritual part of man is the subject of predilection of the Pahlavi treatises. Lists of the spiritual faculties or powers are very frequent, but the number of them varies in quite a remarkable manner. Mention is made of three, four, five, six, eleven, or even more. These lists are exceedingly varied and, strangely enough, sometimes include what we should consider material elements, such as the senses, or speech and action. The longest list is that of the *Dinkart*, in which we find enumerated wisdom, development, knowledge, discernment, faith, and belief, reasoning, sense, intelligence, etc. From a general review of the various treatises, we may conclude (i.) that these philosophers were very fond of making psychological distinctions as to the spiritual elements of the human compound; (ii.) that they had no very fixed principles in their divisions—which thus vary greatly and often overlap; and (iii.) that the terms cited, though we may try to translate them by identical terms in our language, have probably not always the same sense in every treatise or in every passage.

One or two of these terms require special consideration. The faculties properly called intellectual are the *khart*, *vir*, and *hōsh*. *Khart* is divine wisdom, and is spoken of as the being who holds his place next to God, and with whom the whole of the *Mānōg-i-Xraθ* ('The Spirit of Wisdom') is occupied. But *khart* is also a human faculty and is specifically said to be of two kinds—innate intelligence (*amō khart*) and acquired intelligence (*gōshanerūt khart*). The innate intelligence is 'the root of knowledge'; the acquired intelligence 'commences in the marrow of the finger'—i.e. from experience of the material world—and then settles in the heart. Innate intelligence expresses outwardly what exists in the interior of man; acquired intelligence communicates to the interior that which is outside. All our sources agree in representing the *vir* as the faculty of reason, or deduction. *Hōsh* is generally associated with *vir*. It is perhaps the memory, or else prudence, practical good sense (like the modern Persian *hōsh*), which would explain the fact that it makes man the possessor of strength. It is also said that no one can buy *vir* and *hōsh* at any price. Among other non-material elements we ought also to record *bōi* or *bōd*, in which we meet again the Avestan *baodah*, apparently self-consciousness, by which a man knows himself, but, according to one source (*Shāyast lā-Shāyast*, xii. 5), this element on the death of man passes to the nearest fire, then to the stars, to the moon, and finally to the sun. Elsewhere this faculty, the soul (*revān*), and the *fravāhar* remain together after death to meet reward or punishment. Not so the *jān*, or vital force, which apparently perishes with the dissolution of the body. In *dīno* we find scarcely altered the Avestan *daēna* in both its senses. A word which in the Pahlavi characters can be read either as *ahū* or as *akho* is more embarrassing. In the former reading it corresponds with the same word in Avestan and perhaps means 'nature.' *Akho*, however, is a mysterious power which recalls the *daimōn* of Socrates, because it has to warn both body and soul to act virtuously and avoid evil. The *fravāhar* or *frōhar*, is of course the Avestan *fravashi*, but it has descended much lower in the scale of dignity. Thus in the *Dinkart* (iii. 123) its duty is to purify the air in the body by means of fire and thus to maintain life (probably the animal heat); while in the post-Sasanian *Saddar Bāndahishn* it has become a mere principle of digestion.

It is somewhat surprising that, although the whole system of Zoroastrian ethics rests upon man's free will, we do not find in these Pahlavi texts lists

¹ Or *yehevin*; see the curious diagram reproduced in art. DUALISM (Iranian).

a specific term which may be translated 'free will.' The doctrine, however, is plainly expressed. It is said in the *Dinkart* that man is distinguished from other creatures in this that he is master of his wishes (*kām khūtāi*) and that for this reason he is termed in the Avesta 'lord of the material world.' It is also said that 'except God, the only master is man.'

The fatalist doctrine that every man has his star (*star*), which he is bound to obey, is found only in the *Mainōg-i-Xrat*, to whose tendencies we have already referred.

The eschatology of Mazdeism, whether as regards the individual soul, its judgment, and future happiness or misery, or as regards the end of the world, the final resurrection of the dead, the *apokatastasis*, or ultimate regeneration of all things by the great fire and the river of molten metal, belongs to the theology rather than to the philosophy, and need not detain us here.

3. Modern times.—We are indebted to Dhalla for a great deal of interesting information concerning the developments of Mazdeism in later centuries, much of which has not before been known by Western scholars. Of course the works entitled the *Desatir* and the *Dabistān* have long been known and even translated. The latter, written in India in the 17th cent., is founded on the former, and recalls the existence of some fourteen sects.

'We meet with some attempts in them to explain the primordial principle from which creation came into being, and we have some sort of crude metaphysics grafted on physics. . . . Others still preach a strict monism, and assume that the world of phenomena was caused by illusion' (Dhalla, p. 312).

Here we have already the Indian *māyā*; and other sects had taken over the doctrine of metempsychosis as well as the belief in asceticism and rigorous austerities. Mysticism also, with its esoteric doctrines, claimed its devotees, and Parsi mystics composed treatises in the Persian language (see Dhalla for a complete account of all these extraordinary developments, so entirely opposed to the real spirit and teachings of Zoroastrianism). We must conclude with Dhalla that all these strange movements were the direct outcome of the Hindu Yogism, with which the Parsis had been brought into contact during their centuries of residence in India as exiles from their fatherland.

One result of the introduction of Western scholarship to the Parsi mind has been, as we learn from Dhalla, the growth of *theosophism* among a certain number of Indian Zoroastrians. The chapter devoted to this subject is probably in one sense the most interesting in the book, as it gives information not found elsewhere. The movement, we are told, began in the early eighties of last century. Its adepts profess to invest Zoroastrianism with a philosophical garb and to construct for it a scientific basis. They reject philological methods of interpreting the sacred texts and attribute occult significance to the Avestan prayers, however unintelligible. Strangely enough, these theosophists claim to be the champions of orthodoxy, though both their doctrines (such as that of metempsychosis and of the primeval impersonal principle *Zrvan Akarana*) and their practices (such as asceticism and celibacy, 'held to be the primal virtue') are singularly at variance with the whole spirit of the Mazdean religion. Dhalla augurs nothing but disaster to the Parsi community from any considerable growth of this fantastic theosophism in its midst.

LITERATURE.—In addition to the ordinary versions of and commentaries on the Avesta: E. W. West, *Pahlavi Texts*, in *SBE* v. [1890], xviii. [1892], xxiv. [1895], xxxvii. [1892], xlvii. [1897]; W. Geiger, *Ostirānische Kultur im Altertum*, Erlangen, 1882; F. Spiegel, *Brānische Alterthumskunde*, Leipzig, 1871-78, II.; J. H. Moulton, *Early Zoroastrianism*, London, 1913; M. N. Dhalla, *Zoroastrian Theology from the Earliest Times to the Present Day*, New York, 1914; L. C. Casartelli, *La Philosophie religieuse du Mazdéisme sous les Sassanides*,

L. C. CASARTELLI.

PHILOSOPHY (Japanese). — 1. Mythology and philosophy.—Mythology everywhere precedes philosophy, but the latter is often an outgrowth of the former. The Japanese people came under the influence of an elaborate philosophical system before they had emerged out of naive mythological thought on the world and human life, which made an independent development of their own philosophy impossible. We need not inquire whether they could otherwise have developed a philosophy out of their inherited thought alone, whether or not they were by nature a philosophical people. Philosophy, properly so called, began in Japan in the turn of the 6th and 7th centuries, when Buddhism was introduced and a dialectic analysis of human knowledge stimulated its thinkers. But this Buddhist philosophy hardly touched the mythical ideas of the spontaneous generation of the world, of the production of many things by the generative acts of the primeval couple, of the origin of death, etc. These mythological traditions found a more congenial partner in Chinese cosmology, which found its way into Japan in the early centuries of the Christian era, and which taught the two cosmic principles (*yin* and *yang*), the five physical elements (wood, fire, earth, metal, and water), and the orderly circulation of these principles and elements in the formation of things, in the seasons of the year, in human life, etc. The combination of Japanese mythology and Chinese cosmology was, especially since the 9th cent., rather an addition to the methods of divination than anything to be called philosophy. Yet, since Confucianism played a great part in the political and institutional life of the Japanese, the combination produced a certain system of political theory and its associate ethics. The chief stress was laid on the monarchic principle of the State constitution, which was based on the divine origin of the ruling family—the Japanese counterpart of the Confucian theory of the heavenly sanction bestowed upon the sovereign. The authority and dignity of the ruler, according to this theory, were a consummation of his patriarchal dignity, and the relation between sovereign and subjects was that between father and children, in an enlarged sense. Loyalty was thus a manifestation or a higher form of filial piety; and other virtues, such as benevolence, justice, propriety, wisdom, and faithfulness, were regarded more as civic than as personal virtues. This ethico-political theory played an important part in Japanese ethics throughout its history.

In the later years, especially in the 14th and 15th centuries, an age of eclecticism, the combination of Japanese mythology (called *Shintō*) and Chinese cosmology embraced Buddhism and Taoism to a certain extent, and enlarged its scope to an ethico-political philosophy based on the idealistic philosophy of the latter systems. The Buddhist philosophy of the oneness of the individual and the cosmic soul was combined with the Chinese parallelisms between the individual life and the cosmic vitality. The most noteworthy representative of this eclectic tendency was Ichijō Kanera (1402-81), who tried to establish a system of *Shintō* philosophy and ethics by harmonizing it with all other systems then prevailing in Japan. The sole principle ruling the universe was, according to him, nothing but the primeval essence of our own soul, which, in spite of its changeable manifestations, was co-eval with the all-embracing divinity. Although Kanera did not explicitly teach a doctrine of emanation, he explained all existences of the world through analogies between mental and

material phenomena and by ethical and psychological interpretations of physical elements and occurrences.

To take one instance, the three insignia of the throne—the mirror, the jewel, and the sword—were explained as symbolizing the virtues of veracity, benevolence, and justice, which were manifested in heaven as sun, moon, and stars, and on earth as fire, water, and metal. The life of an individual as well as of a nation, especially of the Japanese nation, was, or ought to be, an embodiment of these virtues in consonance with the qualities and powers manifested by those material elements and celestial phenomena. Naturally, various theories were adduced to support these analogies, in which Buddhism played the greatest part in metaphysics, Taoism in physics, Confucianism and Shintō in ethics.

This is a typical specimen of Shintō speculation on cosmological and ethical problems, and the eclecticism continued to exert its influence until the revivalist Shintōists of the 18th cent. attempted to exclude alien ingredients and to explain the ancient myths along the lines of a Euhemeristic historicism.

2. Buddhist philosophy.—Philosophical thought, properly so named, was started by the Sanron¹ branch of Buddhism, which was based on the Mādhyamika system of Nāgārjuna. The philosophy of Nāgārjuna consisted in dialectically analyzing every finite concept into a thesis and its antithesis, in showing their incompatibility, and in reducing the concept to an illusion, when taken by itself alone. The culmination of the dialectic process, and therefore the aim of the philosophy, amounted to realizing in a spiritual illumination the absolute which transcended, and at the same time embraced, all finite conception and things.

This system of transcendental idealism opened a way to philosophical thought in Japan and helped to awaken the most enlightened minds of the 7th cent. to the vanity of naive realism.² Although this idealism did not exercise a wide influence at the time, it laid the foundation of the Buddhist thought of all coming ages, and, to a certain degree, of the Japanese habit of looking at things 'beyond their appearances,' as manifested in art and poetry.

The philosophical system which brought to Japan more systematic, and more or less realistic, ideas about philosophical problems was the Yuishiki (Skr. *Vijñāti-mātrā*) school of Buddhism, initiated by Vasubandhu in India and elaborated by Yuan-Chwang in China. The system, in its ultimate basis and goal, was an idealism teaching that the ultimate reality consists in the innermost soul³ of each individual, and this was identified with the cosmic soul. But, it was taught, the soul has in itself an inexhaustible store of the 'seeds' (*bīja*), which may be called 'vitalons' on the analogy of 'electrons.' By the innate virtues of the vitalons the innermost soul manifests itself in the soul-activities of the lower grades, seven in number, as well as in the external phenomena which are nothing but projections of the soul-activities. Thus we have before us a kind of emanation theory, in which cosmology and physics were always closely interrelated with psychology, allied to a system of mystic contemplation. The latter had in view the practical purpose of arriving at the innermost essence of the soul by penetrating the entanglement of mental and physical phenomena.

¹ Sanron meant the 'Three Śāstras,' because the system was founded on the *Mādhyamika-śāstra*, *Sata-śāstra*, and *Dvādaśā-dvāra-śāstra* of Nāgārjuna. For the first of these see Max Walliser, *Die mittlere Lehre des Nāgārjuna*, Heidelberg, 1911; S. Yamakami, *Systems of Buddhist Thought*, Calcutta, 1912, ch. v.

² The most prominent of them was Prince-regent Shōtoku, for whom see A. Lloyd, *The Creed of Half Japan*, London, 1911, ch. xviii.; M. Anesaki, *Religious and Moral Development of the Japanese* (in preparation), pt. ii.

³ Called the *ālaya*, or 'store,' soul. For this and other points see artt. ASAŌGA, VASUBANDHU; S. Lévi, *Mahāyāna-Sūtrā-lamkāra*, Paris, 1907-11; Yamakami, ch. vi.

Thus the physical and psychological analyses were intended in the Yuishiki philosophy to be the means of getting through the phenomenal world; and yet studies on these subjects induced this school of philosophy to dwell much on minute details of the physical and mental processes, with the result that the system manifested realistic traits more than any other branch of Buddhism. In other words, things (*dharma*) were classified under five categories: (1) the soul, or mind-essence (*chitta*); (2) the mental functions (*chitta-vṛtti*); (3) the material phenomena (*rūpa*); (4) the relationships arising out of neither mind nor matter alone (*viprasamyukta-dharma*), such as attainment (of a new acquisition by the mind), universality, vitality, annihilation; (5) the unborn and unchangeable (*asankṛta-dharma*), the state of the ultimate universality. We shall not enter further into the minute classifications of these categories, but the designations alone show how the system deserved its other title Hossō (Skr. *Dharmalakṣaṇa*), i.e. the treatment of the 'signs of things,' including physics, psychology, ethics, and religious philosophy.

As the foundation of these speculations and discussions, the Hossō system emphasized the importance of logic and epistemology, called together *Hetu-vidyā*, the 'science of the ground.' The origin of this system of Indian logic is traced to Akṣhapāda, believed to have lived before Buddha, but it was further systematized by the Buddhist philosopher Dignāga, who is said to have lived in Andhrā in the 6th cent A.D. The logical system was further elaborated in China and Japan, and flourished in the latter for many centuries from the 8th, being cultivated even by the court nobles. The nature of the whole system may be seen from its general divisions: (1) the theories of concepts and propositions, both intuitive and inferential; (2) a system of syllogism, consisting of three or five propositions; (3) the theories of fallacies, inherent in one of the three main propositions. This system of logic attained its utmost subtlety in Japan.

Closely connected with the logical theories is the part of grammar treating of the eight cases (in Sanskrit, but applied to Japanese) and the formation of compounds (six in kind). Although Japanese philosophers did little to develop their original theories or systems in these respects, they succeeded in applying them to their own language, and in greatly elaborating them according to its possibilities. Indeed, it was the adoption of the Indian system of logic and grammar that made the philosophical thought of the Japanese possible, and overcame, to a great extent, the defects of their language as to precise expression of philosophical thought.

When the Hossō school had laid the foundations of Buddhist philosophy in Japan, another system akin to Hegelianism was introduced there, in the beginning of the 9th century. It was a system of Buddhist idealism attempting to explain the different forms of Buddhism as the tactful steps of Buddha's educative method (*upāya - kausalya*) adapted to the various needs and capabilities of his disciples. The system is known by the name Tendai (Chinese, Tien-t'ai), because it was formulated by Chi-i (536-597) of Mount Tien-t'ai, in the province of Chekiang.¹ The man who introduced it into Japan and made use of it for unifying Japanese Buddhism under its banner was Saichō (767-822).² In Saichō's thought, again, we see little originality; his work consisted in translating the idealistic system of the Chinese philosopher into religious practice, and the Tendai philosophy

¹ Cf. J. Edkins, *Chinese Buddhism*, London, 1893, ch. viii.

² Lloyd, pp. 228-235; Anesaki, pt. iii.

pragmatized, so to speak, ruled Buddhist thought in Japan throughout centuries, parallel with another school of pantheistic mysticism, Shingon (see below).

The philosophy of the Tendai school is founded essentially on the same basis as that of the Sanron school, and amounts to denying reality to a finite conception, or thing, taken by itself. But it is further urged that reality in the full sense consists neither in an abstract vacuity nor in a phenomenal actuality alone, but in the synthesis of both—the doctrine of the Middle Path. In other words, reality means a concrete being seen under the aspect of the universal, or a universal seen in a concrete existence. To realize this truth of reality, first in meditation, and then in moral and religious life, is the kernel of the Buddhist religion.¹

Now the Tendai philosophy of religion proceeds, upon this basic conception of the world, to explain the various branches of Buddhism as the stages of the necessary development of thought, which were taken into account by Buddha in leading his followers to the ultimate truth of reality. The first stage, to speak in a general way, was to instruct the people in the lawful order (*dharma-tā*) of existence, and therefore in the realistic traits of the Hinayāna and the Hossō schools. Then the necessity of breaking down the exclusive adherence to actualities was shown in the teaching of vacuity (*śūnyatā*), as expounded at length in the Prajñā texts. The higher synthesis of these two extremes was carried out in the sermons of the *Lotus of the True Law* ([q.v.] *Sad-dharma-pundarika*), given during the last eight years of Buddha's ministry, according to Buddhist legend, and Chi-i claimed to have based his system on the teachings of that book. Chi-i distinguished five stages in Buddha's educative process and eight kinds of doctrines therein expounded, and he further elucidated these stages and doctrines as the successive steps in Buddha's instructions as well as the gradual development of spiritual enlightenment in individual psychology. But the gist of this religious philosophy was the consideration of the thesis, antithesis, and synthesis which, as stated above, were applied to all philosophical theses and to the instructions in moral and religious life. Thus, after all, we have here a splendid counterpart of the Hegelian idealism, and the contribution of the Japanese mind to the system consisted in applying this synthetic idealism to practical life. In this respect Japanese Buddhism produced not a few men of more or less originality, not only in religion and morals, but also in the arts and poetry; but this belongs to religious history rather than to the consideration of philosophy.

The pantheistic mysticism known as the Shingon (Skr. Mantra) school was promulgated by Kūkai (774-835), a younger contemporary and great rival of Saichō.² The philosophy of Shingon was a significant combination of materialism and idealism, viewing the universe as the very body of the Buddha Great Illuminator (Mahā-Vairocana) vitalized by his soul. The five material elements, together with one 'mental' element, consciousness, are enlivened by the soul consisting of the ninefold stages or strata³ of soul-activities. And in every one of these material existences, even in dust or sand, and in every one of our thoughts and utterances, is embodied the all-pervading vitality of the universe. This was a mystic consummation of the cosmological, physical, and psychological specula-

tions elaborated in India, Central Asia, China, and Japan; and its religious practice consisted in the mystic acts of prayers and rituals. In this respect Kūkai simply imported what he found in China, but the grand scale of his world-view may be seen in his theory of the ten stages of spiritual development, in which he surpassed the achievements of his predecessors.

Kūkai's scheme arranged the various systems and ideas in a series of spiritual development, tracing the gradual illumination of the individual soul from beast-like stupidity up to the full realization, chiefly through mystic practices, of the cosmic life of the Great Illuminator. Not only the various branches of Buddhism but also Hinduism, Confucianism, and Taoism, were included in the scales of the progressive development which culminated in the mystic pantheism of Shingon. Here we shall simply enumerate the ten stages: (1) the stage of the soul, living and dying like a beast absorbed in the thoughts of food and sex—common men without religion; (2) the state of the soul like a stupid child scrupulously sticking to moral rules and social conventions—Confucianism; (3) the state of the soul like an infant living without fear, being nursed in the mother's bosom, i.e. in the belief in the heavenly life—Brāhmanism; (4) the state of the soul which is convinced of the sole reality of the five constituents (*skandhas*) of existence and the non-entity of self—Hinayāna; (5) the state of the soul which, having realized the evil of existence, has eradicated its root, *karma*, and attained an absolute tranquillity—the enlightenment of the Pratyekabuddha (q.v.); (6) the state of the soul awake to the oneness of existence and proceeding to the illumination in the truth of the illusoriness of external existence—the Yūishiki, or Vijñāti-mātrā, school; (7) the state of the soul fully enlightened as to the ultimate reality which transcends all relativities—the Sanron, or Mādhyamika, school; (8) the state of the soul in which the all-embracing sole way of reality is grasped, the reality universal and eternal identified with our own soul—the Tendai school; (9) the state of the soul freely moving in the world of living force, which is neither a chaotic mass nor a static entity, but exhibits its whole vitality even in a particle—the Keron school, based on the book *Avatamsaka* (Chin. *Hwa-yen-king*); (10) the state of the soul which has fully grasped the glories of cosmic mysteries and lives the life of the cosmic Lord even in an individual body—the Shingon mysticism.

The complete embodiment of cosmic mysteries in the individual life is more a matter of religious mysticism than of philosophical speculation; but we have to note that the mystic ritualism of Shingon had in its background, or rather as its systematic expression, this view of a vast spiritual development going on in the individual soul as well as in the cosmic life. The final aim of every finite existence, according to this view, was participation in the full life of the cosmic Lord and attainment by this means of complete mastery over the cosmic mysteries.

The Shingon mysticism was, in fact, a culmination of Buddhist philosophical thought, which tried to unite in a harmonious whole not only the different schools of Buddhism, but also all other religions and philosophies with which it came into contact. What the Tendai school regarded as the steps in Buddha's educative method was modified by the Shingon system to mean the successive stages of spiritual development, guided and illumined by Buddha's wisdom and mercy. Thus the general trend of thought in these philosophical systems was idealistic in their philosophical foundation and pantheistic in their religious bearing.

¹ Cf. the appendix to M. Anesaki, *Nichiren*, Harvard University Press, 1916; Yamakami, ch. viii.

² For Kūkai and Shingon mysticism cf. Lloyd, pp. 235-240; Anesaki, *Buddhist Art in its Relation to Buddhist Ideals*, Boston, 1915, ch. ii.

³ One higher stage, called *amala*, 'purity-consciousness,' is added to the eighth, the *ālāya* (for which see art. *ASAŌGA*).

3. **Confucian philosophy.**—In the early stage of its influence in Japan Confucianism was a system of civic morality and social institutions, and left the field of philosophic thought to Buddhism, never attempting to rival it. But the characteristic feature of Buddhism—its linking of ethics and metaphysics through psychological self-introspection—made more and more impression upon Chinese Confucianists, and resulted in the Sing-li school of the 12th cent., represented chiefly by Chu-Hsi (Jap. Shu-shi).

Sing means literally 'nature,' the universal nature of all existences identified with the ultimate principle of cosmic existence; and in this sense *sing* is identical with *li*, 'reason' or 'universal principle,' like the Stoic *λόγος*. Besides this, the Sing-li school postulated the existence of another principle called *ki*, literally 'air,' which meant the particularizing and vitalizing principle—the source of concrete physical existence. Thus the antithesis between *li* and *ki* may roughly be characterized as a dualism of the metaphysical and spiritual on one side and the physical and concrete on the other. The Sing-li school emphasized in its metaphysics the all-pervading rule of *li* as the wisdom and will of heaven, while in physics it elaborated the theory of the differentiation out of *ki* of mental and physical conditions, which were pervaded by the positive and negative principles (*yin* and *yang*) and composed of the five material elements.

Though the chief interest of the school was in ethics, its thinkers had to face the problem of psychologically examining human nature as reflecting the heavenly reason, on the one hand, and as being disturbed by physical conditions, on the other. The intricate problems of human nature were treated along psychological lines—e.g., the relation between the fundamental nature of the mind and its emotional agitations, the difference of temperaments caused by the preponderance of the various elements in the physical life, the close link existing between control of moral will and intellectual investigation into the nature of things, etc. These discussions were directed towards moral problems and applied to the methods of mental culture and control. This system of metaphysics and ethics was introduced into Japan in the 14th cent., but was cultivated chiefly by Buddhist monks, until it was adopted as the orthodox teaching of the State by the dictatorial government in the beginning of the 17th cent. and took the upper classes under its sway. The story of how the orthodox teachings of the Shu-shi philosophy moulded the moral life of the ruling classes is an important chapter in the moral history of the Japanese, but cannot be treated here.¹ We may, however, point out an important feature of the Sing-li school in Japan: it emphasized the virtues of sincerity and obedience perhaps more than benevolence and justice, the cardinal virtues of the original Confucianism. This was a consequence of the Shu-shi ethics adapted to the needs of the time, when the Japanese nation was ruled by a strong military government and enjoyed a peace lasting over two centuries. Sincerity, thus emphasized, verged on religious devotion—a pious obedience towards the heavenly reason as well as towards social order. This was a characteristic point of Japanese Confucianism, distinguishing it from the same system in its native land; and, in fact, some Japanese Confucianists of the 18th cent. organized a Shintō-Confucian cult.

A system of ethical teaching thus dictated by

¹ See Anesaki, *Religious and Moral Development of the Japanese*, pt. v. On Confucianism in Japan in general see R. C. Armstrong, *Light from the East*, Toronto, 1914, and its review by Anesaki in the *Harvard Theological Review*, vii. [1915] 568-571.

the government and emphasizing obedience inevitably aroused reaction from men of ability and originality. One of the reactions was the 'Old Learning' (Jap. *Ko-gaku-ha*), which claimed to purge Confucianism from later admixtures and proposed a more dynamic view of the world and life. Speaking in general, the result was a monistic philosophy identifying *ki* with *li*, i.e. attributing the concrete vitalizing force to the very nature of the cosmic principle. In this system the partition between metaphysics and physics was partly abolished, and likewise the antithesis between the universal nature and the actual life. Every thing is a direct manifestation of the universal vitality, and what the Shu-shiists call the 'reason' or intelligence is nothing but the reign of law to be detected in the processes of the cosmic and individual life. The ethical consequence of this monistic philosophy was that not obedience but an actual realization of the universal life in the individual was the virtue of human life—a self-realization in which the individual embodies the all-comprehensive vitality of the universe. The cardinal virtues are, therefore, benevolence and justice, the virtues which represent the love and law of the cosmic existence in the individual and social life. In short, the 'Old Learning' school was, in spite of its claim and title, a product of Japanese genius, which cared not so much for metaphysical abstractions as for the realities of life. In its teaching we see a close tie between metaphysics and ethics, to the exclusion to a large extent of physical theories and psychological subtleties.

The second of the heterodox schools consisted of the followers of Wang Yang-ming (Jap. Ō-Yōmei), the intuitionist of the 16th century. This school identified conscience, when unstained and fully alive, with the primeval conscience of the universe. The main distinction of the school was that it abandoned all theoretical subtleties and aimed at realizing the primeval conscience in the individual life, first in intuitive insight and spiritual drill, and then in actual life. This feature had its best manifestation in the moral attainment of a select few, who also favoured democratic ideas and practices. The Yōmei school was eminent and efficacious in its practical effects more than in philosophic thought as such.

4. **Review and present conditions.**—Viewed as a whole, the philosophic thought of the Japanese never manifested originality, but was always influenced by the philosophical systems of the Asiatic continent. Yet the impression made and the modifications wrought by the Japanese upon these imported systems cannot be overlooked. Pragmatic application and attempts at unifying those systems characterized the history of Japanese thought, and it bore its best fruits in religious and moral life rather than in theoretical elaborations.

The change in philosophy going on at present is chiefly due to Japan's contact with Western civilization. Auguste Comte and J. S. Mill were the first European philosophers introduced, in the seventies of the 19th cent., soon after the reform of 1868, and some Confucianists found in Comte's positivism an ally of their own ethical and social theories. Herbert Spencer followed, and the sway of agnosticism lasted during the eighties. The English philosopher exerted his influence in dispelling, more or less, mystic or religious ideas handed down among the Japanese, but a peculiar point in his influence was that his agnosticism was brought by some Buddhists into connexion with the Buddhist transcendentalism of the Sanron school. This was due to the fact that the Unknowable of Spencer showed kinship to the over-coming, in Sanron, of all finite conceptions in

the search for the ultimate reality. This alliance is also found in Lafcadio Hearn's¹ appreciation of Buddhism through his Spencerian agnosticism, though independently from the Japanese thinkers. While agnosticism was prevailing, Hegel was gradually introduced, and soon some young Buddhists realized the kinship between Hegel's metaphysical dialectic and the Tendai philosophy of Buddhism. This discovery, in conjunction with various other circumstances, gave a strong impetus to the revival of Buddhist philosophy during the later years of the eighties. Since then nearly every one of the European philosophers has found his exponents in Japan, and the philosophical thought of modern Japan is in a melting-pot of Oriental and Occidental philosophies. Nearly twenty chairs of philosophy and philosophical sciences in Japanese universities represent all possible combinations of these philosophies. Although it may be premature to speak of any definite tendencies or predominant features, we may perhaps safely say that all these streams of Western thought are being correlated with either Buddhist idealism or Confucian positivism.

LITERATURE.—This is cited throughout the article.

M. ANESAKI.

PHILOSOPHY (Jewish).—Jewish philosophy may aptly be designated as the conscious attempt of Jewish thinkers to reconcile the teachings of Judaism with the results of their studies in the fields of the secular sciences. The literary products of the Jews in this line of thought are not the continuation of either the Bible or the Talmud, nor do they represent a spontaneous manifestation of the Jewish mode of thinking, as was the case with the philosophy of the ancient Greeks; they are the outgrowth of foreign influences which were fundamentally antagonistic to the religious spirit of Judaism. A people begins to philosophize only when, for one reason or another, it becomes suspicious of the value and truth of its inherited ideas and national beliefs. The Jews of ancient times, with the exception perhaps of some individuals, of whom, however, we have no sufficient records to warrant conclusions, never entertained any doubt as to the truth and the ethical worth of their religious teachings. Looking upon the Bible as a sacred book, the contents of which were revealed or inspired by God Himself, they felt themselves in the possession of all truth, and it did not occur to them that they were in need of some new system of metaphysics which would reveal to them verities not contained in their religious documents. It was only when the Jews came in contact with other nations, first with the Greeks and then with their disciples, the Arabs, that some of their scholars, who in their quest for knowledge had ventured beyond the boundaries of their own national literature, began to notice the discrepancies between what they had hitherto considered as eternal verities and the new truth which was heralded with so much clearness and certainty in the works of foreign philosophy. This realization of a conflict of ideas is already reflected in the book of Ecclesiastes, whose author, however, makes no attempt at any philosophic reconciliation of the opposing views.

The first Jewish author of prominence who tried to harmonize the Jewish and the Greek world-conception was Philo of Alexandria (c. 20 B.C.-A.D. 50). Starting out from the point of view of a pious observant Jew, such as he was, that the Law of Moses is the source and standard of all truth, religious and philosophic, and being at the same time an enthusiastic devotee of Greek thought, Philo set himself the task of proving

that Judaism and Hellenism not only are not antagonistic, but actually teach the same divine truth, though each in a different form. In order to achieve his purpose he, on the one hand, resorted to an elaborate and often fantastic system of allegorization of the Bible, whereby the text could be made to mean anything desired, and, on the other hand, selected from the various writings of the philosophers those views which in his opinion could be best adapted to the teachings of the Bible. Philo, though far from being a mere compiler, is thus to be classed with the philosophic eclectics. The doctrines of Pythagoras, Plato, Aristotle, the Stoics, and others were all made to contribute to his system, the main purpose of which was, as already noted, the defence and justification of the Jewish religion (see C. Siegfried, *Philo von Alexandria*, Jena, 1875, p. 137 ff.; James Drummond, *Philo Judæus*, London, 1888, i. 257 ff.). Philo's influence on the later development of Jewish philosophy was comparatively small (cf. Siegfried, pp. 299-302), but was an important factor in the construction of the Christian dogma by the Church Fathers. See, further, ALEXANDRIAN THEOLOGY, § 2.

In the literature of the Jews that originated during the nine centuries following upon the short Hellenistic period very little is found that can be designated as philosophy. The only work of a speculative nature is the semi-mystic Hebrew treatise known under the name of *Sefer Yesirah* ('Book of Creation'), which was ascribed to the Mishnic teacher 'Akiba (2nd cent.) and even to the patriarch Abraham, but is no doubt a product of the Saboraic or the earlier Geonic period (5th-7th cent.). Apart from some philological paragraphs dealing with the Hebrew language, the treatise is a speculative attempt to solve the mysteries of God and nature in short sentences which are partly very obscure. The number-symbolism of the Neo-Pythagorean school and some Gnostic ideas are the most conspicuous elements of the book, which exercised an immense influence on later Jewish literature, particularly the *Qabbalā* (q.v.). It appeared in several hundred editions, was frequently translated into Latin and all the leading European languages, and was variously commented upon by the most prominent Jewish and also Christian authors (see for the literature *JE* xii. 606; M. Steinschneider, *Die hebräischen Übersetzungen*, Berlin, 1893, p. 395, n. 181).

With the general advancement and scientific progress which mark the 9th cent. in the history of Islām a new period of literary activity and productivity was inaugurated also among the Jews living under Islāmic rule. Among the various secular sciences then cultivated philosophy, too, was given careful attention. The numerous Jewish philosophic writers who represent this period (which lasted about four centuries) are properly classified according to the prevalence in their works of the doctrines and ideas which they adopted from one or the other of the three main divisions of contemporaneous Muhammadan philosophers. The latter are usually grouped as Mutakallimūn, Neo-Platonists, and Aristotelians, or Peripatetics, the three schools following one another in chronological succession, although we meet with adherents of the Kalām, e.g., also during the period of the Peripatetics. The Jewish philosophers who looked upon the Arabs as literary models naturally adopted with the external literary form and method also the essential contents of the Arabic philosophy of their time—that is, in so far as the latter was found to be compatible with the principal tenets of Judaism. We find, therefore, the same three philosophic divisions among the Jews as among the Arabs. Often, however, religious

¹ Lafcadio Hearn, *Japan: an Attempt at Interpretation*, New York, 1904, pp. 229-250.

scruples prevented individual thinkers from abandoning themselves entirely to the influence of the school to which, in the main, they belonged. In such events they would adopt single doctrines from some other system of thought, graft them upon their own, and thus obtain the chief result aimed at, namely, the harmonization of reason and belief, of philosophy and religion. With a few exceptions, Jewish philosophers are accordingly, as are indeed most of the mediæval Muhammadan and Christian philosophers, more or less eclectics. Their writings, nearly all composed in Arabic, but some preserved only in early Hebrew or Latin translations, cannot be properly understood without a sufficient knowledge of the kindred Arabic literature upon which they drew (see PHILOSOPHY [Muslim]). It would be a mistake, however, to think that owing to these facts Jewish philosophy is but a repetition or slight modification of that of the Arabs. For, as we have seen, the Jewish mind, when it made acquaintance with philosophy, whether Greek or Arabic, was not a *tabula rasa* capable of accepting anything that offered itself for acceptance, but, on the contrary, had been fully indoctrinated with a system of religion involving, if we may say so, a philosophy of its own which was totally different from the one that now presented itself. A thorough revision of the entire stock of their religious ideas as well as deep penetration into the real meaning of Græco-Arabic metaphysics was required in order to make possible a mental readjustment and a complete blending of the two heterogeneous elements. The Jewish thinkers succeeded fairly well in this task of combining the secular and the sacred, the human and the divine, and by this combination gave to Greek (especially Peripatetic) philosophy, as taken over from the Arabs, a distinct religious character, transforming the whole into a system of ethics and theology. From a scientific point of view, all this activity may have been uncritical and wrong, but, as a stage in the development and manifestation of human thought, it was of no less importance and originality than the philosophy of the Muhammadan theologians and Christian scholastics, which likewise culminated in the attempt to reconcile pagan thought with the tenets of their respective religions. It should also be noted that there were some Jewish thinkers who did not enter upon the field of philosophy with a view of harmonizing it with their religious belief, but tried to settle the problems without considering the consequences from the point of view of religion.

An author of this type was Isaac b. Solomon Israëli of Kairawān, N. Africa († 953, as is reported, at the age of over 100 years), the first known Jewish philosophic writer of the Arabic period, and recognized as the greatest physician of the Middle Ages, mediæval Christian authors referring to him as 'eximius monarcha medicinæ.' As a philosopher, Israëli cannot be rated very high; he was altogether an eclectic, taking his material from any source with which he happened to be acquainted; hence he cannot be classed with any of the three groups mentioned before, although on the whole he inclines more towards Neo-Platonic ideas. Israëli deserves recognition, however, for having first introduced the study of philosophy among the Oriental Jews of his time. His influence on the development of Jewish philosophy was very small, but Christian scholastics, like Albertus Magnus, Thomas Aquinas, and others, made prolific use of his writings (see Steinschneider, *Arabische Literatur der Juden*, Frankfurt, 1902, § 28; J. Guttman, *Die philosophischen Lehren des Isaak ben Salomon Israeli*, Münster, 1911, esp. p. 17 ff.).

1. The Jewish Mutakallimūn.—The earliest

Jewish writer who is known to have followed the philosophy of the Kalām is David b. Merwān ibn al-Muḥammad (*JQR* xv. [1903] 682) of Rakka, Mesopotamia, who flourished towards the end of the 9th and the beginning of the 10th cent. and is the first Jewish author to mention Aristotle by name (*ib.* xvii. [1905] 357). He wrote a philosophic work under the title *Ishrān Maḳāla* ('Twenty Chapters'), dealing with the various philosophical and theological problems current in those days. Fifteen chapters of the work were not long ago discovered in the Petrograd Library, while some portions of it were embodied in a Hebrew translation in the work of an author of the 12th cent. (Steinschneider, *Arab. Lit.*, § 25, p. 338 f.; Schreiner, *Der Kalām*, p. 22 f.; *JE* iv. 466).

Of far greater importance for the history of Jewish philosophy is the famous Gaʿōn Saʿadya b. Joseph al-Fayyūmī (892-942), who is generally recognized as the inaugurator of a new epoch in all branches of Jewish learning, and who was actually the creator of mediæval Jewish philosophy. While in general following the method and the ideas of the Mutakallimūn, he shows himself in many essential points an independent thinker, who paved the way for the work of harmonizing reason and religion. It is impossible here even to mention the problems discussed in his very numerous writings, especially in his main philosophic work, *The Book of Philosophic Doctrines and Religious Beliefs*, which was much read in the Hebrew translation (*Emūnōt we Dē'ōt*) of Judah ibn Tibbōn (1186). The Arabic original was published by S. Landauer (Leyden, 1880). See art. SA'ADYA and literature there cited; cf. also H. Malter, *Life and Works of Saadia Gaon*, in the press; Steinschneider, *Arab. Lit.*, § 31; Guttman, *Die Religionsphilosophie des Saadia*, Göttingen, 1882; Schreiner, pp. 5-22.

Among the Jewish followers of the Kalām shortly after the time of Saʿadya (c. 950) special mention is made by a prominent Muhammadan

author of one Abu-l-Hayr (خير) Dāūd ibn Mūsāʿ

(diminutive of Mūsā), who defended the doctrines of the Kalām in learned meetings of Muhammadan Peripatetics in Baghdad and Baṣra (see Goldziher, *REJ* xlvii. [1894] 41-46).

Saʿadya was taken as a model also by the Geʿōnīm Samuel b. Hofni († 1034) and his son-in-law Hai († 1038), both very influential scholars (see Schreiner, *MGWJ* xxxv. [1886] 314 ff.), as also by their contemporary Nissim b. Jacob, head of the learned community of Kairawān, who in his *Clavis* (*Maftēah*, ed. J. Goldenthal, Vienna, 1847), as well as in other writings (Goldziher, *REJ* xlvii. 179-186; Steinschneider, *Arab. Lit.*, § 59), frequently set forth various doctrines of the Mutakallimūn.

An anonymous Arabic treatise in Hebrew characters dealing, as far as the recently discovered fragment goes, with the question of the divine attributes likewise represents the school of the Mutakallimūn. As supposed by Goldziher, who edited the fragment (*Harkavy-Festschrift*, Petrograd, 1908, pp. 95-114), the author lived also in the period under consideration (11th century).

In this connexion mention must be made of a distinct group of Jewish Mutakallimūn—the sect known under the name of Karaites (*q.v.*). Having broken away from the solid ground of traditional Judaism with its Haggadic theology, which formed a strong barrier against heretic tendencies, they were thrown into a state of religious confusion which inclined them to be blown about by any wind of theological doctrine that happened to be prevailing in their days. The Karaites, especially

those of the 11th and the 12th centuries, therefore adopted the philosophy of the contemporaneous Kalām in its entirety, so that some of their works might 'almost as well have been written by a Muhammadan author' (Steinschneider, *Übersetzungen*, p. 453). The most prominent of the Karaite philosophic writers are: Abu Jūsuf Ja'kūb al Kīrkisānī (c. 930 [*ib.* p. 451 ff., and *Arab. Lit.*, § 43]); Joseph b. Abraham ha-Kohen, known under the euphemy al-Baṣīr (Hebrew 'ha-Ro'eh', 'the seeing') because of his blindness, the most important Karaite philosopher of the 11th cent. (P. F. Frankl, *Ein mutazilitischer Kalām*, etc., Vienna, 1872; Steinschneider, *Übersetzungen*, §§ 265-270, and *Arab. Lit.*, § 50; Schreiner, *Der Kalām*, pp. 27-32); Jeshū'a b. Jehudah (11th cent. [Steinschneider, *Arab. Lit.*, § 51; Schreiner, *Studien über Jeschua ben Jehuda*, Berlin, 1900, who gives a full presentation of Jeshū'a's philosophy]). To these Karaite philosophers may be added the famous author of a Karaite encyclopædia (*Eshkol ha-Kofer*), Judah Hadassi of Constantinople (Schreiner, *Der Kalām*, p. 33 f.), and the Bible exegete Aaron b. Joseph of Constantinople (*ib.* p. 67; cf. Kohler, *JE* i. 14), both of the 13th century.

2. The Jewish Neo-Platonists.—In the works of Isaac Israēlī (mentioned above) we find for the first time a decided influence of the Neo-Platonic school, but the real representatives of Neo-Platonism among the Jews did not appear until over a century later in Spain. Of these the first and foremost author is undoubtedly the famous poet Solomon ibn Gabirol of Malaga, who, up to 1846, when Solomon Munk discovered his identity, was known as a Christian scholastic under the corrupt name of Ayicebron. His main philosophic work, *The Fountain of Life*, which is preserved only in a Latin translation of the 12th cent. (C. Bäumker, *Avencebrolis Fons Vitæ*, Münster, 1895) and in the Hebrew extracts made from the Arabic original by Shem Tob Palquera (13th cent.), has exercised the greatest influence on the development of Neo-Platonism in the Christian Middle Ages. Ibn Gabirol shows himself entirely independent of Jewish religious dogma, treating the philosophic problems without any theological bias. His work was therefore attacked by some of his successors and had comparatively little influence on Jewish thought. See, further, art. IBN GABIROL.

To the 11th cent. belongs in all probability also the anonymous Arabic work *Ma'ānī al-nafs* ('Essence of the Soul'), whose author is entirely under the influence of the Neo-Platonists, especially the so-called 'Sincere Friends' (أخوان الصفا).

ally the so-called 'Sincere Friends' (أخوان الصفا), a fraternity of humanitarian philosophers who had established themselves at Basra during the second half of the 10th cent. (cf. Goldziher, in *Die Kultur der Gegenwart*, i. 5, p. 309 f.). The work was published by Goldziher (*Kitāb m'ānī al-nafs*, Berlin, 1907), who gave also a thorough analysis of its contents.

During the first half of the 12th cent. Jewish Neo-Platonism is represented by the astronomer and mathematician Abraham b. Hiyya of Barcelona in his ethical work, *Meditation of the Soul* (*Hegyon ha-Nefesh*, Leipzig, 1860; cf. *JE* i. 108-110), and by the poet Moses ibn Ezra of Granada

(† 1139), in his *Garden* (حديقة), of which only fragments are preserved (see Steinschneider, *Arab. Lit.*, p. 150, no. 3).

Moses ibn Ezra's prominent contemporary, the philosopher Joseph ibn Ṣaddīk (or Ṣiddīk) of Cordova († 1149), in his *Microcosm*, preserved only in a Hebrew translation (*Olām Kaṭān*, ed. S. Horovitz, Breslau, 1903), likewise propagates Neo-Platonic

ideas (cf. M. Doctor, *Die Philosophie des Josef ibn Ṣaddīk*, Münster, 1895; Schreiner, *Der Kalām*, p. 27 ff.; Kaufmann, *Attributenlehre*, pp. 255-337; Horovitz, *Die Psychologie*, pp. 147-207), as does also the famous Bible exegete Abraham ibn Ezra of Toledo († 1167) in his numerous Bible commentaries and independent works (M. Friedländer, *Essays on the Writings of Abraham ibn Ezra*, London, 1877; for his relation to the Kalām see Schreiner, *Der Kalām*, pp. 35-41).

Altogether in the spirit of Muhammadan Neo-Platonism is the philosophic work *Bustān al-'Ukūl* ('Garden of Intellects'), in seven chapters, by Nathanael al-Fayyūmī of Yemen (12th cent.), published with an English translation and notes by David Levine, New York, 1908 (Steinschneider, *Arab. Lit.*, § 147).

In the very popular ethical work, *Duties of the Heart*, by Baḥya ibn Pakūda of Saragossa, which in the Hebrew translation (*Hōbōt ha-Lebābōt*) of Judah ibn Tibbon (1167) has gone through about 50 editions, and has been translated into several European languages, Neo-Platonic and Ṣūfī doctrines are frequently met with, though the author shows a marked inclination towards the Kalām (see Kaufmann, 'Die Theologie des Bachja ibn Pakuda,' in *Gesammelte Schriften*, ii., and especially Schreiner, *Der Kalām*, p. 25). The Arabic original under the title *Al-hidāya ilā farā'id al-quḥūb* has been edited with a learned introduction by A. S. Yahuda (Leyden, 1912).

Apart from the authors of independent works here enumerated, there were several others who, through translation into Hebrew of non-Jewish Neo-Platonic writings, have largely contributed to the spread and popularization of Neo-Platonic doctrines. In some instances the works in question have been preserved in the Hebrew translation only, as, e.g., the pseudo-Empedoclean treatise on *The Five Substances*, edited by D. Kaufmann in *Studien über Salomon ibn Gabirol*, Budapest, 1899.

Through the influence of this literature various doctrines of Neo-Platonic origin gained entrance into Hebrew Bible commentaries and other works of later authors, who were not always aware of the real origin of their ideas. The main stream of Neo-Platonic ideas, however, emptied into the wide sea of mediæval Jewish mysticism, the Kabbālā (q.v.).

3. The Jewish Aristotelians.—The philosophy of Aristotle reached the Arabs and the Jews only after having undergone considerable changes. Aristotle's early interpreters, especially Porphyry, took great liberties in reading into the text certain ideas which were foreign to Aristotle's system. In the following centuries a number of pseudo-Aristotelian writings came into existence, the doctrines of which would have been vigorously repudiated by the great Stagirite. The lack of historical criticism, however, which was common to those ages, made the Arabs as well as the Jews believe in the genuineness of these writings. Obvious contradictions of the system of Aristotle were represented as later views of the philosopher, or difficulties were smoothed over in some other artificial way. Thus a combination of Aristotelian, Neo-Pythagorean, and Neo-Platonic doctrines was attributed to Aristotle, the influence of which makes itself felt even among the keenest and staunchest Peripatetics.

The first Jewish writer to refer to Aristotle by name is the above-mentioned David al-Mukammaṣ (Steinschneider, *JQR* xvii. [1905] 357), while his younger contemporary, the Gāon Sa'adya (892-942), though never mentioning Aristotle by name, at times adopts some of his philosophic theories, and at others assails him bitterly. By this time, then,

al-Kindī, al-Fārābī, and other Arabs had made the name of Aristotle familiar to Jewish thinkers, but, as Kalām and Neo-Platonism were predominant among the Arabs, the Jews, too, were held under their influence, and for nearly two centuries no representative of Peripateticism appeared among them. The famous poet Judah Halevi (*q.v.*) of Toledo († 1140) shows thorough acquaintance with the philosophy of Aristotle in his apologetic work known under the title *Kuzari* (*Chazari*), which is a philosophic dialogue between a Hebrew scholar and the king of the Chazars, and which was translated into Latin and the leading European languages (Steinschneider, *Arab. Lit.*, § 103). Being likewise a strong opponent of philosophy, he cannot be counted among the Jewish Aristotelians. It was not until about the second half of the 12th cent. that a real champion of Aristotelian philosophy appeared in Abraham ibn Dāūd of Toledo († c. 1180). In a work called *The Sublime Faith* he made the first attempt at reconciliation of Judaism with the doctrines of Peripatetic philosophy. Ibn Dāūd's chief interest was the problem of free will *versus* predestination. He also discusses at some length the problem of *creatio ex nihilo*. Here he deviates from the Aristotelian assumption of the eternality of matter, adopting instead with certain reservations a theory similar to the Neo-Platonic doctrine of emanation. Neo-Platonic ideas find expression also in some other parts of the essentially Aristotelian work (see Guttman, *Die Religionsphilosophie des Abraham ibn Daud*, Göttingen, 1879; Horowitz, *Die Psychologie*, p. 211 ff.).

Of much greater consequence was Moses b. Maimūn, commonly called Maimonides (*q.v.*] 1135–1204), the greatest Jewish philosopher of the Middle Ages. Like Ibn Dāūd, whom he frequently follows, he started out with the conviction that reason, being a gift of God, cannot possibly conflict with true religion, which emanates from the same source. Aristotle is to Maimonides 'the prince of philosophers' whose theories he opposes to those of the Mutakallimūn. In his main philosophic work, *The Guide of the Perplexed*, he tries to demonstrate the identity of Aristotle's teachings with those of Judaism. The apparent contradiction between Aristotle and the Bible is due only to a too literal interpretation of the latter. A large portion of the work is therefore devoted to explaining away the anthropomorphisms of the Scriptures. In connexion therewith he discusses the divine attributes. Maimonides does not admit any positive attributes in the description of God, except those referring to God's actions. God's essence can be described only negatively. The last chapters of the first part offer a history of the Kalām and a trenchant criticism of its methods and teachings, which until recent times was the most important source of our knowledge about the Kalām. The main philosophic problems, as *creatio ex nihilo*, unity and incorporeality of God, and the nature of prophecy, are admirably treated in the second part of the *Guide*, while the third is devoted to questions of a more theological character, such as the origin of evil (theodicy), the extent of divine providence, which, contrary to the opinion of Aristotle, Maimonides holds, embraces all human individuals, and, finally, the meaning and purpose of the revealed law, which is treated in much detail. Maimonides identifies religion, as expressed in the divine precepts of the Pentateuch, with ethics, and tries to show that the precepts, if properly understood, have a moral purpose.

The main results of his philosophic investigations were formulated by Maimonides in short paragraphs at the beginning of his famous code, called *Mishneh Tōrah*. Peripatetic philosophy of Aristotle thus appears here as an integral part of a

code of Jewish law. See, further, art. MAIMONIDES.

Of the immediate pupils of Maimonides special mention is to be made of Joseph ibn 'Aknin († Aleppo, 1226), to whom Maimonides dedicated his *Guide*. He is the author of several philosophic treatises, some of which were published (see Steinschneider, *Arab. Lit.*, § 170; J. L. Magnes, *A Treatise as to Necessary Existence*, etc., Berlin, 1904; W. Bacher, *Sepher Musar*, do. 1910).

Maimonides' works exercised great influence on Christian scholastics, especially Albertus Magnus, Thomas Aquinas, and others (Kaufmann, *Gesammelte Schriften*, ii. 152 ff.). Among the Jews many of his doctrines were strongly opposed as incompatible with traditional Judaism. This opposition led to a wide-spread internal strife and to a decline of philosophic studies within the ranks of Jewry (see H. Graetz, *Hist. of the Jews*, Eng. tr., London, 1891–92, iii. 522–545, 623 ff.). The numerous philosophic writers of the 13th cent. merely repeated the ideas of previous authors. Some of them, however, displayed great literary ability and industry as translators of foreign works into Hebrew (Steinschneider, *Übersetzungen*, pp. 42–500), as compilers of general encyclopædias (*ib.* pp. 1–42), or as commentators on the works of others. Among these writers mention should be made of the Provençal Shem Tob Palquera (1225–90), a profound scholar and keen literary critic (Malter, *JQR*, new ser., i. [1910–11] 151–181, 451–501); the Italian physician Hillel b. Samuel (1220–90), translator into Hebrew of several works, among them the pseudo-Aristotelian *Liber de Causis*, from Latin, and author of an independent philosophic work (*Tagmule ha-Nefesh*, Lyck, 1874; see Steinschneider's letter in the intro. to this work); Isaac Albalag of S. France, an unreserved follower of Aristotle, with some leaning, however, towards the Kabbālā (H. Auerbach, *Isaac Albalag*, Breslau, 1906); Joseph ibn Caspi of Argenteire (1340), the most prolific writer of that period (see E. Renan and A. Neubauer, in *Hist. littéraire de la France*, Paris, 1893, xxxi. 477–547), and his contemporary, the poet Jedaiah Penini of Béziers, whose *Examen Mundi*, an ethical work in a highly poetical Hebrew style, was one of the most popular books of the Middle Ages. It was translated into Latin and most of the modern languages (Eng. by T. Goodman, London, 1806), and very frequently published with various commentaries (Renan-Neubauer, pp. 359–402).

During the first half of the 14th cent. Jewish Peripateticism once more came into great repute through Levi b. Gershon (*q.v.*] Gersonides, Magister Leo Hebraeus, † c. 1344) of Bagnols, after Maimonides the keenest and the most consistent Jewish Aristotelian of the Middle Ages. Levi is the author of numerous philosophic commentaries on books of the Bible and on the works of Averroes as well as of a comprehensive independent work called *Milhamōth 'Adōnai* ('Battles of the Lord'), which established his fame (Renan-Neubauer, pp. 586–644; Kellermann, *Die Kämpfe Gottes*, Berlin, 1914; cf. Husik, *JQR* vii. [1917]).

Of great interest for the history of philosophy are the works of Moses Narboni of Narbonne († c. 1362), surnamed Maître Vidal Bellsom (Belhomme). Like Gersonides, he was an ardent exponent of Peripatetic-Averroistic philosophy. He wrote valuable commentaries on the works of Avicenna, Ghazālī, Ibn Tufail, Averroes, and Maimonides (*Guide*), as well as several independent works on philosophic subjects (Renan-Neubauer, pp. 666–681).

A philosopher of great originality was Hasdai Crescas of Barcelona and Saragossa (1340–1410), author of a profound work entitled *Or 'Adōnai*

('Light of God'). Ḥasdai marks a decided turn in the history of Jewish philosophy. Far from continuing the Peripatetic doctrines of Maimonides and Gersonides, he, like Ghazālī among the Arabs, tried to demolish the whole structure of the philosophers' world-conception, showing the inadequacy of reason to establish the truth, which, he claims, can be obtained only on the firm basis of revealed religion. Ḥasdai's work exercised great influence on Spinoza, many essential points in the latter's system having been taken from the former (M. Joel, *Don Chasdai Crescas' religionsphilosophische Lehren*, Breslau, 1866, *Zur Genesis der Lehre Spinoza's*, do. 1871; J. Wolfsohn, *Der Einfluss Gazālī's auf Chisdai Crescas*, Frankfurt, 1905).

The Karaite Jews of the period under consideration also produced a philosopher of prominence in the person of Aaron b. Elijah of Nicomedia, Asia Minor, whose *Tree of Life* (finished in 1346) compares fairly with the *Guide* of Maimonides, after which it was modelled (see F. Delitzsch, *Ahron ben Eli'a's . . . System der Religionsphilosophie*, Leipzig, 1841; Schreiner, *Der Kaldm*, p. 57 ff.).

Towards the end of the 14th cent. Profiat Duran (Spain), commentator of Maimonides' *Guide* and author of several other works, arrests attention as a man of philosophic learning and critical acumen (S. Gronemann, *De Profiatii Durani Vita ac Studii*, Breslau, 1869). He is greatly excelled by his namesake, Simon Duran of Majorca (1361-1444), a man of keen intellect and vast Jewish and secular learning, who wrote numerous works, among them one of an encyclopædic character, in which he shows perfect familiarity with the problems of philosophy and all the sciences of the Middle Ages (see Guttman, *MGWJ* lii. [1908] 41-72, liii. [1909] 46-79, 199-228).

The best known philosophic writer of the 15th cent. is Joseph Albo († c. 1444), a pupil of Ḥasdai Crescas. He is the author of the very popular book, *Ikkarim* ('Principles'), which is characteristic of the change that took place within the ranks of the Jewish thinkers during the 15th cent. (see A. Tänzer, *Die Religionsphilosophie Joseph Albo's*, Frankfurt, 1896). Partly owing to the sharp criticism of Ḥasdai, Peripateticism had gradually given place to doctrines which were more in keeping with the spirit of Judaism. Among the writers of this period worthy of mention are Joseph b. Shem Tob and his son Shem Tob, both in Spain, the former a very independent writer and critic, the latter a strict follower of Maimonides and commentator of his *Guide* (see Guttman, *MGWJ* lvii. [1913] 177 ff.); Abraham Bibago of Huesca († c. 1490), author of commentaries on Averroes and of *The Path of Faith*, a valuable philosophic presentation and defence of the Jewish religion (Steinschneider, *Übersetzungen*, § 38, p. 168); Judah Messer Leon of Mantua, author of several works, among them a compendium of logic and a commentary on Aristotle's *Ethics* (Husik, *Judah Messer Leon's Commentary on the 'Vetus Logica'*, Leyden, 1906); Elijah del Medigo of Crete (1450-93), the famous professor of philosophy at the universities of Padua and other Italian cities, author of *Behinat ha-Dat* ('Investigation of Religion') and of several commentaries in elegant Latin on works of Aristotle and Averroes, some written at the request of his pupil and friend, Count Pico de Mirandola (Steinschneider, *Übersetzungen*, p. 973); Isaac Arama of Zamora († 1494), author of the very popular philosophic homiletical *Offering of Isaac*, part of which was translated into Latin and made the subject of an academic dissertation by Anton J. von der Hardt (1729; see Steinschneider, *Übersetzungen*, p. 214 f.; *Zeitschr. für hebr. Bibliographie*, iii. [1899] 17, no. 209; *JE* ii. 66); the Catalan Abraham Shalom († 1492),

translator of Albertus Magnus's *Philosophia Pauperum* and of a treatise by Marsilius Ingenus, and author of the learned work *Neweh Shalom* (Steinschneider, *Übersetzungen*, pp. 465, 469); Don Isaac Abravanel (1437-1508), treasurer of Alfonso v. of Portugal, the most prolific writer of that period, author of voluminous Bible commentaries and other works, which were much studied and highly esteemed also by Christian scholars (Guttman, *Die religionsphilosophischen Lehren des Isaac Abravanel*, Breslau, 1915); Judah Abravanel (son of the preceding), called Leo Hebraeus, a Neo-Platonist of the Italian Renaissance period, who has made himself famous as a philosopher by his work *Dialoghi di amore*, which went through many editions in the Italian original and in various translations (Munk, *Mélanges*, pp. 522-528; B. Zimmels, *Leo Hebraeus*, Leipzig, 1886, *Leone Hebreo Neue Studien*, Vienna, 1892).

With the expulsion of the Jews from Spain (1492) the centre of Jewish mediæval secular civilization was destroyed. A considerable number of Hebrew authors were busy writing on religious philosophic subjects also during the following centuries, especially in Italy, where many of the Spanish exiles had settled, but none of their writings can be considered as an original contribution to Jewish philosophy. The Jewish philosophers of great prominence that still appeared on the scene, such as Baruch Spinoza, Moses Mendelssohn, and others of more recent times, were not the continuators of what is known as 'Jewish' philosophy, and are, therefore, not to be discussed here. They belong to the history of philosophy in general.

In summing up it may be said that, while on the whole the Jews as philosophers play only a secondary rôle, 'they indisputably share with the Arabs the merit of having preserved and propagated the science of philosophy during the centuries of barbarism, and of having exercised for a certain period a civilizing influence on the European world' (Munk, *Mélanges*, p. 511).

LITERATURE.—Works on individual authors having been referred to in the text, we quote here only works that deal with Jewish philosophy in general: W. Bacher, *Die Bibelepische der jüdischen Religionsphilosophen des Mittelalters vor Maimuni*, Strassburg, 1892 (cf. his *Bibelepische Moses Maimuni's*, do. 1896); S. Bernfeld, *Da'at Elohim*, Warsaw, 1897; P. Bloch, *Die jüdische Religionsphilosophie*, in Winter and Wünsche, *Die jüdische Literatur*, Berlin, 1897, II. 699-794, also separately; M. Eisler, *Vorlesungen über die jüdischen Philosophen des Mittelalters*, 3 vols., Vienna, 1870-83; I. Goldziher, *In Die Kultur der Gegenwart*, I. [1913] 301-337; S. Horowitz, *Die Psychologie des jüdischen Religionsphilosophen des Mittelalters*, 4 vols., Breslau, 1898-1912; I. Husik, *A Hist. of Medieval Jewish Philosophy*, New York, 1916; D. Kaufmann, *Gesch. der Attributenlehre in der jüdischen Religionsphilosophie des Mittelalters*, Gotha, 1877; P. J. Müller, *Der godskeer der middeleeuwse Joden*, Groningen, 1898; S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59 (cf. B. Beer, *Philosophie und philosophische Schriftsteller der Juden*, Leipzig, 1852); D. Neumark, *Gesch. der jüdischen Philosophie des Mittelalters*, Berlin, 1907-10; M. Schreiner, *Der Kaldm in der jüdischen Literatur*, do. 1895; J. Spiegler, *Gesch. der Philosophie des Judenthums*, Leipzig, 1891.

HENRY MALTER.

PHILOSOPHY (Muslim).—I. The earliest attitude of Islām to reflective thought.—The heathen period of Arabian history, 'the time of ignorance' (*jāhiliyya*), came to an end when Muḥammad received his divine revelation from the hands of the archangel Gabriel. The Qur'ān contains everything that man needs to know. In point of fact, however, it supplies but scanty materials for the philosophical spirit; and of such materials already in existence it was the wisdom of Luqmān alone (cf. Qur'ān, xxxi.)—a body of religious and practical ethics that might be compared to the book of Proverbs—that found admission into the bible of Islām. Had Muḥammad known of philosophers in the Greek sense of the term, he would doubtless have doomed them, as he doomed the poets, to the

Fire. The Tradition ascribes to him the characteristic saying, 'The devil is found upon the way of the solitary,' and philosophers are, as a rule, solitary men. As time, however, reconciles all opposites, the Prophet, according to the Tradition, likewise said that the first thing created by God was knowledge ('ilm) or reason (*aql*). His son-in-law, 'Alī, the fourth *khalīfah*, who was regarded by many heretics of a later age as the first Arabian philosopher properly so called, is reported to have said, 'Philosophy is the lost sheep of the faithful; take it up again, even if from the infidel.' Further, the Socratic maxim 'Know thyself'—in a somewhat mystical or pantheistic sense—was put into the mouth both of the Prophet himself and of his son-in-law.

To the mind of Muḥammad Allāh was pre-eminently the Powerful, the Wise. Primarily, indeed, he is the Powerful, who can do all things, and does as he wills, and it is rather in a secondary sense that he is the Wise—an attribute that here properly means 'all-knowing,' for primitive thought dwells more upon the compass than upon the content or the mode of knowledge. Allāh's wisdom might, in fact, be characterized as shrewdness or sagacity. Just as the merchants of Mecca enter their transactions in their books, so Allāh notes down the deeds of men; he is quick at calculation; he is something of a schemer. His 99 beautiful names or attributes do not include reason. We need not wonder, therefore, that his *rasūl* should speak as time and circumstances demand, or according to the changing moods of his own soul.

2. **Islām in contact with Hellenistic and Christian thought.**—A change ensued when Islām, in the first century of its existence, spread to Syria, Persia, and Egypt, and came into touch with the Hellenistic and Christian culture of these lands. To begin with, it had to come to terms with Christian theology. The Christians whom the Muslims had subjugated were far above their new masters in the dialectic art, and the sons and grandsons of the latter became the pupils of the subject peoples. The polemical and apologetic activities of the Christians brought to view certain naive inconsistencies and defects in the religious law and the Tradition of Islām. The problems of theological metaphysics which above all others gave occasion to disputes and so led to the formulation of doctrines and systems were as follows: (a) divine righteousness and man's freedom and responsibility; (b) the eternity of God's word; (c) the unity of God and His attributes; and (d) the relation of God to man and to the world.

In the discussion of these problems, more particularly during the first three centuries of Muslim development, political faction played a part sometimes of decisive, sometimes of merely secondary, importance. We cannot enter into this here; the attendant disputes concern us only in so far as they led to the development of logical or dialectic methods (see art. KALĀM, vol. vii. p. 637 ff.) and prepared the way for the progress of philosophic thinking.

The results of the conflict between the Mu'tazilite Kalām and the Kalām ranking as orthodox in Sunnite Islām may be summarized as follows. The Christian doctrine of human freedom (a) was rejected, as was also a doctrine that had been developed in various ways under philosophical influences, viz. that the attributes of God are not to be differentiated at all, or are to be differentiated only in the slightest degree, from the unity of His being (c). On the other hand, the doctrine (b) of the eternity of the divine word (the Logos) was applied to the Qur'ān and became a Muslim dogma; while, finally, the relation of God to the world and to man (d) received various interpretations of either a rationalistic or a mystical type.

The more rationalistic explanation predominates in the orthodox Kalām of the early centuries, just as it does in the Qur'ān. It starts from the view that the world is the work of Allāh, and that man is his slave. It accordingly makes little inquiry regarding natural causes or human motives, and refers all that takes place in the world and in the soul to the omnipotent and inscrutable will of God. Every change is therefore something absolutely new. There is no causal connexion, no continuous procreation, in the world; every occurrence is a fresh act of creation. A peculiar modification of the atomistic philosophy on these lines was adopted by orthodox Islām (cf. art. ATOMIC THEORY, vol. ii. p. 202 f.).

Among many Muslim sects, however, and especially in the Shī'ah, and in all schools of Sūfīite mysticism, the divine is brought into closer relations with man and the world, or, conversely, man and the world are deified.¹ Like the Greek and Arabic Neo-Platonists, these sects adopted a thought expressed in the *Theætetus* (176 B), viz. that the great object of our reflexion is to become as like God as is possible for man. By a mystical overstraining of this idea the desiderated 'likeness' (*ὁμοίωσις θεῷ κατὰ τὸ δυνατόν*) is sometimes conceived as complete unification. For the most part, however, the idea is expressed in a more cautious form; thus, under the influence of Christianity, man was regarded as the image of God, and from this point of view it was asserted that one who knows himself knows also his Lord. Servile obedience, moreover, gives place to love, and the devout servant becomes a fellow-worker with God. In minds of an ecstatic cast, however, an extravagant mysticism tends ever to pass into a pantheism for which the human ego becomes God and the world an empty show (cf. art. HALLAJ, vol. vi. p. 480 ff.). The merit of having been the first to reconcile the rationalistic or scholastic trend of thought with the mystical in a fashion that proved satisfactory to the Islām of subsequent times belongs to al-Ghazālī (cf. art. ETHICS [Muslim], vol. v. p. 508 f.). In reality both tendencies were at one in the view that it is Allāh who *works* all in all, while a more extreme form of mysticism added that he *is* all in all.

3. **Early influence of philosophy upon Mu'tazilite thinkers.**—The extent to which the Mu'tazilite thinkers of Baṣra, even by the 9th cent. A.D., had allowed their teaching to be influenced by philosophy is best seen in the writings of al-Nazzām († A.D. 845) and his pupil al-Jāhīz († A.D. 869).

According to al-Nazzām, man has in virtue of his reason the capacity of knowing that God exists. God, in His essential nature, is not will, but knowledge. Nor is He able to do all things; on the contrary, He can do only what is good, i.e. what He knows is best for His servants. From the goodness of God's character, moreover, it follows that He could not have created the world better than it actually is. Creation is to be regarded as, in its divine aspect, a single act by which all things were brought into being simultaneously; in other words, one thing is contained in another, and the whole variety of existing things—minerals, plants, animals, men—are in the process of time evolved from their original state of latency (*kumūn*). Thus, e.g., all the generations of mankind were potentially existent in Adam, the first man. This doctrine of creation as a single act stands in direct opposition to the view that God creates all things afresh every moment, as was taught in the atomistic Kalām.

Al-Nazzām likewise maintains that, while God,

¹ In what degrees this mystical phase was conditioned by native asceticism and by Persian and Indian influences need not be discussed here.

by the necessity of His nature, wills and does what accords with His wisdom and goodness, and while nature can work only in conformity with the constitution given to it at the creation, the human soul, with its freedom of volition and action, stands midway between the two. The human body and its physical activities are certainly subject to natural law, but the soul, which resides in the body as in a vessel, or interpenetrates it in every part and so makes it an instrument, is free. Somewhat obscurely al-Nazzām speaks of the soul as the real and veritable man; it would seem that here certain Pythagorean-Platonic and Stoic elements were mingled together in his thought; and we are reminded also of Qustā b. Lūqā's speculations regarding the soul and the life-spirit (*πνεῦμα*, Arab. *rūḥ*), which owe much to the influence of Galen.

Al-Nazzām, in his theory of the material world, stands opposed to the atomistic view. He maintains the continuity, or rather the complete interpenetration, of all material things (the Stoic *κρᾶσις δι' ὅλων*?). This accords admirably with his doctrine of involution (*kumūn*; see above), according to which every thing is contained in every other. The so-called atom, he holds, is infinitely divisible. Then, with a view to explaining how infinitely divisible spaces can be traversed, he advances his fantastic doctrine of the 'spring' or 'leap' (*tafra*).

Al-Jāhīz, the pupil of al-Nazzām, while he devoted himself more to literature than to philosophy, yet played an important part in the diffusion of philosophic culture in Islām. What is usually ascribed to him in the way of philosophical doctrine may be traced almost wholly to his teacher, as, e.g., his theory that God, having once created the world, cannot annihilate it again, that the only real activity of man consists in the inward exercise of his will, etc. His most effective work is probably found in his compilations in the philosophy of nature, in which he cites not only Pythagoras, Plato, Democritus, and Aristotle, but also Hermes and Zoroaster, Jeremiah and John the Baptist. Like al-Nazzām, al-Jāhīz belongs to the older school of philosophical thought in Islām—the school which Arabian tradition traces back to Empedocles, Anaxagoras, and other pre-Socratic or even mythical thinkers.

4. Influences of an older emanational and redemptive metaphysic.—It is a widely prevalent tradition in Arabic literature that the earliest philosophy, which was traced back to Hermes, Agathos Daimon, Asklepios, Pythagoras, Thales, Solon, Empedocles, Balinūs (Apollonius of Tyana), and others, found its way from Alexandria through Antioch and Harrān to the countries lying farther east. In this movement an important rôle was, as it seems, played by the Ṣābians of Harrān (cf. art. HARRANIANS, vol. vi. p. 519 f.). During the Muslim period Harrān was for centuries the centre of a Hellenistic community which combined certain elements of the ancient Babylonian astral religion with the Hermetic *γῶσις*. The knowledge of divine mysteries was said to have been conveyed to them by the primitive revelation given to the Uranians, especially Hermes and Agathos Daimon, who were identified with the prophets Seth and Enoch (Arab. Idris). This revelation, or philosophy of enlightenment, consists in a graduated system of emanation, the principal stages being—with some variation in the order—(1) God, or the First Cause, (2) reason, (3) the soul, (4) matter, and (5) nature. These proceed successively from one another, and each higher stage, even after its emergence from the antecedent one, still continues to influence the lower. The highest being is usually conceived as light, and the action of the higher upon the lower is represented as being

mediated by light. This metaphysic of light likewise may have been compounded from speculations of Hellenistic philosophy and Persian religion. Connected with it at every point is a species of mathematics that plays fancifully with letters and numbers, as also astrology, alchemy, and magic, or the science of talismans. Nevertheless, the leading idea—the thought that stands at the centre of all these speculative exercises—is that of the salvation of the soul, which longs to escape from the evil (or, at least, imperfect), sensuous, and material world to its original source; and it is upon the path of asceticism and meditation that the soul seeks re-union with the spiritual or divine world.

Among the adherents of this philosophy of revelation and redemption, as also among the extreme mystics, a spirit of eclecticism and syncretism was largely prevalent. Among all peoples and in all religions and philosophies these thinkers found one and the same truth—the same divine light—though in various gradations of purity. Even those who externally gave their adhesion to Islām did not regard that religion as the highest and final revelation. The anthropomorphic and crudely sensuous language of the Qur'ān was interpreted allegorically without the slightest misgiving, for to these thinkers truth lay solely in the inner sense.

Elements of this philosophy of revelation, combined with Persian and Indian wisdom, are even yet more popular in the East than the systems formed more or less on Neo-Platonic models by the so-called Aristotelians of Islām. Directly or indirectly, the intellectual life of Islām had been permanently influenced by Pythagoras and Plato long before it opened the door to the thought of Aristotle.

5. The introduction of the Aristotelian philosophy.—Not only among the Ṣābians of Harrān, but also in the Christian schools and monasteries of Syria, as well as in the medical school instituted by Khosrau I. in Yundai-Sābūr, a beginning had been made with the study of Greek writings and the translation of Greek scientific and philosophical works into Syriac, even before the Muslim conquest. Besides the works of Hippocrates and Galen, a large number of mathematical and astronomical writings, and at length nearly all the works of Aristotle, were thus translated. This work of translation was greatly encouraged by the Abbāsīd *khalīfahs* Maṣūf and Hārūn al-Rashīd, and especially Ma'mūn. Most of the translators were Syrian Christians, though Jews, Ṣābians belonging to Harrān, and now and again Muslims (e.g., al-Kindi) did their part. By profession they were generally physicians, their great aim being, of course, to promote their own special study. From the 4th to the 8th cent. the Greek books were translated into Syriac; from the 8th to the 10th, into Arabic, either from Syriac versions or directly from the original. Probably the more eminent Arabian translators of the 9th cent., such as Qustā b. Lūqā (c. 835; a Christian of Ba'labak), Thābit b. Qurra (a Ṣābian resident in Harrān; †901), and especially the Christian physician Hunayn b. Ishāq (809–873) and his pupils, worked in part directly from the Greek. From the end of the 9th cent. the work of translation was confined almost entirely to Aristotelian or pseudo-Aristotelian writings, with their paraphrases and commentaries.

Neither the natural philosophers nor the theologians received the works of Aristotle without opposition. Till well on in the 9th cent., when the Hermetic *γῶσις* or the Pythagorean-Platonic wisdom was still in the ascendant, Aristotle was known almost solely as a logician (*ṣāhib al-mantiq*)

—a fact the most convincing proof of which is found in the work of the celebrated physician Rāzī († A.D. 923 or 932). The physical, and even more the metaphysical, teachings of the Stagirite met at first with vigorous resistance. This was especially the case with his doctrine that the world was eternal, i.e. without beginning—a view probably¹ at first identified with a doctrine widely current in the East, viz. that of the Dahrites.² It was but natural that theologians of different schools, as, e.g., the Shīʿite Hishām b. al-Haḡam (a contemporary of Nazzām), the Muʿtazilite Abū Hāshim of Baṣra († 933), and the orthodox al-Ashʿarī (873–935), should issue polemical pamphlets against the encroaching philosophy. These writers often found support in the arguments of Aristotle's Christian commentator, Johannes Philoponos (Yahyā the grammarian), whose writings were well known in the East.

On the other hand, al-Kindī and al-Fārābī, the first so-called 'philosophers,' or Peripatetics, in Islām, following the example of the Neo-Platonists, sought to demonstrate the essential harmony of Plato and Aristotle. This task was greatly facilitated by the fact that the Arabic translations included numerous pseudo-Aristotelian writings some or all of which they regarded as authentic. Among these pseudographs were the so-called *Theologia Aristotelis* (an abstract of the *Enneads* of Plotinus), the *Liber de Causis* (an abstract of the *Στοιχειώδεις θεωρητικὴ* of Proclus), the *Book of the Apple* (a Hermetic imitation of Plato's *Phædo*), the *Secretum Secretorum*, etc. Even in a later and more critical age, as the *Politics* of Aristotle was still unknown in Islām, a great mass of Platonic material from the *Republic* and the *Laws* was incorporated (e.g., by Ibn Rushd) with the Aristotelian philosophy.

The line of more or less Platonizing Aristotelians in Islām begins with Jaʿqūb b. Ishāq al-Kindī († after 870). As the earliest Muslim philosopher of Arabian descent—previous thinkers having been Syrians or Persians, and, later, Turks, Berbers, etc.—al-Kindī is styled 'the philosopher of the Arabs.' In theological matters he belonged to the Muʿtazilite school. One great article of his teaching was the righteousness of God, and he also laid stress upon the unity (i.e. the absence of properties) of the divine nature. Doctrines common to various religions, and especially the general belief of mankind in a Creator who reveals himself in prophecy, al-Kindī recognized as expressing the truths of reason. His philosophical syncretism enabled him to descry everywhere traces of a divine truth which flows in various channels from a single source.

Al-Kindī was known to mediæval Christendom mainly as an astrologer and a student of medicine. In the East, however, his significance rests upon his having been one of the first to engage in a thoroughgoing study of Aristotle's works. It was owing to that study, as perhaps also to his sound understanding, that he could so strongly inveigh against alchemy and various forms of the belief in miracles. It was also of importance for the development of philosophy in Islām that, with the support of Alexander of Aphrodisias's commentary on the *de Anima* of Aristotle, he introduced the doctrine of a manifold *νοῦς* (Arab. *'aql*). Here he distinguished four types of reason, viz. (a) the ever actual or active *'aql*—the source or essence of all spiritual entities in the world, and thus probably equivalent to God and the pure spirits who direct the celestial spheres;³ (b) the *'aql* as the constitu-

tion or potentiality of the human soul; (c) the *'aql* as those properties or faculties of the soul of which she can at every moment avail herself; and (d) the *'aql* in the state of outward manifestation. The passage from (b) to (c), i.e. the development of the potential into the habitual reason, is usually regarded as effected by the prime, ever active reason. This doctrine of *'aql*, somewhat modified as time went on, is found also in the greater philosophers of Islām (cf. artt. FĀRĀBĪ, vol. v. p. 757 ff., AVICENNA, vol. ii. p. 272 ff., AVERROES, vol. ii. p. 262 ff.).

6. Difference between the older and the newer type of thought.—The difference between the older philosophical movement, with its Neo-Pythagorean and Neo-Platonizing tendencies, and the logico-metaphysical school of the Aristotelians receives its most apposite illustration from a comparison of the encyclopædic system which the Iḥwān al-Safā ('The Faithful of Baṣra'), about the middle of the 10th cent., imposed upon the data of their knowledge with the classification of the sciences found in al-Fārābī († A.D. 950). The Faithful of Baṣra arranged the 52 treatises composing their philosophical encyclopædia as follows:

i. The first part comprises the propædæutic sciences: first (in conformity with the precedent of the Platonic school) mathematics, and then logic. Mathematics they divided into (1) arithmetic, (2) geometry, (3) astronomy, or rather astrology, (4) geography, (5) music, and (6) the doctrine of arithmetical and geometrical proportion (with much trifling). In all these six treatises the great object is to rouse the soul from 'foolish slumber and careless sleep,' and to lead it from the sensuous to what lies beyond—the spiritual. The transition to logic is made in the next three treatises, viz. (7) on the theoretical sciences, (8) on the practical sciences, and (9) on the various customs or characteristics of mankind. Logic, again, in conformity with earlier tradition, deals with (10) the *Isagoge* (of Porphyry), (11) the (Aristotelian) categories, (12) *περί ἐμπνεύσεως*, (13) the *Prior Analytics*, and (14) the *Posterior Analytics*.

ii. The second section treats of the science of nature on its physical side, but, as the Iḥwān regarded the physical as of little value, their theme here—not only for purposes of edification, but quite directly—was often the soul itself. This section consists of seventeen treatises (nos. 15–31), viz. (15) elucidation of the fundamental conceptions—matter and form, space, time, and motion, (16) the heavens and the earth, (17) genesis and dissolution, (18) meteorology, (19) mineralogy, (20) nature in general, (21) botany, (22) zoology, (23) the structure of the human body, (24) sense perception, (25) development of the human embryo under the influence of the heavenly bodies, (26) man as a microcosm, (27) the development of individual souls, (28) the faculty of cognition, (29) the contemplation of death and life, (30) pleasure and pain, (31) the diverse languages of the nations.

iii. The subject of the third part is the spiritual world—the soul (*nafs*) and the reason (*'aql*)—which is dealt with in ten treatises (nos. 32–41), as follows: (32) spiritual principles according to Pythagoras, (33) spiritual principles according to the Iḥwān al-Safā, (34) the world as man on a large scale, (35) thought and its object, (36) theory of the spheres, the genesis and dissolution of the world, (37) the soul's love and longing for God, (38) resurrection (in a spiritual sense), (39) the kinds of motion, (40) causes and the caused, and (41) definitions and descriptions of things. The leading thought of all these treatises is that the spiritual is the essence and cause of the physical, and that the soul, which stands midway between reason (*'aql*) and nature (*tabīʿa*), yearns for its primal source.

iv. The fourth section deals with the supreme, divine world, the world of divine law (*nāmūs=νόμος*), and contains eleven treatises (nos. 42–52), viz. (42) the various religions and philosophies (their common object being the welfare of the soul), (43) the way to God, (44) the Iḥwān al-Safā's profession of faith in the immortality of the soul, (45) the life of the Iḥwān al-Safā in loyal fellowship for mutual aid, (46) faith, (47) the divine law (*nāmūs*), or prophetic revelation (interpreted allegorically, of course), (48) homily and exhortation, (49) the practice of the spiritual life, (50) communal life (in the State and other associations), (51) the order of the world, (52) miracles and the magic arts, angels and demons.

Al-Fārābī, in his *Enumeration of the Sciences*, arranges the material in a somewhat different order, thus:

i. The science of language, in seven parts, discusses (1) the word, (2) the sentence, (3, 4) the rules of their formation and construction, (5, 6) correct speech and writing, and (7) the technique of verse.

ii. Logic, which is closely associated with linguistic science, is divided into eight parts, corresponding to the six books of the *Organon* (*The Categories, Interpretation, First and Second Analytics, Topics, Sophistical Arguments*), together with (7) the *Rhetoric* and (8) the *Poetics* of Aristotle. While rhetoric

¹ Cf. artt. 'Dahr,' 'Dahriya,' in *EI* I. 894 f.

² The term *'aql fa'al* was, after al-Kindī's time, applied principally to the spirit emanating from the lowest heavenly (i.e. the lunar) sphere.

and poetics belong, on their technical side, to linguistics, they are here treated under logic as the theory of representing and imitating the real. According to this view, which came to have great importance in the East, the sequence of the subjects—topics, sophistics, rhetoric, poetics—forms a descending scale of the probable or the false which gradually declines from the high level of certain and demonstrative knowledge dealt with in the *Analytics*.

iii. Mathematical science consists of seven divisions, as follows: (1) arithmetic, (2) geometry, (3) theory of perspective, (4) astronomy, (5) music, (6) theory of measure and weight, and (7) technique.

iv. Natural science is divided into eight parts, viz. (1) doctrine of the principles of all material things (*φυσική ἀκρόασις*), (2) the earth and the sky, (3) genesis and dissolution, (4, 5) meteorology, (6) mineralogy, (7) botany, (8) zoology, with which is conjoined psychology (as a natural science).

v. Metaphysics, or (likewise in Aristotle's terminology) theology, has the following three provinces: (1) the doctrine of the existent in general, together with its accidents, (2) the principles of the special sciences (logic, mathematics, physics), and (3) the doctrine of purely spiritual beings and their gradation, with God as the highest stage.

vi. Politics.—In this section, as the Aristotelian writings on practical philosophy were not as yet translated, or were translated only in part, there is a considerable representation of Platonic elements, though al-Fārābī seems to have been acquainted with the *Nicomachean Ethics*.

vii. Legislative science, i.e. the science of faith and of religious duty.

Such agreement as is found between the classification of the *Iḥwān al-Ṣafā* and that of al-Fārābī is due to the introductory treatises of Ammonius and Johannes Philoponus. Characteristic differences, however, appear both in the arrangement and in the exposition; as regards the former, the foregoing outline will enable the reader to compare the two systems, while, as regards the latter, it is impossible here to go more fully into detail. The material distinction may be briefly expressed by saying that the longing of the soul, which, according to the *Iḥwān*, aspires to return to its celestial source, gives place in Fārābī to a more tranquil and broader contemplation of all things in the light of reason.

7. Muslim philosophy in the West.—The progress of Muslim culture in the West—in N. Africa, Spain, and Sicily—was in many respects a duplicate of the Oriental development. What Irāq and the city of Baghdād passed through in the 9th cent. was in the 10th repeated in Andalusia and its capital, Cordova. Conditions in the West, however, were of a more simple kind; gradations of culture were fewer; and Spain, true to its orthodox bent both before and after the Muslim invasion, was only superficially influenced by any of the sects and factions of the East. Nevertheless, some of the main currents of Muslim thought made their way to the West. As a result of pilgrimages to Mecca, and even more of scientific journeys extending as far as E. Persia, Andalusians became acquainted with the science and philosophy of the East, and those who travelled brought home books. Oriental scholars, again, frequently moved westwards in order to find employment. In the first half of the 9th cent. Abū Bakr Faraj b. Salam, a physician of literary attainments belonging to Cordova, made a journey of the kind indicated to Irāq, and, e.g., attended the lectures of al-Jāhīz in Basra. On his return to his native city he disseminated there the writings and the theology of that Mu'tazilite teacher, and also the first germs of Greek philosophy.

Somewhat later in the 9th cent. the Neo-Pythagorean philosophy found its way into Spain under the mask of Ṣūfīite and Bātinīte (see below, § 8) mysticism. It purported to rest upon the authority of Empedocles. Its chief representatives here were Muḥammad b. Masarra, a Muslim of Spanish descent, and the Jewish thinker Ibn Gabirol (q.v.).

Ibn Masarra, who was born in Cordova in 883 and died in 931, and whose father had studied Mu'tazilite and mystical theology in the East, lived the life of a devout ascetic. He eventually retired, with his pupils, to the solitude of the moun-

tains, and was on this account styled al-Jabalī. In his place of retreat he instructed his pupils in the Mu'tazilite doctrine of freedom combined with a form of esoteric wisdom, this being in reality the emanation theory of the pseudo-Empedocles. From God, the One, the original principle—he held—proceed all things, each stage deriving from the antecedent one in the following order: (1) first or spiritual matter; (2) reason; (3) the soul; (4) nature or second matter, which forms the substrate of all finite existence in the physical world. Of God Himself, exalted as He is above all predicates, nothing can be said; He is unknowable. He reveals Himself, however, in His emanations; the first emanation, i.e. the spiritual matter from which all spiritual and material things proceed, is symbolically named 'the throne of God.' God, moreover, is so exalted above all things that He has no knowledge of these emanations. His emanations, however, are cognized by reason—by that which arises out of the primal matter; and from reason, again, is derived the soul, which, while bound to the physical, yet seeks to deliver itself from it by asceticism and so to rise to the high plane of the spirit. It was at first only in the West that Ibn Masarra succeeded in forming a body of adherents, but the fact that his ideas were adopted by Ibn al-Arabī (1165–1240), Islam's greatest mystic, made them eventually the common property of the Muslim world.

Towards the end of the 11th cent. the philosophical writings of al-Fārābī and the medical teachings of Ibn Sīnā became known in the West, and the first of the Western Muslims to apply himself actively to their lines of thought was Abū Bakr Muḥammad b. Yaḥyā b. al-Ṣā'igh b. Bājja, who, born in Saragossa, lived in Seville and Grenada, and died at the court of the Almoravids in Fez in 1138. This Ibn Bājja, with al-Fārābī as his model, composed elucidations of the Aristotelian and other philosophical writings. He felt very keenly the isolated position of the philosopher in the world at that day—a fact reflected in the title of his ethical work, *The Guidance of the Solitary*. The ideal of self-culture portrayed in that book was embodied by his disciple Ibn Ṭufail (q.v.) in the figure of 'Hayy ibn Yaqzān,' and his doctrine that the human intellect attains to a general (i.e. not individual) immortality by union with the intellect of the lunar sphere was further developed by Ibn Rushd (cf. art. AVERROES, esp. p. 264); this found a place in the literature of mediæval Christianity as the bugaboo of philosophical heresy.

8. The reconciliation of philosophy with religion.—One of the main problems of Muslim philosophy was naturally the definition of its relation to religion, as presented in the Qur'an and the Tradition. Many theologians, more or less conscious of this problem, were already working towards its solution by spiritualizing the letter of the law, having taken over from Hellenism the allegorical method of interpreting sacred writings. Those who applied this method in thoroughgoing fashion were called Bātinītes (adherents of the 'inner sense' [*bāṭin*, 'interior,' 'inside']; and the endless variety of attempts to harmonize their own speculations with the word of God and of His Prophet developed at length into sheer contempt of the external word. Extreme mystics, rationalists, and free-thinkers all came in this way to the same results. Another theory common to them all was that the inner sense of the word—the truth—was revealed to only a few, whether by divine enlightenment (mystics) or by one's own reflexion (rationalists and free-thinkers).

Now, in the main, the Muslim Aristotelians agreed with this view. They propounded, however, a mediating theory, expressing the matter less crudely and with finer gradations of meaning. With the aid of scholastic distinctions, they tried to show that the different modes of expression used by theologians and philosophers respectively were but varying phases of the one changeless truth. They did not claim that the truth was confined to their philosophy alone, but they held that that philosophy was the highest form of truth attainable by man. It is in the light of this hypothesis that we are to interpret the philosophic endeavours to rationalize the doctrine of prophetic

revelation. Al-Kindi himself had defended prophecy i.e. had sought to show that it was in harmony with reason; at all events, like the Mu'tazilite theologians generally, he regarded the contemplation of revealed truth as a religious duty. Such was also the view of al-Fārābī and Avicenna. Al-Fārābī, in particular, even identifies the philosopher and the prophet. Taking Plato's ideal of the king-philosopher, he furnishes it with various traits of the Stoic sage in such wise that the faithful Muslim, in reading al-Fārābī's works, might well substitute the name of Muḥammad himself. Prophecy is here made intelligible by means of the *aql* theory, the doctrine of the *voûs*. As Plato had set forth in the *Republic*, human beings vary greatly in their intellectual endowments, and the majority require a guide; it is only the most gifted of men, in fact, whom the super-human *voûs* (the *intellectus agens* = *aql fa'āl*) enables to receive and assimilate the truth, and so to impart it to others in a form that varies with the stage of their mental development.

We may discern here not only the resemblance but also the difference between the so-called Aristotelians and the other schools of thought in Islām. The mystics, too, had all their theory of grades—a doctrine of the several stages to be successively traversed on the way to God. The stages are variously enumerated—as many as eight, or even more, being given—and variously described by different thinkers; and few men reach the highest. In similar fashion the Iḥwān al-Ṣafā distinguish four grades of initiation within their society, these corresponding to the stages of divine emanation.

The principle of the philosophical theory of stages in the narrower sense, however, is made to rest upon distinctions in mental endowment, and here there is no transition from one stage to another. In al-Fārābī the doctrine still rather follows the psychological scheme of Plato's *Republic*, while in Averroes it leans more to the outward form of the Aristotelian logic. Each distinguishes three grades of intellectual capacity. In al-Fārābī they correspond respectively to (1) sense-perception, (2) ideation, or perception, which operates with remembered (mentally perceived) images, and (3) pure reason, or the capacity for thought. In few men is the last of these (potentially) present in such measure that by union with the active intellect (the spirit of the lunar sphere) it can rise to actual reason. It is on this highest plane that the philosopher and the prophet join hands. The philosopher, however, receives or wins the truth in a pure form, and in that form, too, he utters it for those who are able to comprehend it; while the prophet, receiving it in figures and similitudes, likewise makes use of these in order to accommodate his thought to human conception; in this way, too, he becomes a guide to those who either cannot rise at all or can rise only with difficulty above sensuous perception. We find similar views in the writings of Avicenna and Maimonides, and in the romance of Ibn Tufail.

Averroes deals with this theory of the harmony of philosophy and religion in a special work. He holds that there is no ground for conflict between reason and faith, since the doctrines of religion are simply symbolical expressions of philosophic truth. That our scientific and philosophical modes of expression might likewise be of a symbolical character seems never to have entered the mind of this Aristotelian thinker; he was satisfied that in Aristotle *par excellence* he had found the pure truth. Aristotle, in his *Metaphysics* (1004^a 15 ff.), had said, however, that the Sophists and the dialecticians deal with the same object as the philosophers, although in a different way. The

knowledge professed by the Sophists was at best fictitious, and even the probability of the dialectician—dependent as it is upon generally recognized principles—fell below the philosophical plane of apodictic certainty. Now Averroes finds in these statements the doctrine of the three stages. The sophistic-rhetorical mode of argumentation is successful with the multitude; the procedure of the dialecticians finds favour with the more cultured classes, and especially the theologians (*mutakallimūn*); finally, the thoroughgoing apodictic method of the philosophers—the heritage of the few—presents the truth in its pure and consummate form. Thus, to take a concrete instance, the simple-minded believer of the lower class will say, 'God is in heaven.' The man of trained dialectic, again, knowing that God must not be represented as a physical entity in space, will read that statement as meaning that God is exalted above all that is earthly and human, and will say, 'God is everywhere, and not merely in heaven.' But, if the omnipresence of God be taken in a physical and spatial sense, that formula too is liable to be apprehended wrongly, and accordingly the philosopher more adequately expresses the purely spiritual nature of God when he asserts that God is nowhere but in Himself; in fact, rather than say that God is in space he might more justly say that space and matter are in Him.

This example suffices to show us that in the view of Averroes the three stages or forms of knowledge have a common basis in one fundamental principle, viz. that there is a God. He believes that the existence of God is a fact to be recognized by every man, God being either figured more or less sensuously or conceived in a purely spiritual way, according to the grade of one's intellectual capacity. To deny the existence of God is forbidden, and such denial should be punished. But the blurring of intellectual distinctions is also an evil thing: the uneducated must not venture to engage in allegorical interpretation, nor shall the philosopher seek to popularize his higher intelligence of things. Hence Averroes censures al-Ghazālī for having diffused philosophy too widely through his popular writings. The masses should believe in conformity with the text of the Book; the theologians must not read more into the Book than is compatible with the Arabic language and diction; absolute liberty of thought is the exclusive prerogative of philosophic genius. Thus the Peripatetic movement of Muslim philosophy ends in what may be called an aristocratic rationalism.

9. The influence of Muslim philosophy.—The development of philosophy in Islām was of importance, in the first instance, to the Muslim peoples themselves. Its influence made itself felt in all branches of science and general culture, though chiefly, no doubt, in the study of theology—a study which still maintains an outstanding place in Islām. In the theological sphere we can trace various currents of thought. In general, it may be said that the mystics of all periods have imported many Neo-Pythagorean and Neo-Platonic elements into their systems, while thinkers of a more rationalistic type owe much to the teachings of Aristotle in the form given them by Avicenna. Avicenna ranks in the East as the prince of philosophy, and, in the conflict regarding the influence of philosophy upon theology, the watchword for centuries has been 'For or against Ibn Sīnā.'

The right of applying philosophical or logical methods to the treatment of theological problems in philosophical discussions is not generally contested. The theologians, in their works dealing with the *Kalām* (g.v.), usually begin with a section discussing questions in the logic of language and the theory of knowledge, and then, in the body of

the work, set forth their scheme of speculative theology.

From the time of al-Ash'ari (*q.v.*) a moderate and partly mediating orthodoxy has succeeded in coming to terms with speculation on theological problems. To the rigid orthodoxy that clung uncompromisingly to the letter of the law al-Ash'ari made the following rejoinders: (1) the Prophet did not condemn those who speculate; (2) the Prophet was cognizant of the speculative problems, and the Qur'an and the Tradition have furnished us with the principles of their solution; (3) his not having dealt with them singly is to be explained on the ground that in his time they had not yet emerged—otherwise he would, of course, have spoken definitely regarding them. The second of these rejoinders furnishes a vindication of the more or less liberal modes of interpretation to which the Qur'an and the Tradition were subjected in the subsequent period. It is impossible here, however, to deal more fully with the process of theological development in Islām; much useful material will be found in the works of M. Horten.

Secondly, the influence of Muslim philosophy was in some measure augmented when at length, more particularly by means of Latin translations, it came to be known in Western Christendom. The best-known translators during the 12th cent. are Johannes Hispanus and Gerard of Cremona; and the work was prosecuted by other students in the century following. Likewise many Jews took part in the process of mediation. The various mutations of Arabic learning were all shared in, either actively or receptively, by the Oriental Jews (*cf.* PHILOSOPHY [Jewish]); and at length Maimonides (*[q.v.]* 1135-1204), working under the influence of al-Fārābī and Avicenna, made an attempt to harmonize Aristotle with the OT. In this endeavour he availed himself of the device of interpreting the sacred text allegorically and restricting the scope of Aristotle's teaching to this world, while maintaining that everything of a supramundane nature is known only by divine revelation.

Such was also the view of the Christian scholars and theologians of the West. Their knowledge of the world, including a great deal of astrology, alchemy, etc., was borrowed very largely from the Arabs, while at first they gave a ready welcome to everything of a Neo-Platonic cast. The most permanent of the Oriental factors in the West, however, were Avicenna's medical teachings and the Aristotelian tradition from al-Kindi to Averroes. In that tradition the Scholastics found abundant incentives to philosophical discussion, and to it they also owed in part their abandonment of the Neo-Platonic ontology for the purer form of Aristotelianism represented by Albertus Magnus and Thomas Aquinas in the 13th century. It was therefore upon good grounds that Dante placed Avicenna and Averroes among the great figures of classical antiquity in the forecourt of hell.

LITERATURE.—I. GENERAL.—S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59; T. J. de Boer, *Gesch. der Philosophie im Islam*, Stuttgart, 1901, tr. E. R. Jones, London, 1903; D. B. Macdonald, *The Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, New York, 1903; J. Goldziher, 'Die islamische und die jüdische Philosophie' (in *Kultur der Gegenwart*, I. 5, Leipzig, 1909).

II. SPECIAL.—Of the numerous monographs dealing with the various phases discussed in the paragraphs we can mention only a few:

1. and 2. D. S. Margoliouth, *The Early Development of Mohammedanism* (HL, 2nd ser., 1913), London, 1914 (*cf.* lect. vii. 'The Philosophical Supplement'); C. H. Becker, 'Christliche Polemik und islamische Dogmenbildung,' ZA xxvi. [1911] 175 ff.; R. A. Nicholson, *The Mystics of Islam*, London, 1914; Carra de Vaux, *Gazali*, Paris, 1902.

3. Cf. M. Horten, *Die philosophischen Systeme der spekulativen Theologen im Islam*, Bonn, 1912, pp. 189 ff., 320 ff.

4. Cf. T. J. de Boer, 'Urānī,' in ZA xxvii. [1912] 8 ff.

5. M. Steinschneider, *Die arab. Übersetzungen aus dem Griechischen* (Beiheft zum Centralblatt für Bibliothekswesen,

xli.), Leipzig, 1893; T. J. de Boer, 'Zu Kindi und seiner Schule,' AGPh xlii. [1899] 153 ff.

6. Cf., besides the writings of the Ihwān al-Safā (various Arab. edd.; Germ. tr. F. Dieterici, Leipzig, 1865-79), esp. L. Baur, 'Dominicus Gundissalinus de divisione philosophiae,' *Beiträge zur Gesch. der Philosophie des Mittelalters*, iv. 2-8 [1903].

7. M. Asín Palacios, *Abenmararra y su Escuela; Orígenes de la Filosofía hispano-musulmana*, Madrid, 1914.

8. M. Steinschneider, *Al-Fārābī; des arab. Philosophen Leben und Schriften*, Petrograd, 1869; Carra de Vaux, *Avicenne*, Paris, 1900; L.-G. Lévy, *Maimonide*, do. 1911; E. Renan, *Averroès et l'Averroïsme*, do. 1882; L. Gauthier, *La Théorie d'Ibn Rochd sur les rapports de la religion et de la philosophie*, do. 1909.

9. M. Horten, *Die philosophischen Ansichten von Rāzi und Tusi*, Bonn, 1910, *Die philosophischen Probleme der spekulativen Theologie im Islam*, do. 1912. A considerable amount of material relating to the influence of Muslim philosophy on mediæval Christian thought will be found here and there throughout *Beiträge zur Gesch. der Philosophie des Mittelalters*, ed. C. Baeumker and G. von Hertling, Münster, 1891 ff. (still being issued), in which (iii. 2 [1908]) will also be found C. Baeumker, 'Witelo, ein Philosoph und Naturforscher des XIII. Jahrhunderts'—especially important for its excursions on the metaphysics of light and the proofs for the existence of God in Christian and Muslim philosophy. T. J. DE BOER.

PHILOSOPHY (Roman).—I. Introductory.—

The Romans made no claim to originality in philosophy. Here, even more than in other fields, the work of Roman literature was mediation (*Vermittlung*). From this point of view, however, it is impossible to exaggerate the significance of such names as Lucretius, Cicero, and Seneca, not to speak of Epictetus and Marcus Aurelius, who wrote in Greek. It is from Lucretius that the modern world received not only the system of Epicurus and the atomic cosmogony of Democritus, but something of the spirit of the pre-Socratic nature philosophy.

Cicero taught the history of older Greek philosophy and the controversies of the post-Aristotelian schools not only to his contemporaries and the Christian Fathers, but for many centuries after the Renaissance to all modern Europe (see the excellent, though incomplete, history of Cicero's influence in T. Zielinski, *Cicero im Wandel der Jahrhunderte*², Leipzig, 1912, pp. 89 ff., 211 ff.; there is a convenient English résumé of Zielinski² in *English Literature and the Classics*, Oxford, 1911).

Seneca transmits to the modern world the ethical religion of later Greek philosophy, the precepts that would make invincible the heart that conned them, the half-Christian sentiments of a Stoicism more than half Platonized.

When the Roman tardily turned his attention to Greek literature, it was, Horace tells us (*Epist.* II. i. 161 ff.), to ask what profit there might be in the Attic stage. Horace does not here mention philosophy, the refuge and religion of his later years (*ib.* I. i. 25).

But the dramas most frequently adapted to the Roman stage, those of Euripides and the New Comedy, were, as Cicero says of his own orations (*de Nat. Deor.* i. 3), stuffed with philosophic sentences (J. S. Reid, *Academica*, London, 1885, p. 9), which conveyed to an intellectually young people the criticism of life, ethics, and religion of a sophisticated and weary civilization (*ib.*, *Introd.* p. 20, note 1; T. Mommsen, *Hist. of Rome*, bk. iii. ch. xiv.; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, pp. 348, 264, 319, *Roman Ideas of Deity*, do. 1914, pp. 30, 101; J. B. Carter, *Religion of Numa*, do. 1906, pp. 64, 122 f.). This completed the disintegration of the Roman religious instinct, which was already sadly confused by the progressive assimilation of the old Roman deities to the Greek mythology.

'Atque haec quidem ejusmodi ex veteri Graeciae fama collecta sunt: quibus intelligi resistendum esse, ne perturbentur religiones' (*Cic. de Nat. Deor.* iii. 23. 60).

Ennius, the Roman Homer (Fowler, *Rel. Exper.*, p. 351), translates Euhemerus (see EUHEMERISM).

adapts with Roman illustrations Euripides' diatribes against priestcraft and augury (Cic. *de Div.* i. 58), and sums up for the populace in three racy lines the Epicurean doctrine that the gods are careless and the traitorous doubts of the moral government of the world long since formulated by Thrasy Machus (H. Diels, *Die Fragmente der Vorsokratiker*³, Berlin, 1912, frag. 8) and eloquently repudiated in the theodicy of Plato (*Laws*, 905 B; cf. Cic. *de Nat. Deor.* iii. 32, *de Div.* i. 88):

'Gods there are, I've always said it, and that will always be my view;
But they little reck, I reckon, of what we race of mortals do,
For if they did the good would flourish, the bad would perish, which is not true.'

Many such quasi-philosophic and critical utterances occur in Plautus (Fowler, *Rel. Exper.*, p. 352; F. Leo, *Plautinische Forschungen*², Berlin, 1912, pp. 129-131; Ranke, *Periplocomenus*, Marburg Dissertation, 1900) and in the fragments of early Latin tragedy (Reid, *Introd.* p. 20, n. 1). The beginnings of more direct study of Greek philosophy are known mainly from the allusions in Cicero (*Tusc.* iv. 6, *Acad.* i. 5), Seneca (*Ep.* c.), Quinctilian (*Inst. Orat.* x. i. 123), and Aulus Gellius (vi. [vii.] 14, xv. 11).

The famous embassy to Rome in 155 of the three representative Greek philosophers—Carneades the Academic, Diogenes the Stoic, and Critolaus the Peripatetic—is the obligatory introduction to the history of Roman philosophy, and has often been brilliantly, if somewhat conjecturally, described (see C. Martha, *Études morales sur l'antiquité*, Paris, 1883, p. 61 f.; 'Le Philosophe Carnéade à Rome'; A. W. Benn, *The Greek Philosophers*, London, 1914, ch. xii. sect. i.).

Cicero himself can name no Roman student of Greek philosophy prior to Lælius and Scipio (*Tusc.* iv. 5), though he sometimes alludes to Pythagoreanism in Italy (*ib.* iv. 1 f.).

The culture of the 'Scipionic circle,' and its possible indebtedness to Polybius and the Achæan exiles, we must dismiss with a reference (Mommesen, bk. iv. ch. xii.; P. Wendland, *Die hellenistisch-römische Kultur*, Tübingen, 1912, pp. 34, 58; J. B. Bury, *The Ancient Greek Historians*, London, 1909, p. 191; Fowler, *Rel. Exper.*, p. 363 f.; Cic. *de Fin.* ii. 8; Polyb. xxiii. 10). Elsewhere Cicero admits that sceptical readers have doubted the erudition in Greek philosophy displayed by the interlocutors in his dialogues, and defends himself lamely (Reid, on *Acad. Prior.* ii. 2). It is not likely that any Roman, except Cicero himself, and possibly the learned Varro or Brutus, could have delivered the systematic expositions which Cicero puts into the mouths of his personages. But the general truth of Cicero's idealized representation of this Roman culture remains.

In the 1st cent. B.C. the educated Roman nobility did often maintain in their households Greek scholars who might be philosophers (see A. Hillscher, in Fleckeisen's *Jahrbücher für class. Philol.*, suppl. xviii. [1891-92] 353-444; Cic. *Brutus*, 90, 97, *de Or.* i. 22, *de Fin.* iv. 26, v. 3, 25). In their youth, or later en route to Asia, they heard at Athens (*de Or.* i. 18, *de Fin.* v. 1) or Rhodes (*de Or.* i. 17) lectures from which they acquired, if not expert knowledge, a sufficient conception of the attitude towards life and experience represented by the three chief post-Aristotelian schools—the Stoics, the Epicureans, and the Academic sceptics. They knew the names and personalities of the leading representatives of these schools and took an amused interest in their controversies (*Acad. Prior.* ii. 14, 11 f., *de Or.* i. 11, 18 f., *de Leg.* i. 20). Their villas sometimes contained libraries in which a scholar could find almost any treatise that he happened to need (*de Fin.* iii.

2 f., *Topica*, i., *ad Att.* iv. 10). They sometimes professed personal allegiance to the Epicurean, the Academic, the Stoic, or the Peripatetic school as the case might be (*de Nat. Deor.* i. 6). This often meant little more than the assumption of a playful partisanship (*de Fin.* v. 3, 26, *Acad. Post.* i. iv. 14, *de Leg.* i. vii. 21). It was sometimes, as in the case of Cicero's friend, the Epicurean Atticus, the expression of a temperament and an attitude (G. Boissier, *Cicéron et ses amis*, Paris, 1888, p. 137).

In a Cato and in a Brutus it was thought to be a religion and a rule of life:

'Neque disputandi causa, ut magna pars, sed ita vivendi' (Cic. *Murena*, 30, of Cato); 'Scias eum sentire, quæ dicit' (Quintil. x. i. 123, of Brutus).

And it is customary in this connexion to affirm a profound affinity between the Stoic philosophy and the old Roman virtue (Fowler, *Rel. Exper.*, p. 362; E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, ch. v., is an excellent history of the 'Stoic sect in Rome'; *per contra*, F. W. Bussell, *Marcus Aurelius and the Later Stoics*, Edinburgh, 1910, p. 185, says: 'The Stoic school nearly spoilt the nobles of the Romans').

Cicero's complacent portrayal of this philosophic culture of the Roman nobility suggests Burke's and Matthew Arnold's idealization of the similar culture of the English nobility of the 18th century. Whatever the precise historical facts, it is in some such setting and against some such historical background as this that we must view the two great extant monuments of that culture—Lucretius's poem on the nature of things and Cicero's philosophical dialogues. In asserting his own essential priority, Cicero laments that the earliest Roman expositions of Greek philosophy were the cheap and superficial popularizations of Epicureanism by a certain Amatinus and his followers (*Tusc.* iv. 3, 6). This recalls the depreciation by old-fashioned college presidents of the diffusion of cheap Voltairism in America by Ethan Allen's *Reason the only Oracle of Man* (New York, 1784), and Paine's *Age of Reason* (London, 1795). But what chiefly offends Cicero is not the irreligion of popular Epicureanism, but its crudity. Epicurus and, with rare exceptions, the Epicureans were hostile to the encyclopædic liberal culture that was Cicero's life-long religion (*de Fin.* i. 5, 7, 21, iii. 12, *Acad.* i. 2, *de Nat. Deor.* i. 22, 26, ii. 18 f., 29). Their writings lack the literary charm, the mastery of dialectic and rhetoric, the conception of man as a social and political animal, the wealth of historic illustration, that attracted him in the disciples of Plato and the 'great and copious' Peripatetics (*de Leg.* iii. 6, *Orator*, 3, *Brutus*, 31, *de Fin.* ii. 23 f., iv. 3, 9, v. 3). The Stoic system and terminology as a subject of study command the respect even of their opponents (*de Fin.* iii. 1). But any educated man can get up the entire Epicurean philosophy in a few days (*ib.* i. 5, 8: 'perdiscere ludus').

So Macaulay marvels that the 'silliest and meanest of all systems of moral and natural philosophy' inspired in Lucretius the finest poem in the Latin language. Cicero does not raise this question, or indeed mention Lucretius at all, except once in the much discussed letter to his brother Quintus. But the coincidences of diction in the exposition of the Epicurean philosophy are too numerous and precise to be due solely to the use of common sources. The parallels collected by Martha (*Mélanges de littérature ancienne*, Paris, 1896, pp. 157-177) are only a small proportion of those that an attentive reader will discover. For Lucretius as a whole see art. LUCRETIVUS and the well-known book of J. Masson, *Lucretius, Epicurean and Poet* (2 vols., London, 1907-09). We can only glance at

a few of the traits that differentiate him from Epicurus. He is a true poet and transmits to the modern world the spirit not of Epicurus on *Nature*, but of the pre-Socratics and Plato's *Timæus*. He 'denied divinely the divine'; and Aphrodite, Phaethon, the fauns, and the cult of the great Mother of the Gods are more real and vivid in his negations than in any hymn of their worshippers. His atheism speaks the language of the deity answering Job out of the whirlwind; and the expression of his honest doubt always preserves that high seriousness the lack of which makes the petulant boutades of Euripides so disconcerting to the lovers of Æschylus and Sophocles, so unifying to the disciples of Plato. In him Epicurus's placid repudiation of superstition is transformed into a passionate conviction that historical or institutional religion has been a curse to humanity. This distinction, often overlooked, has never been explained. It may be conjecturally attributed to something in the poet's own temperament or experience, or perhaps to the religious experience of the Roman people during and after the Hannibalic wars (Carter, p. 144; cf. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 53).

We may perhaps find further confirmation of his sincerity of feeling in the fact that Lucretius never redeemed his promise (v. 155) to lead his

'Memmius in a train
Of flowery clauses onward to the proof
That gods there are, and deathless'
(Tennyson, *Lucretius*).

The positive theology of the Epicureans was certainly chimerical, and their opponents plausibly pronounced it insincere (Zeller, *Die Philosophie der Griechen*, III. i.⁸, Berlin, 1880, p. 399). The speakers in Cicero refuse to take seriously the *faintant* gods who have a *quasi-corpus* and a *quasi-sanguis* (*de Nat. Deor.* i. 26), and take refuge from the cosmic turbulence in 'the lucid interspace of world and world' (*de Div.* ii. 17), where they entertain their infinite leisure with conversation in Greek.

The populace, the false prophets, the mystic or religious philosophers, and the intelligent essayists of later antiquity were agreed in regarding Epicureanism as virtual atheism (Posidonius, in *Cic. de Nat. Deor.* i. 44; cf. iii. 1).

Lucretius has little to say—perhaps there was not much to be said—of the practical aspects of the Epicurean ethics. Satire of Roman luxury and ennui, the praises of sober, sweet, simple Epicurean life, deprecation of the mad race of ambition and the pursuit of wealth, the gospel of renunciation and acquiescence in the law of death—death 'that is more peaceful than any sleep'—that is about all.

2. Cicero.—Cicero was obviously not a professional scholar. But his knowledge of Greek philosophy was extensive, if not always critical. Greek was for him a living language, and he had heard lectures on Greek philosophy, read books about it, and debated the points of controversy between later schools throughout his life (see Reid, *Introd.* pp. 1-9; J. B. Mayor, *de Natura Deorum*, Cambridge, 1880-85, i. p. xxxv, and, for an unfavourable view of Cicero's work, iii. p. xiv). The substance of his chief philosophic treatises he could at any time have written out of his head (*de Fin.* i. 5; not, of course, the 'History of Philosophy' in *de Nat. Deor.* i. 10 ff., for which he had no Diels or Zeller to copy). In the actual composition he freely adapted, translated, paraphrased, or epitomized whatever suited his purpose in the writings of Panætius, Posidonius, Clitomachus, Diogenes of Babylon, Antipater of Tyre, Antiochus, and Philo. Like many of his modern censurers, he often took his quotations at

second hand. But it is quite idle to deny that he read Plato, Aristotle, Theophrastus, Crantor, Dicaearchus, and others of the older philosophers, and could consult and quote them independently when he chose. He sometimes speaks of himself as a translator and sometimes protests that he does not follow his authorities slavishly. The determination of his precise procedure in any given case is a problem that philology can neither solve nor renounce (see the Introductions to Reid, *Academica*, and Mayor, *de Nat. Deor.*; R. Hirzel, *Untersuchungen zur Cicero's philosoph. Schriften*, 3 vols., Leipzig, 1877-83; and the more recent literature in Hans Uri, *Cicero und die epikur. Phil.*, Munich, 1914). He achieved his design of illuminating by Latin letters every topic of (recent) Greek philosophy (*de Div.* ii. 2, *Acad. Post.* i. i. 3). And, in the loss of the Greek 'sources,' this hastily composed philosophical library remains one of the world's chief storehouses of ideas and suggestions and of the great commonplaces of ethics and natural religion. It is no impairment of the value of his writings or disparagement of his intelligence that he did not invent a system of his own, or swear superstitious adherence to the words of any one of his teachers (Boissier, p. 340). The philosophy of the post-Aristotelian schools centred in two or three large topics of controversy still under debate—the criterion of truth, the absoluteness and autonomy of the moral law, the identification of 'virtue' with happiness, and the reality of natural religion and its accommodation to institutional and historic religion. Towards all these questions Cicero's attitude was that of not a few of the best minds of the 18th and 19th centuries. The Stoics maintained that certain states of consciousness are infallible witnesses to their own truth. Cicero held with the New Academy that probability is the limit of our knowledge and the guide of life (*Tusc.* i. 9, v. 11, *Acad.*, *passim*; *de Offic.* iii. 4 *in fine*). This is still a perfectly rational position in relation to all absolute systems, and was in Cicero's as in Plato's day an entirely reasonable view of physical science also (*Acad. Prior.* ii. 39; Plato, *Tim.* 29 B, C). The Stoics insisted that nothing is good except the virtuous will, and that virtue alone ensures not only a happy, but also the happiest possible, life. Cicero admired this fine moral gesture and the ingenious elaboration of terminology that justified it (*de Fin.* iii. 22). He would like to believe it:

'Ego vero volo in virtute vim esse quam maximam' (*ib.* v. 26).

He is not sure that he can find any valid sanction for the moral life without it. But in other moods he doubts its conformity to common sense or its confirmation by experience, and sees in it only the pedantic and paradoxical elaboration of truths better stated by Plato (*de Fin.* iv. 11 f.). Virtue on the rack is still happiness perhaps. But why say the highest possible happiness? Would it not be a little happier without the pain? It is our modern problem of the sanction. Unless you go the whole length of paradox, how find a logical sanction for the extreme case of entire self-sacrifice? Cicero's waverings and self-contradictions on this point find their precise parallels in the literature of the modern utilitarian debate from Mill and Grote to Leslie Stephen, and in the associated discussions of the main thesis of Plato's *Republic*. He prefers the Stoic position to the Epicurean of course, and even to the laxity of Theophrastus on the happy life (*ib.* v. 5), and perhaps to the Aristotelian over-emphasis of external 'goods' (*ib.* v. 25). But he does not prefer it to the finer tact of Plato's expression of the same ideas (*Acad.* iv. [*Lucullus*] 44, *de Fin.* iv. 24, *Tusc.* v. 12). And he fears that it may

prove to be only a magnificent rhetorical defiance to experience and human nature :

'Dicuntur ista, Cato, magnifice' (*de Fin.* iii. 8), 'repugnante natura' (*ib.* iv. 20).

He had probably often debated the question with Brutus and Cato, and a large part of bk. iv. of the *de Finibus* reads more like the reflexion of these discussions than the copy of a Greek treatise, for which it is generally taken. The alleged contradiction between bk. v. of the *Tusculans* and bk. iv. of the *de Finibus* practically disappears on a careful consideration of the respective contexts (*Tusc.* v. 11; cf. *de Leg.* i. 20: 'Probe quidem sentis, si re ac non verbis dissident,' *de Offic.* iii. 7: 'Mihi utrumvis satis est; et quum hoc tum illud probabilius videtur').

Space fails for the study of the *de Natura Deorum* and the *de Divinatione* as storehouses of material for the history of the post-Aristotelian philosophies of religion. The 'noble eclectic deism' which Cicero transmitted to the Renaissance and the 17th and 18th centuries is summed up in a concluding paragraph of the *de Divinatione*, which says in effect :

'We ought to conserve religion without encouraging superstition. The wise man will respect and maintain the religious rites and institutions of his ancestors and he will keep his personal faith in a supreme and eternal nature to be revered and admired by man as the author of the beauty and order of the world' (*ii.* 72).

Those who read between the lines could find mingled with this edifying doctrine many suggestions of the statesman's or the policeman's view of the utility of religion (*de Rep.* and *de Leg.*, *passim*, *de Leg.* i. 7, ii. 7, *de Nat. Deor.* i. 27; cf. A. Collins, *ap. Zielinski, Cicero im Wandel*, p. 223; *de Nat. Deor.* ii. and iii.) and hints of economies and reserves (*de Nat. Deor.* i. 22, *de Div.* ii. 12, 'sed soli sumus,' *de Leg.* i. 13) and of accommodation (the word, *de Nat. Deor.* i. 15 [41]) legitimate or illegitimate to popular and institutional religion (*ib.* i. 28, iii. 15 f., 23; Warde Fowler, *Roman Ideas of Deity*, p. 54). The Platonizing Dream of Scipio and bk. v. of the *Tusculans* have been the chief channels by which the Platonic hope of immortality was transmitted to the Middle Age and the modern literature of natural religion. The *de Finibus* deals with the theory of ethics (see art. SUMMUM BONUM). The *Tusculans* are, like Seneca's *Epistles*, the practical application of the religion of Greek philosophy (*Tusc.* v. 2: 'O vitae philosophia dux,' etc.; cf. Seneca, *Ep.* 90, both conjectured to be derived from Posidonius's *Protrepticus*) to conduct and spiritual guidance. They exhibit the philosopher as physician of the soul (*Tusc.* i. 49, iii. 1), healing the perturbations, diseases, or passions of the mind, and combating the fear of death and pain and other 'accidental evils,' or maintaining the Stoic thesis of the all-sufficiency of virtue for the happy life. The *de Officiis*, based in the main probably on the *περί τοῦ καθήκοντος* of Panætius, is a practical treatise on the ethics not of the ideal sage but of fallible men. It became in turn the model of St. Ambrose's Christian ethics, and, until the rise of the 19th cent. 'science' of evolutionary ethics, it remained for such readers as Locke, Hume, Voltaire, and Frederick the Great almost the definitive treatment of the subject. The wide-spread opinion that Cicero in the *de Officiis* seriously compromises the ethical ideal is a vague impression left in the minds of hasty readers by his discussion of the Stoic casuistry of *caveat emptor* and similar questions (*de Offic.* iii. 12 ff.). In nearly every case Cicero himself rejects the casuistic compromise, the 'capitulations of conscience' which even John Stuart Mill attributes to him (*de Offic.* iii. 13 *in fine*; Mill, *Three Essays on Religion*³, London,

1885, p. 107). Apart from a few possibly prejudiced political and historical judgments, the derogations of the *de Officiis* from absolute, ideal, Platonic, or Christian ethics are rare and doubtful. On the authority of Panætius, Cicero justifies the advocate in maintaining a merely plausible case (*ii.* 14). He twice permits himself the un-Platonic expression that a good man will harm no one 'nisi lacessitus iniuria' (*i.* 7, iii. 19), for which Lactantius and Ambrose rebuke him. He once incautiously generalizes a sound principle of legal equity in the unqualified statement that promises need not be kept 'si plus tibi noceant, quam illi prosint, cui promiseris' (*i.* 10). That is about all. The tripartite scheme of the *de Officiis* distinguishes the topics of the right (*honestum*), the useful (*utile*), and the (apparent) conflict of the two. The admission of a real conflict, Cicero insists, would destroy ethics altogether, which must rest on the Socratic-Platonic postulate of their identity (*ii.* 3, iii. 3). The elaboration, for which Cicero himself apologizes (*ii.* 6), of Chesterfieldian prudential morality in bk. ii. is natural in a father addressing his son and not inappropriate to the literary kind which is allied to the 'parenetic discourse' (see art. ISOCRATES). Transcendental and ascetic ethics are treated in the *Tusculans*, which are essentially akin to the literature of 'consolations.' These and similar distinctions, which cannot be developed here, are indispensable to the discriminating criticism of the *de Finibus*, the *de Officiis*, and the *Tusculans*. The *honestum* of *de Officiis*, i. divides into the four Platonic cardinal virtues. Emphasis is laid on their derivation from 'nature,' the primary instincts, and the social nature of man. The *ius gentium* is sometimes equated with nature (*iii.* 5: 'natura, id est, iure gentium'). Beneficence as a social virtue is placed side by side with justice. And there are many other divergences from Plato and Aristotle due to the elaboration of ethical terminology in the discussions of the schools, the accumulation of political and social experience, and the imperfect equivalence of Greek and Latin ethical terms. Much industry that might have cleared up all these complexities has been wasted on the conjectural philology of Cicero's lost sources.

Cicero boasts that his philosophical treatises had inspired many emulators of his example. Two only require mention here: Brutus, with whom he evidently had often debated the Stoic ethics (Boissier, p. 320), and Varro, for whose vast erudition he felt a certain awe. Varro (Zeller, *III.* i.³ 669) apparently accepted the eclectic compromise of Antiochus between the New Academy and Stoicism. Whatever his private creed, his chief literary interest in Greek philosophy was its service to his interpretation of Roman religion and antiquity. We know him mainly through the Christian Fathers, who sought in him illustrations of the absurdity of the pagan religion.

3. Roman philosophy after Cicero. — Roman philosophy acquired few if any new ideas after Cicero. An exhaustive monograph would study the not inconsiderable traces of Epicureanism and Stoicism in the poets Horace, Vergil, Lucan, Juvenal, and Persius (C. Martha, *Les Moralistes sous l'empire romain*, Paris, 1865, p. 100 ff., 'Perse'; Arnold, *Roman Stoicism*, ch. xvi., merely glances at the topic), the relation of the 'science' of Seneca and Pliny to their Greek sources, and the Latin reflexion of incipient Neo-Platonism in Apuleius. But, broadly speaking, post-Ciceronian philosophy merely amplified that conception of the philosopher as physician of the soul and director of conscience which we have already met in Cicero's *Tusculans*. This, with some admixture of asceticism and Pythagoreanism, was the philosophy of the

school of the Sextii to which Seneca alludes with grateful enthusiasm. And this is the chief function and content of philosophy for Seneca himself (Zeller, III. i.³ 696 ff.).

This ethical culture religion of moral philosophy in the literature of the Græco-Roman empire is of enormous human, though of slight scientific, interest. There are few shades of modern moral sentiment which the ethical culture of to-day cannot find already eloquently expressed in Seneca, Plutarch, Epictetus, Musonius, Dio Chrysostomus, Maximus of Tyre, or Marcus Aurelius—to mention only the best-known names. And under the combined influence of Platonism and cosmopolitan humanitarianism this pagan preaching sometimes approximates so closely to distinctively Christian sentiment as to provoke perpetual renewals of the hypothesis of its direct indebtedness to Christianity (Zeller, III. i.³ 714; Wendland, p. 95, with bibliography; Boissier, *La Religion romaine*⁴, Paris, 1892, vol. ii. ch. v., 'Sénèque et St. Paul'; C. R. Haines, *Marcus Aurelius*, in Loeb Classical Library, 1916, p. 383). It would be futile to try to summarize this literature in a paragraph. It is better to refer the reader to the articles on the authors named and to the many readable and accessible studies of the subjects (W. E. H. Lecky, *Hist. of European Morals*⁵, London, 1890, ch. ii.; Boissier and Martha, *opp. cit.*; L. Friedländer, *Sittengeschichte Roms*⁶, Leipzig, 1910, III. iv., 'Die religiösen Zustände', v., 'Die Philosophie als Erzieherin zur Sittlichkeit'; E. Renan, *Marc-Aurèle*⁷, Paris, 1882, ch. iii.; W. Pater, *Marius the Epicurean*, London, 1888, ch. xv.; T. R. Glover, *The Conflict of Religions in the early Roman Empire*, do. 1909, chs. ii. f., vii.; R. D. Hicks, *Stoic and Epicurean*, do. 1910, ch. iv.; Arnold, *Roman Stoicism*, chs. v., xiii.–xvi.; J. Oakesmith, *The Religion of Plutarch*, do. 1902; O. Gréard, *De la Morale de Plutarque*⁸, Paris, 1874). The theology associated with this gospel of Greek moral philosophy may be described indifferently as natural religion or 'morality touched with emotion.' Matthew Arnold's sharp distinction between the two meant little to Cicero, Plutarch, Seneca, and Marcus Aurelius, who, though, like Plato, they would affirm the autonomy of ethics, were, like Plato, willing to supplement it with the sanctions of natural religion. Discriminating scholarship finds distinctions in the extent and character of their accommodation to popular religion, but no such contrasts as that which Glover discovers between the essential rationalism of Seneca and the superstition, as he deems it, of Plutarch:

'The ancient world rejected Seneca, as we have seen, and chose Plutarch' (*Conflict of Religions*, p. 111)—an exaggerated, not to say a false, antithesis.

Nor ought we to catalogue the entire ethical and religious literature of these centuries under the indiscriminating rubrics, 'orientalism,' 'recrudescence of superstition,' and 'failure of nerve.' There was doubtless a drift towards superstition in the populace, in third-rate writers, and finally in the later Greek literature of Neo-Platonism. The decline of ancient science and scholarship left these tendencies without a check:

'If the old civilization had not been on the wane, if a supply of instructed, critical, cool, indifferent minds had continued,' etc. (M. Arnold, preface to *God and the Bible*, London, 1884, p. xvi, after Renan).

And the accommodations of the Stoics and the coquetries of the Platonists with mysticism may be thought to have encouraged them. But in the better writers, down to and including Plotinus, neither the accommodations nor the half-serious literary mysticism went farther in concession to the 'concrete supernatural' than many of the most respectable and respected writers of the last fifty

years have done.¹ It is only from the avowed standpoint of a Velleius (Cic. *de Nat. Deor.* i. 8: 'fidenter . . . ut solent isti'), a Lucian, or a Haeckel that modern criticism is justified in deprecating the supernaturalism, the superstition, the failure of nerve of the Græco-Roman ethical teachers of the first two centuries. The later Greek literature of Neo-Platonism is an independent question and does not concern us here.

LITERATURE.—See the works mentioned throughout.

PAUL SHOREY.

PHœNICIANS.—Phœnicia lay at the eastern end of the Mediterranean and extended from the Nahr-el-Kabir to Mt. Carmel. It included the maritime plain and the adjacent portions of Jebel Nusariyeh, Mt. Lebanon, and the highlands of Galilee. Its chief cities in the order from north to south were Arvad (Arados), Simir (Simyra), Arka, Gebal (Byblus), Birutu (Berytus, Beirut), Sidon, Sarephath (Sarepta), Sur (Tyre), Kana, Akzib, and Mahalliba. The name is derived from the Gr. *φοινίξ*, which means first 'purple' and then the land that produces purple. It is found as early as Homer (*Il.* xxiii. 743 f., *Od.* xiii. 272, xiv. 288 ff., xv. 415 ff.). The natives named themselves Tyrians, Gebalites, etc., after their individual towns, which were originally independent; or called themselves Sidonians from Sidon, the principal city. Thus Hiram, king of Tyre, calls himself 'king of the Sidonians' (*CIS* i. 5), and on coins of the Greek period Tyre is called 'mother of the Sidonians' (E. Babelon, *Cat. des monnaies grecques: les Rois de Syrie*, etc., Paris, 1890, i. 86). This is the usual name for the Phœnicians in the OT (*Jg* 10¹³ 18⁷, 1 K 11¹ 5, 33 16³¹, 2 K 23¹⁸) and also in Homer (*Il.* vi. 290, *Od.* iv. 618, xiii. 285, xv. 118).

The Phœnicians also called themselves by the broader racial name of Canaanites, as we know from coins of Laodicea (Babelon, i. 84, 162, 172). We have also the testimony of Herodian and of Stephen of Byzantium that the ancient name of Phœnicia was *Χνᾶ*, which corresponds to a shorter form *כנען* (Kinabhi in the Amarna letters) over against *כנעני* (Kinahni in the Amarna letters). Philo Byblius (in Eusebius, *Præp. Evang.* i. 10, ed. E. H. Gifford, Oxford, 1903) names as the ancestor of the Phœnicians Chna, who had his name changed to Phœnix (39d); and in I. Bekker, *Anecdota Græca*, Berlin, 1814–21, iii. 1181, Chnas is the father of Phœnix, whence the Phœnicians are called Ochna (= *הכנעני*). Augustine states that the Phœnician colonists in N. Africa called themselves Canaanites (*Exp. Epist. Rom.* 13). The OT frequently calls the Phœnicians Canaanites (*Gn* 10¹⁵, 19, *Nu* 13²⁰, *Jos* 5¹ 13²⁶, *Jg* 1³¹, 2 S 24⁶, *Is* 23¹¹, *Ob* 30, *Zeph* 2⁹; cf. *Mt* 15²², *Mk* 7²⁶). In the OT Canaan (*Zeph* 1¹¹, *Ezk* 16²⁹ 17⁴) or Canaanite (*Zec* 14²¹, *Job* 40³⁰, *Pr* 31³⁴) is the standing term for 'merchant,' but in the early days trade was wholly in the hands of the Phœnicians.

With this testimony in regard to the racial affinities of the Phœnicians their language agrees. It is identical with the proper names and Canaanite glosses in the Amarna letters (see J. A. Knudtson, *Die El-Amarna-Tafeln*, Leipzig, 1907–15, ii. 1545 ff.), and differs only as a dialect from Moabite and Hebrew, which *Is* 19¹⁸ calls 'the language of Canaan.' In civilization and in religion also the Phœnicians and the Canaanites were one people. Accordingly, we must regard the Phœnicians as a branch of the Semitic race which under the names

¹ This caveat is intended not as a criticism of the indispensable book of Franz Cumont (*The Oriental Religions in Roman Paganism*, Chicago, 1911) or the brilliant sketch in Murray (ch. iv., 'The Failure of Nerve'), but in deprecation of the impression which the present generation of readers will receive from the exclusive emphasis of this aspect of the religious life and thought of the Græco-Roman empire.

of Amorites and Canaanites settled in Palestine about 2500 B.C.

A. PERIOD BEFORE THE HEBREW CONQUEST (2500-1200 B.C.).—During this period the Phœnicians were undistinguishable from the other Canaanites. Accordingly, the account of the religion of the Canaanites (*ERE* iii. 176-188) is at the same time an account of the first period of the Phœnician religion.

B. PERIOD FROM THE HEBREW CONQUEST TO THE BEGINNING OF GREEK INFLUENCE (1200-400 B.C.).—The sources for this period are scanty compared with those for the preceding and the following periods. They consist of two native inscriptions, that of Limassol and that of Hassanbey-li; theophorous personal names in the Assyrian records, in the OT, and in Menander's list of the kings of Tyre; and a few statements of the Assyrian annals and the OT in regard to the gods of the Sidonians.

The inscription of 'the servant of Hîrôm, king of the Sidonians,' on fragments of a bronze bowl found at Limassol in Cyprus (*CIS* i. 5) is commonly regarded as belonging to the reign of Hîrôm I., the contemporary of David and Solomon (c. 960 B.C.). This is the view of Lidzbarski (*Handbuch der nordsem. Epigraphik*, pp. 118, 176); but Von Landau (*Beiträge zur Alterthumskunde des Orients*, i., Leipzig, 1893) and E. Meyer (*EBi*, col. 3753) think that the king mentioned was Hîrôm II. (c. 740 B.C.). In either case this is the oldest known Phœnician inscription. It is a dedication to Ba'al Lebanon (*ERE* ii. 287^b). The name Hîrôm (Gr. *Ἡρώμης*) is an abbreviation of Ahi-rôm, 'brother is high' (=Heb. *Ḥi-rām*; *ā* in Heb. is regularly represented by *ō* in Phœn.). This name is a witness to the continued use of the primitive Semitic divine title *Ab* (*ERE* iii. 179, § 6; cf. i. 387, § 1). Josephus (*Ant.* viii. v. 3) quotes from the Greek translation of the annals of Tyre made by Menander of Ephesus (see C. Wachsmuth, *Einleit. in das Studium der alten Geschichte*, Leipzig, 1895, p. 404 f.) the information that the father of Hîrôm I. was Abibalos=Abi-ba'al, 'father is ba'al,' which contains the divine title *Ab* (*ERE* iii. 179, § 5) as well as the title *Ba'al* (*ERE* iii. 179, § 2). Of Hîrôm Menander says that he built temples for Herakles (=Melkart, *ERE* ii. 293) and for Astarte (=Ashtart, *ERE* ii. 117, § 5), and that he dedicated a golden pillar to Zeus (=Ba'al-Shamim, *ERE* ii. 288, § 8). He also instituted the festival of the awakening of Melkart. A wise man who flourished in his reign was Abdēmounos (read Abdēmounos)=Abd-Eshmun, 'servant of Eshmun' (see below, p. 892, § 33).

The successor of Hîrôm, according to Menander, in Josephus (*c. Apion*, i. 18, ed. B. Niese, Berlin, 1889, v. 21), was Balbazeros (or Baleazeros)=Ba'al-azôr, 'the ba'al has helped.' His son was Abdastartos=Abd-Ashtart, 'servant of Ashtart.' He was dethroned by Methousastartos=Methu-Ashtart, 'man of Ashtart,' the son of Leastartos=Le-Ashtart, 'belonging to Ashtart.' His successor was Astharumos (or Aserumos)=אשרום, 'Osiris is high' (see below, C. i. 65; cf. *ERE* iii. 184 f.). He was slain by his brother Phelles=פֶּלֶס (*CIS* i. 40. 1, 356. 2 f.), an abbreviation of Ba'al-pelles, 'the ba'al has levelled the way' (J. and H. Derenbourg, *Insc. ph. du temple de Seti à Abydos*, *RAssyr* i. [1885] 81-101, no. 24). He in his turn was slain by Eithôbalos, the priest of Astarte=Ittoba'al, 'with him is the ba'al.' He is the same as Ethba'al, king of the Sidonians (1 K 16²¹). His daughter Jezabel (=אִיזָבֶל; see below, p. 890), the wife of Ahab, introduced the cult of Melkart, the ba'al of Tyre, into Israel; and from the narrative of the book of Kings we gain some information about his worship (*ERE* ii.

292^a, 293). His son was Balezôros=Ba'al-azôr, 'the ba'al has helped.' He was succeeded by Mettenos=Metten, Heb. מֶטְטֵן (2 K 11¹⁸), an abbreviation of Metten-ba'al, 'gift of the ba'al' (*CIS* i. 261. 3, 303. 1, 406. 4, and often). His successor was Pygmalion, in whose reign Carthage was founded. On Pygmalion see below, p. 893, § 49.

Here the list of Menander closes, but for the period immediately following we have a number of theophorous names of Phœnician kings mentioned in the Assyrian inscriptions. In 854 B.C. Shalmaneser III. names Matinu-ba'li=Matten-ba'al, 'gift of the ba'al,' king of Arvad (*KB* i. 172. 93; cf. ii. 20. 60) and Adunu-ba'li=Adon-ba'al (*ERE* iii. 179, § 8), king of Shiana=the Sinite of Gn 10¹⁷. On Ba'li-ra'si=Ba'al-rosh, 'ba'al of the promontory,' in Shalmaneser III., see *ERE* ii. 287, § 4. Tiglath-pileser IV. in 738 B.C. mentions Hîrôm II., king of Tyre, and Sibittib'li, 'seven is ba'al' (*ERE* iii. 184, § 8), king of Gebal (*KB* ii. 30. 51; cf. 20. 57). On Ba'al-Zephon in Tiglathpileser IV. see *ERE* ii. 288, § 8. In 725 B.C. Shalmaneser V. attacked Elulaïos=Elu-eli (Heb. אֱלִילַיִם), 'El is my god,' king of Sidon, as we know from Menander, in Josephus (*Ant.* ix. xiv. 2). In the inscriptions of Sennacherib he appears as Luli (*KB* ii. 90. 35). On the divine name El see *ERE* iii. 178, C. x. In 701 Sennacherib mentions Tubu'lu=Itto-ba'al, Eth-ba'al, 'with him is the ba'al,' king of Sidon; Minhimmu=Mēnahēm, 'comforter,' an abbreviation of a theophorous name such as Ba'al-mēnahēm (*CIS* i. 55. 1, 57. 2, 87. 3; 2 K 15¹⁴), king of Samsimuruna; Abdil'ti='Abd-ēlôt, 'servant of the goddess' (i.e. Ashtart), king of Arvad (*CIS* i. 243. 3, 244. 4; *ERE* ii. 115, § 1); Urumilki, 'light is my king' (*ERE* iii. 181, § 8), king of Gebal (*KB* ii. 90. 48-50). In 676 B.C. Esarhaddon names Abdimilkutti='Abd-milkôt, 'servant of the queen' (i.e. Ashtart; *ERE* vii. 433, § 4), king of Sidon (*KB* ii. 124. 15). He also mentions Ba'lu=Ba'al, king of Tyre; Milkiasapha=Milkasaph, 'the king has gathered' (*ERE* iii. 179, § 7), king of Gebal; Matan-ba'al=Metten-ba'al, 'gift of the ba'al,' king of Arvad; Abibaal=Abi-ba'al, 'father is ba'al,' king of Samsimuruna (*KB* ii. 148. 13-17). Ashurbanipal names the same persons mentioned by his father and also Yahimilki, 'my king makes live,' son of Ba'al, king of Tyre (*KB* ii. 168. 58); Yakinlu=Yakin-el, 'El causes to be,' king of Arvad (*KB* ii. 170. 63); and the following ten sons of Yakin-el: Aziba'al='Azzi-ba'al, 'my strength is the ba'al'; Abiba'al, 'father is the ba'al'; Aduniba'al, 'my lord is the ba'al'; Sapatiba'al=Shopheti-ba'al, 'my judge is the ba'al'; Pudibaal, 'the ba'al has redeemed'; Ba'al-yashubu, 'the ba'al returns'; Ba'alhanunu, 'the ba'al is gracious'; Ba'al-maluku, 'the ba'al is king'; Abimilki (Abimelech), 'the father is king'; Ahimilki (Ahimelech), 'the brother is king' (*KB* ii. 172. 82-84). On Melkart, Ba'al-Malki, Ba'al-Shamim, Eshmun and Ba'al-Saphon, and the gods of Tyre mentioned in the treaty of Esarhaddon with Ba'al, king of Tyre, see *ERE* ii. 293^a; and on Ashtart in the same treaty see *ERE* ii. 115^a.

The Phœnician inscription found at Hassanbey-li near Zenjirli in N. Syria (*SBAW*, 1895, p. 122; H. Winckler, *Altor. Forsch.*, Leipzig, 1896, iv. 305) stands next in age to the inscription of Hîrôm, king of the Sidonians, referred to above. Its allusion to 'the king of Assyria' shows that it is older than the fall of Nineveh (606 B.C.). It mentions בַּלְשָׁמִים וְאֱלֹהִים, 'Ba'al-shamim and the gods' (*ERE* ii. 288, § 8), וְרַמָּן, 'and Ramman' (*ERE* iii. 183, § 2).

Ashtart, 'the goddess of the Sidonians,' is mentioned in 1 K 11¹⁸⁻²³, 2 K 23¹³.

In the Neo-Babylonian period Josephus again

quotes from Menander a list of kings (c. *Apion*. i. 21). He says that Nebuchadrezzar besieged Ithobalos = Ethba'al II. His successor was Ba'al II. Then came a series of judges: Eknibalos = (H)ëkinniba'l, 'the ba'al caused me to be' (cf. Yakin-el above), the son of Baslëchos (or Balsachos) = Ba'l-Sakkun (?), 'Sakkun is the ba'al'; Chelbës = ילכבס, 'dog of Isis' (cf. עכרס; *CIS* i. 50. 1, 'servant of Isis')—interesting as the first appearance of the Egyptian goddess Isis (*ERE* iii. 184 f.); son of Abdaïos, apparently = 'Abd-Yahu (Obadiah), 'servant of Jahweh' (Abdaïos is the transliteration of Obadiah in the Greek version according to Q; other recensions read Abdeïos; on Jahweh among the Canaanites see *ERE* iii. 183, § 17); Abbaros (Lat. Abalus) = Ab-ba'l, 'father is ba'al'; Muttunos = Metten-(ba'l), 'gift (of ba'al)'; and Gerastros = Ger-Ashtart, 'sojourner of Ashtart' (frequent in Phœnician inscriptions), sons of Abdëlimos = 'Abd-ëlim, 'servant of the gods.' They were followed by a king, Balatoros = Ba'l-a'tör, 'the ba'al has crowned.' Then came Merbalos = Mar-ba'l, 'the ba'al is lord'; and after him Eirëmos = Hirëm III., under whom Babylon fell before the arms of Cyrus (539 B.C.).

During the period of Assyrian and Babylonian rule the Phœnicians must have felt the influence of the Assyro-Babylonian religion. This is shown by survivals in the next period (see below, p. 893, § 53 ff.).

During the earlier part of the period of Persian rule we have no information in regard to the later Phœnician religion. No trace of the Persian religion appears in the later Phœnician religion, so that we may assume that it exerted no influence upon Phœnicia during this period.

Our sources, meagre as they are, for the period from the Hebrew conquest down to 400 B.C. show that the Phœnician religion remained practically the same as it had been during the previous period. Nearly all the old gods are mentioned, and no new ones appear, except Isis and Osiris.

C. PERIOD OF GREEK INFLUENCE (FROM 400 B.C. ONWARDS).—As sources for this period we have a considerable body of inscriptions from Phœnicia and from the Phœnician colonies in Cyprus, Carthage, etc. The oldest of these date from the end of the Persian period (c. 400 B.C.). The majority come from the Greek period (333 B.C. onwards). The inscription of Yehaw-milk of Gebal (*CIS* i. 1) belongs to the end of the 5th or the beginning of the 4th century. Those of Tabnit of Sidon (Lidzbarski, p. 417) and of Eshmun-azör (*CIS* i. 3) are assigned by some to the end of the 5th, by others to the end of the 4th century. All the other inscriptions found in Phœnicia belong to the Greek period. The Cyprian inscriptions date mainly from the end of the 5th and the 4th century. The Delos inscription (*CIS* i. 114) is from the 4th century. The older inscriptions from Carthage, Sardinia, and other Phœnician colonies in the west belong to the period before the Roman conquest (146 B.C.). The Neo-Punic inscriptions belong to the Roman period, and have frequently Latin translations that are useful for determining the pronunciation of the personal names. These inscriptions contain names of gods, theophorous personal names, and some information in regard to religious beliefs and rites. In many respects the Phœnician religion was preserved in a more primitive form in Carthage than in the homeland, where it was subjected to Greek influence.

Two Phœnicians, Mochos and Sanchuniathon, are reported by classical authors to have written accounts of the Phœnician religion. Mochos of Sidon is named along with Sanchuniathon by Athenæus (iii. 126A), and with Sanchuniathon is said by Strabo (xvi. ii. 24) to have lived before the

Trojan war (cf. *Jos. Ant.* i. iii. 9). He wrote a cosmogony of Sidon, which was translated into Greek by Eudemus, a pupil of Aristotle, from whom a fragment was borrowed by Damascius (*Quæst. de Primis Principiis*, 125, ed. J. Kopp, Frankfurt, 1826, p. 385). It is also said to have been translated by Lætus at the end of the 1st cent. B.C. (Tatian, *adv. Græcos*, 37 = Clem. Alex. *Strom.* i. xxi. 114). Our only knowledge of this cosmogony is from the fragment in Damascius. Another much more extended cosmogony, that of Gebal, is said to have been composed by Sanchuniathon (= Sakkun-yathôn), and to have been translated by Philo of Byblus (Gebal), from whom it is quoted by Eusebius. On the contents and historical character of this document see the artt. PHILO BYBLIUS and SANCHUNIATHON. It is probable in the case both of Mochos and of Sanchuniathon that genuine Phœnician records are preserved by the Greek writers, although the names attached to them may be apocryphal.

Besides these native historians we have as sources the incidental references to the Phœnician religion in Greek and in Latin authors, particularly Herodotus, Lucian (*de Dea Syria*), Origen, Jerome, Theodoret, Tertullian, and Augustine.

From these sources it appears that the characteristic of the period from 400 B.C. onwards was ever-increasing Greek influence upon the Phœnician religion. Even in the Persian period Greek civilization began to invade Phœnicia. King Straton (= 'Abd-Ashtart?) of Sidon maintained a thoroughly Greek court. He established a Sidonian colony in Athens which has left a number of Phœnician inscriptions, and permitted Athenian merchants to settle at Sidon. He joined with the Athenian embassy to Artaxerxes II. in 367 B.C. (Athenæus, xii. 531; Ælian, *Var. Hist.* vii. 2). The anthropoid sarcophagi from Sidon of the later Persian period show strong Greek influence, and the splendid monuments known as 'the Alexander sarcophagus' and 'the sarcophagus of the mourners,' which belong to the end of the 4th cent., are masterpieces of Greek art (see O. Hamdy-Bey and T. Reinach, *La Nécropole royale de Sidon*, Paris, 1892-97). After the battle of Issus in 333 B.C. the Phœnician cities submitted to Alexander, except the island of Tyre, which was captured by constructing a mole from the mainland. It then became a Macedonian fortress, and from this time onwards the Hellenizing of Phœnicia went on apace. The bilingual inscriptions and Philo Byblus show us that the Greek gods were identified with the old Phœnician deities, and in the classical writers the Phœnician gods are habitually called by their Greek or Latin equivalents. Close relations with the Greek dynasty of the Ptolemys in Egypt encouraged also the adoption of new elements from the Egyptian religion in addition to those that had already been borrowed in the days of the XVIIIth and XIXth dynasties (*ERE* iii. 184). This period, accordingly, is one of unlimited religious syncretism.

i. THE PANTHEON.—(a) *General titles.*—1. **EL.**—The generic name for 'god' in Phœnician, as in the other Semitic languages, is ʾēl, ʾēl (for this and for the following names of gods see the alphabetically arranged Phœnician vocabulary of Lidzbarski, pp. 204-388, where references are given to all the occurrences of the names in the inscriptions; see also *ERE* iii. 178 ff.).

In the inscriptions this word is never used as a personal name like Heb. *El*, but is always generic like *ba'al*. It was the favourite title of the chief god of Gebal, just as *ba'al* was the title of the god of Sidon. What his real name was, if he had any, is unknown. Hence *el* is found as an element in personal names chiefly in inscriptions from Gebal—e.g., El-amon, 'Amon is god,' or 'the god is faithful'; El-barik, 'the god has blessed'; El-hanôn, 'the god is gracious'; El-pa'ôl, 'the god has done'; El-rôm, 'the god is high'; Na'ëm-el, 'the god is good'; 'En-el,

'eye of the god': Tamôk-el, 'the god has supported,' Philo Byblius (in Eus. *Præp. Evang.*, ed. Gifford, i. 10, 36c, 37b) says that Elos (the El of Gebal) is Kronos, that he founded the city of Gebal (37a), that he gave Gebal to the goddess Baalūs (=the *ba'lat* of Gebal), and Berytus to Poseidon (=Ba'l-Bērūt) (38d). He had four eyes, two open and two closed; four wings, two spread and two folded; and two feathers (like the Egyptian gods) upon his head. This figure seems to be represented on certain Phœnician seals (M. de Vogüé, *Mélanges d'archéologie orientale*, Paris, 1895, p. 109). On the myth of the El of Gebal see SANCHUNIATHON, O. 2.

Other towns called their chief god *ēl*, as we know from the Punic name El-'am, 'the god is uncle' (CIS i. 147, 6); Metten-el, 'gift of the god'; and numerous place-names in Palestine compounded with *ēl*. Philo also knows another *ēl* besides that of Gebal (38a). The Greeks were unable to distinguish between these various *ēl*s, and therefore assumed one god Elos whom they identified with Kronos. Through Greek influence the idea of one god El was gradually developed by the Phœnicians.

The plur. of *ēl* is *ēlim*, which occurs in numerous inscriptions and in the personal names 'Abd-*ēlim*, 'servant of the gods'; Kelb-*ēlim*, 'dog of the gods'; and Metten-*ēlim*, 'gift of the gods'. A favourite honorific title in Carthage is *qsm* אלם, 'establisher of the gods.' Philo (37b) says that the allies of Elos were called Eloim. This Hebrew form cannot come from either Sanchuniathon or Philo, but must be a modification by Eusebius or a Christian transcriber.

2. *Ēlôt*.—The fem. form corresponding to *ēl* is *ēlôt*, 'goddess,' which is used as a title of 'Ashtar (cf. Arab. al-Lât). It occurs also in the fem. name *Ĥôt-lôt*, 'sister of the goddess.'

3. *Allôn*.—Another name for 'god' is *allôn*, which in Hebrew means 'holy tree.' It occurs in the personal names Yehaw-allôn, 'may the god cause to live'; and Aḥ-allôn, 'the god is a brother.' The plur. is *allônim* and fem. *allônôth* (cf. *alonim ualonoth*, Plautus, *Pœn.* v. i. 1).

(b) *Celestial gods*.—4. *Shamim*, 'heaven,' occurs in the name [Sa]mēmroumos, 'heaven high' (Philo, 34d); also the name of a district in Sidon (C. C. Torrey, in *JAOS* xxiii. [1902] 162). More commonly we meet Ba'l-Shamim, 'owner of the sky' (ERE ii. 288^b, 293^a). Philo (34c) calls him 'Beel-samēn [the Aram. form *l*], which in Phœnician means lord of heaven, but in Greek Zeus.' In the same passage he incorrectly identifies him with the sun. In 36b he calls him Ouranos. In the treaty of Hannibal with Philip of Macedon he is called Zeus (Polybius, vii. 9).

5. *Zebul*, 'dwelling,' or Ba'l-zebul, 'owner of the dwelling,' i.e. the abode of the sky, seems to be an alternative name for the foregoing. It occurs in the fem. name Shem-Zebul, 'name of the dwelling' (Lidzbarski, p. 420, 3), and in the fem. name Ba'l-azbul (cf. Askun for Sakkun), 'dwelling is owner' (CIS i. 158, 1 f.); also probably in I-Zebel, the Tyrian queen of Ahab, where *z* cannot mean 'not' any more than in I-Tanit (CIS i. 542, 3), or I-Saphon (Lidzbarski, p. 214), or the Heb. name I-kabod (ERE ii. 287^a, 289^a, and art. BAALZEBUB).

6. *Şaphon*, 'north,' or Ba'l-şaphon, 'owner of the north,' in Bod-Şaphon, 'member of Şaphon'; Abd-Şaphon, 'servant of Şaphon'; I-Şaphon and perhaps Şaphon-ba'l, 'Şaphon is the *ba'al*' (see ERE ii. 288, § 8, 293^b).

7. *Shahar*, 'dawn,' in 'Abd-Shahar, 'servant of the dawn,' and Shahar-ba'l, 'dawn is the *ba'al*' (cf. the Heb. name Ahi-Shahar, 'dawn is a brother').

8. *Ur*, 'light,' in Ur-milk, 'light is king' (CIS i. 1, 1; see ERE iii. 181, § 8).

9. *Shemesh*, 'the sun,' in Adon-Shemesh, 'Shemesh is lord'; Abd-Shemesh, 'servant of Shemesh'; and in the place-names Shemesh, on coins of Boccus III., and Mekôm-Shemesh, 'place of Shemesh,' on Mauretanian coins (see ERE iii. 180, § 1). Philo (34c) says that the sun was worshipped by the first parents of the Phœnicians.

10. *Yerah*, 'the moon,' in 'Abd-Yerah, 'servant of the moon' (see ERE iii. 180, § 2). In view of the fact that Phœnician personal names are nearly always theophorous, *Ĥodesh*, 'new moon,' in Ben-*ĥodesh* is probably to be regarded as a god, in spite of the Greek translation *νομήριος* (CIS i. 117, 1).

11. *Star-worship*.—*Mazzol*, 'constellation,' 'sign of zodiac,' 'fate,' occurs in the phrase *מזל*, 'good fortune' (CIS i. 95, 8). The same word occurs in Assyrian, Hebrew, and Aramaic. In 2 K 23^a we read of those who sacrificed to Ba'al (Shamim), to the sun, to the moon, to the constellations (*mazzā-lôth*), and to all the host of heaven. The identification of 'Ashtar with the planet Venus is also implied by Philo in 38c (see ERE ii. 116^b), and of El with the planet Saturn in 40c.

12. *Adôd* (=Adad, or Hadad), the storm-god, does not happen to be mentioned in the inscriptions, but Philo (38c) knows him as Adôdos, king of the gods, who ruled the land with 'Ashtar and Ba'al-Tamar (see ERE iii. 180, § 4).

13. *Resheph*, the lightning, appears as Resheph-*hes*, 'Resheph of the arrow' (CIS i. 10, 3, 4); Resheph-Mukol, 'Resheph of the city of Mukol in Cyprus' (ib. 89, 3); Resheph-*l-h-y-t-s* (in the Cyprian transcription *a-lo-si-o-ta-i*=Alashia, 'Cyprus,' in the Amarna letters?; *Tamassus inscr.* 2, 4 f.); Resheph-Elit (name of a city); also in the personal names 'Abd-Resheph, 'servant of Resheph' (CIS i. 93, 4); and Resheph-yaton, 'Resheph has given' (ib. 44, 2, 88, 2, 4, 6). A variant form of the same name is Arsheph (ib. 251, 2), occurring also in the personal name 'Abd-Arsheph (ib. 393, 3), 'servant of Arsheph.' He probably appears also in the name of the Palestinian town Arsuf (=Apollonia). In the bilingual inscriptions just cited he is equated with Apollo. Hence Philo probably means him by Apollo, the brother of El-Kronos and Belos-Zeus (38a). He also is probably meant by Apollo in the treaty of Hannibal (Polyb. vii. 9). Resheph in Melkart-Resheph (M. A. Levy, *Siegeln und Gemmen*, p. 18) is possibly only a variant of Resheph (see ERE iii. 180, § 5).

(c) *Terrestrial gods*.—14. *Ār*=Heb. *ereš*, 'the earth.' Philo calls her Gê, the sister-wife of Ouranos (36b). She is mentioned also in the treaty of Hannibal (Polyb. vii. 9). It is possible that *ארש* in עבראש and other Punic names is only a variant of the same.

15. The *ba'als*.—Not only the earth in general but every important object upon the earth was animated by a divinity. The generic name for these nature-spirits was *ba'al*=Heb. *ba'al*, 'owner.' There were *ba'als* of water, *ba'als* of trees, *ba'als* of mountains, *ba'als* of holy stones and of their surrounding sanctuaries, and *ba'als* of places (see art. BAAL, vol. ii, particularly pp. 293 f. and 297, where the Ba'al cult in Phœnicia and the Phœnician colonies is discussed; also ERE iii. 179, § 2). Philo alludes to these when he says that the first men consecrated the productions of the earth and regarded them as gods (34b).

16. *Dagon*.—One of the most important of the *ba'als* was Dagon, or Ba'l-dagon, which Philo (36c) correctly translates 'corn'=Heb. *dāgān* (see DAGON).

17. *Sacred animals*.—Philo (41a) asserts that 'Tautoth (Thôth) himself regarded the nature of the dragon and of serpents as divine. . . . For which reason this animal has been adopted in temples and in mystic rites. . . . It is immortal, and is self-consumed, as is stated before; for this animal does not die by a natural death, but only if struck by a violent blow. The Phœnicians call it "Good Daemon." In 42b he says: "Having built temples, they consecrated in the shrines the primary elements represented by serpents, and in their honour celebrated festivals, and sacrifices, and mystic rites, regarding them as the greatest gods, and rulers of the universe." Hawk-worship is also mentioned by Philo (41c, 42a). The cult of horses may be indicated by the name 'Abd-susim, 'servant of the horses' (CIS i. 46, 1, 49, 53, 93, 3). 2 K 23¹¹ speaks of the horses dedicated to the sun, and the Hebrew names *Sûsa*, *Sûsi*, and *Ĥasar-sûsim* seem to indicate a totemic cult of this animal. The winged horse is a Carthaginian religious emblem. Akbor, 'mouse,' is one of the commonest Phœnician personal names. It appears also as a Hebrew personal name. Is 66¹⁷ speaks of people who sanctify themselves and purify themselves to go into the gardens to eat swine's flesh, and the abomination, and the mouse. In Lv 11⁴¹ the term 'abomination' includes mice and similar small creeping animals, and in Ezk 8¹⁰ we find these as objects of worship

One can hardly escape the conclusion that the mouse, like the serpent, had demonic qualities for the Canaanites, and that this is the reason why it was 'unclean' for the Hebrews. The swine was sacrificed once a year in the worship of the Cyprian 'Ashtart' (Lydus, *de Mensibus*, ed. I. Bekker, Bonn, 1837, p. 80), and the sacrifice of a sow is depicted in a rock sculpture (E. Renan, *Mission de Phénicie*, pl. 81), but ordinarily it was not eaten (Lucian, *de Dea Syria*, 54; Athenæus, iii. 49; W. R. Smith, *Rel. Sem.*, p. 290 f.). This shows that it was a sacred animal, as originally among the Hebrews (cf. the priestly clan of Hezir, 'the swine' [1 Ch 24¹⁶, Neh 10²¹]). The sanctity of the dog is indicated by a statement of Justin (xix. 1) that Darius commanded the Carthaginians not to sacrifice men and not to eat the flesh of dogs, the latter being evidently a sacramental rite (cf. the Hebrew clan of Caleb, 'the dog'). On the sanctity of the dove in connexion with the cult of 'Ashtart see *ERE* ii. 117^b, 165^b. On the cult of animals in ancient Canaan see *ERE* ii. 286, § 3.

(d) *Tribal gods*.—Powers presiding over tribes, clans, or families were called by names expressing kinship or authority, which described them as owners of men in the same way as *baʿl* described them as owners of things. In the primitive matriarchal stage of social organization the chief tribal gods were feminine. When subsequently the family assumed the polyandrous form, a male 'father-uncle' was worshipped alongside of the mother-goddess. When finally the patriarchal family was introduced, the tribal god began to be called 'father.' The Phœnicians stood upon the patriarchal stage of development, but survivals of more primitive conceptions linger in their personal names.

18. Em, 'mother'.—In *CIS* i. 177 a goddess מֵם is invoked along with בעל מֵם, 'mistress of the cella' (*ERE* ii. 288, § 6). Which goddess is meant we do not know. In *CIS* i. 380 we meet 'the mother, the mistress of Pnē-baʿl.' She is identical with Tanit of Pnē-baʿl, who is named in many inscriptions (see below, 31). We find also 'mother of the *āshērāh*' (*CIS* i. 13, read מֵם instead of מֵם). This must be 'Ashtart, who is frequently identified with her symbol, the *āshērāh*' (*ERE* iii. 186, § 2). Evidently the title 'mother' could be applied to any goddess. It occurs also in the fem. personal name Em-ʾAshtart, 'Ashtart is a mother.'

19. 'Amm, 'father-uncle,' the designation of the tribal god in the polyandrous period, still survives in Eli-am, 'the god is father-uncle' (*CIS* i. 147. 6; see *ERE* i. 387 f., iii. 179, § 3).

20. Ab, 'father,' as a divine title is common in personal names—e.g., Ab-baʿl and Abi-baʿl, 'father is *baʿal*' (used for both men and women); אב־בַּל, 'our father is *baʿal*'; Ab-halol, 'father has begotten'; Ab-milk, 'father is king'; Ab-kōm, 'father has risen' (see *ERE* iii. 179, § 5).

21. Ah, 'brother,' occurs in Ahī-nadōb, 'brother is generous'; and Ahī-allōn, 'brother is god.' Frequently the word is abbreviated to Hī, as in Hī-rōm, 'brother is high'; Hī-milk, 'brother is king.' In the name Hī-milkōt (Lat. Himilco) we cannot translate 'the queen is a brother,' nor 'brother of the queen,' since in every other case in Phœnician and in the Semitic languages in general Ah in personal names is a divine title (see G. B. Gray, *Studies in Hebrew Proper Names*, London, 1896, p. 75 f.). Possibly in this isolated case Hī = 'n, 'life,' and the name is to be translated 'life of Milkot' (cf. the Heb. name Hī-el, 'life of El,' and the Phœn. Mari-hi). On the other hand, (a) *hot*, 'sister,' is used exclusively in fem. names, and is not a divine title, but expresses the relation of the worshipper to the god (see below, p. 895^a). On these names of relationship as divine titles see the literature under 'AMM, and also *ERE* iii. 179, § 6.

22. Adon, 'master,' is used in Hebrew and Phœnician for the owner of a slave. It describes the god as a proprietor of a person, just as *baʿal* describes him as a proprietor of a place. In the dedicatory inscriptions and in the personal names the term is applied to nearly every god and goddess

of the pantheon. This shows that, like the foregoing terms, it is not an individual name, but a title. Every town could have its *adon* as well as its *el* or its *baʿal* (see *ERE* iii. 179, § 8).

The most famous of the Adonim was the Adon of Gebal, the consort of 'Ashtart, the *baʿalat* of Gebal, whose cult was transplanted to Paphos in Cyprus along with that of the Gebalite 'Ashtart. For the Greeks his title became a true proper name, Adonis. The real name of this 'lord' is uncertain. Several of the classical writers identify him with the Bab. Tammuz—e.g., Jerome, *Ep.* lviii. 3, and Comment. on Ezk 84; Cyril of Alexandria, Comment. on Hos 41^b; Melito, in W. Cureton, *Spicilegium Syriacum*, London, 1855, p. 44. This view is favoured by the facts that Ezk 84 speaks of 'women weeping for Tammuz' in the Temple in Jerusalem, and that Is 17¹⁰ speaks of 'planting shoots of the Pleasant One [a title of the Adon of Gebal], and stocking [gardens] with scions for a foreign god' (a rite of Adon-worship). These passages seem to identify Tammuz and Adon. The difficulty with this evidence is that it is late. The Adon of Gebal may easily have been identified with Tammuz in the Assyrian or the Neo-Babylonian period, although his Canaanite name may have been different; or he may have had no name at all. Tammuz has not yet been found in the early Canaanite period. Adonis was also identified with Osiris (Plutarch, *de Is. et Osir.* 15; Lucian, *de Dea Syria*, 7; Apollodorus, ii. 1. 3); but this does not prove that Osiris was his original name, since Osiris appears as a distinct deity in the Phœnician pantheon. Philo mentions neither Adon nor Tammuz, but connects the myth of Adonis with 'Elyun, 'the high,' which was evidently another title of Adonis.

In character Adonis was a personification of the spring verdure that withered in the dry heat of summer. He was the Canaanite variant of a deity that, under the names of Dumuzi among the Sumerians, Tammuz among the Babylonians and Assyrians, 'Ate, or Attis, among the Syrians and peoples of Asia Minor, and Osiris among the Egyptians, was worshipped from the earliest times. His death occurred in the month of Tammuz (June-July), and his resurrection in December-January, when vegetation once more flourished after the early winter rains. According to the Babylonian myth, he was the child (later the husband) of Ishtar; and, when he died, she descended to Sheol to bring him up (see *ERE* vii. 430, §§ 2, 4, and art. TAMMUZ). In the Phœnician version of the myth, as preserved by Greek writers, Adonis was a beautiful boy who was loved by Aphrodite ('Ashtart). In order to keep him for herself, Aphrodite placed him in a chest and gave him into the keeping of Proserpine (= Allatu, the Babylonian goddess of Sheol). Proserpine fell in love with the child and refused to surrender him. Zeus thereupon decreed that Adonis should stay half of the year with Proserpine in the under world and half of the year with Aphrodite in the upper world. According to the local Gebalite form of the myth, Adonis was slain annually by a wild boar while he was hunting at Apeha (the modern Afka) in Mt. Lebanon, and the discoloration of the waters of the Adonis river (Nahr Ibrahim) was due to his blood (see Philo Byblius, 36b; Lucian, *de Dea Syria*, 6 f.; Apollodorus, iii. 14. 4; Bion, *Idyl.* i.; Ovid, *Metam.* x. 503 ff.). A rock relief representing the death of Adonis still exists at Ghineh in the valley of the Adonis river (Renan, pl. xxxvi.; A. Jeremias, *Das AT im Lichte des alten Orients*, Leipzig, 1906, p. 90).

The cult of Adonis consisted in bewailing his death round a bier on which was placed an image of the dead god, which was then deposited in a tomb, and remained there until, six months later, his resurrection was celebrated. Another interesting rite was the planting of Adonis gardens. These were pots, or baskets, filled with shallow earth, in which the seeds of quickly-growing plants were sown and tended by the women for eight days. The plants were allowed to wither at the time of the death of Adonis, and were carried out along with small images of the god and cast into the water. This custom seems to be referred to in Is 17¹⁰. It is a witness to the primitive character of Adonis as a vegetation-god (on Adonis see *GB*, pt. iv., *Adonis, Attis, Osiris*, London, 1907; W. W. Baudissin, *Adonis und Esmun*, with copious bibliography).

23. Mar, 'master,' synonymous with Adon, appears in Mar-barik, 'the master has blessed'; Mari-hi 'my master lives'; Mar-sammik, 'the master has sustained'; 'Abd-Marnai, 'servant of our master.' Marna is the name under which the chief god of Gaza (Dagon?) was worshipped (see *ERE* iv. 387^b). A Tyrian lamp (*CIS* i. 111) bears the dedication θεῷ Βεελμάρ, 'to the god Baʿl-Mari.'

24. Milk, 'king' = Heb. Melek (Moloch), is one of the commonest Phœnician divine names.

It occurs in Adon-Milk, 'the king is master'; Ohel-Milk, 'tent of the king'; Ahot-Milk, 'sister of the king'; Ur-Milk, 'light is king'; Bod-Milk, 'limb of the king'; Ger-Milk, 'client of the king'; Han-Milk, 'the king is gracious'; Hī-Milk, 'the king is a brother'; Hot-Milk, 'sister of the king'; Yada-Milk, 'the king knows'; Yehaw-Milk, 'may the king cause to live'; Yaton-Milk, 'the king has given'; Mikne-Milk, 'possession of the king'; 'Abd-Milk, 'servant of the king'; 'Az-Milk, 'the king is strong'; Šadoḳ-Milk, 'the king is righteous.' This also is not an individual name, but the title of many different tribal gods (see *ERE* i. 390 L, iii. 179).

25. **Melkart.**—The most conspicuous of the Phœnician Milkim was Melkart=Milk-kart, 'king of the city,' the chief god of Tyre.

This compound becomes practically an individual name, and is used in forming other proper names—e.g., Amot-Melkart, 'handmaid of M.'; Eshmun-Melkart; Bod-Melkart, 'limb of M.'; Ger-Melkart, 'client of M.'; Han-Melkart, 'M. is gracious'; Hot-Melkart, 'sister of M.'; Kabod-Melkart, 'M. is honourable'; Mot-Melkart, 'handmaid of M.'; 'Abd-Melkart, 'servant of M.'; Sid-Melkart; Rosh-Melkart, 'head of M.'; Melkart-hallis, 'M. has saved'; Melkart-han, 'M. is gracious'; Melkart-hanno, 'M. has favoured him'; Melkart-mashol, 'M. has ruled'; Melkart-Repeph; Melkart-shama, 'M. has heard.'

Apart from compounding in personal names, Melkart is often mentioned in the inscriptions both in the east and in the west (Lidzbarski, p. 311). In the bilinguals he is equated with Herakles Archēgetēs. Philo (38*) calls him Melcathros, the son of Demarous (Ba'l-Tamar), who is also called Herakles. Polybius in the treaty of Hannibal (vii. 9) calls him Herakles. This identification was the one commonly accepted in Phœnicia and throughout the Greek world (on the cult of this god see *ERE* ii. 292 f.). A feast of 'the awakening of Melkart' was kept annually at Tyre (Menander, in Jos. c. *Apion* i. 18).

26. **Milkot**, 'queen,' is a title for goddesses. It is used absolutely in *CIS* 198. 4, and in the personal names Ahot-Milkot, or Hot-Milkot, 'sister of Milkot'; Hi-Milkot, 'life of Milkot'; Mot-Milkot, 'handmaid of Milkot'; Na'om-Milkot, 'Milkot is good'; 'Abd-Milkot, 'servant of Milkot.' This designates no particular divinity, but is used as a title of 'Ashtart, 'Anath, Tanit, or any other goddess.

27. 'Elyon (Ελιών), 'high,' is mentioned as the father of all the gods by Philo (36a), who translates the name by Τψωτος.

He 'died in an encounter with wild beasts, and was deified, and his children offered to him libations and sacrifices' (36b). This identifies him with the Adonis of Gebal. The name seems to occur also in Pygmalion=Pu'me-Elyon (see above, p. 888^b). The element *ly* in Punic names is commonly interpreted as a mistake for *lk*—e.g., *ly*nk, 'brother is god'—but it is possible that it represents this title (see *ERE* iii. 180, § 13).

28. **Adir**, 'mighty,' seems to be a divine name in the place-name Rosh-Adir, 'head of the mighty one'; also in Adir-bal (Lat. Adherbal), 'Adir is owner,' and Adir-milk, 'Adir is king.' The same name appears apparently in Adrammelek, the son of Sennacherib (2 K 19⁷; cf. 17³; see also *ERE* iii. 180, § 11).

(c) *Departmental gods.*—These were deities who presided over various sections of the life of their people. In distinction from the gods just mentioned, who were called by general titles, these had individual names.

29. 'Ashtart, the goddess of love and of reproduction (see 'ASHTART, and *ERE* iii. 182, § 1).

30. 'Anath, the goddess of war, appears in the Idalion inscription (7), in 'Anath-han, 'Anath is gracious,' and in the inscription on a helmet, *bynt*, 'with the help of 'Anath' (Lidzbarski, p. 172b; see *ERE* iii. 182, § 2). In the bilinguals and in Philo (36d, 38d) she is identified with Athene.

31. **Tanit** (conventional pronunciation; the vowels are unknown) appears in a Sidonian inscription from Athens (*CIS* i. 116. 1) in 'Abd-Tanit, 'servant of Tanit' (cf. 501. 4). Here she is identified with Artemis. In Carthage she appears in an immense number of inscriptions as 'the lady Tanit of Pne-bal.' Some historians have tried to find a mystical meaning in the name 'Tanit of the face of Ba'al,' but Pne-bal is probably only a place (cf. Penuel) where there was a famous sanctuary of the goddess. Perhaps she is represented by Hera in the treaty of Hannibal (Polyb. vii. 9).

She appears also in Bod-Tanit, 'limb of Tanit'; 'Abd-Tanit, 'servant of Tanit'; Sid-Tanit, and I-Tanit (see P. Berger, 'Tanit pene-baal,' *JA* VII. ix. [1877] 147-160). The origin of the name and the functions of the goddess are unknown. Perhaps she was only a local form of 'Ashtart. She is not found in ancient Canaan.

32. **Edom** (עדם), 'maker,' seems to be a god in Edom-yaton, 'Edom has given,' and 'Abd-Edom (= Heb. Obed-Edom), 'servant of Edom' (see *ERE* iii. 182, § 3).

33. **Eshmun**, the god of healing=Asklēpios, appears alone and in a great number of Phœnician and Punic personal names as *ḥsmn* (Lidzbarski, p. 229). This is transliterated into Greek as Esmun, Asmun, and Usmun. These forms imply that the original pronunciation was Ashmun.

As to the etymology of the name, the current opinion is that it is derived from the root *shaman*, 'to be fat.' It is then an elative, meaning 'the very fat one.' What a god of this sort should have to do with health is hard to see, and the etymology is more than questionable. A number of Phœnician gods have names ending in *un* or *on*—e.g., Allon, Eshmun, Sakkun, 'Elyun, Sidon, Shalmun. This fact suggests that the *n* in Eshmun is not radical, but is a masc. ending. Moreover, the prefixing of the vowel *a* is common in Phœnician; cf. Arsheph and Resheph, Askun and Sakkun, Azbul and Zebul. This makes it probable that *a* in Ashmun is prosthetic, and that the root is *sh-m*. If this be so, then Eshmun is only a variant of Shem, 'name,' which is widely attested as a title of deity among the Semites (see *ERE* iii. 180, § 12). It is interesting to note that, although Shem appears as a divine title in the Canaanite period, it disappears in the later period, evidently because its place is taken by Eshmun. The fem. counterpart of Eshmun is Ashima, the goddess of Hamath (2 K 17³⁰), who appears also as Ashima-Bethel, the consort of Jahweh, in the Assuân papyri. The series Shem (undifferentiated), Eshmun (masc.), and Ashima(t) (fem.) exactly corresponds to the series *el* (divinity), *allon* (male god), *elot* (goddess). In this case Eshmun was originally only a title, like so many other Phœnician divine names (see Lidzbarski, 'Der Name des Gottes Esmun,' *Ephemeris für sem. Epigraphik*, iii. [1912] 260).

At least two kings of Sidon in the late Persian or the Greek period bore the name Eshmun-*azor*, 'Eshmun has helped.' Eshmun-*azor* ii. relates that he and his mother built a temple for Eshmun (*CIS* i. 3. 17). In 1900 the site of a great temple near Sidon was excavated, and a number of inscriptions were found in which Bod-'Ashtart states that he built this temple for Eshmun his god (see Lidzbarski, *Ephemeris*, ii. [1903] 49; C. C. Torrey, *JAOS* xxiii. [1902] 156; F. C. Eiselen, *Sidon*, p. 143 ff.). It was probably the temple begun by Eshmun-*azor*. Two fragments of votive inscriptions from this temple also contain the name of the god (*MVG* ix. [1905] 34, 39 f., note). The worship of Eshmun in Cyprus is attested by the compound deity Eshmun-Melkart and by proper names, and in Carthage by the compound deity Eshmun-'Ashtart and proper names. A temple of Eshmun in Carthage seems to be mentioned in *CIS* i. 252. 4 f. In Sardinia he appears in a trilingual inscription as the equivalent of Asklēpios-Æsculapius (*CIS* i. 143. 1). Philo (37d, 39c) knows Asklēpios as the eighth son of Šuduk, which suggests that he derived Eshmun from *ḥsm*, 'eight.' He states also that he was the brother of the Cabeiri, which seems to connect him with Berytus (cf. 38d).

In all the bilingual inscriptions and in many statements of classical writers Eshmun is identified with Asklēpios, and this is maintained with a consistency that is not found in the identifications of other Phœnician gods. This shows that Eshmun as a god of healing must have possessed such marked resemblance to Asklēpios that he could not be equated with any other Greek deity. The inscriptions themselves yield no information in regard to the healing character of the god, except that the trilingual mentioned above says of Eshmun, 'He heard his voice and healed him.' None of the objects discovered in the temple of Eshmun at Sidon suggests that he was a healer. Several of his temples were near mineral springs, and these may have been connected with the curing of diseases. The title *ἰατρίων*, *ἰατρῶν*, applied to the god in the Sardinian trilingual, is of uncertain meaning. Philo (36a) says:

'From Šuduk came the Dioscouri, or Cabeiri, or Corybantes, or Samothrace. . . . From them have sprung others who discovered herbs, and the healing of venomous bites, and charms.'

This brings Eshmun into a remote connexion with medicine through the descendants of his brothers.

the Cabeiri. The proper names compounded with Eshmun contain the familiar predicates that are applied to all the gods, but no special terms that connect him with the art of healing. Still, in spite of this lack of direct evidence, there is no reason to doubt that the character of Eshmun is correctly indicated by his identification with Asklepios (see Baudissin, *Adonis und Esmun*, with full bibliography for Eshmun, p. xvii f.).

34. *Gad*, 'fortune,' is found in Ba'l-Gad, 'Gad is owner' (*CIS* i. 107), Gad-na'om (Lat. Giddeneme), 'Gad is good,' and the synonymous Na'om-Gad (see *ERE* iii. 182, § 6).

35. *Dayyog*, 'fisher.'—Philo (35b) names Halieus, 'fisher,' with his brother Agreus (=Sid), 'hunter.' He seems to represent a Phœnician name similar to Heb. Dayyāg, 'fisher.'

36. *Do'm*, in Do'm-hanno, 'Do'm has favoured him'; Do'm-sallih, 'Do'm has prospered'; and Do'm-milk. In the Greek parallel he appears as Δομ.

37. *Harōsh*, 'smith' = Chrusor, 'goldsmith,' or Hephaistos (see SANCHUNIATHON, C. 2 (2)).

38. *Y'-l* (אל) is the name of a god in *CIS* i. 132, 4, 5, 7, and in the personal name Y'-l-pa'ol, 'Y'-l has made.' It occurs also apparently in Iolaos in the treaty of Hannibal (Polyb. vii. 9). The origin and character of the god are unknown. Perhaps אל = על, 'profit.'

39. The Kabbirim, or Cabeiri, i.e. כבירים, 'the mighty,' according to Philo (36a), were the children of Šuduk, and first invented a ship. They were the same as the Dioscuri, or Corybantes, or Samothracæ. See KABEIROI.

40. *Muth* (מוט), 'death.'—Philo (38d) calls him the son of Kronos and Rhea, and says that the Phœnicians call him Thanatos, 'death,' and Pluto (see *ERE* iii. 182, § 10).

41. *Melliḥ* (= Heb. מלח, 'sailor') was evidently a patron-god of fishermen and sailors.

He invented the hook, and bait, and line, and raft, and was the first of all men to make a voyage. Wherefore they revered him as a god after his death, and he was also called Zeus Melichios (Philo, 36c).

42. *Meni*, 'fate,' is not mentioned in any of the inscriptions, but seems to be meant by Eimarmene, 'fate,' in Philo (37c) (see SANCHUNIATHON, C. 3 (15)).

43. *Miskar* (מסכר; Lat. Mescar, Misicir, etc.) appears in Ger-Miskar, 'client of Miskar,' Ḥator-Miskar (a compound with the Egyptian goddess Ḥathor), 'Abd-Miskar, 'servant of Miskar.' Nothing further is known about this divinity (see Cooke, *N. Sem. Inscr.* 42).

44. *M'-n-k* (מנכ) appears only in the Neo-Punic masc. name M'-n-k-bal, 'M'-n-k is owner.'

45. *Mishor* (מישר), 'justice,' is named by Philo (36a) as Misor, 'straight' (see SANCHUNIATHON, C. 2 (6)).

46. *Sankun*, in Sanchun-iathon (= Sankun-yaton), 'Sankun has given,' is generally written, with assimilation of the *n*, Sakkun. He appears in Sakkun-yaton, Ger-Sakkun, 'client of Sakkun,' and 'Abd-Sakkun, 'servant of Sakkun'; also in the form Askun (*CIS* i. 118). The meaning of his name and his functions are unknown.

47. *'Eṣau* (עסו), 'maker' (or 'subdner'?), appears in Ousōs of Philo (35a):

'He first invented a covering for the body from skins of wild beasts which he was strong enough to capture. And when furious rains and winds occurred, the trees in Tyre were rubbed against ea' other and caught fire and burned down the wood that was there. And Ousōs took a tree, and, having stripped off the branches, was the first who ventured to embark on the sea; and he consecrated two pillars to fire and wind, and worshipped them and poured libations of blood upon them from the wild beasts which he took in hunting. But when Hupsouranios and Ousōs were dead, those who were left, as he says, consecrated staves to them, and year by year worshipped their pillars and kept festivals in their honour.'

He is evidently a patron-god of hunters. His name probably appears also in Ushu, or Palætyrus

(Sennacherib, 'Taylor Cylinder,' col. ii. line 40; see *ERE* iii. 183, § 12).

48. *'Ate* (see SANCHUNIATHON, C. 3 (16)).

49. *Pu'me* (פמע) appears as a deity in the names עברפמע (*CIS* i. 112, c 1, c 2), 'servant of Pu'me,' עברפמע, 'Pu'me is good' (J. Euting, *Sammlung der carthagischen Inschriften*, Strassburg, 1883, p. 263. 2), in Latin inscriptions *Namphame*, *Nampame*, etc. (*CIL* viii. 1030^b), כחפמי, 'handmaid of Pu'me,' עברפמי, 'servant of Pu'me,' and פמיתון, 'Pu'me has given.' Here belongs also Pygmalion in the list of kings of Tyre as given by Josephus (c. *Apion*. i. 18). An amulet discovered in a Carthaginian grave by Delattre and published by P. Berger (*CAIBL* iv. xxii. [1894] 453-458) contains the dedication לעשתרת למסלון, 'to 'Ashtart, to Pygmalion.' Here Pygmalion is a deity. In spite of the archaic writing, the form seems to be written back into Phœnician letters from the Greek or Latin. The original is apparently פמיתון, Pu'me-Elyun. The letter *y* is often represented in Greek by *γ*—e.g., Atargatis for עשתרת. On 'Elyun cf. *ERE* iii. 180, § 13. This, then, is one of the numerous Phœnician compound deities (see below, 81, and P. Berger, 'Le Mythe de Pygmalion et le dieu Pygmée,' in *CAIBL* iv. viii. [1880] 60-68).

50. *Sid*, 'the hunter' (see *ERE* iii. 183, § 14).

51. *Šuduk*, 'righteousness,' is mentioned by Philo (36a, 37d, 39c) as the brother of Misor, 'justice' (see above, 45). He married one of the Titanides, or Artemides, the daughters of El and Astarte. He had seven sons, the Cabeiri, and Asklepios, or Eshmun (see *ERE* iii. 183, § 15).

52. *Sadidos* (= Heb. Shaddai?) is mentioned by Philo (37b) as a son of El (=Kronos), whom he slew with the sword. He seems to appear also in 'Abd-Shaddai, 'servant of Shaddai,' and Gad (read Ger)-Shaddai, 'client of Shaddai.'

(f) *Babylonian and Assyrian gods*.—53. *Nergal*.—An inscription of the Sidonian colony in Athens (*CIS* i. 119; *CIA* ii. 119) states that the tomb of Asephat, daughter of Eshmunshilleh, the Sidonian, was built by Yaton-bél, son of Eshmunshilleh, chief priest of Nergal. Here the Babylonian god Nergal is worshipped by a Phœnician family even in far-away Athens (*ERE* iii. 184, § 7).

54. *Bél*.—Bél in Yaton-bél is the Babylonian form of the name rather than the Phœnician *ba'l*, as in numerous other Phœnician names (Lidzbarski, *Handbuch*, p. 236). On the cult of the Babylonian Bél see *ERE* ii. 290, § 2, 295, § 6.

55. *Béltis*.—The form Béltis for the *ba'alat* of Gebal (*ERE* ii. 117^b) in classical writers shows the influence of the Babylonian Béltu (construct Bélt; see *ERE* ii. 296 f.).

56. *Ishtar*.—The connexion of 'Ashtart with a star by Philo Byblius and others also shows the influence of Babylonian astral religion (*ERE* ii. 116^b, vii. 432, § 13). The spelling of the proper name נישטרת instead of נישטרת (*CIS* i. 871. 6 f.) suggests the Babylonian Ishtar rather than the Phœnician 'Ashtart (see *ERE* vii. 433, § 4).

57. *Tammuz*.—The cult of the Adon (Adonis) of Gebal was strongly modified by the Babylonian cult of Tammuz (see TAMMUZ).

58. *Ashur*.—The name אשור in *CIS* i. 65. 1 f. is commonly interpreted as a mistake for אסרשול, 'Osiris has sent,' but it is quite possible that it contains the Assyrian god Ashur.

59. *Ninib*.—The identification of El = Kronos = Saturn with the planet Saturn by Philo (40c) also points to influence by the Babylonian god Ninib (see *ERE* iii. 183, § 3).

60. *Shalman* appears in the Sidon inscription 4.2. This is the Assyrian form of the name rather than the Canaanite (see *ERE* iii. 183, § 16).

61. *Nebo* is perhaps found in נבאלי (*CIS* i. 102d). Whether these Babylonian influences date from

the Assyrian and Neo-Babylonian periods or go back to the old Babylonian period is difficult to determine (*ERE* iii. 183 (e)).

(g) *Egyptian gods*.—62. **Bast**.—In the form **עבר**, with prosthetic **א**, Bast appears in the names **עבר-אבס**, 'Abd-Bast, 'servant of Bast,' and **עבר-אבס**, 'Pa'ol-Bast, 'Bast has made' (see *ERE* v. 245).

63. **Amon** appears perhaps in **אמון**, 'Amon is god,' and in **נעם-אמון**, 'Neit-Amon' (see *ERE* iii. 184^b, § 5, v. 247).

64. **Isis** (**אס**) occurs in the name 'Abd-Is, 'servant of Isis,' and perhaps in **סבס**=Seb-Isis; perhaps also in **אשער-אס**, 'Isis-Ashtart,' and **אשער-אס**, 'Isis-Tanit' (see *ERE* v. 246).

65. **Osiris** (**אסר**) is found in the names **Osir-badil**, 'Osir is terrible (?)'; **Osir-gan**, 'Osir has defended (?)'; **Osir-shamor**, 'Osir has guarded'; **Amot-Osir**, 'handmaid of Osir'; **Milk-Osir**, 'Osir is king'; 'Abd-Osir, 'servant of Osir.' Possibly Philo means Osiris by Eisirios (39d), the inventor of the three letters, the brother of Chna (Canaan) (see *ERE* v. 246, § 38).

66. **Hathor** (**ח**) appears in the inscriptions only in the compound deity **Hathor-Miskar** (*CIS* i. 253. 4, 254. 3f.). As early as the XIXth dynasty she was identified with 'Ashtart both by the Egyptians and by the Canaanites (see *ERE* iii. 182, § 1, 184, § 1, v. 247 (1), viii. 182^b). The stele of Yehaw-Milk represents the **ba'alat** of Gebal in pure Egyptian style, like the goddess Hathor, with the horned disk on her head (see Perrot and Chipiez, *Hist. of Art in Phœnicia*, i. 69).

67. **Horus** (**ח**) is named in *CIS* i. 46. 1; and by Derenbourg, 3a (see *ERE* v. 247^a).

68. **Neit** appears probably in the compound deity **נעם-אמון**=Neit-Amon (see *ERE* v. 247^b).

69. **Seb** is found in the personal name 'Abd-Seb-Is, 'servant of Seb-Isis' (see *ERE* v. 248^b).

70. **Ptah** (**פ**) occurs in 'Abd-Ptah, 'servant of Ptah' (*CIS* i. iii. 1; see *ERE* v. 249^a).

71. **Khnum** (**כ**) occurs in several inscriptions (Lidzbarski, *Handbuch*, p. 363; see *ERE* v. 245^b).

72. **Thôth** is not mentioned in the inscriptions, but was evidently a popular god because of the amount of information that Philo has to give about him. In 31d Philo says that the Egyptians call him Thôth, the Alexandrians Thôthi, and the Greeks Hermes. He first invented writing, and his history was the beginning of the work of Sanchuniathon. He was the adviser of El in his war against his father Ba'l-Shamim, and devised magical charms by which he succeeded (36d). Here he is called by the Alexandrian name of Hermes Trismegistos. He invented the letters of the alphabet by imitating the forms of the gods, and devised the insignia of royalty for El (39a). El gave him the land of Egypt (39b; see *ERE* v. 246^a, vi. 380^b).

In all these cases it is an open question whether these gods found their way into Phœnicia at the time of the Ptolemaic dominion or were adopted in the period of Old Egyptian rule of the XVIIIth and XIXth dynasties (see *ERE* iii. 184 (f)).

(h) *Compound deities*.—A peculiar feature of the Phœnician religion is the compounding of two divinities to form a new god, who then develops his or her individual traits. Analogies are found in 'Ashtar-Chemosh in the Mesha inscription, Atargatis (=Attar-Ate), and such Hebrew forms as El-Shaddai and Jahveh-Elohim.

73. **Eshmun-Ashtart** (*CIS* i. 245. 3f.).

74. **Eshmun-Melkart** (*ib.* 16. 23-28).

75. **Ba'l-Addir**, in Bal-Addiris, who was worshipped at Sigus in Numidia (*CIL* viii. 5279, suppl. 19121-19123).

76. **Gad-Ate** (*CIS* i. 93. 3).

77. **Milk-Osir** (Molech-Osiris; *ib.* 123b. 1f.).

78. **Milk-Ba'l** (*ib.* 123a. 1f., 147. 1f., 194. 1, 380. 1).

79. **Milk-'Ashtart** (*ib.* 8. 1, 250. 3, *Ma'sub Inscr.* 2f.).

80. **Melkart-Reseph** (=Resheph) (Levy, *Siegeln*, p. 18).

81. **Pu'me-'Elyon** (Pygmalion) (see above, 49).

82. **Sid-Melkart** (*CIS* i. 256. 3f.).

83. **Sid-Tanit** (*ib.* 247. 5, 248. 4, 249. 4f.).

In the cases where a male and a female deity are combined one is probably the consort of the other. Where two male deities are united, they are probably identified with one another.

ii. **THE MYTHS OF THE GODS**.—On the cosmogonies and theogonies preserved by Mocho and Sanchuniathon see art. SANCHUNIATHON.

iii. **THE CONCEPTION OF THE GODS**.—The way in which the Phœnicians regarded their deities is known to us almost exclusively from the predicates that they apply to them in personal names. Most of these express the supremacy and authority of the gods.

The titles **ba'l**, 'owner,' **adon**, 'master,' **mar**, 'lord,' **milk**, 'king,' **milkot**, 'queen,' and **elyon**, 'high,' have been discussed already. Titles of kinship such as **em**, 'mother,' **amm**, 'father-uncle,' **ab**, 'father,' and **ah**, 'brother' (see above), bring the gods nearer to men and describe them as friendly powers. As among all the Semites, the predicate **קדש** (Heb. *kādōsh*, 'holy') is frequently applied to the gods (Lidzbarski, *Handbuch*, p. 361). The original meaning of this word is 'set apart' or 'tabu.' It describes the gods as charged with a mysterious energy that made it dangerous for men to come into contact with them, and that communicated itself to the objects in which they resided, the phenomena in which they manifested themselves, and the persons whom they possessed. This primitive meaning, rather than the late Hebrew ethical one, obtains in Phœnicia. Other predicates that express the divine transcendence are **rom**, 'high,' in Ab-rom, El-rom, Ba'l-rom, Rom-Ba'l, and Milk-rom, **kabod**, 'glorious,' in Kabod-Melkart, 'oz', 'strong,' in 'Oz-Ba'l and 'Oz-Milk.

In regard to the powers of the gods the predicates affirm that they know (**דע**), in Yado-Milk; that they hear (**שמע**), in Shamo-Ba'l and Melkart-shamo'. In regard to their character many personal names state that they are good (**טוב**)—e.g., Na'om-El, Na'om-Gad, Gad-na'om, Na'om-Milkot, Na'om-Pu'me. In relation to men the predicates say that the god has created (**בנה**), in Bano-Ba'l; that she has made, in **שמה** (a hypocoristic of a name beginning with 'Ashtart); that he has wrought (**פעל**), in Ba'l-pa'ol, El-pa'ol, and Pa'ol-Eshmun; that he causes to live (**חיה**), an apoc. impf. 3rd sing. Piel from **חיה**), in Yehaw-Allon, Yehaw-Ba'l, Yehaw-Milk; that he has given (a child) (**חן**), in Yaton-Adon, Eshmun-yaton, Yaton-Ba'l, Ba'l-yaton (Lat. Ballatho and Ballahon), Yaton-Milk, Milk-yaton, Sakkun-yaton (Sanchuniathon), 'Ashtart-yaton, Pu'me-yaton, Yaton-Sid, Sid-yaton, and Resheph-yaton. Because children have thus been given by these various gods, they bear names compounded with **metten**, 'gift'—e.g., Metten-El, Metten-Elim, Metten-Ba'l—or with **mikne**, 'possession,' as in Mikne-Milk. The gods appear as the apportioners of human destiny in Eshmun-hallik, 'Eshmun has assigned,' Eshmun-ya'od, 'Eshmun has appointed,' and Ba'l-shillek, 'Ba'l has cast' (Lat. Balsillec). The name Yamlik-Ba'l (Jamblichus) affirms that Ba'l has made king.

A great number of names describe the gods as helpers of mankind. Thus the god has arisen (**קם**), in Ab-kom; he has judged (**שפט**), in Shaphot-Ba'l and Ba'l-Shaphot; he has redeemed (**פדה**), in Ba'l-pado; he has saved (**חילץ** Pl.), in Eshmun-hallik, Hallik-Ba'l, Ba'l-hallik, Milk-hallik, and Melkart-hallik; he has delivered (**פלט**), in Adon-pallit; he has helped (**עזר**), in Eshmun-azor, Ba'l-azor, 'Azor-Ba'l, 'Ashtart-azor; he is gracious (**חן**), in El-hannon, Ba'l-hanno, Hanni-Ba'l, Hanon-Ba'l, Do'm-hanno, Han-Melkart, Melkart-hanno, Melkart-han, Han-Milk, and Han-Sid; he has blessed (**ברך** Pl.), in El-barik, Barik-Ba'l (Lat. Barichal), Mar-barik; he has sustained (**שם**), in Mar-samok; he has carried (**נשא**), in Eshmun-amoc; he has guarded (**שמר**), in Osir-shamor, Eshmun-shamor, and Shamor-Ba'l; he has protected (**צנן**), in Saphon-Ba'l; he has prospered (**צלה**, Pl.), in Eshmun-gallih, Do'm-gallih, and Ba'l-gallih; he has rewarded (**שלם**, Pl.), in Eshmun-shallim and Ba'l-shallim; he has smoothed the way (**בלע**, Pl.), in Ba'l-pallis. The curious title of **אהל**, 'tent,' or 'shelter,' appears in Ohel-Ba'l and Ohel-Milk. These titles show a lofty conception of the character and the activity of the gods.

iv. **THE RELATION OF MEN TO THE GODS**.—Corresponding to the fact that the gods were called mostly by names of authority is the fact

that men described themselves usually (1) as the slave (*abd*) of some god.

Thus we meet 'Abd-A-b-s-t (Bast), 'Abd-Adon, 'Abd-Elm, 'Abd-Isis, 'Abd-Osir, 'Abd-Eshmun, 'Abd-Ba', 'Abd-Ba'lot, 'Abd-Hammon, 'Abd-Yerah, 'Abd-Milk, 'Abd-Milkot, 'Abd-Melkart, 'Abd-Miskar, 'Abd-Marna, 'Abd-Seb-Isi, 'Abd-Susim, 'Abd-Azoz, 'Abd-Ashtart, 'Abd-Pu-me, 'Abd-Ptah, 'Abd-Sid, 'Abd-Saphon, 'Abd-Resheph, 'Abd-Shaddai, 'Abd-Shahar, 'Abd-Shemesh, 'Abd-Tanit. The corresponding fem. form is *amot* (עֲמוֹת), 'female slave,' which is often abbreviated to *mot*. Thus we find Amot-Osir, Amot-Ba' (Lat. Amobballi), Amot-Milkot, Amot-Melkart, Amot-Ashtart, Mot-Milkot, Mot-Melkart. Another name of submission was *keld*, 'dog,' 'hierodule.' This appears in the name Kelb-Elm, and in the hypocoristic Kelba. A similar name was *ger* (גֵּר), 'client.' This appears in Ger-Ba', Ger-hekal, ('client of the temple'), Ger-Milk, Ger-Melkart, Ger-Miskar, Ger-Sakkun, Ger-Ashtart, Ger-Sid, Ger-Shaddai, and in the hypocoristic Gera. Similar in meaning probably was *bod*, 'member' (of the family?), which appears in Bod-Eshmun, Bod-Ba', Bod-Milk, Bod-Melkart, Bod-Ashtart, Bod-Saphon, and Bod-Tanit.

(2) *Ben*, 'son.'—Much less often do worshippers call themselves by names of kinship to the gods. *Ben*, 'son,' occurs in Ben-Ur, Ben-Ate (?), Ben-Ba' (?), Ben-Hodesh, and Ben-Melek.

(3) *Bot*, 'daughter,' is found in Bot-Ba', Bot-Na'om, and Bot-Shelem.

(4) *Ahot*, 'sister.'—Women are also called 'sister' of a god, although the term 'brother' is apparently applied only to deities; e.g., we have Ahot-Milkot, Ahot-Melkart, and abbreviated Hot-Milk (Lat. Otmile), Hot-Lot (= Ahot-Elot), Hot-Milkot, and Hot-Melkart.

v. PLACES OF WORSHIP.—1. *High places*.—The location of a sanctuary was determined by the presence of a sacred natural object, such as a spring, holy tree, etc., in which dwelt a *ba'al*. This was fenced off from the surrounding territory by a wall or a line of stones. The Canaanite and Hebrew name for such a *temenos*—*bama*, 'high place'—does not happen to occur in the inscriptions, but was doubtless in use. Remains of open-air high places are still found in Phoenicia and in the colonies (see *ERE* iii. 185). Tacitus (*Hist.* ii. 78) informs us that, when Vespasian consulted the oracle on Mt. Carmel, he found neither statue nor temple, but only a much venerated altar (cf. Suetonius, *Vesp.* 5).

2. *Temples*.—In the larger towns permanent structures were erected over or around the sacred object, which served to protect it, to shelter the priests, and to guard the treasures that were deposited in the sanctuary. Such temples were known as *bet* (בֵּית), 'house' (Lidzbarski, *Handbuch*, p. 235), or *hekal* (הֵקָל), 'temple' (a loan word from the Sumerian *e-gal*, 'great house'), which appears in the personal name Ger-hekal, 'client of the temple.' Another common name is *mikdash*, 'sanctuary' (*ib.* p. 361). The holy of holies where the god dwelt was called *heder* or *hedrot*. All these names are used in Hebrew (see *ERE* iii. 185).

No remains of temples earlier than the late Persian period have come down to us. The majority are of the Greek and Roman periods. The oldest of these temples was the one built by Bod-Ashtart at Sidon, which was excavated by T. Maerdy-Bey and H. Winckler in 1903 (see F. von Landau, in *MVG* ix. [1905] 5, x. [1906] 1; and T. Maerdy-Bey, in *RB* xii. [1903] 69-77, xiii. [1904] 390-403). A number of other temples of the Greek and Roman periods were investigated by Renan (*Mission de Phénicie*). The temples of Cyprus are described by L. P. di Cesnola, *Cyprus: its ancient Cities, Tombs, and Temples*; and many of the monuments are reproduced in *A Descriptive Atlas of the Cesnola Collection of Cypriote Antiquities* (see also M. Ohnefalsch-Richter, *Kypros*). Coins of Phoenicia and of Cyprus give rude representations of temples that aid in reconstructing their architectural features. A number of fine ruins of the Roman period are still to be seen in

the Lebanon—e.g., at Brummana (see Baedeker, *Palestine and Syria*⁴, Leipzig, 1906, p. 283), at Niha near Zahleh (*ib.* p. 292), and at Afka at the source of the river Adonis (*ib.*, p. 336). The last is the famous temple of 'Ashtart described by Lucian, where the death of Adonis was annually bewailed. Near Neba' el-Lebn is a remarkable ruin known as Kal'at Fukra. It stands in a hollow among jagged pinnacles of rock that must have been a haunt of some ancient *ba'al*.

From these remains it appears that the earliest departure from the primitive high place was a monolithic structure such as the *ma'abed*, 'temple,' at Amrith (Renan, *Mission*, pp. 63-68). This is constructed of three upright stones that rest on the solid rock and a monolithic roof. It served as a shelter for the cult-object. The style of architecture suggests Egyptian influence. The next step was to construct a platform about the tabernacle and enclose it with a portico. This is the stage depicted on coins of Byblus, where we see the fetish-stone of the god in its shrine surrounded by a large court and portico (Perrot-Chipiez, i. 61; cf. the similar coin from Cyprus, p. 276). Finally, a roofed building was added on one side of the court (see the coin of Byblus mentioned above). Some idea of what an old Phoenician temple was like may be gained from the description of Solomon's temple (1 K 5-7), since this was built by Phoenician workmen. The later temples all show the Greek style.

3. *Massëbhôth*.—Standing stones which served as dwelling-places for the deity were the central objects in all the sanctuaries. They were called either *massëbhôth* (= מצבה) or *nasib* (= Arab. *nashb*) (see Lidzbarski, *Handbuch*, p. 325). Philo (35b) says that two pillars were consecrated by Ousôos (the eponym of Palætyrus), and that other pillars were consecrated to Samim-rom and Ousôos (see *ERE* ii. 117, § 4, iii. 186, § 1, viii. 487). A common Phoenician name for a variety of the *massëbhôth* was *hammon*=Heb. *מִן* (see *ERE* ii. 287, § 5). These are probably mentioned by Philo (32b) as the inscribed *ammoneis* from which Sanchuniathon derived his records; also in the name Amunos (35d). Such *hammonim* are depicted in *CIS* i. pl. viii. Fetish-stones were called *beth-el*, 'house of a god,' by the Phœnicians, as by the Hebrews. Philo (36c) speaks of a god Baitulos, the son of Ba'l-Shamim, and the brother of El, Dagon, and Atlas. The same deification of the holy stone is found in the god Beth-el of the Assuân papyri, and is analogous to the deification of the *ashêrah* (see *ERE* ii. 288*).

4. *Ashêrim*.—Wooden posts that served as dwelling-places for deities, particularly for the goddess 'Ashtart, were as common among the Phœnicians as among the Canaanites and the Hebrews. The word probably occurs in the *Ma'sub Inscription*, 4, 'Ashtart in the *ashêrah*.' A clay figure from Cyprus represents a goddess sitting within the trunk of a tree (Ohnefalsch-Richter, *Kypros*, i. 171). Such poles are depicted on the stelæ from Carthage. They are mentioned by Philo (35b) along with the *massëbhôth* (see *ERE* iii. 186, § 2).

5. *Images*.—In the oldest sanctuaries the standing stones were the only emblems of the gods, and these lasted down to the latest times in some of the temples. With the advance of civilization, however, images were developed out of the primitive fetishes. They are implied by Philo's description of 'Ashtart (38c) and of El (39a). The images that have survived show strong Egyptian influence in the artistic treatment. Ashtart is represented with the attributes of Hathor, or else as a nude female holding a dove. Ba'l-hammon is represented with ram's horns (see *ERE* iii. 186,

§ 4; and Perrot-Chipiez, i. 65-79, ii. 9 f.). The *beol* of *εὐσπαρεῦμενοι* mentioned in the treaty of Hannibal (Polyb. vii. 9) must have been some sort of images or standards representing the gods that were carried along with the army.

6. Altars.—These are often mentioned in the inscriptions (Lidzbarski, *Handbuch*, p. 265). For illustrations of the altars that have been discovered see Perrot-Chipiez, i. 261, 315 f.

vi. TEMPLE MINISTRANTS.—1. Priests.—These are called *kōhānīm*, the same name as in Hebrew (Lidzbarski, *Handbuch*, p. 294). The chief priest is known as *rab-kōhānīm* (CIS i. 119, 2) or *rab kōhēn* (ib. 224, 3). A priestess is mentioned (ib. 3, 15). Philo also speaks of priests (32b) (see *ERE* iii. 187, § 10).

2. Prophets.—The word *sophe*, 'seer,' or 'diviner,' appears in CIS i. 124, 6. The word *סוֹפִים* seems to mean 'gazer with the eyes,' i.e. 'seer,' and *סוֹח* means 'augury.' The ecstatic prophets of the Tyrian Ba'al and of the *āshērāh* are familiar to us from I K 18. Philo also (39c) speaks of 'prophets who celebrated the orgies and inaugurated the mysteries' (see *ERE* iii. 188, § 11).

3. Servants.—The inscriptions speak of *פִּרְסָה*, i.e. probably guardians of the *פִּרְסָה*, or 'sanctuary' (CIS i. 86 A. 5, 10). These seem to have corresponded to the Levites among the Hebrews. There were also *gerim*, 'clients,' who were attached to the temples as artisans and labourers in all sorts of capacities (see above, iv. (1)). We meet also barbers (*בָּרִי*), who shaved hair and beards for those who had offered them in fulfilment of vows, and a number of other temple attendants whose precise functions are unknown.

4. Hierodules.—*Kēdeshīm* and *kēdeshōth*, i.e. male and female prostitutes, devoted to the service of 'Ashtart at her temples, were as common among the Phenicians as among the Canaanites and the Hebrews (see *ERE* ii. 116^a, vii. 430, § 4; and art. *HIÉRODOULOI*). Male hierodules were called *kelb*, 'dog,' the word used in Dt 23¹⁸. In CIS 52. 1 a certain man called Ger, 'client,' has a son called Kelba.

vii. OFFERINGS TO THE GODS.—1. Animal sacrifices.—These are known to us with considerable detail from tariffs of payment for sacrifices found at Marseilles (CIS i. 165) and at Carthage (CIS i. 166, 167). These are so similar to the Hebrew legislation that they might almost be extracts from the book of Leviticus. They enumerate the *zebah*, 'slaughter,' the *kalil*, 'whole burnt offering,' the *shelem*, 'peace offering,' and the *minhāh*, 'meal offering'—all of which are found in the OT. The sin offering and the guilt offering are not named, but this is not surprising, since they make their first appearance among the Hebrews in Ezekiel and in the post-Exilic Priestly Code. The technique of the sacrificial ritual does not differ much from that of the Hebrew. The explanation of this fact is, of course, that the Hebrews borrowed the sacrificial rites of the Canaanites after their settlement in Canaan. The animals offered by the Phenicians, as by the Hebrews, were mainly domestic; but wild animals, such as the deer, wild birds, and game of various sorts were offered also. The priests received certain parts of the sacrifice as their perquisites, and the rest of the flesh was consumed by the worshippers in a sacrificial meal. The sacrifice of wild beasts is mentioned by Philo (35b), who says that Ousōos poured upon the pillars that he had set up libations of blood of the wild beasts that he had taken in hunting (see *ERE* iii. 187, § 1).

2. Sacrifice of the first-born.—This sort of sacrifice existed among the Semites from remote antiquity (see *ERE* i. 390 f., ii. 117, § 4, iii. 187, § 2, vi. 862 ff.). Its existence among the Phoeni-

cians is proved by the myth of El (Kronos) as recorded by Philo.

In 38d he says that 'on the occurrence of a pestilence and mortality Kronos offered his only-begotten son as a whole burnt-offering to his father Ouranos' (Ba'l-Shamim). In 40c he says: 'It was the custom of the ancients in great crises of danger for the rulers of a city or nation, in order to avert the common ruin, to give up the most beloved of their children for sacrifice as a ransom to the avenging daemons; and those who were thus given up were sacrificed with mystic rites. Kronos, then, whom the Phenicians call Elus, who was king of the country, and subsequently, after his decease, was deified as the star Saturn, had by a nymph of the country named Anobret an only begotten son, whom they on this account called Iedud (Heb. יְדֻד), the only-begotten being still so called among the Phenicians; and when very great dangers from war had beset the country, he arrayed his son in royal apparel, and prepared an altar, and sacrificed him.' The same passage is repeated in 166d. This shows that the sacrifice of the first-born was by no means a universal custom, as among the primitive Semites and Canaanites, but that the rite was performed only in times of special danger, as in the case of Mesha, king of Moab (2 K 3²⁷). Ordinarily, as among the later Hebrews, the sacrifice was commuted with the sacrifice of an animal (Ex 34²⁰).

The testimony of the classical writers is unanimous and unquestionable that the Phenicians alone among civilized nations maintained the primitive custom of child-sacrifice. Plutarch (*de Superst.* 13) says that 'the Carthaginians used to sacrifice their own children, and those who had no offspring of their own used to buy children from the poor and slaughter them, as if they were lambs or birds. The mother stood by unmoved, without a groan; if she groaned or wept, she lost the price, but the child was sacrificed none the less. The whole space in front of the image was full of the din of flute-players and drummers, so that the sound of the wailing might not be heard.' To escape the necessity of sacrificing their own children, wealthy Carthaginian parents were accustomed to adopt slaves, and to bring them up as their own offspring in order that they might be substituted; but in times of special peril no such redemption was permitted. In 310 a.c., when Agathocles had defeated the Carthaginians and was besieging their city, 200 boys of the noblest families and 300 volunteers were placed in the arms of the heated brazen image of Kronos (El), and fell into the fiery pit below (Diod. Sic. xx. 14). It is questionable whether this description of the image of Kronos is not a variant of the myth of Talos, the brazen giant made by Hephaistos, who guarded the island of Crete. It rests solely upon the authority of Kleitarchos. It is the origin of the mediæval Jewish accounts of the Biblical Molech, which have found their way into so many Christian books of reference (see G. F. Moore, *JBL* xvi. [1897] 161). For further allusions to this practice see Porphyry, *de Abst.* ii. 56; Quintus Curtius, iv. 15; Eusebius, *Orat. Const.* xiii. 7; the Platonic *Minos*, § 15 C; Kleitarchos, in the scholia to Plato's *Republic*, i. 337 A; Tertullian, *Apol.* 9.

3. Human sacrifice other than that of the first-born is attested by Diodorus (xx. 65), who relates that, after the victory of the Carthaginians over Agathocles in 307 B.C., 'they slew the prisoners upon the altar before the holy tent.' This corresponds to the *herem*, 'ban,' in the OT. In times of peril the head of the State might offer himself as a voluntary sacrifice. This was done by Hamilcar, and was planned by Juba, king of Numidia (see *ERE* iii. 187, § 3).

4. Firstlings and firstfruits.—The principle was established among the Phenicians, as among the Hebrews, that the first-born of animals, the choicest of the crops, and the best of all that was acquired by individuals or by the State belonged to the gods. The word *קֶרֶם*, which probably means 'firstlings,' occurs in CIS i. 165, 12, 166, 3, 7. ראשון, 'firstfruits,' 'choicest,' is found in CIS i. 5.

5. Libations.—Philo (34b, 36b) mentions drink-offerings and libations. The materials of which these were made, according to the inscriptions, were milk, fat, oil, and wine.

6. Incense is mentioned under the names of לבִּנְת (CIS i. 166, B. 6) and קֶרֶם (ib. 166, 3, 6, 334, 3 f.) (see *ERE* iii. 187, § 5).

7. Circumcision.—This is implied for the Canaanites and Phenicians in the OT by the fact that they are never called 'uncircumcised,' as are the Philistines. Herodotus (ii. 104) states that the Phenicians and Syrians were circumcised, and that they learned this custom from Egypt. Philo (38d) traces the rite back to the god El, who circumcised himself and his allies.

8. Emasculation is not ascribed to the Phenicians by any ancient writer, but is perhaps implied

in the myth narrated by Philo (38b) of the emasculation of Ba'al-Shamim by his son El (see *ERE* ii. 167).

9. **Prostitution.**—The *kēdēshōth*, or temple harlots, have been referred to above (vi. 4). Besides these, virgins and married women were required to sacrifice their chastity on certain occasions in honour of 'Ashtart. This is asserted by Lucian, *de Dea Syria*, 6; Herod. i. 199; Justin, xviii. 5; Clem. Alex. *Protrept.* ii.; Athenæus, xii. 11 (see *ERE* vi. 674, §3).

10. **Vows** (נדר, as in Heb.) were made by individuals for recovery from disease or for the obtaining of blessings for themselves or their families. They consisted in the promise to dedicate a particular thing if the petition were granted. Usually the promise was of some sort of sacrifice; but in some cases objects were vowed for the use of the sanctuary, such as bowls, lamps, altars, statues, and most often *hammonim*, or stela, which have been found in great numbers at Carthage. On these objects it was customary to place the name of the god, of the dedicator, and sometimes of the object dedicated, together with a statement of the reason why it was presented. To these dedicatory inscriptions we owe most of our knowledge of the Phœnician language.

viii. **THE CULT OF THE DEAD.**—The inscriptions show that the Phœnician idea of the future life was identical with that of the pre-Exilic Hebrews. The soul continued to exist after death, but it led an unsubstantial and worthless existence. As in the OT, the dead were the *rephaim*, 'shades' (*CIS* i. 3. 8; *Tabnit Inscr.* 8). Death was only a calamity. Thus Eshmun-azar says: 'I have been seized before my time, the son of a (short) number of days.' The spirit of the dead maintained a close connexion with its corpse, and therefore the utmost importance was attached to proper burial and to the preservation of the tomb inviolate. The tomb was the *olmān*, 'the eternal house' (*CIS* i. 124. 1; cf. Ec 12³). The inscriptions declare that no treasures are buried with the dead, and launch terrible curses upon those who shall disturb their resting-place.

It was the duty of survivors to attend to the proper burial of the deceased. Kings such as Eshmun-azar and Tabnit were placed in sarcophagi brought from Egypt. People of lower rank were buried in anthropoid sarcophagi of native workmanship that display the influence of Greek art. The poor were interred in wooden coffins, or were merely wrapped in cloths (see Hamdy-Bey and Reinach, and *CIS* i. pl. ii.). In the anthropoid sarcophagi the opening of the ear was sometimes carried through the stone cover as if to allow the dead to hear the prayers that were addressed to them. The sarcophagi were placed in subterranean tombs hewn out of the solid rock. These were reached either by a vertical shaft or by a flight of steps (see Perrot-Chipiez, i. 149 f.). On the surface of the ground above the tomb a pillar was set up that served as a place of manifestation for the spirit, just as similar stones served as dwelling-places for the gods, and that was called by the same name *masgēbhōth* (in Palmyrene it is called *nefesh*, 'spirit'). On this stone an inscription was often placed that described it as the property of the deceased, and gave the name of the person who had erected it. Here doubtless offerings and libations were brought in honour of the dead. Out of this simple stone in later times more elaborate sepulchral monuments were developed.

LEWIS BAYLES PATON.

PHRENOLOGY.—I. **History.**—Phrenology, like hypnotism, has suffered in reputation from the abuses that occurred in its name. Beginning with both scientific and humanitarian aims, it came into the hands of quacks and charlatans, was rejected by the medical faculty, to whom its first appeal was made, and finally, after a brief triumph in Great Britain, fell into utter disrepute, although it has never ceased to have some serious individual adherents. Its founders were Drs. Gall and Spurzheim. F. J. Gall (born 1758) studied at Strassburg and Vienna, where he practised as a physician for some years. Early in life—from his ninth year, according to his report—his attention had been attracted by the differences in mental powers between himself and others, and he had noticed that those who were very successful in learning by heart had large and prominent eyes; from this he formed the idea that mental capacities have certain external marks or signs in the shape or other features of the head. In studying physiology he became convinced that the skull took its shape from the brain, and he assumed accordingly that the external signs in question came from the special development of different portions or regions of the brain. Hence we should be able to determine, by inspection of the head, the mental capacities and moral dispositions of the individual. In 1791 his first publication appeared in Vienna—*Medico-philosophical Enquiries into Nature and Art in Health and Disease*. Only the first two chapters, however, were published. In 1798 a notice of his investigations into the shape of the head in its relation to the faculties appeared in the *Deutscher Merkur* for December, being a letter to Baron Retzer. From 1796 he was lecturing in Vienna, and some of his hearers published accounts of his system. In 1802 the Austrian Government prevented his further lecturing by means of a general regulation prohibiting private lectures without special permission. This permission Gall did not ask for. Meanwhile J. G. Spurzheim (born 1776) attended one of Gall's courses in 1800,

and, after completing his medical studies in 1804, became associated with Gall in his work, and continued with him until 1813, when they separated. There is no doubt that it was to Spurzheim that the great if temporary success of phrenology, towards the end of the first quarter of last century, was due. Gall died in 1828 and Spurzheim in 1832. The latter travelled with Gall through Germany, where they inspected prisons and indicated the characters of the prisoners with great success, to Holland, and to France, where they strove with Cuvier and the doctors, and were at length prohibited from lecturing; Spurzheim also visited England and Scotland, France again, and then America, where he died. One of his demonstrations in Edinburgh in 1816 was attended by George Combe (born 1788), who was attracted by a bitter criticism of the new science that had appeared in the *Edinburgh Review* for June 1815. The demonstration tended to alter his opinion, and he attended the next course of lectures, became a sympathetic student of phrenology, and, finding that his own observation confirmed its truth, became its staunch supporter. Unjust criticisms of phrenology led him to accept the invitation of the editor of the *Literary and Statistical Magazine for Scotland*, who offered a free discussion of its merits. He wrote four papers in its defence, which were afterwards published as *Essays on Phrenology; or an Inquiry into the Principles and Utility of the Systems of Drs. Gall and Spurzheim, and into the Objections made against it* (Edinburgh, 1819). Largely through his efforts a Phrenological Society was started in Edinburgh in 1820, of which he was president, and a *Phrenological Journal* was published by this society from 1823 onwards. Many other societies arose in different parts of the British Isles, in the colonies, and in America, in one of the universities of which a professorship of phrenology was even established. Combe published numerous works, of which the best-known was *The Constitution of Man* (Edinburgh, 1828). It attracted Richard Cobden, who was instrumental in forming one of the societies in Manchester, 1835 (see J. Morley, *Life of Richard Cobden*, new ed., London, 1910, ch. iv.). Several well-known scientists in Britain, as in other countries, defended phrenology—including Dr. J. Elliotson and Archbishop Whately—while more recently Alfred Russel Wallace has spoken in its favour. But its opponents were far more numerous and persistent. One of the strongest defences of the system was that in the *Foreign Quarterly Review* (vol. ii. [1828] no. 3). The *Phrenological Journal* came to an end in 1847, after 20 volumes had been published. Combe died in 1858.

The name 'phrenology' is due to Spurzheim, but was made popular by Combe's adoption of it. Gall's studies had been called 'craniology' or 'cranoscopy.' The change of name is important as indicating that emphasis was to be laid in the new science upon the mental and moral aspects rather than upon the purely physical; unfortunately, it became synonymous in this country and elsewhere with the art of 'reading bumps,' which is quite a caricature of its original intention. Gall had naturally taken notice in the first instance of outstanding personalities, capacities, or peculiarities of disposition, and had sought to connect these with exceptionally large or prominent portions of the head; or, on the other hand, noticing prominent features in heads, had tried to connect these with striking characteristics of the individuals; moreover, in demonstrations, and especially in public demonstrations, it was only the prominent portions of the skull or cast or head that could be brought to the attention;

hence perhaps the unfortunate association in question.

2. Theory.—The theory may be stated somewhat as follows. Individuals differ mentally as well as physically from each other; their characters, intellectual and moral, are largely independent of their environment and education, and are more or less constant and uniform; education may repress the manifestation and therefore hinder the development of powers, but it cannot originate new ones. Such differences, therefore, are natural or congenital; they are transmitted from parent to child; there are family and national similarities in mental character, as there are family and national similarities in face and in other physical structure. In the same way, different animal species show different mental powers, which are inherent in all the members of each species. The young differ from the old, and there is a regular progression in the development and decay of the mental powers from birth to death. These mental powers are exercised in the first instance through the brain, which is their physical condition. But the brain is not a single organ, uniform throughout, or capable of conducting any mental operation in any of its parts. It consists of a number of distinct and separate organs, each of which has some specific mental function which it subserves, and which depends for its energy and its development upon the relative size and vigour of the organ in question. Three problems are thus before the phrenologist: to divide the intellectual and moral character into its separate powers or faculties; to mark off the separate organs in the brain, or rather on the external skull of the living man; to connect each faculty with its corresponding organ in the brain and its corresponding protuberance or portion of the skull. Spurzheim laid down the principles according to which a faculty is regarded as natural and primitive: if it exists in one species of animals and not in another; if it varies in the two sexes of the same species; if it is prominent or deficient as compared with the other powers of the same individual; if it appears or disappears earlier or later in life than other faculties; if it is active or at rest separately from other powers; if it is inherited by children from parents; if it shows health or disease in its exercise apart from the other faculties. A faculty is 'a specific power of feeling in a certain way, or of forming ideas of a certain kind'—the power being distinct from the feelings or the ideas which are thus produced or formed; it is independent of the will; one faculty cannot manifest the same feelings or form the same ideas as another; each has some definite relation to the objects of the external world; each may be excited from without by these objects, but also from within. The faculties are either propensities, which are both animal and human, such as 'amativeness' and the 'love of offspring,' or sentiments, some of which are peculiar to man, or, finally, intellectual powers, perceptive and reflective. On the other hand, such terms as 'sensation,' 'memory,' and 'imagination' do not correspond to 'faculties' in the phrenologist's sense, but are merely general names for the products of the different faculties either singly or in combination. The connexion between a faculty and its physical organ was determined, as already indicated, by a study of the living heads, of the skulls, of casts from the heads, or of pictures and sculptures of men distinguished beyond their fellows in some specific ability; practice increased skill in noticing the differences in the shape of the head and in the proportionate size of its different parts; heads of animals, of striking mental characteristics, as ferocity, cunning, timidity, etc., were compared with those of man;

differences of skull in the two sexes were compared with the supposed mental differences; the heads of the insane, of the mentally defective, of criminals, etc., were studied and again compared with their peculiar mental or moral aberrations or defects. The results were verified, as far as possible, by reading the heads of unknown individuals, finding how far their actual characteristics coincided with those inferred by the phrenologist from their heads. It was this practice that led to the ridicule and ultimately to the contempt and neglect under which phrenology fell; yet it had a perfectly practical and useful aim. Apart from the verification of the organs, it was hoped by this means to be able to forecast the vocation for which a child was best adapted; to indicate the lines along which a child's education would most successfully proceed, the dangers to which its character was liable, the treatment by which criminals or the insane might best be brought back to humane and normal courses; and even the beginnings of eugenics are to be found in the phrenological writings—life-partners are to be selected on its principles. The objections brought against the new doctrine were from various standpoints—anatomical, philosophical, and theological; it was objected that the brain is homogeneous throughout, that there is no evidence that it is the organ of mind, that the size and shape of the brain cannot be argued from that of the head, that great injuries have occurred to the brain without corresponding effect upon the mental powers, that the shape of the head is artificially altered in many savage tribes without affecting the intelligence; that the mind or consciousness is a unity, and cannot consist of separate faculties, or that it is a *tabula rasa* on which impressions are made through the senses and associated together into ideas and thoughts without any innate powers; that there is nothing to fix the number of the faculties, and, indeed, that phrenologists disagree as to their number; that, if phrenology were accepted as true, it would destroy religion, remove responsibility from man, and reduce mind to a purely material process. Gall and Spurzheim were able to show the possibility of studying the structure of the brain, and of proving that differences actually exist in its different parts; in particular, they pointed out the true condition of the brain in hydrocephalous subjects; they were the first to admit that the inner and outer plates of the skull are not parallel throughout, but they showed that this deviation amounts to not more than one or two-tenths of an inch, whereas the difference in heads is from one to two inches; and in general they proved that the shape of the skull is certainly determined by the prior growth of the brain. As to the argument from the effect of injuries or loss of substance of the brain upon the mind, and the striking cases reported by Sir Everard Home from Haller and others, they pointed out that this argument would apply equally against any theory as to the brain functions, that the observations were not always accurately made, and that in describing the resultant effects upon the character only vague general terms were used, such as 'intelligence,' whereas some quite limited and specific ability might disappear or be reduced in its activity without the general intelligence being appreciably affected. Analogy with other organs and organisms suggests that each part of the brain has a separate function; the brain becomes more complicated in animals in proportion to their place in the scale of intelligence—insects, fish, birds, mammals, and, highest among them, man; the same is true of individuals in the human race; the different parts of the brain do not grow simultaneously, but in succession; each appears as its faculty appears;

and both organ and faculty are developed when they are necessary for our existence; intense application of the mind fatigues not the whole brain but only some part of it, for a change of work or occupation brings rest; the states of sleep, dreaming, somnambulism, and the like can be explained only on the assumption that the organs of the brain are different in activity and in position. With regard to the philosophical objections, it was pointed out that the same arguments will apply to *life*, which is also a unity, but acts differently in different circumstances, and through different organs; that, in any case, phrenology takes no concern with the ultimate nature of mind or of body, but deals merely with facts of observation and experience, whose truth will not be affected by the truth or falsity of idealism or any other philosophy. This answers the objections from theology also. Phrenology will give us knowledge of ourselves and others, of our characters and tendencies; this will lead to higher morality, not to lower; by preventing the manifestation of bad tendencies, their development will be hindered, and corresponding encouragement may be given to the good. The vices and defects, the virtues and talents, of each particular race can be learned, the former suppressed, the latter cultivated; and a rational treatment of insanity may be adopted, etc. Popular belief has always favoured the idea that persons differ in their natural tendencies—one covetous, another cruel, another kind, another proud; that one has a talent for music, another for mechanics, another for painting, and another for poetry; that these tendencies cannot be changed by an effort of will; that a genius for music cannot be acquired by study or practice; that there is a natural growth in the powers and a certain order in their development with which we cannot interfere without danger; and that no obstacle will prevent a genius from showing and from cultivating his superior powers. At the same time it was admitted that the division of the faculties, being founded upon observation alone, could not be regarded as finally settled; still less was it certain that the particular organs adopted by Gall and Spurzheim were really those of the faculties in question. It cannot be said, however, that the phrenologists were fortunate in their choice of faculties as the primitive ones in human nature, nor are the results of their observations with regard to the position of the organs in the brain in the least degree satisfactory. The following is Spurzheim's latest arrangement of the powers of the mind, with the numbers of their corresponding organs:

AFFECTIVE.—i. *Propensities*: (desire to live), (alimentiveness), (1) destructiveness, (2) amativeness, (3) philoprogenitiveness, (4) adhesiveness, (5) inhabitiveness, (6) combativeness, (7) secretiveness, (8) acquisitiveness, (9) constructiveness; ii. *Sentiments*: (10) cautiousness, (11) approbateness, (12) self-esteem, (13) benevolence, (14) reverence, (15) firmness, (16) conscientiousness, (17) hope, (18) marvellousness, (19) ideality, (20) mirthfulness, (21) imitation.

INTELLECTUAL.—i. *Perceptive*: (22) individuality, (23) configuration, (24) size, (25) weight and resistance, (26) colour, (27) locality, (28) order, (29) number, (30) eventuality, (31) time, (32) tune, (33) language; ii. *Reflective*: (34) comparison, (35) causality.

Of this classification it may be said (1) that it is quite inadequate for the complexity of the case; experimental psychology is only at the beginning of the real analysis of mental phenomena; while there is no doubt that there are certain innate powers of the mind, it is quite uncertain at present which of the functions actually manifested by the mind of man are primitive and simple; even the apprehension of colour or of form is probably a very complex process. (2) We are only at the beginning also of a scientific effort to measure and therefore to compare the manifestations of these

different powers in different individuals, so as to have some real knowledge of the extent to which one individual differs from another. (3) We are only beginning to know what are really the changes in the behaviour of individuals that occur after brain injury or disease; or, again, the differences in behaviour between the child born with defective brain and the normal child, etc. (4) A similar limitation obtains in our knowledge of the capacities of different races, sexes, ages. (5) The hundred years that have passed since Spurzheim demonstrated in Edinburgh have not brought anatomists much nearer to an understanding upon the limits of the different areas or regions in the brain; while it is almost universally admitted that there are separate regions, which are intimately connected with different mental phenomena, still it seems improbable that such regions have hard and fast boundaries; a part of one may under compulsion take over the work of another; the destruction of a comparatively large part of an area does not involve the total disappearance of any mental capacity; and in particular the true nature of these regions seems to be that all are connecting systems between sense-organs, on the one hand, and muscles, glands, and viscera, on the other, rather than initiating sources of special activity. (6) Finally, there is even yet no sort of agreement as to how the different portions or areas of the brain are connected with the mental powers (see also art. BRAIN AND MIND).

LITERATURE.—F. J. Gall and J. G. Spurzheim, *Anatomie et physiologie du système nerveux en général, et du cerveau en particulier*, 4 vols., Paris, 1810-19; J. G. J. LEWIS MCINTYRE.

PHRYGIANS.—I. The religion of the Phrygians as old Anatolian.—It is impossible to write any sketch of Phrygian religion without continual reference to the history and ethnology of the Phrygian people. These subjects are still under discussion, and opinion differs; but it is not possible here to discuss the differences. The present writer will merely describe his own views and the historical assumptions on which they are based. It is assumed that certain European tribes entered Asia Minor across the Dardanelles earlier than 1000 B.C., and spread eastwards and southwards. Gradually the eastern branch called Phryges, or Briges,¹ occupied the country which was called after them Phrygia. We trace their history by scanty references in the ancient historians, by archaeological remains, and by inscriptions, the sources being all very inadequate. The Phrygians took possession of a country which already enjoyed

a civilization distinctly superior to that of the invaders; but the latter seem to have imposed their language on the country, just as the Gauls did in Galatia, when they conquered it in the 3rd century B.C. The Phrygians, however, like the Gauls, adopted the religion of the country in which they settled, and, though this religion was often called Phrygian, it was really much older than the Phrygian conquest. It represents a prevalent type of religion, which was very widely spread over the countries adjoining the Aegean lands and the south coast of the Black Sea. This wide-spread type may be called Anatolian, pre-Hellenic, or Pelasgian. It presents close analogies to certain Syrian cults, and the Mosaic Law presupposes the existence of an older cult of the same general type.

2. Influence exerted by the Phrygians on the older Anatolian religion.—It must be supposed that the conquering European race exercised some influence over the old religion, but it is not easy to distinguish the elements which belonged to the different peoples. On one point alone comparative certainty can be attained. As mentioned below (§§ 13, 18), the goddess in the older religion was the most important person in the divine family, but in the subsequent history of Phrygia there are many cases in which the god is apparently dominant. There must have occurred a change, and the probability is that this change was due to the natural relation between conquerors and conquered. In war superior force is exercised by the male sex. It is true that, according to legend, the old Anatolian or Phrygian religion used the services of armed priestesses, who were called Amazons, and Greek art delights to picture the conflict between armies of Greek men and Amazons. To the Greek artist this conflict became symbolical of the great conflict between civilization and barbarism, between Europe and Asia, between good and evil. There is no reason to think that Greek soldiers ever came actually into conflict with a force of Amazons, but the explanation of this artistic form must lie in the fact that the Greeks were aware of the existence of such warriors, at least in the past, and that they pictured the European Phrygian conquerors as being in a sense kindred to themselves, at the early time when they were engaged in the war against the Anatolian system with its armed priestesses.

The Phrygian conquest of the country was achieved by men, and they inevitably tended to put a god rather than a goddess in the position of dominance, and to picture the contest as a fight between men and women. Hence in the *Iliad*, iii. 187, Priam alludes to the battles which he had fought as an ally of the Phrygians against the Amazons on the banks of the Sangarios in the heart of the country which was afterwards known as Phrygia. An allusion so early as this cannot be set down as mere legend; it must have some historical basis such as has been described, and it implies also an approximate date. Homer associated this conflict with a comparatively late stage in the history of that city of Troy which was captured and demolished about 1184 B.C. The last king of that city had in early youth taken part in those battles, which implies that the Trojan race was closely akin to the Phrygians, and was allied with them in their conquests towards the east. It is, however, remarkable, and yet perfectly explicable, that the war between Greeks and Trojans in the old age of this last king should have been regarded in the later historical view as a stage of the conflict between Europe and Asia, for mythology is never logical or self-consistent, and the Phrygians are sometimes considered as Europeans fighting against Asiatics,

¹ On forms and derivatives of the name used in Phrygia see Ramsay, *Cities and Bishoprics of Phrygia*, ii. 382, 616.

but at other times, after being settled for generations on the Trojan coast, came to be regarded by Europeans as typical of Asia; and similarly the branch which settled in Phrygia became rapidly identified with their new country, and ranked as an Asiatic stock in their relations with European Greeks. In this, as in almost all similar cases, there is the strongest tendency for the conquering people to adopt, at least in part, the religion of the conquered, because the belief lies deep in human nature that the local gods must be able and powerful to protect or to harm all human beings that are settled in their country (2 K 17²⁶⁻²⁸). It was therefore necessary for the Phrygian conquerors of Troy and of Phrygia to pay court to the gods of the land, and there is no way of paying court to a deity except by worshipping him as such.

Yet the conquerors, who must have consisted largely of men, generally married the women of the country. But, while they married them, they did not regard them as superior in rank or dignity. They were taking the women of a conquered race, and it was inevitable that they should regard themselves as the superior, conquering caste, who were conferring honour on a certain part of the subject population by marriage.

3. *Mysteries in the Phrygian religion.*—Now the character of pagan religion always reflects the social and economic circumstances of the people who profess it, and the result appeared in the aspect which was imparted to the religion of this more or less mixed Phrygo-Anatolian race. A god generally appears as the superior and dominant figure, at least in outward show, in the most typical Phrygian cities. The coins are struck in the name of a god at least as often as in that of a goddess, and the foundation legends often speak of a god. On the other hand, in the cities to which the Phrygian domination never spread, or where there is reason to think that it was weaker, the goddess remains the more outstanding and characteristic figure. In all cities alike, however, Phrygian and non-Phrygian, of inner Asia Minor the religion remained fundamentally as it was before. This result was attained through the mysteries (*g.v.*), in which the real character of the religion was displayed to the initiated. The religion was not shown in its entirety to every person; only those who fulfilled certain tests, or performed certain preparatory rites, were admitted to see its true nature. A good example of this fact is revealed in the Phrygian city which is generally called Antioch of Pisidia, and which was one of the great religious centres of Phrygia. On the coins and in the inscriptions the god Mên Askaënos is the ruling figure. He appears in them as the hereditary deity (*πάτριος θεός*).¹ Strabo² speaks of the two centres of Phrygian religion near Antioch as being seats of the god Mên, not of any goddess. No form of the native goddess is mentioned by Strabo as known at Antioch; and she appears far less frequently on the coins. One of those two sanctuaries was discovered in 1911. It stands on the top of a mountain, 5000 ft. above the sea and 1300 ft. above the city, from which it is distant about four miles by a steep and difficult path. In and around the great sanctuary there were found numberless dedications to the god Mên, but not one single dedication to the goddess. There was a small chapel of the goddess in one corner of the great sanctuary, if we may judge from the discovery of several statuettes representing Cybele or Artemis. It is apparent that in outward show, just as Strabo says, the sanctuary was obtrusively and pre-eminently that of the god,

while the goddess was relegated to a small chapel in a corner. There were also at least two small temples dedicated to a goddess, one of the Cybele type, and another of the Aphrodite type, outside the sanctuary, on the summit of the same mountain, forming part of a large complex of buildings of various kinds, which composed the Hieron. In none of these small temples was any dedication to the goddess found, but there were statuettes representing her. It is very evident that in outward aspect the Hieron as a whole was characterized to the public as the seat of a god, and that the goddess had quite a secondary place.

On the other hand, when a building which seems to have been the hall of initiation, close to the central and great sanctuary and evidently standing in close relation with it, was excavated, it became apparent that the ceremonies which were there celebrated were the old Phrygian or Anatolian ritual of a goddess, and not the novel ritual of a god, although (*c. A.D. 300*) the throne of a god was added to the scene. Now those rites which were celebrated in the Phrygian mysteries are described by all ancient authorities as the rites of a goddess, viz. of the Phrygian mother—a goddess who was the impersonation of the earth, as the great mother of all life, who gives birth to all things, and receives back to herself all things at death. Demosthenes describes those rites as celebrated mainly by a priestess.¹ The priestess was the chief figure in the ritual, while a man was the assistant of the priestess. The man acted as the teacher of the ritual; he recited from the books the words of the sacred formula; he helped those who were being initiated to go through the ritual; he taught them the proper words to use, and showed them how to perform the rites in orderly succession.

In the Hellenic religion, which developed through various external and internal influences out of the pre-Hellenic, Pelasgian, or Anatolian type, many cases are observable in which a prophetic centre was apparently under the presidency of a god, and the prophecy appeared as the expression of his soul or his knowledge. This is especially the case with the god Apollo, a purely Hellenic idea, in whom the highest tendencies of Hellenism were manifested to the world. To take two great centres of Apolline teaching, Klaros on the Asiatic side of the Ægean and Delphi on the European side—at Klaros we know that mysteries were celebrated, and even the scanty allusions to their ritual show that they were fundamentally of the Phrygian or Anatolian type;² at Delphi, as Æschylus expressly says,³ the deity who presided was originally the earth-goddess; she was succeeded by Themis, who is merely a moralized expression of the same divine idea; only in the third place did Apollo come in to replace the successive goddess-ideals in the presidency of this prophetic centre; a woman was always the medium through whom he expressed himself; and in popular statement this prophetess Pythia is mentioned as the source of revelation almost as frequently as 'the god' himself.

4. *God and priest.*—In the rite which Demosthenes describes⁴ the man acting as priest was the director of the ritual, while the woman as priestess was the centre and head of the religion; and all the evidence, scanty though it be, tends to show

¹ The description is given by Demosthenes, *de Corona*, 259 f., where he inveighs against Æschines. The mother of Æschines was a wandering priestess of the Phrygian goddess, who carried the rites about Attica, and the son acted as her assistant and ministering priest.

² Makridi, in *Wiener Jahreshefte*, 1905, p. 155 f., 1912, p. 261 f.; also *BCH*, 1906, p. 349, 1915, p. 331.

³ *Eum.* 1 ff.

⁴ G. Foucart, *Assoc. rel. chez les Grecs*, p. 67.

¹ M. M. Hardie (Mrs. Hasluck), in *JHS* xxxi. [1912] 111 f.; J. G. C. Anderson, *JRS* iii. [1913] 68 f.; Ramsay, in *BSA* xviii. 2 xii. 557, 577.

that this is one instance of a general principle. The god is represented by the priest in this religion; he teaches mankind what are the proper rites and words with which they should approach the divine power. The god was himself the first priest, and all subsequent priests are considered as successively taking his place, wearing his dress, bearing his name, and filling his part in the religion. In a sense it is true to say that the goddess is the chief figure. It is she who is the source of all life and the giver of all good things to mankind, while the god is a sort of accident in her life. But this is not the whole truth. The god is in practice the most important figure in the natural relations between the deity and human beings, because he shows, partly by example and partly by teaching, the ritual through which alone man can appeal to the goddess, who is the ultimate embodiment of the divine power. It was therefore quite easy to lay emphasis on the functions of the god, without really altering the character or ritual of the religion. The divine life was in a sense a reflexion of the life of society, or, rather, a model for human life.

Further, this human life was not regarded simply as the relation between individuals or as the picture of a single family. The family is regarded in the religion as the unit in the social organism; and the divine life, as shown in the relations of the god and the goddess, sets forth for the good of men the foundation on which society rests, viz. the mystic marriage of the god and the goddess as the symbol and pattern of earthly marriage. The gods in their mutual relation form the model which human life in society must reproduce. The gods have taught men, and are always teaching men, what they ought to do in their relations to one another and to the deity.

5. The holy marriage.—The theory has been advanced, and seems to the present writer fundamental in the subject, that the holy marriage as celebrated in the mysteries was intended to convey the full teaching about the perfect completion of human life; and the marriage ceremony of the old Phrygian or Anatolian religion consisted in the performance by the pair who were married on earth of precisely the same ceremony as took place at the holy marriage in the mysteries. There is also good reason to think that the marriage ceremony was performed at the sanctuary. One of the rites was that the pair drank from a common cup, and this rite passed into the Greek ceremony of marriage as it is still celebrated down to the present day under Christian forms. At the common meal which formed part of the religious ceremonial constituting the bond to hold together any association in ancient life the crowning rite consisted in drinking from the common cup, and the same was the case in the celebration of the mysteries. Each *μύστης* had in turn to say, 'I have drunk from the holy vessel' (*κύμβαλον*). But in the celebration of the marriage it was only the married pair who drank from the same cup; they alone were united in this social bond; all others present at the marriage feast drank from their own separate cups. Such was the character of the ceremony which was performed in Athens on the second day of the Anthesteria.¹ At that festival the marriage of Dionysos was celebrated, and the fact that all the celebrants drank from separate cups on this occasion marked out the ceremony so distinctively that the name 'Cups' was given to the second day of the festival. Seen from this point of view, the mysteries presented a picture of the nature of civilized society and a contrast between the rude savagery of human life without the divine guidance and the higher civilization which came through that divine example.

One of the formulæ that were repeated in the mysteries by the person who was being initiated consisted of four words: 'I escaped evil; I found better.'² It is mentioned that the same formula was repeated as part of the ritual of marriage in Athens, and the divine marriage must be taken to be typical of the old form surviving from pre-Hellenic times. The identity of the formula in the two cases implies the marked similarity of the ritual in both.

6. Two stages in the mystic initiation.—Judging from the arrangements of the Hall of Mysteries at Pisidian Antioch, where was an old, wealthy, and powerful religious centre, there seem to have been two stages in the mystic ritual (just as there were at Eleusis).³ But there is no reason to think that the two stages were celebrated at different seasons (as at Eleusis); on the contrary, they seem to have succeeded one another practically without any interval. The first stage was called initiation (*μύησις*); the second stage was called by a name as yet unknown, but the verb denoting the act was *ἐμβάρευν*, 'to enter' or 'to set foot upon,' and the idea expressed in this stage of the ritual seems to have been the entrance on a new life; possibly the noun *ἐμβάρευνσις* may have been a technical term; but no term has as yet been discovered in actual use. The phrase used in the inscriptions at the temple at Klaros near Colophon (where similar mysteries were celebrated) is 'those who had been initiated entered on' (the new stage), and it is certain that at Klaros the stages followed immediately after one another. Those mysteries might be celebrated at any season, like a church service, and were not restricted to a single occasion in the year.⁴ Similarly at Antioch the arrangements of the hall seem to imply that the *μύστης* passed through the first stage on one side of the hall, and thereafter entered through a sort of gateway in the middle of the hall after purification into the immediate presence of the god, and then began a new series of rites before the throne on which the god was supposed to be sitting; but we may imagine that the high-priest sat on the throne which is dedicated to the god by an inscription of late date. The rites described by Demosthenes took place probably as the first moment of the ritual in this second stage before the face of the god. In the first stage there had taken place an act which is described as the 'reception of the mystic things and words,' and the *μύστης* who had passed through this first stage (*παράλαβὸν τὰ μυστήρια*) immediately was free to enter into the presence of the god, and pass through the second stage of the ritual. The ceremonial of the higher grade symbolized the approach of man to the presence of the god, and its subject was the identification of the initiated person with the god, and the promise was probably given to him in the ritual words, 'Happy and blessed, thou shalt be god instead of mortal.'⁵ This identification of the human being with the divine life is the proper goal of human life. That goal was attained at death, as is shown in many epitaphs, for the dead man returns to the mother who bore him. But the same goal was attained as the result and perfection of the initiatory ritual. In the mystic rites at Antioch the culmination lay in the enactment of the perfect scene of human life—the fundamental rite on which society rests, viz. the mystic marriage of the god and the

¹ *ἔφηνον κακὸν· εἶπον ἄμεινον*. The same formula was used in the marriage ritual (see § 8).

² See Ramsay, in *BSA* xviii. 37 ff., and *HDB* v. 127a, 129b.

³ Envoys sent by cities and States were initiated, evidently at a special service for their convenience. They usually brought a chorus with them (Ramsay, *The Teaching of Paul*, p. 250).

⁴ *θεὸς εἶσθαι ἄντι βρότῳ*, known only in the so-called Orphic funeral formulae (most recently in J. E. Harrison's *Prolegomena*, Cambridge, Appendix); we take them to be closely connected with the mysteries.

goddess as the warrant and guarantee of earthly marriage.¹

7. The choice between good and evil.—The question presents itself whether the two stages of the divine life were shown in the mysteries as two steps in a development from the worse to the better or in the form of a choice between good and evil. If the answer to this question could be made with certainty in favour of the former opinion, it would be extremely important; but there is no positive evidence to support that view; and all analogy is distinctly in favour of the other opinion, that there was simply presented in the religious ritual a choice between two alternatives, one good, the other evil. Such a choice is frequently presented in ancient religion and in ancient moral teaching. It appears in advanced Hellenic literature in the form of the *Choice of Heracles*; but that is only a literary apologue, elaborating in moral form a choice which, according to religion, is always being presented to mankind. In this religious choice there is not merely a presentation of the alternatives; there is also always the advice and counsel given by the gods to men to prefer good rather than evil and life rather than death. A fundamental idea in the religion is that good and life are aspects or names of one fact, and similarly evil and death of the opposite. The probability therefore is that in the drama of the mysteries the gods of the divine family are represented as choosing between the two courses—good and evil, or life and death—and that the divine choice is the model for human nature to follow. Accordingly, the formula which we have rendered, 'I escaped evil; I found better,' which seems to suggest in that translation the idea of development, is more correctly to be rendered, 'I rejected or avoided evil; I found better,' so as to suggest that the formula is an expression of choice between alternatives both equally open at the same time. Further, the formula is certainly an example of parataxis and really implies, 'I rejected the evil, because the opportunity of better was presented to me.' The idea that men are always placed in a position to choose between good or life and evil or death, and that religion exemplifies and teaches the preference of life rather than death, lies at the basis of the Anatolian religion, which in all departments of conduct shows men what they should do, in agriculture, in household economy, in hygiene, etc. So it is the basis of the Hebrew teaching, 'The fear of Jehovah is the chief part of knowledge; but the foolish despise wisdom and instruction' (Pr 17⁹ 15³³, Ps 111¹⁰, Ec 12¹³); Moses said to the people, 'I have set before thee life and good, and death and evil, the blessing and the curse; choose life' (Dt 30¹⁵⁻¹⁹); and the same is expressed in the beginning of human history (Gn 2 and 3), for in the garden that was in the land of Eden there were two trees, the tree of life and the tree of knowledge (which immediately produced death); the instruction given to the man and the woman who lived in the garden was that they must not eat the fruit of the tree of death; but after they did so they were sent forth from the garden, lest they should have access to the tree of life and eat and live, and the angel with the flame of a sword was placed on guard to prevent approach to the tree of life. In this account we have the expression in primitive thought of the idea that from the beginning of human existence the choice between good or life and evil or death has constantly been presented to mankind, and the divine advice has always been given in the most positive form of absolute prohibition, to avoid the act which will 'bring death into the world.'

If the point of view taken in this article is

¹ BSA xviii. 37 f.

correct, there would probably be presented to the *μύσταις* in the first stage of the mystic ritual the choice between good and evil, and, when he chose rightly and in the proper mystic words, he was admitted on the second stage.

8. The divine teaching.—The 'holy marriage' of goddess and god is only one example of the general principle that the gods are always teaching and advising men what to do and how to behave. There was indeed no formal teaching in the way of discourse or theoretical instruction. There was only (1) the teaching by example in the divinely instituted ritual, and (2) the occasional advice by signs and omens, chiefly those seen in the air, which needed interpretation and application to the individual case. The theoretical basis of the ritual is expressed, e.g., in a relief found in E. Lydia on the Phrygian frontier. This relief is arranged in two zones; in the upper zone the god is represented as performing on an altar the same act of ritual as the priest is performing on an altar in the lower zone.¹ Every act of religion on earth has its counterpart in the performance of the same rite on a higher level in the divine life; and so the marriage celebrated on earth between the man and the woman has its counterpart in the marriage that is always taking place above between the god and the goddess. The teaching lies in the example and model which the divine powers set forth to all their worshippers. But earthly marriage is not merely a relationship between two human beings; it is a rite which concerns the entire society to which they belong. On this rite and on the family relationship organized society is built up. The unit of civilized society is not the individual, but the family. Accordingly we find it recorded that, according to Greek religion, the married pair celebrate the sacred marriage in honour of the god and goddess.

9. Relation of the conquerors to the ancient priesthood.—We have no information about this relation in the case of the old Phrygian conquerors, and we can only speculate with regard to it from the analogy of two later cases. (1) When the Gauls conquered and settled in that part of the old Phrygian country which afterwards was called Galatia, they soon adopted the religion of the country which they had won. Not merely was it necessary for them (as stated above) to worship the gods of the country where they now dwelt; they had also to face the problem of governing the people whom they had conquered. They could not and did not try to exterminate an entire race; all that they could do was to take a portion of the land for themselves, and to employ the conquered race as a subject caste which should till the land for the new owners of the great estates. The conquering caste, then, must govern the subject population according to some method or other. With the ancient views about religion and its fundamental importance as the governing principle in any organized society, the method of governing must be through the use of the already existing forms of religion. Hitherto the priests of the great religious centres had been the rulers of the god's land. The simple and easy way for the Gauls to rule the old inhabitants was to become the priests, and to fulfil the same religious forms and duties as the Phrygian priests had fulfilled. We know from an inscription that at Pessinus the conquering Gauls took only half the places in the priestly college. What was the exact situation at other great religious centres is unknown, but this may be taken as exemplifying the general principle. The chiefs of the new conquering caste allied themselves with, or even wholly displaced, the priests of the old colleges and centres; in con-

¹ Ramsay, *Letters to the Seven Churches*, p. 63.

junction with or instead of the ancient ruling priestly families, they administered the government of the mass of the population.¹

(2) When the emperor Augustus, by the will of the deceased Amyntas, last king of Galatia, came into possession of Pisidian Antioch and the whole territory attached to it, he put an end to the old ruling dynasty or families, in which the priesthood was hereditary, and himself became owner of all the land of the god. His procurator, who represented him in the district and managed his interests for him, was priest in his place, and therefore lord over the cultivators of the estate. This lordship over the cultivators was not applicable to the free citizens of the Græco-Roman cities, and in this way a highly complicated situation arose, according to which the priest-procurator was in the city only an official of the emperor, while on the estates he was the embodiment in human form of the distant god-emperor. Something of the same kind must have existed under the Greek kings in many parts of W. Asia. Those kings were identified with the god, and regarded as the embodiment in human form of the god on earth. This convenient religious fiction was utilized practically as a means of governing the country. It gave to the god-king or the god-emperor the sanction of religious awe, and this obedience to the emperor took the place of loyalty to the empire. The same fiction was widely practised throughout the Græco-Roman world; but we know more about the details only in the case of the Roman empire, because the evidence is clear that in every district and in every city of the Eastern world the emperor was supposed in the cult to be identified with the chief god of the district, and even free citizens, though not actually the serfs on the soil of such estates, yet regarded the emperor as the present god, on whose power they were dependent for defence, and to whom they owed the peace and prosperity of the whole empire. In the 4th cent. those formerly free cultivators became real serfs, because the law regarded the owner of the soil as having a right to their labour.

The same principle that underlies these later historical cases may be applied to the Phrygian conquest of the old Anatolian population of the country which afterwards was called Phrygia; but the details are not yet discovered.

10. **Varying accounts of the character of the mystic ritual.**—In the fact that the mystic ritual presents a choice and a contrast between good and evil, between violence and order, and that it places human life under the guidance of religion, lies the explanation of some serious difficulties which are presented by the records about the mysteries. Christian writers describe them as presenting a series of incidents of violence, deceit, and horror. The question has been much debated whether this account is correct. The answer would seem to be that it is perfectly correct so far as it goes, but it was not the object of the Christian writers to give a complete picture of the mysteries or to inquire into the possible truths and ideas that might be suggested by those rites. Their method was simply to show that from the contemplation of such hideous incidents presented in the form of a sort of drama there must result evil to those who contemplated the spectacle. Their object was to contrast the horrors and abominations which were presented to the initiated with the order, simplicity, and beauty of the Christian ceremony. It must always be remembered that they were replying to the misrepresentations of their own ritual which were current among their opponents, and their purpose was to paint in lurid but necessarily true colours the hateful character of the pagan

ritual and the evils that must result from it, while they maintained and described the beauty and purity of their own ritual. They were not antiquaries; it was sufficient for them to point to the horrors which formed a real part of that ritual. False statement or even exaggeration would have been fatal to their purpose. We must therefore accept as correct all the details in the picture that they give, remembering that that picture needs to be looked at from a certain point of view; and we must also remember that the mysteries were intended to exhibit the placing of human life on a higher level through the influence of religion and the example set in the divine life. The use of the formula, 'I escaped evil; I found better' (§§ 5, 8), proves beyond dispute that some such idea formed the fundamental truth underlying the religion presented in the mysteries, and the further fact that the same formula was repeated in the marriage ceremony proves also that the social 'better' which those who chose in accordance with the divine precept found lay in the institution of true marriage. These facts make it clear that we can and ought to accept as true also the opinions expressed by Plato and Isocrates and other Greek philosophers and thinkers that the mysteries shown at Eleusis were an educative and elevating influence in life; and, if it is true, as we must also admit, that part of the ritual of the mysteries was of extremely repulsive character, it follows inevitably that a strong contrast (or even possibly a process of development) in moral and social relations formed the real subject of the mystic ceremony. Thus in one stage of the mysteries the birth of the god-son (or daughter, as the case might be) originated from an act of violence and fraud, and in the other stage the holy marriage was set forth as the rule and basis of society. In both cases the scene was fully presented to the eyes of the initiated; and the details of violence or fraud, as enacted in the divine drama of life, furnished full justification for the attack of Christian assailants; but the apology was that religion should speak straight out, concealing nothing, and that it shows the naked truth to devout eyes. In the process of degeneration to which the Anatolian religion was exposed the ugliest and most repellent parts of the mystery were emphasized and made more prominent. The effect was seen in respect of both sexes. The devout, both women and men, felt bound to live the life of the goddess and the god in every act and every detail. Hence originated the custom of ritual prostitution, in which women voluntarily imitated the fate of the goddess; and this custom was carried out in a series of ingenious perversions and developments which constitute the most abominable and socially degrading side of the Anatolian religion. Similar in origin, and carried out with the same ingenious perversion, was the strange and remarkable rite of self-mutilation among men, which constituted the supreme sign of devotion to the goddess, and which was performed from time to time by devotees at, or even standing upon, her altar. In modern time certain sects of dervishes practise extraordinary rites of mutilation or of personal wounds, which seem to be perhaps an expression of the extremest asceticism (though it is difficult to make any assertion with regard to the original nature of their ritual of self-devotion). But the Phrygian rite seems clearly to stand in close relation to a common part of their economic ritual. It was known that mutilation was prescribed in the divine ritual as a necessary part of the treatment of domesticated animals, and that involuntary self-mutilation also formed a noteworthy fact in the life of the bee; and there were doubtless other analogies,² some well-founded and

¹ HDB ii. 83^b note.

² HDB v. 116^a, 123.

some purely fanciful, which seemed to establish the divine origin and character of the rite, so that the devotee who consecrated himself to the observance in the most perfect degree of the religion of the land practised this extremest act on himself, knowing that the god had set the example (as the *ἑρως λόγος* declares) by performing it on himself and thus consecrating it for his human followers.

11. Other examples of the analogy between the divine life as shown in the mysteries and human life.—It would also appear that the purificatory ceremonies which formed part of the mysteries were practically identical with some of the marriage rites, and this identity further confirms the close similarity between the rites in the two cases.

A formula which was uttered by the initiated person at a certain stage in the ritual of the mysteries was, 'A kid I have fallen into the milk.'¹ It is generally recognized that the kid is the mystic form of Dionysos as the god-son in the divine nature. In these words the *μύστυς* expressed the same meaning as the goddess of the world of death uttered to the dead when they came before her already initiated and pure, 'Thou hast become god instead of mortal.' In both the idea is that death is the entrance on life. The initiated dead come back to the goddess from whom they originated. Life comes from her and death also, and the two facts of life and death are different aspects of one idea. The formula about the kid declares that the initiated person has assumed the divine form as Dionysos. Each *μύστυς* in death is merged in, or finds his perfection and completion in, the personality of the god with whom he is identified.² The formula under discussion evidently belongs to the religion of a pastoral people, and places us on the great central plain of Phrygia and Lycaonia, where a god called Zeus Galaktinos or Galaktios is mentioned in inscriptions. The variation in the form of the adjective and its non-Greek character show that it is an attempt to express in Greek an epithet of the god which had the same meaning in the Phrygian or Anatolian ritual. We are reminded of the instruction which was three times impressed upon the Israelites in the Mosaic Law, 'Thou shalt not seethe a kid in his mother's milk.' Comparing the two expressions, we must infer that W. Robertson Smith's suggested explanation of the Hebrew commandment is correct. This commandment has formed the subject of much controversy, and Robertson Smith³ interpreted it as forbidding the performance by the Hebrews of a rite which belonged to a forbidden religion. J. G. Frazer⁴ objects that there is no proof of the existence of any such rite, but the formula now under discussion, as taken from the mysteries, seems to allude to symbolism derived from a rite of this kind. The *μύστυς* is now Dionysos; he becomes a god through entering the gate of death, and symbolically in pastoral religion the death is expressed in this form of words; and the words were the prelude to a rite having the religious form which is forbidden by the Mosaic Law. The rite of the kid goes back to a pastoral religion, which has been united in the fully formed mysteries with an agricultural religion.

12. Progressive assimilation of mysteries through the Græco-Roman world.—By the Christian apologists the mysteries are generally described as practically a single uniform institution

at all mystic seats. Now there can be no doubt that the mysteries as celebrated in different regions were originally distinct and showed different rites, although there was a generic similarity. The Eleusinian mysteries were originally different in character from the Phrygian, for the Eleusinian mysteries were the drama of a purely agricultural religion, whereas the Phrygian were not. It has therefore been maintained that the Christian writers who neglect this difference are really misrepresenting the character of this religious institution by mixing up in a single picture details which belong to diverse religions. But the objection is not valid, for there was a marked tendency in the history of Greek and Græco-Asiatic religions to assimilate to each other the various mysteries; and the assimilation was effected by incorporating in each ceremonies and rites taken from the others. Thus the picture presented by the Christian apologists must be accepted as reasonably accurate in details, though incomplete. On this there is agreement.

13. The ultimate supreme deity and the mediator.—The goddess was the fountain and source of human life. The principles on which that life must be lived emanated from her. The god is instrumental in making those principles known to men; they are made known in practice, not theoretically. The god does what he teaches; he is the worker who by his toil shows principles in operation. This idea, that there is an intermediary in carrying the knowledge of divine truth to the world of men, appears in many forms which are in the last resort almost identical expressions of the same fact. There is a supreme divine power, the source of all truth and all good, and there is an intermediary divine power; and these two divine personages are in the Phrygian religion conceived usually as the goddess who is the mother and the god who is her son or priest or paramour or companion; in these various ways of expressing the relation lay the seeds of much evil in the divine drama as presented in the mysteries. Yet these envisagements as female and male are not universal in early Anatolian or Greek religion. In the first place, as we have already shown, the goddess is often displaced, at least in outward show, by a male embodiment; in this case the two personages are the supreme god and an assistant or ministering god. When names were given to these embodiments of the divine power, the most characteristic were Zeus and Hermes. The embodiment in two persons was necessary to the complete presentation of the divine action (as, e.g., in the striking story recorded in *Ac* 14⁷⁻¹⁸). It has already been explained (§ 2) how the variation between the presentation of the supreme divine power as male and as female is to be explained. In the second place, while the ministering god is almost invariably presented as male and especially under the name Hermes, there is one striking exception in the *Iliad*, where for certain purposes the goddess Iris is presented as the messenger of the father of the gods. Iris—the rainbow—seemed in certain points of view to be the line of communication by which divine truth was introduced to the world, and this thought is elaborated into the picture of Iris in the *Iliad* (though never in the *Odyssey*). A similar thought appears in the book of Genesis, where the bow is set in the cloud as a symbol of the covenant which is concluded between the supreme God and His people.

14. The ritual expressed the self-protecting instinct of collective society.—The ancient Anatolian religion originated from the self-defending and self-protecting instinct in early society. The instinct and tendency expressed itself through the voice of prophets, and assumed the form of a series

¹ The formula occurs several times on gold tablets found in graves of Italy and Crete, which stand in close relation to the Orphic mysteries; see App. to J. E. Harrison, *Prolegomena*, and bibliography there.

² This conception of the nature of death is more fully treated below.

³ *OTJC*, p. 438, *Religion of the Semites*, London, 1894, p. 221.

⁴ *Anthropological Essays presented to E. B. Tylor*, Oxford, 1907, p. 154.

of regulations for the better organization and management of society, mainly in its economic aspect. But it is useless to make rules for an ignorant people, unless there is some powerful sanction for these rules enforcing their observance by the dread of punishment. The rules, therefore, being the expression of the divine interest in the welfare of human society, took the form of religious law; and they were obeyed because the power of the goddess was offended by violation and ready to punish it. Thus, *e.g.*, it is urgently necessary for the welfare of a primitive society, which practises agriculture and lives by its results, that proper times and seasons and methods should be strictly observed. It is not, however, safe to expect that a simple and uneducated population, which is only learning the importance of these things by experience, will observe strictly the rules of sound method; men are lazy, slow to learn, and ready to procrastinate; but, when the rules are embodied in the form of a ritual by which divine protection and help are to be gained, then they enforce themselves, for violation brings punishment by suffering. The gods live in the life of nature; the times and seasons are crises in that life, and the due observance of the ritual brings its reward in the gifts which the gods are always tendering to the use of man. Similarly in respect of domestic economy, or the wise conduct of the family life, or the proper management of domesticated animals, all the rules come from the divine power and are enforced by that power because they are expressed as the ritual or religion. To go into this in detail is impossible here, for it requires elaborate treatment, and it depends on only scanty evidence. It remains really the simple orderly statement of the facts so far as known, but yet only a hypothesis.

In a region where agriculture is the main business of the population the religion is agricultural, and the episodes in the divine life as exhibited in the ritual are the stages in the farmer's year.

So, *e.g.*, 'Demeter, that bright goddess, lay in loving union with the hero Iasion in a thrice-ploughed fallow-field in the fertile land of Crete, and bare goodly Ploutos' (Hesiod, *Theog.* 968 f.; *Odyssey*, v. 125 f.).¹

The marriage of the goddess-mother to the heroized envisagement of the race takes place in the rich field newly opened after long preparation, and her son is Wealth. The rule of times and conduct, as fixed by divine power and revealed in practice to men by the god as priest and head of the ritual, brings in orderly course prosperity, happiness, and life; but, if violated or neglected, it causes suffering and death.

Similarly in a country where flocks and herds constituted the chief source of livelihood the religion was pastoral and the god was the god of milk, who granted the produce on which the life of the people depended. As it happens, we have practically no records of this type of religion, with the exception of the titles 'Galaktios,' and 'Galaktinos' applied to the supreme deity. A pastoral people is, as a rule, rude and uneducated, and there therefore remain hardly any memorials of their ritual or even of their life. It is, however, certain that the great plains around the salt lake Tatta were always a pastoral country, in which, *e.g.*, Amyntas, the last king of Galatia, possessed more than 300 flocks.² There can be no doubt that these flocks were very large, as we may judge from the immense size of some of the flocks which shepherds lead about over the plains at the present day. We can understand how the principles of

attending to the welfare of domesticated animals were consecrated in a series of rites fixed according to the seasons of the year.¹

The sacred character of useful domesticated animals was a device for the benefit of men, and it seems probable that the arts of domestication of animals may have in some degree originated on the great Anatolian plateau,² where conditions are exceedingly favourable, and where indubitably a high degree of skill was reached. Valuable breeds were artificially produced by intelligent cross-breeding. Of these the Angora goat still survives, and the secret of its breeding is carefully treasured and concealed. The present writer is unable to accept the view advocated by some distinguished German writers that the Angora goat was introduced from Central Asia and is a naturally distinct species. There is some authority for believing that the secret of preserving the fine character of the wool of the Angora goat lies in a system of breeding. Strabo mentions other fine breeds—*e.g.*, the Colossian sheep with its glossy violet-coloured fleece, and the glossy black-fleeced sheep of Laodicea. These have entirely disappeared, and the reason is that the breeds, being artificial, were through carelessness and ignorance allowed to degenerate.³

The worship of the Ephesian goddess Artemis seems to have been closely related to the practice of bee-keeping. The goddess was the queen bee, and it is noteworthy that in the religion of Anatolia the sex of this supreme official among the bees was correctly known, and its life-history was properly understood, whereas Aristotle and the Greeks generally thought that the queen bee was a male and called it *ἑσθήν* or *βασιλεύς*. The image of the goddess has only the slightest resemblance to a human body, but in outline is roughly similar to the body of a bee. As the queen bee she is indicated literally as the great mother of all life in the community. The facts of nature pointed out the queen bee as the natural analogue to the goddess. She is attended by a body who are called *Essenes*, bearing the same name as the male bees or drones who do no work, while another body of her followers are the *Melissæ*, the female working bees, in whom the sexual character is undeveloped. These two bodies of followers, the male and the female, constitute the priests and priestesses of the goddess.⁴

An example of the self-protective character of the religious law which ruled the conduct of primitive Anatolian society is found in the conduct of social life. The idea is that the divine power must be localized at each point where the safety of the family or of society is involved. In the construction of the house, where a pillar or column is an important structural member, it is regarded as sacred and as a home of the divine power, in order to impress on all persons the respect with which it must be treated; and this sacredness leads to the institution of a ritual by which the religious awe is impressed on all minds.⁵ The roads which led from town to town were placed under divine protection by sacred pillars (in which the divine power finds its home) along their course. These stones were sometimes made useful to human needs as measures of distance, and thus became mile-stones. Under the Roman empire mile-stones were dedicated to the god-emperor. In modern Mediterranean countries the shrines of Christian character which are found at important points,

¹ Ramsay, *Impressions of Turkey*, London, 1897, p. 272 f.

² Ramsay, *Cities and Bishoprics of Phrygia*, i. p. xv.

³ On this subject see Ramsay, *Impressions of Turkey*, p. 272 ff.

⁴ *HDB* v. 117a.

⁵ The male bee perishes after consorting with her, like Iasion

¹ The statement is identical in the two poets, which shows that it expresses the religious myth (*ἱερὸς λόγος*). Hesiod alone specifies Crete, Homer alone the resulting death of Iasion (Iasion). The latter fact is essential in the *ἱερὸς λόγος*.

² Strabo, xii. 6, p. 568.

especially at meeting-places of roads, originated in this feeling that the divine guardianship has to be impressed upon all persons at all important points in social life. In the city the streets are similarly placed under the same protection, and, as the number of the people who pass along the streets by day and by night is very much greater, the symbols (usually *Hermæ*) of the presence of the divine power are very much more frequent. The permanence and health of society depend largely on the safety and cleanliness of the streets, and these purposes are ensured by the presence of so many pillars or altars or representations of a god. In the presence of God cleanliness and purity are exacted. No one is free to come into the presence of God unless he is pure both physically and morally. By insisting upon requirements like these the salvation and health of society were attained. The clearest and most explicit declaration of this principle is contained in the Mosaic Law (see Dt 23¹⁴): 'Jehovah thy God walketh in the midst of thy camp, to deliver thee, and to give up thine enemies before thee; therefore shall thy camp be holy, that he may not see an unclean thing in thee, and turn away from thee.'

When the right conduct of people in society was hindered by some catastrophe or some serious change in external conditions, then serious dangers resulted. At the beginning of the Peloponnesian War, *e.g.*, the entire population of Attica was crowded within the walls of Athens. There was not room for them to live according to religious law and custom. The ordinary rules of life were inevitably neglected. The presence of the god could not prove a sufficient restraint, and the result was speedily evident in a terrible plague through which (as popular religion believed) the divine power punished the violation of the laws which God had laid down for human conduct.

The religion of the Phrygians, therefore, must be regarded as springing from a simple enough type of religious feeling which was widely spread throughout the *Ægean* lands and the great peninsula of Asia Minor. This religion shows marked similarity to certain cults which are characteristic of Syria, and some of the best illustrations expressed in brief and clear terms are found in the Mosaic Law. The sacred Law of the Hebrews evidently was adapted to a state of society similar in certain ways to the social conditions implied in the Anatolian religion. This religion in its original character was one of ideas rather than of ritual; that is to say, we can envisage it at a stage early enough to see the ideas which are expressed in the ritual. All of this religion is in origin an expression of ideas and principles designed for man's good.

15. The religion of organized society and the family religion.—Obviously the religion of the mysteries is a religion of an organized society adapted to the conservation of social welfare by enforcing upon all members of the social organism such conduct as is to the benefit of the entire society to which they belong. The individual and even the family are secondary to the society. But behind and beneath this there lies another stratum of religion on which the life of the family is founded. In religion of that older type the guiding principle was not to subordinate the interest of the family to that of the social organism: it was directed to the purpose of conserving the family as an organism complete in itself; the family must not be suffered to come to an end; in life the father works for the sake of the children, in order that they may continue as a family; after death he is still able to aid in conserving it through the right conduct of survivors. In this primitive religion there is no thought of or provision about

work for the purely selfish advantage of the individual. Work is done for certain ideals, not perhaps understood clearly by the individual worker, but impressed upon him by some guiding power. So far as an individual looks merely to selfish advantage, he is not driven to work for the distant future benefit of children or children's children. But religion impresses upon him the importance of the family and the duty of working for it, and moulds his mind into conformity with this salutary purpose; and, while his intellect does not fully grasp the principle, yet his natural emotions lead him to guard and work for his children, at least while they are young. With these two motives in co-operation, an immensely strong force is brought to work on the conduct of the individual. Religious custom in the *Ægean* lands was in its origin the wise guidance of nature.

16. Family cult of the dead members.—The way in which religion guarded the permanence of the family was through the idea that the living members have much to gain from, and serious duties to fulfil towards, the other members of the family who have died. The dead ancestor or parent continues to live as a deity. He is strong to help his family so long as his family give him strength to help them. It is in the mutual relation of each party to the other that the strength of both lies. The dead help the living, provided that the living help the dead. God helps man, but man must co-operate with God. In the modern superstition of Asia Minor, as it appears under Turkish forms, the divine influence which expressed itself at many places all over the land is called 'ancestor' or 'father' (*Turkish dede*), in so far as it is associated with any personality at all. There is no other word in the colloquial language of the uneducated peasant to express his recognition of a vague divine power except this term taken from the family religion. The idea is primitive and fundamental; the dead man becomes god, going back to the goddess-mother who bore him. This idea might develop, and in some minds did develop, along the line of an Oriental pantheism—that the dead is merged in the impersonal divine power; but the typical development was in W. Asia and Greece—that the dead becomes a god, personal and individual.

In the later stratum of the Phrygian religion as a device of social organization there is effected a sort of identification of the family ancestor and god with the god who guards and preserves society. In that later stage or stratum of religion names for the gods came into existence (as Herodotus relates),¹ and the possession of a name indicates growth in the personality of the divine conception, which begins by being simply 'the god,' 'the goddess,' 'the mother,' or 'the father,' and develops into a personal conception moulded only too closely on human personality. The divine prototype in heaven is similar to the human antitype on earth.

Epitaphs belonging to the Roman period give some information about the fashion in which the ordinary uneducated or slightly educated peasantry of Anatolia conceived the relation between the living man and the dead man who has become god. The making of the tomb to a dead person is at the same time the discharge of a vow to the god. The dedication to the dead person is also a dedication to a certain envisagement of the divine nature, whether indefinitely as 'the god' or anthropomorphically as a divine person possessing an individual name and character and local relations. Since the dead person is regarded as identified with the god, he or she is so described in some epitaphs.

¹ At first the Pelasgians had no names for the gods; most of the names came from Egypt, and the oracle ordered the Pelasgians to use them (Herod. ii. 62).

The dead is the god, and the grave-stone is the altar on which this god is worshipped.¹

It is a custom which has persisted throughout every period of Anatolian history and under every religious external form that it requires a grave to impart consecration to a shrine or a locality. This idea is as powerful still under Muhammadan influence as it was in the earliest traceable period of Anatolian history. There are throughout the country innumerable localities which are at present regarded as sacred, sometimes because they are seats of ancient society and sites of dead cities, sometimes as being places where the divine power manifests itself in some striking natural phenomenon. In almost all those places there is a grave of some *dede*, or ancestor, and a sort of worship is maintained in irregular fashion at the shrine. People seek here the cure of diseases and make vows and prayers, and tie a rag from their own clothing on a tree. The sufferer and the unfortunate come here for help. Those who are healthy and prosperous do not need to have recourse to such a way of invoking the divine help and protection. The whole custom is antipathetic to the spirit and the teaching of Muhammadanism, but it rules the conduct of the people, as an imperishable survival of an old religious view, engrained in the popular mind. It is evident that in the earliest Phrygian religion a grave was the means of ensuring the divine presence at a particular spot.² The shrine of a deity was also marked by a grave, and thus shared in the awe arising from both the older and the more developed type of religion. Wherever there was a need for consecration, so that a certain locality should be preserved for general safety or advantage, a grave intimated the presence of a god and warned off violators or intruders. This custom stands evidently in close relation to the worship of ancestors and to the family religion. It is a device to extend the protection of the deified ancestor beyond the circle of the family for the benefit of others.

17. Two strata in the Anatolian religion.—We must therefore regard the Anatolian religion as having come into existence in two different periods from two different causes. The older stratum is the family religion, *i.e.* a certain group of rites holding the family together in the performance of common religious duties; for, according to ancient religious ideas, no unity and no social body could have a common existence except through the performance in common of certain religious duties. The later stratum was the religion of an organized society, knit together for the common advantage.

18. The divine power as the mother.—In both the older and the later stratum the conception of the existence of the gods as a divine family having certain relations with each other necessarily existed. Especially the conception of the goddess as the mother lay at the basis of the family religion. While it is evident that there was a certain growth in the conception of the divine family between the older and the later religious stratum, it is not easy to distinguish the elements which belong to each period; but in the beginning the goddess-mother must have been the principal figure, for the family exists in virtue of the mother. In old Anatolian custom, as is agreed by the great majority of scholars, the human family kept its continuity through the idea that the influence of the mother was the determining power. To this old custom the name 'matriarchate' is commonly applied in English, but the name is not correct, and the German term *Mutterrecht* is more suitable to the real character of that

early family system. It was not the case that the mother was the ruler, but it was the case apparently that right, law, inheritance, and descent were reckoned in terms of the mother and not of the father,³ and that influence and freedom of life were a birthright of the women. The introduction into Phrygia of the developed Hellenic religion was unfavourable to the continuance of this early idea of the family; and all those legal and social relations came to be reckoned in terms of the father rather than the mother, as we see in the Græco-Roman period. Yet still the ordinary custom of the land continued in the old habit of assigning prominence to the female element: women magistrates appear frequently in the records of many cities in Phrygia and Anatolia generally, and women are mentioned as performing public duties much more freely than was the case in Greece. Even among the Phrygian Jews—though Jewish feeling was always extremely hostile to the prominence of women—one finds examples of Jewesses not merely filling magistracies in the towns, but actually holding the position of chief of the synagogue (*ἀρχισυνάγωγος*); and this religious fact can hardly be explained otherwise than as due to the influence of the custom of the country on them.²

19. Persistence of the conception of the divine mother.—The deep-seated tendency of the people to look for a conception of the divine nature in a feminine personality was a strong influence on early Christian system. The people sought for something in the new religion to satisfy their craving for such a female element in the divine nature. In all probability the first form of the Thekla-legend as it was composed by a presbyter of Asia, not later than the third quarter of the 2nd cent., was an expression of this craving; but the Orthodox Church, while condemning the presbyter who gave literary form to the legend, took over the figure of St. Thekla and modified the legend so as to make it harmless from the ecclesiastical point of view. Yet there still remain in the tale slight traces of the idea that in Thekla the rights of women find a heroine; and the women who sat as spectators in the amphitheatre where she was exposed to wild beasts regarded her as their champion and appealed to God on her behalf, throwing spices and balsam towards her. It is because of this quality in St. Thekla, as a sort of heroized impersonation of Anatolian custom and ideals, that she gained for herself such an important place in the hagiography and the ritual of the Eastern Church.

The Anatolian custom, however, aspired towards a fuller expression of its nature, and this was found at last in the idea of the 'Mother of God.' It was at Ephesus, the city of the goddess, that the earliest proof is found of an established cult of the Virgin Mary as the Mother of God; and in the Council held at Ephesus in A.D. 431 this cult was definitely established as a feature of the Orthodox ritual, while Nestorius was condemned because he held that the title 'Mother of God' ought not to be applied to the Virgin, who was only the 'Mother of Christ.'³ The Council assembled at Ephesus 'in the most holy church, which is called Maria' (a title apparently popular rather than official); and there can be no doubt that it was the force of popular feeling that imposed on the Orthodox Church this recognition of the Mother of God. There is prefixed to the Acts of the Council of Ephesus a sermon delivered in A.D. 429 by Proclus, bishop of Cyzicus, which

expresses in Christian form the popular idea. The subject of this sermon is 'to celebrate the glorification of the race of women': for 'the glory of the female' is due to her 'who was in due time Mother and Virgin': 'earth and sea do honour to the Virgin.' It seems impossible to mistake or to deny the meaning implied in this and much similar enthusiastic language. The Anatolian religious feeling craved for some clearer and more definite expression than it could find in Christian rites and language of the honour, the influence, the inevitableness in the world of the female element in its double aspect of purity and motherhood. 'Purity is the material,' but purity that is perfected in maternity. The Virgin, the Mother, the purity of motherhood, was to the popular Anatolian religious sentiment the indispensable crown of the religious idea.

Muhammadan religion, on the other hand, with its stern hostility towards this point of view, was not affected by it in Anatolia. Muhammadanism probably originated from the seed sown in the mind of Muhammad by Christian refugees who had been expelled as heretics from the Orthodox empire, because they were opposed to the worship of the 'Mother of God' and had fled into Arabia. Springing from such seed, which grew up amid Semitic surroundings hostile to the prominence of women, Muhammadanism has always assigned an extremely humble place to the feminine element in society and religion, and it extirpated the old ideals of feminine place and duty from the popular mind in Phrygia. Islām was unable to extirpate so deep-seated a feeling, and had to satisfy it in other ways; and some light is thrown on the nature of the ancient religion by observing how this was achieved. It was partly done through the orders of dervishes with their ritual and enthusiasm,¹ and in recent years the personality of the Prophet himself has come to exercise a profound influence over a large number of devotees, especially among the Arab-speaking peoples, but also among part of the population of Anatolia.

'The Moslem's devotion to his Prophet, his admiration and enthusiasm, nay, his personal love for him, are intense realities. . . . Sometimes he points simply to "the fact of Mohammed," he feels a personal relationship to him, he is conscious of a personal gratitude for the ineffable services he rendered.'²

Another writer says:

'The devout Mohammedan is never so enthusiastic as when he calls on his Prophet. . . . Hymns to the Prophet are sung most enthusiastically on the birthday of Mohammed and on the day of his Ascension. . . . Pious men and women are never so full of devotion as on these occasions. Their whole nature is stirred up and their whole heart goes out in worship and adoration when these hymns are sung.'³

One line of a popular hymn runs thus:

'In every flower and in every plant the light of Mohammed is visible.'⁴

Sectarian Muslims cherish the same feelings towards some other heroes, especially Ali, Hasan, and Husain, etc.

Two lines of a hymn addressed to one of those heroes reads:⁵

'Thou removest sorrow, thou takest away pain, thou forgivest sin, thou didst restore the widow's son to life, thou didst transform a robber into a saint.'⁶

Prayers and hymns like these form a ritual, which is usually held at night and continued to early morning; and, as another writer says,

'So it has come about that Mohammed is often practically deified, however contrary to exact Islam and to the Prophet's own declaration such an apotheosis may be.'⁷

¹ The dervishes are an excrecence on Islām.

In rites and words like these impassioned religious feeling appears which is similar in tone and words to that which is expressed by Bishop Proclus in the sermon quoted above. The life and joy of nature is expressed now to the Muslim mind in the person of Muhammad. In the Orthodox Church of the 5th cent. and later it was expressed in the Mother of God, 'the sole bridge by which God passes to man.' The idea is the same in both, 'Purity is the material,' but in the Muslim form it is wholly disconnected with any relation to sex. Muhammad is the intercessor between God and man, and the only intercessor. But there is a price to pay for the narrowing of the scope of this idea, which results in the Muslim position of women, and in the growing dissatisfaction of many Muslims with the position that their religion assigns to women, almost excluding them from the higher departments of life. The Mariolatry of the Orthodox Church was an attempt to express in form comprehensible to an uneducated populace an idea which was latent in Christianity, but which seemed to be not clearly enough expressed to the vulgar mind. It was the purification and Christianization of the mother-worship of the old Anatolian religion. The enthusiastic devotion with which the mother-goddess was served expressed itself in forms often indeed repulsive, but corresponding to the strongest and deepest feelings of human nature.

20. Outstanding characteristics and social effects.—In this old Phrygian or Anatolian religion certain characteristics especially arrest attention.

(a) *The land is divine property.*—There is no pretence that land is national; human ownership cannot exist in any form, when the Earth herself is the supreme goddess; the divine nature cannot be the property of men. Accordingly, the land is the deity's, just as the people on it are her slaves. In this principle is found a guarantee for what practically amounts to possession by the cultivator as distinguished from ownership and dominion; and the implication of the principle becomes clear when one looks at the parallel case of the freedom of the individual. The individual is necessarily free in all human relations, in so far as he is the slave of the god; the slave of the god cannot be the slave of a human owner; and the commonest form of enfranchisement of slaves throughout the Greek world lay in the purchase of the slave by the god. According to human law, the slave could not possess any property; all that he earned was the property of his owner and master; but, if the slave earned anything, he could safeguard it by giving it to the god, who kept it for him; and in process of time, as the money accumulated, the god purchased the slave from his human master, and thus enfranchised him. The god in this way came to act as banker and money-lender on a large scale; the temple held money in trust not only for slaves but for free citizens; and it lent to land-owners and probably also to States. Similarly, when the land is owned by the god, it in practice is held on the tenure of cultivation. He who used the land was, practically speaking, its temporary owner; for he could sell the possession but not the *dominium*. The modern Turkish law in Asia Minor recognizes something of this principle, for it contains the enactment that land which has not been used by an owner for a certain short term of years ceases to be his property, and lapses to the common good; and the same law is very favourable to the acquisition of waste land by any one who undertakes to cultivate it, and whose ownership lasts only while he is actually using it.

In this way the divine ownership of the soil was a substitute for, and even better than, peasant

proprietorship. The man who made use of the land and worked it knew that no person could interfere with his right to use the land. This security of tenure by the actual cultivators was the main cause of the improvement of the land and the gradual subjugation of the soil for the benefit of their families. They gathered up the stones, and piled them. They stored up the water that fell from heaven—the gift of the god—or they brought water¹ a great distance in artificial channels from some bountiful fountain which also they recognized to be the gift of the god. They planted trees which would not begin to be useful until a number of years had elapsed. Under the divine guidance they planted and improved the crops. Thus gradually they transformed the Mediterranean lands from their natural rather sterile condition into a great series of gardens that ring round the central sea.² With war and conquest began the system of great estates belonging to owners from a ruling caste, and of cultivators attached to the soil with growing strictness.³

(b) *The influence of the goddess a guarantee of peace.*—The divine life is at once the reflexion of human life and the model or ensample for human conduct, and the influence of women tended towards a state of international peace, whereas war among the nations inevitably tends to diminish the importance of women and to increase that of the male sex. The general character of the Anatolian religion is adapted towards peace, and presupposes a state of peace as its basis. It makes use of the earth and its products, plants and animals, for the benefit of mankind, but the usefulness depends upon security of tenure. As soon as uncertainty begins whether the family of the cultivator will enjoy the fruits of his toil, he ceases to be disposed in the same degree towards cultivation. The influence of habit and the chance that he may gather the fruits lead him to continue his attention to the soil for a time, but, in proportion as uncertainty of enjoyment increases, his attention to the soil is lessened.

(c) *The goddess is the revealer of principles and the teacher of ideals to her worshippers through her prophets.* Through her influence domestic, economic, and international law are gradually established. The god in the divine family is the worker. He imparts to men the knowledge of the right way to approach the divine pair through the establishment of a ritual which he performs as the first priest, and which men imitate from him. He is the first cultivator of the soil, because cultivation of the soil is the putting into practice of the principles which are revealed, and which constitute the ritual of agricultural religion. It is the same with every department and every form of human life; the god exemplifies by his practice the way of carrying into action the principles which come from the goddess.⁴

Certain principles of international law were observed in early warfare. The goddess, who lived in peace and through peace, was striving to mitigate the sufferings and the tears of that state of war to which her ritual was opposed. There was

in Hellenized Greece a sacred month during which war was suspended, in order that the combatants should be free to celebrate the sacred festival of the summer and should be able to travel safely back and forward between their homes and the scene of the festival. There can be no doubt that the custom goes back to a very early time, and that it was a means to ensure a safe time for the gathering or the sowing of the crop—two supreme duties of the ritual marked by festivals and rites, impressive and sacred. Thus were limits set to the excesses of war. The water supply should not be interfered with, because the life of the earth depended in the Mediterranean world on the proper distribution of the water. The year's harvest, in so far as it was secured by a year's labour, might be destroyed, and thus the enemy might be vexed and overcome through scarcity and high prices, but the fruit trees were not allowed to be destroyed, because to recreate them is a matter of many years' growth, and their destruction would imply too serious an interference with the ritual of the divine command. This law of war is expressed in Rev 6⁶ 'A measure of wheat for a shilling, and three measures of barley for a shilling; but the oil and the wine thou shalt not touch.'¹

(d) *Another characteristic of the Anatolian religion which specially impressed the Greek mind was the strong hold which it had on its servants and the enthusiastic devotion with which they were affected by it.* This was due partly to mere difference of temperament: the people of Anatolia were nearer the Asiatic than the European type; and in Asia religion, as a rule, has had stronger hold of its people than in Europe (though from this we may except the Turkish races, who are usually too insensitive to be much dominated by religious enthusiasm). But the effect of the Anatolian religion on its people was due partly to its nature. It touched closely the greatest facts of ordinary life, as connected with the family, with a simple type of society, with the food supply, with the returning seasons and duties of the year. The people could not but feel that their life was staked on the observance of the ritual duties which an agricultural or pastoral religion imposed upon them. The custom of mutilation already referred to was the most striking example of this fact, and it was of such a character as to impress strongly the Greek mind by its absolute contradiction to some of the deepest feelings of the Greek nature. The religion of the mother-goddess was essentially one of enthusiasm and strong emotion.

(e) *The old Anatolian cult is essentially a religion of ideas, and the ritual comes into existence for the sake of embodying ideas in the form of acts and ceremonies, which are a method of appealing to God, as kindly and all-powerful, to benefit His creatures.* We have here to deal with what is in its essence and original character a religion, and not a system of magical rites whose object is to compel the deity to act according to the desires and caprices of a worshipper possessed of the requisite knowledge. Such is the true character of the Anatolian worship. Yet the general principle on which it is based, viz. that there are certain fixed acts and verbal formulæ through which the deity ought to be approached and to which the deity will certainly respond, is one that lends itself readily to be perverted into magic. The principle is a necessary part of the religion, in which is involved that the whole system of domestic, agricultural, pastoral, and national economy must be fixed, and that the desired result will certainly ensue if the system of acts and rites is followed

¹ Is 52 5811.

² Ramsay, *Luke the Physician and other Studies in the Hist. of Religion*, pp. 179, 191, 195-197.

³ The change of free peasants into *coloni adscripti glebæ* was accomplished when Roman law formally recognized the right of the landlord to the labour of the cultivators (A.D. 415). A big step in this change was made when Augustus recognized that all persons had a proper home (*lota*) and must return to it periodically (Lk 24); the same principle was known in 118 B.C., and explicitly stated by Roman prefects of Egypt (e.g., A.D. 154) (Ramsay, *Bearing of Recent Researches on Trustworthiness of NT*, pp. 259-272, quoting from Rostowzew, *Stud. zur Gesch. des röm. Kolonates*, p. 305, and Zulueta, in *Oxford Essays* [Vinogradoff], 1909, p. 42).

⁴ See preceding note: also the influence of the writer's Gifford Lectures, Edinburgh, 1916-17, pervades (a) and (b).

¹ Ramsay, *Cities of St. Paul*, p. 431; cf. Dt 28; less definite in Persian rules (see E. L. Hicks and G. F. Hill, *Manual of Greek Historical Inscriptions*, Oxford, 1901, p. 20).

out with perfect accuracy. This is easily perverted into the magical idea that the performance of certain acts gives to the performer a hold on, and power over, the deity. But this magical perversion is a stage in the degeneration of the religion, and not essential to it. It is not the case that the religion originates out of the magic, but that the magic is a perversion of the religion (though certainly this perversion began very early).

P

PICTS.—The Picts and all connected with them—name, race, customs, and language—have long constituted a problem upon which the most contrary views have been held, and which cannot yet be said to be completely solved.

1. Name.—The word 'Picts' has been commonly derived from Lat. *picti*, 'painted men,' but it is now generally admitted that the Latin word is the form of a native name which may or may not have referred to the Pictish (and Celtic) custom of painting and tatuing the skin. The Romans used a word which resembled the native name, and which described this custom of theirs.

The native name is connected with that of the *Pictones*, or *Pictavi*, of Gaul,¹ whose town was *Pictavi* (Poitiers), and the name *Pictones* is sometimes applied to the Picts of Scotland in Irish and Scottish Chronicles.² The Latin name must have been commonly used in Roman Britain, and became, in Anglo-Saxon, *Pectas*. As the diphthong in Poitiers corresponds to an earlier *e*, found in Ptolemy's *Πικτιώνων ἄκρον* on the coast of Poitou, Rhys conjectured that the name was *Pectones* rather than *Pictones*. The Welsh forms *Peithwyr*, 'Pict men,' and *Peitheu* must be derived from *Pect* (cf. Scots *Pecht*, A.S. *Peohtas*, Norse *Petta*). An Irish (Goidelic) equivalent, with the usual transmutation of *p* and *c*, may be *cecht*, which may give the numerous place-names with 'keith' in Scotland.³ What the native name meant is uncertain, but an equivalent is thought to exist in Irish *cicht*, 'engraver,' or 'carver' (or, according to Rhys, 'slaughterer' or 'mighty warrior'), this meaning perhaps being influenced by the Pictish tatuing custom. Nicholson derives *Picti* from an Indo-European stem *peik-*, 'tatu.'⁴

Another native name has the Goidelic form *Cruithni*, from *Qretani*, the name of Picts in Ireland and Scotland, and derived from *cruth*, 'form,' 'figure'; an Irish writer, Duaid MacFirbis, explains it as meaning the people who painted the forms (*crotha*) of beasts, birds, and fishes on faces and bodies. Rhys and Stokes refer it to *cruith-neachd*, 'wheat,' or 'that which is reaped or cut.' Hence it would still suggest the supposed meaning of *Picti*. The corresponding Brythonic name was *Pretani*, in old Welsh *Priten*, later *Prydyn* (*pryd*, 'form'). *Prydyn* means Scotland, the Pictland of the north, while *Ynys Prydain*, 'Isle of the Picts,' was the name for the whole of Britain, and thus must have originated at a time when the whole

island belonged to the *Prydyn*, or *Picts*.¹ This, then, accounts for the early Greek name *Περαιναὶ Νῆσοι*, 'the Pictish Isles.'

Rhys considers that Goidelic invaders of Britain called it by some such name as *Inis Cruithne* (from *Qretani*), 'Island of the Picts'—a non-Celtic race to whom the whole island had once belonged, according to him. On the arrival of the Brythons they changed this to *Ynys Prydain*.² Macbain, on the other hand, maintains that the *Cruithne*, *Prydyn*, or *Picts* were themselves the Celtic inhabitants of Britain, about 300 B.C., and gave their name to it.³

2. Classical notices.—Cæsar writes that the interior of Britain is inhabited by those said traditionally to have been born in the island itself, and the sea-coast by those who had crossed over from the Belgæ. The latter cultivated the land; most of the interior tribes did not, but lived on flesh and milk and were clad in skins. All the Britons dyed themselves with woad. Ten and even twelve of them had wives in common, brothers with brothers, fathers with sons; the children were held to be offspring of him who first espoused the virgin.⁴

Does the last statement refer to all the Britons or only to the interior tribes? Zimmer holds that the reference to 'all the Britons' is a parenthesis, and that the account of the interior tribes is resumed with this statement as to marriage. The interior tribes were presumably Picts, possibly Goidels; Cæsar's account of their promiscuity is probably worthless (§ 5 (b)).⁵

Cæsar knew nothing of the tribes to the north, who were certainly Pictish. His 'interior tribes' may have been Picts or Goidels, though the Goidels are thought by some to have first come to Britain from Ireland from the 2nd cent. onwards. If the Picts were a Celtic people, there must also have been aboriginal tribes separate from or mingled with them.

The northern tribes first came into notice during the time of Agricola's invasion. Tacitus calls them collectively *Caledonii*, and in his opinion their red hair and large limbs pointed to a Germanic origin. Some of their tribes fought from

chariots, like the southern Britons. They had tribal assemblies, ratified with sacred rites. Calgacus, their leader against the Romans, speaks of their harvests—which points to cultivated lands; and of their wives and children, without any reference to promiscuity. Tacitus makes no reference to the custom of painting their bodies.¹ On the whole, his Caledonians seem to differ but little from the southern tribes akin to the Gauls. Ptolemy² next describes the various inhabitants of Britain according to tribal groups.

South of the Forth and the Clyde were the Otadini and Gadeni on the east, and on the west the Selgovæ, Novantæ, and Damnonii, the last extending to near the Tay. On the east coast, north of the Tay, were the Venicones and Tæxali; west of these were the Vacomagi, then the Caledonii and Epiidii. Along the west coast were the Cerones, Creones, Carnonacæ, and Carini, separated from the Caledonii by the Decantæ. To the north were the Lugl, Smertæ, and Cornavil.

Ptolemy's tribes to the north of the Forth and the Tay correspond to Tacitus's Caledonii, the name of the largest group with whom the Romans came in contact having been given to all the tribes. These may be regarded as Picts, since their position corresponds to that of the Picts described by Bede.³ Possibly some of the tribes south of the estuaries (Selgovæ, Novantæ) may also have been Pictish. By c. 208 the tribes had apparently united into two groups, for Dio Cassius speaks of the two nations of the Caledonii and Maiatai into which the names of the others were merged.⁴ The Maiatai lived in the flattish region north of the northern Roman wall, and perhaps derived their name from *magh*, 'a plain.' They dwelt in that part of Scotland which, according to Ptolemy, had been occupied by the northern portion of the Damnonii. Dio says that these tribes neglected agriculture, but had cattle, and lived on milk, the produce of the chase, and fruits, but never ate fish. They had horses and chariots, and fought with shield, sword, spear, and dagger (? a dirk). They had community of women, and their progeny were reared as the joint offspring of each small community. They had a certain food a small piece of which sufficed a man for several days. They would also run into morasses up to the neck and live there several days without eating.⁵ According to Herodian, they punctured (tattooed) their bodies in the forms of animals, and went naked, the better to show the ornamentation.⁶

Eumenius, who first mentions the Picts by name, says that Constantius Chlorus in A.D. 306 defeated the Caledonii and other Picts.⁷ The tribes are again summed up comprehensively as Picts in the notices of the invasion of Roman Britain between the walls by them and the Scoti from Ireland or Wales in A.D. 360, and in 364 when Picts, Scots, Saxons, and Atecotti invaded Roman Britain from different directions. When Theodosius came to the rescue, the Picts are described as consisting of two divisions, Dicaledonæ and Verturiones, doubtless the equivalents of the Caledonii and Maiatai.⁸

Rhys has shown that Verturiones is the Latin form of a Celtic word which appears later as the name of the Pictish district of 'the men of Fortrenn' (Strathern and Menteith). Fortrenn is probably the gen. of Fortriu or Foirtriú, which again is found in Fothreue (Kinross and Clackmannan). On the whole, this corresponds to the region of the Maiatai. Dicaledonæ suggests the people of the two Caledonias—the regions divided by the lochs from Inverness to Fort William.⁹ Cf. Ptolemy's name for the ocean to the west of Scotland, *Δουρικανόνιον*.

Claudian says that Theodosius drove the Picts into their own region of Thule; the Scots retired to Ireland, the Saxons to the Orkneys, while he

drafted the Atecotti into the Roman army.¹ Picts and Scots returned to the attack in A.D. 387 and in later years, when the Romans had finally left Britain. The Picts, however, did not continue to hold the land south of the Forth and the Tay, except partially in the district known as Manaw or Manann, where, later, Picts, Scots, Saxons, and Brythons mingled, and possibly in Galloway, where they may have been indigenous.

Manaw or Manann included the western part of Midlothian, Linlithgow, part of Stirlingshire (where the name survives in Slamannan), and apparently Clackmannan, which also preserves the name. The part south of the Forth was known to the Welsh as Manaw of the Gododin (=Ptolemy's Votadini), to distinguish it from the Isle of Man or Manaw.²

Rhys regards the invading Scotti from Ireland who joined the Picts from A.D. 360 onwards as themselves Pictish, mixed with Celtic Goidels. They were the Cruithni of Ulster or Dál n Araide. Their name is cognate with Welsh *ysguthr*, a cutting, carving, or sculpture—hence the men who were scarred or tattooed. This name may have been given them by the Brythonic Celts, and Latinized as Scotti. The later Scots who settled in Argyllshire came from another Irish Pictish district, Dalriada, which name they gave to their new habitat.³ Zimmer also regards the Scotti and Atecotti as non-Aryan people of Ireland, conquered by the Irish Celts.⁴ Macbain regards the Scotti as Goidels, and their name as Goidelic = 'tattooed men,' Gael. *agath*, 'to lop off,' O. Ir. *scathaim*. 'It was their own name for themselves.'⁵ Skene also regards them as distinct from the Picts, and their region of Dalriada in Ireland as one of their earliest settlements among the Ulster Picts.⁶

The Atecotti were a non-Celtic folk, the Picts of Galloway, Bede's Niduari, and possibly Ptolemy's Novantæ and Selgovæ. Their name means 'the old or ancient race.' This is Rhys's opinion.⁷ Skene regarded them as a people from Ireland settled in Dalriada, but later considered them as inhabiting the district between the Roman walls.⁸

After the settlement of the Scots in Dalriada, which they took from the Picts early in the 6th cent.,⁹ and the Saxon invasions the Picts or Caledonians occupied all Scotland north of the Firths of Forth and Tay,¹⁰ except the region of Argyllshire and, later, the W. Isles. They partially occupied the district of Manaw, and were perhaps also found in Galloway. The remainder of southern Scotland was occupied by Brythons and Saxons.¹¹

3. Traditions about the Picts.—In accordance with a tendency in mediæval Celtic legends to connect races, tribes, or heroes with classical or Biblical personages and regions, the Picts were derived from Scythia. The Welsh tradition, as found in the *Brut* of Layamon, represents the Picts as coming from Scythia with their king Roderic to Alban (Scotland), where they were defeated and Roderic was slain. Their conquerors, the Britons, gave them a district in Ireland (Caithness, according to Layamon), but refused them their daughters in marriage. Hence they obtained women of the Gwdyl (Goidels) from Ireland. Their descendants are the Scots or the Gwdyl Ffichti (=Goidelic Picts), who now through these women speak Ireland's speech.¹²

The Irish tradition is found in three forms. In one of these the children of Gleoin (Gelonus), son of Ercol (Hercules), took possession of the Orkneys. Thence they were dispersed, but Cruithne seized the north of Britain, and his seven sons—Caith, Ce, Cirig, Fib, Fidach, Fotla, and Fortrenn—divided the land into as many parts. Five others

of the Cruithneach went to France, and there founded Pictavis. Thence they came to Erin, but were driven forth.¹ In the second form of the tradition the Cruithneach, children of Gleoin, came from Thrace. After building Pictavis, they came to Ireland, and helped Crimthann, king of Leinster, to expel the Tuatha Fidhba. Drostan, their Druid, ordered that the wounded should bathe in the milk of seven score white cows, and the poison of the weapons would not hurt them. They now gained power in Ireland, but Heremon drove them out, giving them as wives the widows of the men drowned when the Milesians came to Ireland. They now acquired Alban (Scotland). Some, however, remained in Ireland. Spells, charms, and omens are attributed to them. The metrical version of this legend says that they acquired their name 'Picti' from tatuing their fair skins, and that on being given wives they swore that from the mother should descend the right to the sovereignty.² A third account says that Cruithnechan went over from the sons of Mile (in Ireland) to the Britons of Fortrenn to fight the Saxons, and remained there. Wives were obtained from Ireland, Cruithnechan swearing by heaven, earth, sun, and moon that the regal succession should always be on the mother's side.³

The preface to the 10th cent. Pictish Chronicle says that the Picts are so called from *picto corpore*, because they are marked with various figures made by iron points with pigments. The Scots are so called because they come from Scythia, or because they are descended from Scotta, queen of the Scots, Pharaoh's daughter. They came to Ireland in the fourth age of the world, the Britons having come to Britain in the third age. The people of Scythia have white hair—hence they are called Albani—and from them the Picts and Scots originate. Cruide, father of the Picts dwelling in this island, reigned 100 years, and had seven sons—Fib, Fidach, Flocleid, Fortrenn, Got, Ce, and Circinn.⁴

Gildas, who appears to regard the region north of the Forth and the Tay as an island, mentions the Picts as a 'transmarine' people who, with the Scots, invaded Roman Britain. They came from the north-north-east ('ab aquilone'), the Scots from the west-north-west ('a circio'). When they were ultimately driven from the region between the walls, they settled in the north of the island.⁵ Nennius brings the Picts from the Orkneys, whence they occupied a third of Britain up to his own day.⁶ Bede brings them from Scythia to Ireland, whence the Scots directed them to Britain (where they inhabited the northern part, the Britons being in possession of the southern), giving them wives on condition that, when any difficulty should arise, they should choose a king from the female royal race rather than the male—a custom observed among the Picts 'to this day.'⁷

The origin of the Picts from Scythia or Thrace is purely mythical, and the stories of how they obtained wives may be regarded as equally so—an ætiological myth to account for the Pictish succession. The Goidelic name for the Picts being Cruithne, an eponymous Cruithne was regarded as their ancestor, while the seven districts into which Scottish Pictavia or Cruithenauith was divided supplied names to most if not all of his mythical sons—Fib: Fife and Fothreve; Fortrenn: Fortrenn (Strathearn and Menteith); Fodla: Atholl (Athfoitle) and Gowrie; Circenn: Magheircin=

Mearns and Angus; Cait: Caithness (Cathenesia). Fidach and Ce have no nominal equivalents.

The regions unaccounted for are Mar and Buchan, and Moray, Argyll being included in Dalriada. The legend must therefore have arisen after the occupation of Dalriada by the Scots.

The fact that there were Cruithni, or Picts, both in Ireland and in Scotland may account for the varying traditions of their coming first to Ireland or first to Scotland. One tradition says that both Irish and Scottish Cruithni were governed by the same kings to the number of thirty.¹

4. Who were the Picts?—Rhys regards the Picts as the non-Aryan (Ivernian) aborigines, dispossessed by the incoming Goidels, whose language they adopted, although they greatly outnumbered them. The Goidels were, however, profoundly modified by them in language, race, and customs. Having driven the Ivernians before them, they later made common cause with them against the invading Brythons. Hence there was an amalgamation of the Goidelic and Ivernian elements, and 'the term Goidelic should strictly be confined to the mixed population of Aryan and non-Aryan language in possession of the country when the Brythons arrived.'² Before Pictish, or Ivernian, died out, it was 'loaded with words borrowed from Celtic'—Goidelic and Brythonic—but it also modified Celtic vocabulary and continued the syntax of its own speech.³ Zimmer also regards the northern Celts as having become Goidelic in speech at an early period, while the southern Picts adopted Brythonic speech.⁴

The traces of alleged Pictish (non-Celtic) speech are scanty, but Rhys professed to find them in the Ogam inscriptions of the north, and at first equated it with Basque—an opinion afterwards abandoned. But he still adhered to the theory of its non-Aryan character, and continued to challenge the upholders of the Picts as Celtic to prove that the punctuated Ogam inscription at Lunastun in Shetland is Celtic: 'Ttocuhetta-ahchhtmmnn-hocvvev-nehhtonn.' The challenge seems a safe one, for, as Lang says, it is 'not merely non-Aryan, but non-human! or not correctly deciphered.'⁵

Rhys also finds non-Aryan traces in Celtic nomenclature, and, assuming totemism to be non-Aryan, argues as to its existence from names like MacCon, 'Hound's son'—the name of a legendary prince whose rule extended from Ireland to Britain. Hence 'MacCon may, perhaps, be regarded as representing the whole non-Celtic race of these islands.' Totemism, however, may have been Aryan, and a personal name is not evidence of clan totemism. He also argues for the non-Aryan character of the Picts from their custom of succession through the mother, traces of which he also finds in the names and relationships of Irish and Welsh mythology.⁶ Zimmer accepts the Pictish succession through the female line, as well as the classical references to promiscuity in the Celtic region, and incest incidents in Irish saga, as pointing to non-Aryan marriage relations. In the case of the sagas, the Celtic invaders of Ireland being in a minority, the aboriginal customs would not be changed at once, and have left their impress in legends.⁷

Skene's whole theory of the history of the Picts is connected with his opinion that there were two divisions of them, eventually distinguished as northern and southern Picts. This is based on Bede's statement that the northern Picts were separated from those of the south by 'steep and

rugged mountains,¹ but such a distinction as Skene asserted is probably fallacious. His 'northern Picts' were Gaelic in race and language; the 'southern Picts' were also Gaelic, but, the Damnonii between the Forth and the Tay, who 'belonged to the Cornish variety of the British race,' having been incorporated with them, they introduced a British (Cornish) element into their language. The Damnonii are the Britons of Fortrenn.²

Skene's arguments for the Picts as Goidelic in race and language may be summarized as follows. (a) The Welsh designation for the Picts, Gwydyll Ffichti, shows that, since all Goidels were called Gwydyll by the Welsh, the Picts were thus assigned to that race. The term, however, is not an early one, nor is Ffichti the regular rendering of Picti in Welsh.³ (b) St. Columba's occasional but not constant use of an interpreter while preaching to Picts was necessary because the difference between Pictish and Irish resembled that between Breton or Cornish and Welsh, which are not always mutually intelligible. The difference may none the less rather have resembled that between Irish and Welsh. (c) Gaelic was spoken in Galloway at a late day, and in the 12th cent. Richard of Hexham and Reginald of Durham called the Gallowgians Picts.⁴ As to this it should be noted that there was an early Brythonic element in Galloway, but the district had been overrun by Goidels, which accounts for the predominance of Gaelic there. The name Picts may have been given to them by those English writers on account of the peculiarity of their language. (d) Many Pictish personal names in the lists of kings are of Irish form; others show a mixture of Brythonic, Gaelic, and Teutonic. The last is accounted for by the sway of the Angles over the Picts in certain districts; the Brythonic element came from the 'Britons of Fortrenn' (the Damnonii), who spoke a dialect akin to Cornish. (e) When the place-names are studied according to strict rule, the generic terms show no Cymric element in the districts occupied by the Picts. Thus 'Pen' does not occur north of Forth and Clyde. (f) Legend attributes a Goidelic speech to the Picts, acquired by them from the Irish women whom they married.⁵ This, however, only suggests that the Picts once spoke some other language, or perhaps some other Celtic dialect.

Nicholson is also of opinion that Pictish was a language virtually identical with Irish. He holds, however, that the loss of Indo-European *p* was comparatively late in Goidelic dialects—Pictavian, Sequanian, Belgic, Menapian, proto-Irish, and proto-Pictish—but that *p* was lost in literary or old Irish. *P* in Celtic speech is therefore not always a mutated *qu* or *b*, but may be original and a sign of Goidelic occupation. Insular Pictish, like Pictavian in Gaul, was a Goidelic dialect with *p* preserved to historic times. Highland Gaelic is descended from Pictish, not from the Irish speech of the Dalriadic Scots, who did not conquer the Picts. The word 'Pict' is derived from a root *peik-*, 'tatu,' with *I E p* preserved. He also holds that the Belgii were Goidels, and are found not only in Gaul and Britain, but also in Ireland. They are the Fir Bolgs of Irish legend, and, with the Fir Domnann (=the Damnonii) and Fir Galéoin (Picts), were Goidels who preserved *p*. The Kymry or Brythons of other writers—Gaulish, Welsh, Cornish, and Breton—were the first Celtic arrivals in Britain. Then came the Goidels, who drove the Kymry into the interior in pre-Roman times, where later Cæsar found them.⁶ If, however, this order of occupation—the opposite of that usually accepted—is true, it is difficult to account for the presence of Goidelic Picts in Scotland, where presumably the Kymry would have retired before them.

Whatever may be said of these views, it is certain that neither Skene nor Nicholson sufficiently faces the fact that, rightly or wrongly, the early notices of the Picts regard them as differing from the Scots in origin, language (dialect), and the matter of the kingship.

¹ Bede, *HE* III. 4.

² *Celtic Scotland* 2, i. 281.

³ Cf. Macbain, in Skene's *Highlanders* 2, p. 408; Rhys, *Celtic Britain* 4, p. 242.

⁴ Skene maintains that the language of Gildas shows that Picts remained in the region between the walls after the last incursion, and that Bede's Niduarian Picts=Picts of Galloway (*Chronicles*, p. cviii, *Celtic Scotland* 2, i. 133).

⁵ See Skene, *Four Ancient Books of Wales*, i. ch. 7 ff., *Celtic Scotland* 2, i. 194 ff.

⁶ Nicholson, *Celtic Researches*, p. 110 f.

Some writers are of opinion that no Goidel occupied British soil except from Ireland. Macbain regards the Picts, the Caledonii of Tacitus, the Pretanoi of Pytheas, as the first Celtic incomers to Britain, c. 600 B.C. They were 'a Celtic-speaking people, whose language differed both from Brittonic and Gadelic, but at the same time only differed dialectically from the Gaulish and Brittonic tongues.' Their language, unlike Goidelic, was of the *p* class of Celtic speech, and they were driven west and north by the incoming Belgi. They were thus Cæsar's aborigines of the interior.

Macbain shows that Skene's philological arguments for Pictish=Goidelic are defective. Bede speaks of the various dialects or languages spoken in Britain—those of the Angles, Britons, Picts, Scots, and Latins. Pictish was thus different from both Brythonic and Gaelic. Again, the Cruithni of Ulster were Pictish incomers from Scotland who had become Gaelic-speaking. The Irish looked upon them as a people different from themselves. The classical names from the Pictish area are mainly Celtic, and a third of them are nearer Brythonic than Gadelic. The lists of Pictish kings are 'decidedly British in phonetics.' Place-names in the Pictish region, excluding the Isles, Caithness, and Sutherland, which are largely Norse, show a veneer of Gaelic, since the Scots imposed their language as well as their rule on the Picts, but they are 'very different from names on Gadelic ground—Ireland and Dalriada.' The prefixes *aber* and *pet*, unknown to Gadelic, are found from Sutherland to the Forth.¹ The former is often superseded by Gaelic *inver*, the latter by *baille*.² Skene regarded *aber*, *inber*, and *cumber* or *cymmer* as originally common to both branches of the Celtic language, retained in some dialects, obsolete in others;³ but it is surely significant that *aber* does not occur in Argyll (Dalriada).

Other Celtic scholars, Windisch³ and Stokes, also regard Pictish as Brythonic rather than Goidelic. Stokes, after collecting and examining all the known Pictish words down to the period of the Irish annalists, comes to the following conclusion:

'The foregoing list of names and words contains much that is still obscure; but on the whole it shows that Pictish, so far as regards its vocabulary, is an Indo-European and especially Celtic speech. Its phonetics, so far as we can ascertain them, resemble those of Welsh rather than of Irish.'⁴

D'Arbois de Jubainville identifies the Cruithni of Irish legend, who fought against the Fir Fidge, with the Brigantes, a British tribe located by Ptolemy also in the south-east of Ireland. Their Druid Trostan has a name akin to that of the Arthurian Tristan. The Fir Fidge are the Manapii, a tribe identical with the Belgic Menapii. The Brigantes, inhabitants of Britain (Prydyn), were called Cruithni=Pritanicos, by the Irish.⁵

Where philological experts are so much divided on the question of language, it is clear that it cannot be regarded as settled. If, however, the Picts were a non-Celtic race, they could not have remained so unmixed with their Celtic conquerors as Rhys's theory demands. And, again, granting that they were Celtic=Goidelic or Brythonic—such incoming Celts must have been numerically small compared with existing aboriginal tribes, which would again imply a mixture of races. Whatever the Picts were, it appears certain that they either adopted or retained Celtic speech.

5. Pictish customs.—(a) *Painting and tattooing.*—Cæsar says that all the Britons dyed themselves with woad;⁶ and Herodian says of the northern tribes (the Picts) that they tattooed themselves with coloured designs and figures of animals of all kinds, and did not wear clothing, in order that these might be seen.⁷ The custom is also ascribed to them by Duaid MacFirbis as an explanation of

⁷ Herodian, iii. 14. 8.

their name: a Cruithneach, or Pict, is one who takes the forms, or *cruths*, of beasts, birds, and fishes on his face and body. This probably represents a tradition in Ireland. Far earlier Isidore of Seville explains the name Scotti as derived from their custom of tatuing, and this explanation of the name Picti is given in the Pictish Chronicle (see § 3). Tatuing may have been common to all Celtic tribes at one time, and Claudian personifies Britain as a woman with tatued cheeks.¹ Faces depicted on Gaulish coins have marks on them which appear to be tatu marks.² Probably no great distinction need be drawn between painting and tatuing. Among other peoples these customs are ornamental, are used to produce a frightful appearance, or have totemistic significance. Herodian and Caesar associate the British custom with the first two of these respectively, but they were not likely to connect it with totemism if that existed in Britain. There is no reason to believe that tatuing was peculiar to the Picts among British tribes.

(b) *Descent through women.*—The community of women ascribed by Caesar to all the British tribes (or, according to Zimmer, to those of the interior), by Dio to the Caledonians, by Strabo to the Irish (along with incest), and by the interpolator of Solinus to the people of Thule (Shetland), and, in the Hebrides, to the king, who was not allowed to possess a wife, but borrowed such women as he wanted, is regarded by Rhys³ and Zimmer⁴ as a non-Aryan practice among people in Scotland and Ireland who were not Celts, i.e. the Picts, and as explaining the peculiar Pictish law of succession through women. Macbain also regards this succession as non-Aryan, but adopted by the Picts (Celts) from the aborigines whom they conquered.⁵ It is, however, most unlikely that the Picts, whether Celtic or not, who had advanced beyond savagery and whose general customs differed but little from those of known Celtic tribes, had such absolute community of women as these classical writers describe. We may regard it (1) as fabulous, since it is difficult to see how a society based on the matriarchate could indulge in such promiscuity as Caesar's words denote, or (2) as a mistaken interpretation of marriage customs with which the Romans were unfamiliar. Nor need we suppose with Zimmer that promiscuity and incest incidents in Irish sagas are necessarily non-Aryan customs surviving after the Celtic conquest. They have parallels in all mythologies and all societies. As to the Pictish succession with which these customs are said to be connected, we find from the lists of Pictish kings that brothers by the same mother succeeded each other—not an unusual feature in male succession⁶—but no son succeeded his father, who was sometimes a foreigner. When brothers failed, the succession went to a sister's son or to the nearest male relative on the female side. This explains Bede's statement cited above (§ 3). Bede does not make the succession through women absolute; succession through males took place up to a certain point. All this has been explained as an instance of the matriarchate, and therefore non-Aryan. Lang, however, notes that words exist in Greek denoting kinship on the mother's side.⁷ It has also perhaps been assumed too hastily that the evidence points to the matriarchate. In northern Welsh law, when a woman married a stranger, her son had a right to the inheritance of her father, because 'the stranger, entering the

family, brought to it strength, and the nephew, son of the stranger, became the continuator of the grandfather, in some sort his son.'¹ In Ireland by special favour right of inheritance was given to a daughter's or sister's son born of a stranger. Accordingly, d'Arbois de Jubainville explains Bede's statement by the astonishment caused to Anglo-Saxons by the law of inheritance allowed by Celtic custom in the case of sons of daughters in concurrence with their cousins, sons of sons. The Picts had not a law of inheritance differing from that of the Irish or Welsh, and the facts do not require to be explained by the matriarchate.² Already, too, the importance of the sister's son is seen in ancient Celtic history, where, in 400 B.C., King Ambicatus placed each of his sister's sons at the head of an army, the one conquering Bohemia, the other N. Italy.³ D'Arbois de Jubainville's explanation, however, hardly covers the anomalies of the list of Pictish kings, if that is to be regarded as in any way authentic. In Irish and Welsh sagas, where divine groups are called after the mother, or where gods and heroes have often a matronymic, while the father's name is omitted, we may have something analogous to the Pictish succession—some custom perhaps akin to the matriarchate.⁴ But this is so deeply embedded in Celtic myth that we can hardly imagine that it is all borrowed from hypothetical non-Celtic custom, as Rhys maintained.⁵

6. *Religion of the Picts.*—Neither the classical observers nor the biographers of saints who laboured among the Pictish tribes discuss the native religion. As far as the latter are concerned, Ailred in his *Life of St. Ninian* speaks of the southern Picts worshipping deaf and dumb idols⁶—a vague statement. Adamnan speaks of the northern Picts as possessing Druids who extolled their own gods as more powerful than the God of the Christians.⁷ Their magical acts resemble those ascribed to Irish Druids, and Adamnan does not appear to know any difference between Pictish and Celtic Druids. He refers to the fountain which St. Columba found in Pictland, 'famous among this heathen people and worshipped as a god.'⁸ The saint blessed it and caused 'the demons' to depart from it for ever.⁹ The cult of wells was common among the Celts and is almost universal. If the Picts were a Celtic folk, their religion may be estimated from what is known of Celtic religion elsewhere (see art. CELTS). Bede says that the southern Picts, i.e. those tribes dwelling in the region immediately north of the Forth, were converted to Christianity by St. Ninian.¹⁰ This must have been about the beginning of the 5th century. The tribes beyond these, the so-called northern Picts, were converted by St. Columba and his followers. Columba encountered the Druids of King Brude at Inverness, and preached to and baptized the king and many of his people in the latter half of the 6th century.¹⁰

7. *Later history of the Picts.*—The history of the Picts from the 7th cent. to the time of Kenneth MacAlpin is one of internecine feuds, strife with the Scots of Dalriada and with the Angles. The usual view has been that eventually Kenneth MacAlpin, king of the Dalriadic Scots, overcame

the Picts, and ruled over them as king of the Scots, or, according to the 10th cent. Pictish Chronicle, extirpated them—an obviously absurd statement. But Skene, following Pinkerton to some extent, maintained that Aengus MacFergus, the Pictish king from 731 to 761, defeated the Scots and took Dalriada, which now became a Pictish province. In 832 Alpin, of Scottish race by paternal descent, but, as his name shows, a Pict by maternal descent, as king of the Scots fought the Picts and was defeated. His son Kenneth eventually obtained the throne of the Pictish kingdom. This was not the result of a foreign invasion. The events are rather to be regarded as a war of succession; Alpin and Kenneth had a claim through maternal descent to the throne and were supported in that by a party among the Picts and by the remains of the Scots of Dalriada. The Picts, a Gaelic-speaking people like the Scots, were not conquered, and suffered no change of language. There was a more or less silent revolution, a mere matter of succession according to Pictish law, and the modern Highlanders represent the older Picts.¹ Nicholson urges similar views, and points to the unsubstantial nature of the evidence for a Scottish conquest of the Picts (the fact that Alpin and Kenneth are names borne previously by Pictish, never by Dalriadic, kings), to the improbability of the Pictish nation being conquered by their Scottish subjects, as well as to the fact that the Annals still describe Kenneth and his successors as 'rex Pictorum.' Thus the position is somewhat analogous to the change which set James VI., a Scottish king, on the English throne. There was no conquest of the English in this case or of the Picts in the other case.² These views have been strongly combated by Macbain, who insists that the documents are not rightly handled, and that a wrong value is put upon some of them. He shows, e.g., that, though Aengus conquered Dalriada, the Annals insert this significant note, 'wane of Aengus's kingdom.' Yet the conquest of the Picts cannot be clearly explained from our present materials. There had been dynastic wars— attempts to break the Pictish rule of succession. The Scots were aggressive, and superior in culture, and eventually their Gaelic speech both in Pictland and in Strathclyde 'wiped out the original Pictish and British.'³

The problem involved here is entirely one of evidence drawn from obscure documents and of probability, while the view adopted of the original Pictish tongue, Brythonic or Goidelic, must necessarily affect the results. Whatever theory is followed, it is certain that there must be a large Pictish admixture among the Scottish people in the region north of the Forth.

3. The Picts in folk-tradition.—With the disuse of their name in connexion with actual peoples, the 'Picts' or 'Pechts' came to be associated in folk-tradition with megalithic remains and large buildings and with myths of their origin. From being a historic folk, they became a mysterious people, more or less supernatural, and usually considered as of small stature.

'Pecht' in Shetland is synonymous with 'dwarf';⁴ in Aberdeenshire 'picht' means 'a small person,' and in the south of Scotland the 'peghs' are regarded as dwarfs, 'unco wee bodies, but terrible strong'—their immense strength being necessary on any theory of their having been able to move easily the large stones of archaeological remains, etc., attributed to them. Hence D. MacRitchie regards the Picts as a former dwarf race in Scotland, equivalent to the fairies of popular

belief¹ (see art. FAIRY, § 6). That the Picts were not a small race is proved by what Tacitus says of the Caledonii, nor is there the slightest scrap of historical evidence for the theory. The so-called 'Picts' houses' or 'earth houses'—low underground passages terminating in one or more chambers—need not indicate that they were constructed or used by people of small stature. Their position necessitated a constricted height, they were probably store-houses or hiding-places like those described by Tacitus (*German.* 16) among the Germans of his day, and not regular dwelling-places, since they are generally associated with remains of surface dwellings. Scattered over the Pictish area in Scotland, and perhaps of post-Roman date, they may quite likely have been constructed by the Picts, in which case the tradition of their origin would be authentic.

Generally speaking, however, the tradition which ascribes all mysterious or large structures to the Picts (e.g., Glasgow Cathedral) is analogous to wide-spread traditions elsewhere in which the origin of megaliths and colossal remains is ascribed to fairies, dwarfs, giants, the devil, Cyclops, etc.

LITERATURE.—The classical sources have been referred to in the article; the post-classical sources are collected in W. F. Skene, *Chronicles of the Picts, Chronicles of the Scots, and other Early Memorials of Scottish History*, Edinburgh, 1867. See also Bede, *HE*; Nennius, *Historia Britonum*, Irish version, ed. J. H. Todd, Dublin, 1848. The older authorities are mainly: G. Chalmers, *Caledonia*, 3 vols., London, 1807-24; T. Innes, *Essay on the Ancient Inhabitants of the North of Britain or Scotland*, 2 vols., do. 1729, new ed. in 'The Historians of Scotland' series, viii., Edinburgh, 1879; J. Pinkerton, *An Enquiry into the Hist. of Scotland preceding Malcolm III.*, new ed., 2 vols., Edinburgh, 1814, *Dissertation on the Origin and Progress of the Scythians or Goths*, London, 1787. More modern works are: J. Loth, 'Les Pictes d'après les travaux récents,' *Annales de Bretagne*, vi. [1891] 111 ff.; A. J. A. MACCULLOCH.

PIETISM.—I. Use of the term.—(1) Pietism is used in a general sense to indicate a religious attitude of devotional feeling; (2) by Heppé, Ritschl, and others, the term is extended to cover all similar tendencies during the past three centuries; (3) the Roman Catholic 'pietists' are the brethren and sisters of the pious and Christian schools founded by Nicholas Barre, in 1578, for the instruction of girls and boys.

As a proper name, however, the term belongs to the movement which arose under Spener towards the close of the 17th century. Like the term 'Methodist,' it was originally bestowed in contempt.

2. The religious life of Germany at the rise of the movement.—The close of the Thirty Years' War in 1648 left German Protestantism in an impoverished condition. The Lutheran Church was ruled from without by the civil governments of the various States, and from within by theologians as autocratic as the papacy. Both civil and theological rule tend more to vigilance over doctrine than to care for Christian character. The result was that, whilst orthodoxy was never more outwardly alive, it was never more inwardly lifeless. The clergy had not entirely forgotten their functions, it is true, but they were obsessed with the belief that, if there were sound doctrine, as a necessary consequence all else would be right. Luther had placed the seat of faith in the heart, but emphasis had now shifted to the intellect.

⁴ See an amusing instance of this in Lockhart's *Life of Sir Walter Scott*, ch. 29, and Scott's *Pirate*, note 1.

It was held, accordingly, that, if intellectual knowledge (*illuminatio*) were correctly imparted, it would assuredly direct the will aright. Luther had placed the Bible above dogma. The order was now reversed, and a creed-bound Church neglected the Bible in home, school, university, and service. Theological controversy was both frequent and acrimonious. Lay rights were subordinated to pastoral prerogatives. Matters were somewhat better in the Reformed Church, and its presbyterian form of government gave a larger place to the laity; but even here the taint of legalism and the spirit of self-righteousness were only too often in evidence.

Upon this clouded sky Pietism arose, bringing a clearer and purer light. Beginning modestly in an attempt to improve the religious life of Frankfurt, it spread rapidly through Middle and N. Germany. Among the forerunners of the spirit rather than the system of Pietism may be numbered Jakob Boelme (*q.v.*) the mystic, Johann Arndt, and Theophilus Grossgebauer, but the history of Pietism proper is almost entirely bound up with the life, work, and personality of the two great leaders who together and successively gave it inspiration and guided its course, namely P. J. Spener and A. H. Francke. Within the span of their lives may be measured the rise, the growth, and at least the beginning of the decline of Pietism. To sketch their biographies is therefore, in the main, to recount the history of the Pietistic movement.

3. History of the movement; lives of Spener and Francke.—(a) *Philipp Jakob Spener*, 'the father of Pietism,' was born at Rappoltswiler, Alsace, in 1635. Trained under the influence of a devout godmother, he was impressed early in life by reading Arndt's *Vom wahren Christenthum* (Brunswick, 1606-09). Whilst a student at Strassburg, he found his 'father in Christ' in Johann Schmid. Taking his master's degree by a disputation against Hobbes's philosophy, he continued his studies at Basel, Geneva, Stuttgart, and Tübingen. At Geneva the influence of A. Leger and Jean de Labadie, the ex-Jesuit, combined with the piety, mysticism, and strict discipline of the place to shape his character. At Tübingen he read Grossgebauer's *Wächterstimme aus dem verwüsteten Zion* (Frankfurt, 1661). In 1663 he became preacher at Strassburg, and lectured on philology and history. In 1666 he removed to Frankfurt as chief Lutheran pastor. Here in 1670, developing an idea which he had previously tried at Strassburg, Spener instituted his famous 'Collegia Pietatis,' first in his own house, and subsequently in the church. His aim was to promote fellowship and Bible study; his means were catechizing, lecturing, and discussion. The name, and, according to Ritschl, the idea of such gatherings originated in Holland, where the 'Collegiants' met 'in collegia' for worship; but this has scarcely been proved. The attempt, inspired by good motives, was imitated, however, and in less capable hands, often indeed in the absence of all leadership, the Collegia gained a name for promoting heresies, fanaticism, and even graver abuses. Spener finally suppressed the meetings. Some were continued despite this, and mostly became separatist communities which seriously injured the good name of Pietism.

In 1675 Spener's *Pia Desideria* appeared in Frankfurt. In it he advocated (1) earnest Bible study conducted in 'ecclesiolæ in ecclesia'; (2) a lay share in Church government, as the proper consequence of the Christian doctrine of the priesthood of believers; (3) that knowledge of Christianity is practical, not theoretical, and shown in charity, forgiveness, and devotion; (4) that, rather

than denouncing their errors, sympathetic treatment should be given to unbelievers, to win them, if possible, to truth; (5) that theological training should be reorganized, and emphasis laid on devotion rather than on doctrine; and (6) that preaching should be more practical and less rhetorical. Spener followed up his contentions in *Das geistliche Priesterthum* (Frankfurt, 1677) and *Allgemeine Gottesgelehrtheit* (do. 1680). In spite of the opposition of the orthodox, Spener's influence increased, and in 1686 he became court chaplain at Dresden. Here he offended the elector by rebuking his vices, but refused to resign his post. The Saxon court met the difficulty by obtaining for him the rectorship of St. Nicholas, Berlin, with the title Consistorial Inspector. Here, in a court where the tendency was rationalistic, Spener's true piety was honoured and appreciated.

In 1694 the University of Halle was founded, and Spener assisted in nominating the professors. Spener's coadjutor in the affairs of Halle was Christian Thomasius (1655-1728), the jurist and publicist. Thomasius is an interesting figure. A disciple of Hugo Grotius and Samuel Pufendorf, he had been professor of Natural Law at Leipzig. His views were provocative. He attacked traditional methods in law and theology alike, advocated toleration for all, even for such outlaws as witches and atheists, and advised mixed marriages between Lutheran and Calvinist. Denounced from the pulpits and forbidden to write or lecture, Thomasius had to flee to Berlin to escape arrest. Here he received a welcome, and, taking part in the formation of Halle University, became its rector and professor of Law. In regard to ecclesiastical matters, Thomasius contended that a sharp distinction must be made between that which is inward and that which is external in religion. Questions of piety and of doctrine are inward. The State should therefore leave them alone. In the external matters of worship and Church life, however, the State may rightly interfere, if necessary, to promote the general wellbeing of the country and to maintain peace and order. Thus rendering to Cæsar and to God the things which were respectively theirs, Thomasius reconciled his own broad sympathies with his position as a State servant. Personally he was in the main orthodox, holding that revealed religion was necessary for salvation. Though never a Pietist, and indeed not of the Pietist temperament, Thomasius is interesting as an example of the broader tendencies of his age. He maintained cordial relations with Spener, though in later life he parted from Francke. It is obvious, however, that he had much in common with Pietism's spirit of toleration and its undoctinal bent, and his work at Halle binds his name indissolubly with the Pietistic movement.

Meanwhile Spener's influence was creating jealousy. The theological faculties of Wittenberg and Leipzig attacked him bitterly, the former censuring in 1695 no fewer than 264 errors laid to his charge. This thunderbolt fell harmlessly, however, and Spener reiterated his position in his *Theologische Bedenken* (Halle, 1700-02). His influence maintained itself, and the Pietistic movement continued to flourish. In 1705 Spener died in Berlin.

Spener's was a quiet, well-balanced mind. Himself a profound Bible student and a charitable practical man of devotion, he united Luther's stress upon Scripture with the insistence which the Reformed Church laid upon conduct. Strictly speaking, he was neither mystic nor quietist. He was not a separatist, nor did he desire that Pietism should become a separatist movement. Ritschl indeed declares that he was not truly a Pietist,

because he did not share in the more pronounced developments of Pietism, such as insistence upon a conscious crisis as necessary in the process of salvation, and a complete breach with the world. If this is an extreme statement, it is none the less true that, except for his insistence on the need for regeneration before a man should teach theology, and a belief that the restoration of the Jews and the fall of the papacy would precede the final victory of Christianity, there was little to distinguish Spener's views from the orthodox Lutheran creed of his day.

(b) *August Hermann Francke*, the second great leader of Pietism, was born at Lübeck in 1663. Losing his father at an early age, Francke owed his religious training to a godly mother. He studied at Erfurt and Kiel, where he first met Pietistic influences in the person of Christian Kortholt. He proceeded to Leipzig, where he became an accomplished Hebrew and Greek scholar, graduating in 1685. Here, with Paul Anton and Johann Caspar Schade, he founded the Collegium Philobiblicum to enable graduates to study the Scriptures together, both philologically and practically—a venture of which Spener expressed approval. Francke subsequently visited Spener, and, ultimately returning to Leipzig, lectured to crowded audiences. Opposition, however, soon arose, and Francke's Bible College was suppressed and his lectures forbidden. He thereupon withdrew to a pastorate at Erfurt, but a similar outburst of opposition caused the civil authorities to expel him at forty-eight hours' notice on the charge of forming a new sect. Three months later, at the end of 1691, Spener secured for him the unsalaried chair of Greek and Oriental Languages at Halle (where his colleagues were Anton, Joachim Lange, and Joachim Justus Breithaupt) and a pastorate at Glaucha. Here Francke remained for thirty-six years until his death in 1727, exchanging, in 1698, his former position for the chair of Theology.

Francke was a man of real gifts, eloquent, learned, saintly, and industrious (for his remarkable philanthropic work see below). It is said that, as a token of the respect which his character evoked, the whole town followed his body to the graveside. As a writer Francke was less able than Spener, but, besides controversial pamphlets, he left several works for students and some books of devotion.

With the death of Francke the activities of Pietism waned. Its main power was wielded in N. and Middle Germany, but it exercised some influence throughout Europe, and especially in Switzerland. Frederick I. supported the movement, decreeing in 1729 that all who desired appointments in Prussia must study two years at Halle. Frederick II. was unsympathetic, however, and Valentin Ernst Löschler of Dresden headed an opposing movement. While Pietism withstood this in the main successfully, by the middle of the 18th cent. its force was largely spent, although the violence of the opposition weakened contemporaneously with the decline of Pietism. During the period of rationalism which followed Pietism was quiescent, but its spirit, at least, subsequently revived, and, in better fellowship with orthodoxy, is not yet dead in German evangelical Church life.

A more moderate form of Pietism, centring in Württemberg, flourished longer. Its leader was the famous Johann Albrecht Bengel (1687–1752), together with Friedrich Christoph Oetinger (1702–92) and others. Schaff compares the Württemberg Pietists in their relation to Lutheranism with the early Methodists and Anglicanism. They aspired to be a movement within the Church,

holding prayer-meetings, conducted by lay leaders (*Stundenhalter*), but attending church service and the sacraments. Unlike the Methodists, however, they did not entirely break away, the main body tending to become more churchly without being strict Lutherans. Some communities, like those of Kornthal and Wilhelmsdorf, seceded, following the tendency of so many Pietistic centres to become separatist.

The reaction against rationalism under Baroness von Krüdener was inspired by Pietistic influences, as was the party led by Ernst Wilhelm Hengstenberg which flourished at the close of the Napoleonic wars. It was mainly distinguished by its opposition to the scientific study of theology. But these were after-effects. The direct influence of Pietism ceased by the middle of the 18th century.

4. *General principles of Pietism; its strength and weakness.*—Spener's basis was experience. Without attacking doctrine, he relegated it to a minor place, emphasizing the will rather than knowledge, and insisting that justification by faith must be by a faith supported by works, such as repentance, conversion, and a changed life. A certain Puritan strain was manifested in the Pietist's condemnation of theatres, dancing, and such pursuits (adiaphora), and in the insistence that the regenerate alone were fitted to teach theology—a point which, somewhat strangely, gave great offence. Some Pietists indulged in millenarian speculation; many dabbled in mysticism; but, in the main, Pietism is justly to be called a movement of revaluation, which tried to attach to regeneration and sanctification as accomplished facts a higher value than to justification by faith as an approved theory. Pietism has been described as the last fruit of the heart-religion originated in the Franciscan movement; and also as the last great surge of the waves of the Reformation, and the final form of its Protestantism. Neither description is strictly accurate. 'Heart-religion' did not start with the Franciscans or end with Pietism; nor are the waves of the Reformation spent. Pietism was the reaction of the spirit against the letter. It sprang up in protest against the formalism of its day. But it represents a permanent spirit, for, just as tyranny provokes rebellion, and licentiousness creates a Puritan reaction, so will formalism always call up some form of Pietism.

The opposition to Pietism, as the lives of Spener and Francke reveal, was violent. It took the form of controversial literature, such as *Imago Pietismi* (1691), floods of pamphlets, heresy charges, and processes in the civil courts. Its first ground was doctrinal. The contemporary opponents of Pietism seized upon its antidoctrinal, or at least undoctinal, character, alleging that it impoverished the doctrine of justification by faith by laying stress upon the subjective rather than the objective aspect of faith. They declared that Pietism was indifferent to the importance of correct knowledge in religion, and thus uprooted all sound theology. The Pietist stress upon the will offended the orthodox, who regarded the work of the Holy Spirit in conversion to be primarily in the illumination of the understanding, whereas the Pietists regarded it as consisting rather in the stimulation of the will. The later critics, however, chiefly bring charges of another character, mainly of fanaticism, though others see in the movement a retrograde tendency to Catholicism. It is suggested that the subsequent deterioration of Pietism was involved in its own principles. Its insistence upon new birth, separation from the world, and acute repentance is alleged to have led to exaggeration and frequent fanaticism. It is said to have indulged in wild prophecies, mysteries, bloody sweats, the formation

of independent communities, some fanatical like the millenarians, others criminal. A long list of unsavoury scandals can be collected, and men, like Gottfried Arnold (1666-1714), who began as Pietists and ended as fanatical mystics are quoted as examples. It is said that registers were kept for souls, and idle people supported themselves by uttering the shibboleth of Pietism, whilst others committed suicide in religious mania. Such criticism, however, defeats its own ends. It represents the Pietism of Spener and Francke as little as gluttony and drunkenness represent the philosophy of Epicurus. Pietism must be judged in the form in which it was presented by the actual leaders of the movement, not in the excesses to which it degenerated apart from their control. In this statement, however, the main weakness of Pietism is revealed. It was the lack of central control. Unlike Wesley, Spener allowed the movement that he initiated to develop unorganized and largely undisciplined. He let liberty become licence, and it led to degeneration. Spener judged that organization had killed spirituality in the Lutheran Church, but among the Pietists the lack of organization led to the same result. There were other causes. Pietism proclaimed a gospel of individual rather than universal salvation. It tended to leave the Church and the world as evil and to seek purity in isolation. There was also opposition, and subsequently the undermining influence of the rationalistic movement. But the chief cause of the decay of Pietism was none the less the false individualism which left every Pietist community free to direct its own destinies in its own way. The decay of Pietism came when it had worn down opposition; and the influence of rationalism, though hostile, is least potent of all against spiritual movements. One can but conclude that the prime cause of the ultimate failure of Pietism to maintain itself lay in the fatal error of believing that spirituality needs no organization.

5. **The results of Pietism.**—(a) *In the Church.*—Though the critics of Pietism allege that the *ecclesiola in ecclesia* weakened Church organization and led to separatism, there is little doubt that Pietism tended in the main to restore vitality to the Church. It showed afresh the importance of religious experience; it revealed the religious value of feeling and of practical Bible study; it vindicated lay rights. It led to some improvement in the conduct of worship and a better liturgy. It gave a fresh impetus to hymnology and religious poetry. Paul Gerhardt's hymns proved an inspiration to the Pietists, and stimulated their own production. Spener and Francke both wrote hymns, though Spener's are poor and Francke's few. Better known are those of J. A. Freylinghausen; whilst among the hymn-writers influenced more or less by Pietism may be counted W. C. Dessler, B. Schmolck, J. J. Schütz, and G. Tersteegen. Although the Pietistic movement died out without effecting the thorough renewal of the life of the Church which it aimed at securing, its indirect influence tended to restore a truer conception of religion and a more intelligent form of worship, and the legacy which it left became the joint property of many subsequent forms of evangelical revival.

(b) *Philanthropy.*—Perhaps the most enduring result of Pietism was the fresh impetus which it gave to philanthropic work. Francke established the famous Halle schools in 1795, and the foundation still exists. The work began modestly with a ragged school in his own house. Two years later a special building was taken, which had grown at the time of Francke's death to a large institution, supporting nearly 150 orphans, and educating between 2000 and 3000 poor children, for the most

part gratuitously. The system of education was both religious and technical. It embraced natural science, physical exercises, various trades, and the German tongue. One by one were established a printing press, hospital, library, farm, brewery, and laboratory. A teachers' training college was also added and a Bible Society under Karl Hildebrand von Canstein. The best side of Pietism is illustrated in the Halle orphanage—a work which gained for it the support of those to whom its purely religious propaganda did not appeal.

Pietism was also a pioneer in foreign missionary activities. Frederick IV. of Denmark, acting under the influence of Julius Lütken, the court preacher, who was a friend of Spener and Francke, sent men to Halle for training, and asked Francke to find missionaries to Danish E. Indian possessions. In 1704 a mission was thus established at Tranquebar, and the Danish-Halle mission received the congratulations of George I. of England. The Moravian missionary movement also owes much of its strength to the Pietist strain in its ancestry.

(c) *Other movements.*—The Moravians (*q.v.*) may be regarded as indirectly an offshoot of Pietism. Zinzendorf was Spener's godson and a pupil in the Halle schools. From Pietism he learned not only the missionary fervour which characterized the Moravian community, but the emphasis on vital religion also. Through the Moravians the Pietist influence came down to Schleiermacher (*q.v.*), and is found in the insistence which his philosophy lays upon feeling. The Lutheran stress upon knowledge, changed by Spener to emphasis upon will, becomes in Schleiermacher a doctrine of feeling, and in this sense also, despite Ritschl's anti-Pietistic strictures, the Ritschlian theology has its Pietistic strain. Indirectly linked with Pietism by means of Moravianism is the Methodist revival under John Wesley (see art. METHODISM).

By a strange contradiction, the *Aufklärung*, which represented the antithesis of Pietism's religious views, was in some part prepared by the Pietistic movement. In the first place, the individualism of Pietism, which attracted the robust common sense of Thomasius, prepared for the individualism of 'the Enlightenment' (*q.v.*), and, in addition, the reduction of emphasis upon doctrine provided an atmosphere of greater freedom. It is noteworthy that Johann Salomo Semler, who was one of the forerunners of theological rationalism, came from Halle, where he was professor in 1752.

Through these channels the stream of Pietism ran down to the sea and lost itself. If now the watercourse is dry, at least it may be said that the flow was not in vain. Outwardly the record of Pietism is that of a movement which spent itself, but those who take a wider view will see that it was not lost as an influence when it ceased to have an independent course as a movement. The spirit of Pietism survived its body, and still lives in every form of intensive and devotional religious life.

PILGRIMAGE (Arabian and Muhammadan).

—1. **Pilgrimages in early Arabia.**—A religious feast like that annually celebrated by the heathen Arabs in the neighbourhood of Meccah was called *hajj*. This word (like Heb. *an*; see, e.g., Ex 10⁹ 12¹⁴, Dt 16¹⁰) designated a periodical feast at any sacred place, to which the worshippers on that occasion made a pilgrimage. Probably there were various holy places in Arabia, where such a *hajj* took place. Epiphanius, e.g., mentions the word *Ἀγγὰς αἱ ἁγίας* (i.e. 'the *hajj* to the holy temple') as being the Arabic name of a month in N. Arabia. We may suppose that 'the' holy temple to which this pilgrimage was made was a local sanctuary in that country, and not the distant Ka'bah at Meccah (cf. J. Wellhausen, *Reste arab. Heidentums*², p. 85).

Only the great *hajj*, celebrated annually by various Arabic tribes at the holy mountains of 'Arafah and at adjacent places, in the sacred month of Dhu'l-Hijjah, has survived the ancient paganism, since Muhammad incorporated these ceremonies in a somewhat modified form into his own religion. The feast took place at the end of the year (see Wellhausen, p. 94 ff.) and had originally, we may suppose, a magical character. Its purpose in early times must have been to get a happy new year with plenty of rain and sunshine, prosperity, and abundance of cattle and corn. Great fires were lit at 'Arafah and Muzdalifah, probably to induce the sun to shine in the new year. Water was poured on the ground as a charm against drought (hence, probably, the 8th of Dhu'l-Hijjah was called 'the day of *tarwiyah*', i.e. 'the day of moistening [the ground]'). Perhaps the throwing of stones at certain places in Minā, a relic of the primitive heathenism, was originally a symbol of throwing away the sins of the past year, and in this way a sort of charm against punishment and misfortune. Other theories, however, are defended by V. Chauvin ('Le Jet des pierres au pèlerinage de la Mecque,' *Ann. de l'Acad. royale d'archéol. de Belgique*, v. iv. [1902] 272-300; cf. M. T. Houtsma, 'Het skopelisme en het steenwerpen te Mina,' *Verlagen en Mededeelingen der Kon. Acad. van Wetenschappen*, iv. vi. [1894] 194-217) and many others. The excessive hurry and noise which characterized the run from 'Arafah to Muzdalifah and from Muzdalifah to Minā seem originally to have had some magical meaning. The three days at Minā (11th-13th of Dhu'l-Hijjah) were 'days of eating, drinking, and sensual enjoyments,' according to Muslim tradition; fasting during that time was even forbidden—evidently as a symbol of the abundance that was hoped for in the following year.

Every pilgrim entered upon a special state of sacredness (*ihrām*) during the *hajj*. In this state certain things, allowable at other times, were forbidden. The *muhrim* (i.e. he who was in the state of *ihrām*) was not allowed, e.g., to cut his hair or nails or to shave his head. His whole body had to be left uncovered, though he might wear two pieces of white cloth (the so-called *ridā* and *izār*). We can hardly doubt that the real purpose of the various obligations of abstinence imposed on the *muhrim* (cf. the Hebrew Nazirite) was originally to bring the pilgrim into a state of magical power

and to strengthen the magical influence of the *hajj* ritual.

It must be observed, however, that in the time of Muhammad the original meaning of the old ceremonies was long forgotten. Indeed, the feast had no longer much religious, but rather a commercial, importance for the contemporaries of the Prophet, since during the *hajj* Meccah and the neighbouring market-places were visited by the Arabic tribes, even from distant countries. Every one could travel and trade then without fear, on account of the general truce between the tribes during the sacred months.

Pilgrimages were also made in early Arabia to the Ka'bah, the old heathen temple at Meccah. The most sacred spot of this sanctuary was the eastern corner in which the venerated Black Stone was fixed, opposite the holy well of Zemzem. It was especially in the sacred month of Rajab (the 7th month of the year) that the Ka'bah was visited by pilgrims, who made circuits round the building and sacrificed first-born camels and sheep. Meccah was surrounded by a *haram* (sacred territory), the boundary of which was marked by stones. He who entered this sacred territory assumed the state of *ihrām*, and would then pay a religious visit to the Ka'bah. The worshipping of the Meccan sanctuary was called '*umrah*' (i.e. cultus, cultivation of the sacred building) and, as it seems, was not connected with the annual *hajj* of 'Arafah.

2. **Incorporation of *hajj* and '*umrah*' into Islām by Muhammad.**—Muhammad had seen the *hajj* since his youth. When he began to preach, he had no reason for enjoining the old Arabic rites as a religious duty on his followers. For in the revealed books of the Jews and Christians no divine precepts were given as to the *hajj* feast. After the *hijrah*, however, as Muhammad had persuaded himself that the Jews and Christians had changed the true sense of their sacred books, he concluded that the Ka'bah and the ritual connected with this 'house of God' had belonged originally to the true religion, and were founded according to the will of Allāh by Ibrāhīm (Abraham), the great prophet of the Jews and Christians as well as of the Arabs. As a consequence of this theory, the pilgrimage to Meccah now became a religious duty for the Muslims at Medinah, in the second year after the *hijrah*. Several verses of the Qur'ān, all relating to the Ka'bah and the ceremonies which must be performed there, were now revealed (see, e.g., ii. 185-199, iii. 89 ff., xxii. 25 ff.).

But the unbelieving inhabitants of Meccah refused to admit the Muslims into the sacred city, and it was not till A.H. 6 that Muhammad tried to go with his followers to Meccah. The first attempt failed. As soon as the Meccans heard that the Muslims were approaching, they prepared themselves for stern resistance. The two parties met at Hudaibiyah, on the frontier of the sacred territory. Negotiations were opened there, and it was settled that the Muslims should return to Medinah, but should be allowed to celebrate their feast in Meccah the next year. According to this treaty, the Prophet came in A.H. 7 with many of his followers to Meccah, and made the so-called '*umrat al-qadhā*' (i.e. 'the '*umrah*' whereby was performed at last what was neglected till

this time,' or perhaps 'the *'umrah* of the treaty'.

Since Meccah was conquered by Muhammad in A.H. 8, many Muslims joined in the *hajj*, at first along with the unbelieving Arabs and without the Prophet himself. But, in A.H. 8, Qur'ān ix. 1 ff. and 28 were revealed. In these verses Allāh declared that all treaties between the Muslims and unbelievers must be revoked, and that nobody who was not a true Muslim might approach Meccah or the *hajj*. Ali ibn Abi Tālib (afterwards the fourth *khalīfah*) was sent to Meccah by the Prophet to promulgate this revelation among the pilgrims assembled at the *hajj* of that year.

Thus, in A.H. 10, all unbelievers were excluded from the feast, and now the Prophet came from Medinah to Meccah in order to partake himself in the *hajj* and to reform the old heathen ceremonies into a good Muslim service. All later Muslims have conformed to the example set by the Prophet at this pilgrimage—the so-called *hajjat al-wadā'* (i.e. 'the farewell *hajj*,' because it took place in the year before his death).

3. Muslim pilgrimages (*hajj*, *'umrah*, and *ziyārah*).—The various ceremonies of the Meccan pilgrimage have often been described, not only by Muslim authors, but also by Europeans who have witnessed them. Moreover, the Muslim law-books contain full details about all that a pilgrim has to do during the days of the *hajj*. The pilgrimage to Meccah is called in Muslim law one of the five 'pillars' of Islām. It is a religious duty for every Muslim 'who is able to make the journey to Meccah' (Qur'ān, iii. 91)—for women as well as for men. In a few cases believers are exempted from this duty—e.g., if they have not sufficient means to pay their expenses or to provide for the support of their households till their return, or if the journey to Meccah is peculiarly dangerous on account of war or epidemic; also a woman ought not to go unless accompanied by her husband or a near relative.

At the present day most of the pilgrims arrive in the holy city from Jiddah, where they are landed by the steamers of various countries. Those who travel overland come with one of the caravans to Meccah. The two best known caravans in modern times are the Syrian, which comes from Damascus, and the Egyptian, which starts from Cairo. Each has a so-called *mahmal*, i.e. a camel with a richly-ornamented saddle such as distinguished Arabic women used to ride upon. The *mahmal* was a sort of banner in Arabia. In ancient times several *mahmals* often appeared at the *hajj*, every independent *sultān* or *emir* sending his own caravan to the *hajj* with a *mahmal* as a visible mark of his high dignity (see C. Snouck Hurgronje, *Mekka*, i. 29, 83 ff., 105). This custom was held in honour by the Turkish *sultāns*, who even continued to send the Egyptian as well as the Syrian caravan with a *mahmal*, though they had become *khalīfahs* of the whole Muslim territory.

In the holy city pilgrims usually begin by performing the ceremonies of the *'umrah*, the so-called 'little pilgrimage' to the Meccan sanctuaries. Almost every pilgrim requires the assistance and information of a Meccan guide (*dalīl*, *mutawwif*, or *shaiikh*) to instruct him in the ritual and teach him to recite the prescribed sacred formulæ. The Muslim *'umrah* consists mainly of the four following ceremonies:

(1) Before entering the *haram* of Meccah, the pilgrims must assume the state of *ihram*, abstaining thereafter from worldly affairs and devoting themselves entirely to religious duties. The inhabitants of Meccah, when performing an *'umrah*, must go out of the *haram*. They assume the state of *ihram* on the frontier (usually at Tan'im, which is therefore often called *Umrāh*).

(2) The pilgrim then proceeds to the *ṭawāf* (the circuit of the Ka'bah). He begins at the Black Stone in the eastern corner of the Ka'bah, and walks round the temple seven times. When passing the eastern corner, he must kiss the Black Stone. If the crowd is so great that he cannot get near enough to do this, he must touch it with his hand or with a stick or must look towards it.

(3) The next ceremony is the *sa'y* (the running or circuiting) between Safā and Marwah, two sacred places in the immediate neighbourhood of the great mosque of Meccah. Safā and Marwah must once have been hills, which were held in reverence by the Meccans. In later times the soil of Meccah has risen considerably and at the present day Safā and Marwah hardly show above the surrounding houses. A revelation (Qur'ān, ii. 153) has confirmed the sacred character of these places. Starting from Safā, the pilgrim runs seven times between the two sanctuaries, in a prescribed manner, moving his shoulders.

(4) At last, arriving at Marwah, he goes to the barber *there*, who shaves his head and thereby ends the state of *ihram*. Originally the ritual shaving of the head must have been a sign that a sacrifice or other religious act was performed.

The *'umrah* can be performed at any time and as often as the individual Muslim likes. The inhabitants of Meccah usually do it in the month of Ramaḍān because this is the special month for religious acts.

Before the beginning of the *hajj*, on the 7th of Dhu'l-Hijjah, a *khatīb* ('preacher'), usually the *qāḍī* of Meccah, gives an address in the great mosque at Meccah to remind the pilgrims of the ritual of the following days. Next day (8th of Dhu'l-Hijjah) most of the pilgrims enter upon the state of *ihram* for the *hajj*, and depart from Meccah to 'Arafah, which can be reached in about four hours by camel. According to the law-books, it is best to pass the night in Munā (formerly Minā), about half-way between Meccah and 'Arafah, but usually the great majority of the pilgrims go directly to the plain of 'Arafah. There the *wukūf* takes place on the 9th of Dhu'l-Hijjah. The Muslim *wukūf* is simply the staying or standing in the plain of 'Arafah for the prescribed time (just after mid-day till a little after sunset). This ceremony is also a 'pillar' of the Muslim *hajj*. There are no special rules for the *wukūf* in the law-books. The pilgrims are only waiting there. Wellhausen thinks that this ceremony was of more importance in pagan times, and was perhaps a general sacrifice for all the pilgrims.

After sunset the *ifādhah* begins (i.e. the running from 'Arafah to Muzdalifah, half-way between 'Arafah and Munā)—according to the old heathen usage, with great hurry and noise. The pilgrims pass the second night in Muzdalifah, and many of them are present at the second *wukūf* there in the early morning. Before sunrise the journey to Munā must be continued.

In Munā the great offering-feast is celebrated on the 10th of Dhu'l-Hijjah. This day is therefore called the *yawm an-naḥr* ('the day of slaughtering'). The sacrifice is preceded by the ceremony of throwing seven pebbles to the *jamrah al-'Akabah* (i.e. the heap of pebbles close to the mountain-road) at Munā; to-day this place is marked by a sort of buttress of rude masonry about 8 ft. high by 2½ ft. broad. The Muslims say that this ceremony has been performed since the time of Ibrāhīm because the devil (Shaitān) tried to seduce him on this spot. Before throwing each of the seven pebbles, the pilgrim must say: 'In the name of God, Allāh is almighty!'

The sacrifice at Munā, strictly speaking, concludes the *hajj*, and the pilgrim may then shave his head. But, before returning to the ordinary profane state, he should go to Meccah and make the *ṭawāf* round the Ka'bah, followed by a *sa'y* between Safā and Marwah, if he has not already performed this ceremony on his first arrival at Meccah. It is, however, not necessary to perform the *ṭawāf* and *sa'y* on the 10th of Dhu'l-Hijjah, though it is a meritorious act. It may be done also on one of the following days.

The remaining days, the 11th, 12th, and 13th of Dhul-Hijjah, are called the three days of the *tashriq*. The original sense of this word is uncertain (cf. T. W. Juynboll, 'Über die Bedeutung des Wortes Tashriq', *ZA* xxvii. [1912] 1-7). It is commonly explained by later Muslims as the drying of the flesh of the victims in the sun. The pilgrims should spend these days at Munā, eating, drinking, and making merry. Moreover, they must again throw seven pebbles each day at each of the three *jimār* ('heaps of pebbles') at Munā. The law, however, allows a return from Munā to Meccah on the second day, and many pilgrims avail themselves of this privilege. Having finished the *hajj*, the pilgrim, before leaving Meccah, should perform a farewell *ṭawāf* round the Ka'bah.

Other pilgrimages, which are not expressly prescribed by Muslim law (e.g., pilgrimages to the tombs of saints in various countries) are generally called *ziyārah* ('visit') by the Muslims. The *ziyārah* to the tomb of the Prophet at Medinah is regarded as a religious act from which many blessings accrue. Most of the pilgrims visit it before or after the *hajj*.

W. JUYNBOLL.

PILGRIMAGE (Babylonian).—By this word most people understand a journey to a holy place or shrine, either in the pilgrim's native land or abroad. The object of a pilgrimage is to obtain some benefit, material, moral, or spiritual, which the sanctity of the chosen spot is thought to confer. It is true that pilgrimage may be undertaken because such a journey is regarded as meritorious, but the idea of the acquisition of divine favour, either directly or through a saint, is seldom absent. All kinds of benefits may be asked in return for the labour and travail, from the healing of a bodily infirmity to the gift of everlasting life.

1. **Frequency of pilgrimages.**—Though pilgrimages were probably not among the means of grace recognized by the Assyro-Babylonians, they were far from rare. The making of a journey, either for business or for pleasure, must have furnished, in many instances, an opportunity for acquiring the merit or the benefit which a pilgrimage conferred. In such a case the advantages connected therewith would be merely a matter of chance, due to the seizing of the opportunity, for the Babylonians and Assyrians were much addicted to the observance of omens, and those connected with a visit to a place would naturally attract attention and lead to the decision to profit thereby. Several fragments of a tablet, or a series of tablets, dealing with the advantages to be gained from tours of this kind exist, and are of some interest in those cases where the lines are complete. The following are examples of the benefits promised:

'If he go to Laban, he will build a house' (word-play, *labānu* meaning 'to make bricks'). 'If he go to the house (temple) of the Seven (*Utu Imina-bi*, the divine Seven), he will attain perfection (*isālīm*)' (due to seven being the number of perfection).

'If he go to the city Nippur, grief of a day, peace of a year' (Nippur was the renowned shrine, first of Enlil, the older Bēl, afterwards of the god En-urta). 'If he go to Tindir (Babylon), trouble of a day, peace of a year' (there is no need to mention the importance of Babylon as a holy centre). 'If he go to Namma, and swim in the divine river (*Utu Nāru*), he will exercise power, his days will be long' (Namma (Nammū) is probably another name of the Euphrates, which was apparently a holy river like the Ganges; in the above extract Namma, which was one of the names of the river-god, was also the name of a town). 'If he go to Sirpur (probably for *Sirpura*=Lagaš), he will be plundered' (perhaps we have to read *Sirgul*, the modern Zerghul, in which case the pun may have been by comparison with *Sirqu*, 'theft').

Omens of this nature were numerous, but so far comparatively few have been found.

2. **Stories of visits to holy places.**—Records of pilgrimages are, for several reasons, few in Assyro-Babylonian literature. It does not seem probable that pilgrimages, unconnected with other business, were often undertaken. In addition to this, it was the custom among the Babylonians, and probably among the Assyrians as well, to send their deities from place to place, in order that they might receive the homage of the faithful; and journeys to worship them, or to obtain the advantages which a pilgrimage brought, were not so much needed. The most noteworthy instance of a pilgrimage is the great journey of Gilgames, king of Erech, to the abode of Ut-napistim, the Babylonian Noah, who had been placed by the god whom he worshipped in 'a remote place at the mouths of the rivers.' Among the benefits sought by the hero was the gift of knowing how he might attain immortality. In this case, as the Babylonian patriarch could not be brought to Gilgames, Gilgames had to go to him (see *ERE* ii. 315^b-316^a, vi. 643). The descent of Ištar into Hades to bring forth Tammuz, her husband, can hardly be regarded as a pilgrimage in the true sense of the term, as no devotional or spiritual benefit was sought. Different, again, is the legend of Etanna, who tried to visit Ištar in heaven, mounting thither on the back of an eagle. The aerial journey was undertaken to invoke the goddess's favour on behalf of the hero's expected child, but apparently failed because he feared to mount so high (see *ERE* ii. 315^a, vi. 644).

3. **Travelling in general.**—Babylonian tablets of from c. 2300 to 2000 B.C. testify to a considerable intercourse by road between the various towns of S. Babylonia and Elam. These record the transport of provisions, principally drink (probably herb-beer), food, and oil, which were sent to various cities, generally such as were considered sacred on account of their shrines and fanes. Among the places most commonly mentioned are Ur, Nippur, Susa, Anšan (the old capital of Elam), Adamdun (probably in the same district), Kimaš, U-uru-a, Sabu^m, and Huhunuri. The persons mentioned in connexion with these consignments are messengers, 'couriers,' and officials who may be classed as 'retainers.' All these seem to have journeyed from the temples of the cities where they lived, on behalf of their employers, though some at least went on their own account. Noteworthy is a statement of a tablet in a private collection, in which one of the persons mentioned is the king's son:

'30 qa of drink, 30 qa of food, $\frac{1}{2}$ gin of oil,
Šu-dada.
10 qa of fine drink, 10 qa of food, 10 gin of oil,
Šur-Ninsun, the son of the king.'

That journeys are intended is shown by those lists in which the consignments are described as having been either 'within the city' or 'for the road':

'60 qa of royal drink,
6u qa of food,
1 qa of sesame-oil, e
Abum-gallum, viceroy of Sabu^m.
2 qa of drink, 2 qa of food.'

2 *gin* of oil within the city,
1 *gur* of herb-beer, 5 *ga* of food for the road,
Maš, the "retainer."
They have taken (the above) to Sabum.¹

Similar entries follow these. The date is 'Month of the Festival of Tammuz.'

As there is no reference to viceroy Abu-šallu^m's provisions 'for the road,' he may have been coming to Lagāš, where the tablet was found. Maš, on the other hand, required provisions, as he was going to Sabum.¹

4. **Vicarious pilgrimages.**—In some cases these tablets may record vicarious pilgrimages, made at the request of people who, unable or unwilling to leave their homes, sent others to represent them, and possibly to make offerings on their behalf. In all probability these journeys were in parties or caravans.

5. **Later instances.**—One of the most interesting visits to a holy place is that of Shalmaneser II. to Babylon, as recorded on the Bronze Gates of Balawat discovered by Hormuzd Rassam. This king relates that, after leaving Marduk-sum-iddina, king of Babylon (851 B.C.), he found 'the fulness of his heart,' and Merodach commanded him to go to Babylon and Cuthah, where the king caused offerings to be made. At Ê-sagila (the temple of Belus in Babylon) he directed the ceremonies and more offerings were made. Afterwards Shalmaneser 'took the road' to Borsippa, and made offerings to Nebo. Entering Ê-zida (the temple of Nebo at Borsippa), he caused the rites to be conducted reverently, and offered plentifully 'great oxen and fat sheep.' At both Babylon and Borsippa he made drink-offerings, and there were feasts, with food and wine. The result of all this devotion was that the gods regarded Shalmaneser, though an alien king, with joy, and heard his prayer. Two hundred years later (c. 650 B.C.), King Aššurbanipal went to Arbela to supplicate the goddess of war, Ištar of Arbela, for her divine help against the Elamites.

6. **Pilgrimages in a private capacity.**—These are not always certain—they may have been simply ordinary acts of worship. Thus Meissner's rendering of *šiki* (from *āšaku*, 'to go') as 'my duty'—'I am firm in my duty at Ê-zida with regard to my father'—makes the possibility that Bêl-ubhu (?) went on a pilgrimage to the temple of Nebo to pray for his father very doubtful. Nevertheless he did visit the temple on his father's behalf:

'The son of the temple [Nebo, the god worshipped there], when I had prayed with regard to thee, set the time for success as being until the 4th day.'

This grace applied not only to his father Kunā, but also to all his people. In no. 865 of R. F. Harper's *Assyrian and Babylonian Letters* (London, 1902) the writers' statement that 'he [the king] entered Babylon—he kissed the ground before Merodach and Zêr-panitu^m' (i.e. in the temple of Belus) likewise implies at least a turning aside to perform a religious duty. But more to the point, apparently, is the following (from Babylon):

'Letter from Marduk-ibni to Šišku, my brother. May Merodach and Zêr-panitu^m promise the prosperity and the preservation of my brother. Behold, Iddina-Bêl has gone up with me to Sûnu—we made an offering there with Nergal-iddina, his brother. I am looking after your interests.'

Here, again, we have (to all appearance) the combination of business with religious duties.

7. **The legend of the 'Mother of Sin.'**—This is a bilingual record in which, after describing the misfortunes of the 'royal maid,' as the 'sinful

¹ As an illustration of these journeys in connexion with temples, that in which the priests (of Sippar), c. 1850 B.C., give a $\frac{1}{2}$ shekel of silver to buy grain for a journey may, perhaps, be quoted (A. Ungnad, *Hamurabi's Gesetz*, Leipzig, 1909, no. 481, in vol. iii. p. 134). The amount was the gift of the chief singer (*nāru rabû*).

mother' is called, the text, in a fresh paragraph, continues:

'Come, let us go to him, let us go to him!
As for me, to his city, let us go to him!
To the city, to the wonders, let us go to him!

To the city, to the city, to Babylon's foundation,
At the command Ištar gave,
The maid Ama-namtaga (the Mother of Sin) passed through the dust.'

Here follows a long account of Ištar's punishments, from which it would appear that not only did the 'sinful mother' make a pilgrimage to the holy places Kullab, Erech's foundation, Zazabu's foundation, Hursag-kalama at Kis, and Ê-tur-kalama ('the house of the world's repose'), but she had also to do penance and submit to Ištar's punishments, performed by her servants and ministers. The record is unfortunately incomplete, but it is probable that the deity referred to by the pronoun was Tammuz, Ištar's spouse, whom the 'sinful mother' had offended in some way.

Though the records are apparently scanty and doubtful, the journeys which pilgrimages imply were far from uncommon in Assyria and Babylonia, as the fragments referring to the benefit to be gained from visits to sacred places seem to show.

T. G. PINCHES.

PILGRIMAGE (Buddhist).—In the earliest order and scheme of Buddhist monastic life, if the sacred books of the Tripiṭaka may be taken to reflect faithfully and in general the teaching of the Founder, there was no recognition of the duty or advantage of pilgrimage, and no sanction given to the practice. Gautama Buddha neither forbade nor enjoined his followers to imitate that which Hindu example must already have made sufficiently familiar—the journeyings to near or distant shrines for spiritual benefit and to render homage. It was impossible that with his views and teaching with regard to the future life he should have allowed the existence or recognized the validity of a habit founded upon the belief in the continuity and permanence of existence after death. The slight evidence available, however, indicates that very soon after the *parinirvāṇa*, and probably in connexion with the distribution of the relics and the building of memorial *stūpas* over them, the practice arose among the adherents and friends of the Buddha of visiting the places thus consecrated by the presence of the earthly remains of their honoured teacher and guide. From this it was an easy step to a practice of pilgrimage which endeavoured at one and the same time to secure personal advantage from a visit to the shrine and to honour the saint whose name and fame were there commemorated. Whatever its origin, the habit of pilgrimage is and for many centuries has been wide-spread in Buddhism, not only in the Mahāyāna school, where it is most prevalent, but also in the Hinayāna of the south.

1. **Origin.**—It appears probable therefore that Buddhist usage in this respect is, in the first instance at least, imitative of Hindu practice, and grew up independently of any direct command. It is perhaps not without significance also that the Pāli form of the Sanskrit word for pilgrimage (*pravrajā*, Pāli *pabbajjā*, lit. 'a going forth,' 'retirement from the world') should be the technical term for admission or 'ordination' to the first grade of the Buddhist monkhood. The pilgrim (*pravrajita*, *pravrajaka*, Pāli *pabbajita*) is defined in the *Dhammapada* as one who has abandoned

the world (X. i. 89); and in an earlier verse (i. 75) it is declared that the heedless pilgrim, so far from securing good, only scatters more widely the dust of his (unsubdued) passions. In these and other passages of the early literature there is no direct mention of any aim or purpose other than that of retirement from the world to assume the rank and status of a member of the Saṅgha. There was certainly, however, in the writer's mind the practice, wide-spread and familiar in his time, of a wandering ascetic life which was not entirely aimless, but contemplated visits to sacred temples or shrines as the profitable and meritorious end of its often toilsome and prolonged journeyings.

In all probability also the injunction laid upon Buddhist monks to adopt a wandering mode of existence without settled home or habitation contributed to the facility with which they adopted the Hindu practice of pilgrimage to the sacred places associated with their religious history and faith.¹ Only in the season of the rains, in Vassa, were they prohibited from travelling about, lest injury should be done to living creatures (*Mahāvagga*, iii.). At all other periods of the year the Buddhist monk was to be 'homeless,' possessed of no stated or fixed residence; and a habit or passion for wandering taken up as a religious duty by men to whom the idea of pilgrimage was not unfamiliar, and among a people whose nomadic mode of existence lay probably not many centuries in the past, readily developed into the practice of travel for a religious purpose to a formal and definite destination. The institution of Vassa, with its prohibition of travel, would necessarily place difficulties in the way of continuous or lengthy pilgrimages to distant shrines. In practice, however, the difficulty does not seem to have been felt. The early books and narratives, especially of the Chinese pilgrims, record prolonged journeyings in which there is no reference to interruption or delay caused by the observance of rules for retirement in the season of the rains.

In the later Buddhist literature of both the Northern and the Southern schools references to pilgrimage and the sacred places whither the pilgrims resort are not infrequent. In the *Buddha Charita* the statement recurs that purification from sin may be attained by dwelling or bathing at sacred places;² and these holy centres of pilgrimage are ladders to heaven.³ The extravagant assertion is even ventured that the Buddha himself created millions of ascetics,⁴ whose wanderings are more or less indefinite pilgrimages from shrine to shrine. Holy streams and *tirthas* are recognized in the earliest homes of Buddhism, in part no doubt derived from Hindu custom, but partly associated with Buddhist history and religious origins.⁵ Elsewhere right-minded and pious Buddhists are said to have their places of pilgrimage;⁶ it is a pious duty to build *chaityas* (Pāli *cetiya*) in honour of Buddhas,⁷ where their relics are preserved, and miracles are wrought in the presence of the assembled worshippers.⁸

In the later Mahāyāna literature therefore, and in writings of the Southern school that have come under the influence of this type of thought, the Buddha himself is represented as declaring the sacred character of shrines and other places associated

with the lives of holy men and inculcating the virtue and duty of pilgrimage thereto.¹ It is hardly probable that this feature of his teaching is original. It bears rather the impress of a later practice, introduced from ancient Hindu usage, and in harmony with the natural desire to maintain communion with and do honour to the dead; and is part of the esoteric and mystical teaching which, according to Mahāyānist belief and assertion, was formulated by Gautama during the later years of his life. There is no real evidence in support of this; and in regard to the doctrine of the life after death and kindred ideas, or those which imply the possibility of relations between the living and the dead and the individual consciousness and capacity for good or evil of the latter, it is unlikely that the direct and limited teaching of his mature life, in which he refused to be drawn into discussion or to make affirmation concerning aught beyond this present world, was later exchanged for positive doctrine and directions based upon entirely different views. The uncertainty of date of the several works and strata of the Buddhist literature must not be overlooked. The Pāli Tripiṭaka does appear, however, to make good in most respects at least its claim to represent most faithfully the convictions and doctrine which Gautama set forth to his disciples.

2. Indian places of pilgrimage.—It is probable that the earliest centres of pilgrimage were the places most closely associated with the life and teaching of the Founder. Four of these, viz. Kapilavastu, Kuśanagara, Buddh Gayā, and Benares, were pre-eminent, and for centuries continued to be the goal to which the steps of Buddhist pilgrims were turned; two of them are venerated and resorted to by numerous Buddhist worshippers at the present day, who bring offerings from the most distant lands. Testimony to the reverential regard in which these and many other places were held is found especially in the writings of the Chinese pilgrims. In the Lumbini Grove at Kapilavastu (*q.v.*) was the birth-place of Gautama Buddha. Buried in the dense *tarai* districts of S. Nepāl, the lost site of the town was re-discovered in the year 1895, and identified by a pillar and inscription recording the visit of the emperor Aśoka. As a centre of pilgrimage it has for a long time been inaccessible and is so at the present time, and thus awakens little interest in Buddhists themselves. Kuśanagara (*q.v.*) also, the scene of the death of the Buddha, was visited by the same Chinese monks, to pay their homage at the sacred site. According to their testimony, Kuśanagara lay at no great distance east of Kapilavastu. The exact site, however, has not been identified.

The two remaining places that shared in all probability with the traditional scenes of Gautama's birth and *parinirvāṇa* the veneration of the earliest Buddhists, and which have maintained to the present day their popularity and sacred character with thousands of Buddhist pilgrims from all parts of the Buddhist world, are Buddh Gayā, six or seven miles south of Gayā (*q.v.*) in W. Bengal, where, seated under the Bo-tree in deep meditation, Gautama attained insight and the bliss of perfect knowledge; and Benares (*q.v.*), probably the most ancient sacred city in the world, the scene of the first deliverance of his message, when in the Deer-Park (Isipatana), in his first sermon addressed to the five ascetics in whose company he had previously practised fruitless austerities, he 'set in motion the wheel of the law,' and founded 'the highest kingdom of truth.'² These places possess an equal sanctity in the eyes of Hindus, and they are sought out by multitudes of pilgrim worshippers of both religions.

¹ Cf. *Mahāvagga*, i. 11. 1: 'Go ye, O Bhikkhus, wander for the gain of the many, for the welfare of the many, out of compassion for the world, for the good, for the gain, and for the welfare of gods and men.' Then follow directions to preach, and the promise that he will himself preach the doctrine.

² *Buddha Charita*, II. 87; the thought and even the phraseology are of Hindu conception and origin.

³ *Ib.* vii. 40. ⁴ *Ib.* xv. 78. Those who bathe and offer their worship in the holy river and reverence the *chaitya* of the three stones become great-souled *bodhisattvas*, and obtain *nirvāṇa*.

⁵ *Mahā-Parinibbāna-Sutta*, v. 161.

⁶ *Fo-sho-hing-tean-king*, v. 271.

⁷ *Mūlinda-panha*, iv. viii. 61 f.; cf. *Buddha Charita*, xv. 62 ff.

¹ Cf. *Mahā-Parinibbāna-Sutta*, v. 16-22: 'There are four places which the believing man should visit with feelings of reverence and awe, . . . the place at which the believing man can say, "Here the Tathāgata was born," . . . "Here the Tathāgata attained to the supreme and perfect insight," . . . "Here was the kingdom of righteousness set on foot by the Tathāgata," . . . "Here the Tathāgata passed finally away in that utter passing away which leaves nothing whatever to remain behind," . . . And there will come to such spots believers, brethren and sisters of the order, or devout men and devout women, . . . and they who shall die while they, with believing heart, are journeying on such pilgrimage shall be re-born after death, when the body shall dissolve, in the happy realms of heaven.'

² *Mahāvagga*, i. 6. 80.

After the death of the Buddha the relics of his body were collected from the funeral pyre, and divided into eight portions. These were distributed to the various claimants for their possession, and over them memorial *stūpas* were erected for their preservation. The places thus made sacred became centres of pilgrimage, which attracted devout worshippers from far and near, and were visited among others by the Chinese monks in the course of their travels through N. India.

3. **Historical visits.**—(a) *Asoka*.—The earliest historical reference to pilgrimage undertaken with a religious motive is contained in the edicts of the Buddhist emperor Asoka (q.v.) in the 3rd cent. before our era. In the midst of his zealous care for the welfare of his subjects he found time and opportunity for extensive journeyings to the sacred places of the Buddhist faith within his dominions. Besides confirming and propagating the faith by his edicts and missions he erected at these places numerous *stūpas* containing sacred relics, repairing others which had fallen into neglect or decay. For their maintenance also he provided revenues, and himself, according to the tradition, undertook the care and sustenance of 64,000 monks. The limit of his pilgrim travels northward was the ruined site of Kapilavastu; and here, in addition to the erection of a commemorative pillar with inscription, he repaired or rebuilt a *stūpa* in memory of Kanakamuni (q.v.), one of Gautama's predecessors of a bygone age. This enlargement or repair he is said to have accomplished for the second time. In any case his experience and action are sufficient proof of the existence in his day, and for a considerable time previously, of sacred buildings associated with the life and deeds of holy leaders and teachers of old, which had already become centres or goals of pilgrimage. Certainly the *stūpa* of Kanakamuni was not a solitary instance of a commemorative erection, where offerings were presented and homage paid. There were many others, at least in the sacred country of Buddhist origins, and probably elsewhere. The words and acts of Asoka clearly indicate that in his day merit was considered to attach to visits to these spots, and the names and memory of those in whose honour the *stūpas* had been raised were regarded with veneration. The date and circumstances of his visit therefore and the motives that prompted it justify the conclusion that sacred pilgrimage became a recognized observance of the Buddhist faith not long after the death of its Founder.

(b) *Fā-Hian*.—Both Kapilavastu and the scene of Gautama's death at Kuśanagara were visited by the Chinese pilgrim Fā-Hian and others in the 5th and following centuries. The former site Fā-Hian describes as already deserted in his day, inhabited only by a few monks and some poor families; and it has remained ever since in the same state of desolation. In the course of his pilgrimage Fā-Hian visited all the important Buddhist shrines and cities in the north of India; thence he travelled to Ceylon, and paid his homage to the sacred relics there, including the tooth of the Buddha preserved in the island. Everywhere in India he found numerous monasteries with many learned and pious monks; and at the sacred places there were great companies of Buddhist pilgrims, intent on showing honour to the dead and winning merit by their self-sacrificing endeavour.

(c) *Hiuen Tsiang*.—The most important and celebrated Chinese traveller and pilgrim was Hiuen Tsiang (Yuan Chwang [q.v.]), who followed Fā-Hian at an interval of rather more than two centuries. His name and fame still survive in Central Asia, where his memory is revered as that

of a wonder-working teacher and saint. His travels extended over sixteen years from A.D. 629 to 645. In these laborious journeys he covered a considerably wider area in India itself than his predecessor, but he did not visit Ceylon. He appears, moreover, to have been more interested in the present condition of Buddhism, in its doctrine, practice, and literature, than in its relics or holy places of pilgrimage, and to have been more impressed by its vitality and influence, and by the conflicts of the schools, than by the crowds of pilgrims. He visited all the great centres of the Buddhist faith, and makes frequent reference to the revival of Brāhmanism, which even in Buddh Gayā had to a considerable extent supplanted its rival.

At Buddh Gayā also Hiuen Tsiang describes the great temple built by Asoka, 160 ft. or more in height, of eleven storeys, each of which bore golden statues of the Buddha. Probably this building was erected on the site of a more ancient monument that soon after the death of the Buddha was placed there to commemorate the spot on which he attained emancipation and perfect wisdom. The ancient building has been many times reconstructed and restored, and the pyramidal temple with its many images that now occupies the site is rarely without its pilgrim visitors from distant Buddhist countries, who present their prayers and offerings at its sacred shrines. It is surrounded by numerous *stūpas*, ancient and modern, and is as attractive and sacred a spot to Hindu devotees as to those of the Buddhist faith.

The distinctive feature of the enclosure is the ancient Bo-tree, the sacred *pīpal* (*Ficus religiosa*), under the shadow of an ancestor of which in this place the Buddha established his seat. There are several *pīpal*-trees surrounding the temple, most of them not improbably descended from the original Bo-tree. The pilgrims lay their offerings and pour their libations of oil and scents at the foot of the oldest, which they regard as the identical tree of Gautama, and affix gold-leaf to the stem, and to the low stone steps by which it is surrounded.¹ It is in his account of the Bo-tree that Hiuen Tsiang records the tradition of the Buddha walking on the water.

Second only to Buddh Gayā in its sacred associations is Sārnāth (q.v.), three or four miles north of Benares. It is believed to be the site of the Deer-Park (Isipatana, Skr. *ṛṣipatana*) where Gautama delivered his first address to the Hindu ascetics. The ancient *stūpa* on the site is probably the same as was seen by Hiuen Tsiang in the 7th century. Fā-Hian also found a monument existing there at the time of his visit. Recent excavations at Sārnāth, conducted by the Government of India, have resulted in the discovery of numerous *stūpas*, shrines, and sculptured stones of different epochs, including two pillars erected by the emperor Asoka and many figures of the Buddha. Evidence also has been found of the existence of monastic buildings and settlements of monks at least as early as the 4th and 5th centuries of our era. The pilgrim history of the site is long and extensive, and if its record could be recovered would be of the greatest interest.²

4. **Other pilgrim resorts in N. India.**—A mere enumeration of the local centres of pilgrimage in N. India would not be to much profit, and a description of them all is not possible here. The narratives of the Chinese monks who travelled in India are full of notices of the sacred places where the pilgrims congregated from near and far, to

¹ See art. GAYĀ, vol. vi. p. 181 ff., and Monier-Williams, *Buddhism*, pp. 390-401.

² See art. BENARES, vol. ii. p. 468; Monier-Williams, p. 401 ff.; E. B. Havell, *Benares, the Sacred City*, London, 1906.

worship the relics of the saints and to pay homage at their shrines. The impression gained is that such centres of pilgrimage were much more numerous in the early centuries than at the present day, and they were naturally more densely thronged at a time when India was to so large an extent Buddhist in faith. At or near Pāṭaliputra (Patna [*q.v.*]), his capital city, Aśoka built the first of the 84 *stūpas* which he is said to have erected over relics of the Buddha, and the town is described as containing monasteries and hospitals with thousands of Buddhist monks and pilgrims. According to Fā-Hian, at Srāvastī, the ancient capital of Oudh, identified with the extensive ruins at Sāhet Mahēt in the Gonda District,¹ the first sandal-wood image of Gautama was erected; and there also stood the convent or monastery of Jetavana, an early gift by a rich merchant to the community, sanctified by the frequent presence and preaching of the Master. Later, in the time of Hiuen Tsiang, the town and monasteries were deserted and ruined. Some of the most sacred sites and pilgrim resorts were to be found at Rājagṛha (see COUNCILS [Buddhist], vol. iv. p. 182), the first metropolis of Buddhism, as it has been called, where monasteries and *stūpas* were most numerous, and where some of the ashes of Gautama's body were enshrined. Vaiśālī (*ib.* p. 183), the scene of the second Buddhist Council, Nālanda (*q.v.*), the famed university town, Ayodhya, most holy ground to Buddhists and Hindus alike, where the Buddha is believed to have preached for many years, and numerous other places were renowned centres of pilgrim resort during the period of Buddhist ascendancy in India. Few of these have retained their attraction for Buddhist pilgrims at the present day. In the farther north-west, near Peshāwar, much interest was aroused among Buddhists a few years ago by the identification of the relic mound raised by the king Kaniska (*q.v.*) on the spot where four hundred years before the Buddha had stood and prophesied of his coming and reign. A few fragments of bone were discovered within a relic casket, which were generally accepted as authentic remains of Gautama himself. They were transported with much ceremony to Burma, and have been preserved in a monastery at Mandalay.

5. Pilgrim movement beyond India.—Within the more recent centuries the stream of Buddhist pilgrimage has been to a large extent diverted from India, and the sanctuaries of the country have passed into other hands or fallen into oblivion and ruin. Buddh Gayā alone has maintained its supremacy and attraction, and is still the centre and most holy place to which the heart and eyes of the Buddhist pilgrim turn with faith and affection. Outside the country of its birth the two great lands of Southern Buddhism, Ceylon and Burma, compete to draw visitors to their sacred shrines. There is constant movement and interchange between countries so closely united in sympathy and religious belief.

(a) *Ceylon*.—In Ceylon the Temple of the Buddha's Tooth at Kandy is unique in its claims on the reverence and devotion of the pilgrim. Small and unimposing as the building is, compared with the great temples of Japan, it enshrines a relic of the Buddha, recognized and honoured by all his followers of every land. The Tooth is preserved in an inner chamber of the temple, resting on a golden lotus-flower within nine caskets of gold, and is exhibited by the priests to pilgrims and visitors. The original tooth is said to have been taken to Kalinga from the funeral pyre of Gautama, and to have been kept in the temple

at Puri for a period of about eight hundred years. Later it was transferred to Ceylon and S. India and again to Ceylon, where it is said to have been burnt by the Portuguese in order to divert the people from idolatrous worship. The priests at Kandy maintain that the true relic was concealed, and an imitation substitute given over to the Portuguese rulers and destroyed by them. The existing bone is not a human tooth, and probably not of human origin (see art. KANDY, vol. vii. p. 651 f.).

There are numerous temples and *vihāras* in Ceylon with their congregations of monks and worshippers, but the most celebrated and frequented place of pilgrimage is Adam's Peak (*q.v.*), with its sacred foot-print (*śrī-pāda*) in the rock at the summit. The worship of foot-prints is universal in the East; Muhammadans, Hindus, Jains, and others take part in this veneration, and the practice is certainly of very early date, foot-prints of the Buddha being found on the sculptured stones at Bharhut and Sāñchi as well as in various other places in India, and also in Siam, Tibet, Burma, and elsewhere. The hole or mark in the rock on Adam's Peak is the most sacred of all, and is visited by pilgrims of many faiths. Hindus believe it to be the foot-print of Śiva, Christians of St. Thomas on his apostolic journey of evangelization to the island, Muhammadans of Adam or, according to others, of Ali. The pilgrims of Buddhist faith, however, greatly predominate in numbers.

(b) *Burma*.—Except in these two centres, the spirit and practice of pilgrimage are little effective in Ceylon. It is otherwise in Burma, the rival home and stronghold of Southern Buddhism. The pilgrim habit plays a much larger part in the life of the people, but, in entire accordance with their character, is undertaken less seriously, and is more a matter of sociability and holiday-making than of religious obligation or the discharge of religious duty. The custom, however, of more or less formal attendance at sacred shrines and fulfilment of the appropriate rites and engagements of the sacred seasons is universal; and the monks themselves connive at and even take part in the merriment and relaxation which follow upon the satisfaction of the claims of religion. The most important and celebrated of all is the Shwe Dagon pagoda at Rangoon, where crowds of pilgrims from Japan, China, and Korea jostle with worshippers from Ceylon and Siam and the more numerous natives of the country. On the various platforms of the temple are hundreds of images of the Buddha, gilded or in stone, and the summit of the building rises to the height of St. Paul's Cathedral and is crowned with the *tī*, the sacred symbol of the Buddhist faith. There are here preserved, according to the traditional belief, eight hairs of Gautama, and various relics also of the three preceding Buddhas, including the staff of Kaśyapa and the robe of Kanakamuni.

Burma is full of *dāgabas* (pagodas), many of them deserted and in ruins, but others centres of attraction to a greater or less distance throughout the surrounding country, and at the festival seasons full of a rich and varied pilgrim life. Perhaps the most renowned next to the Rangoon pagoda are those at Pegu and Prome. Within the walls of the ancient capital of Pagan are the remains of nearly a thousand such buildings; and at Mandalay itself are many *dāgabas* and temples unrivalled in their beauty and perennial fame. In the courtyard or precincts of most of these buildings is a sacred foot-print of the Buddha, which in the case of the more famous and accessible of them is rarely without its offering of fruit or flowers.

¹ The identification was made by A. Cunningham, and has been confirmed by recent discoveries.

(c) *China*.—Chinese Buddhism in general has been considerably affected and modified by the native Taoist beliefs of the country; and the pilgrim customs and practice of China are in most instances, as regards both their observances and their sacred centres of pilgrimage, the survivals of earlier Taoist usage. The most sacred shrines where the pilgrims congregate are in origin antecedent to the introduction of Buddhism, in the same way as in the Near East Christian sanctuaries have been taken over and converted into Muhammadan places of worship. The hermits also, whose spirit and aspirations are in all lands closely akin to those of the itinerant pilgrims, have in China adopted the haunts and homes of their Taoist forerunners. The most holy and frequented centres of pilgrimage are the four mountain shrines of Omishan in the west in the province of Szechwan, Putoshan in the east on a sacred island in the Chusan archipelago, Wutaishan in the north in the province of Shansi, and Chiu-huashan in Nganhwei in the centre near the Yangtze river. The most popular and celebrated of these is perhaps the first named, Mount Omi, where the temples on the summit of the mountain are dedicated to Pu-hsien, the *bodhisattva* Samantabhadra, an ancient bronze image of whom in one of the largest monasteries, seated on an elephant, is believed to date from the 7th century.¹ The monks of Putoshan are a sincere and religious folk who welcome yearly to their island home thousands of pilgrim-worshippers, who cross from the mainland to pay their homage at the shrines dedicated to Kwanyin, the goddess of mercy. The sanctuary on the Yangtze is the least regarded of the four, and in the Taiping rebellion many of its temples were sacked and destroyed. In the temples of Wutaishan the presiding deity and object of worship is Wenshu, the *bodhisattva* Mañjuśrī; situated near the Mongol border, the shrines are as much frequented by Mongol worshippers as by Chinese, and Tibetan emblems and practices are numerous.

There are many other centres of pilgrimage throughout China, often of more than local reputation; and the pilgrims journey for long distances, making offerings and burning incense at the shrines by the way. For the most part they travel in companies, in this respect following the example of the early travellers to India. Solitary ascetics, however, are not uncommon, whose journeying is a perpetual self-inflicted penance. The most celebrated monasteries are in the province of Chekiang, the stronghold of Buddhism in China. It is probably true that in every direction the hold of the ancient faith is slowly weakening, and the practice of pilgrimage is likely to fall gradually into desuetude with the extension of modern systems of education and the decay of Buddhist temples and rites.²

(d) *Tibet*.—In Tibet the most important centres of pilgrimage, where the sacred temples and shrines are to be found, are at Lhasa, the capital of the country, and at Tashi-hlunpo, the residence of the Tashi or Pañchen Lāma. The latter bears the higher repute for sanctity, for the office and functions of the Dalai Lāma at Lhasa have been to so great an extent intermingled and contaminated with political duties and intrigue that the sacredness of his person as an object of reverence has to a certain extent suffered eclipse. His misfortunes and exile during the last few years can hardly have raised his reputation in the eyes of his countrymen. Pilgrims, however, from all countries

where Lāmaism holds sway turn their steps to the capital in great numbers to worship the incarnate Buddha, and to pay their devotions at the numerous sacred shrines. The quiet of Tashi-hlunpo, the 'Mount of Glory,' is undisturbed by the movements of politics, and the great temple and surrounding districts are favourite places of retirement for those who have finally renounced the world and its cares. The person and character of the present Tashi Lāma, who, as an incarnation of the *bodhisattva* Amitābha, receives the worship of all Tibetans, have made a most favourable impression on all Europeans who have come into contact with him.

Tibet is the most priest-ridden country in the world; and of its 3000 or more monasteries none is without its pilgrim visitants, the number of whom varies according to the reputation and accessibility of the temple-shrine. Itinerating bands of Lāmas also of Tibetan and Mongolian race are to be met with outside the country itself, in Central Asia and on the borders of India. Urga in N. Mongolia, the residence of the third Grand Lāma, known as the Bogdo or 'Saint' Lāma, is perhaps the most sacred place in the eyes of the Mongols. The Lāma himself, however, bears an evil reputation for worldliness and immorality. Mongol pilgrims come to worship at his feet and attend the festivals. There are numerous other centres of Lāmaist devotion in Mongolia and China, and the Grand Lāma at Peking is recognized and revered throughout all the countries where a Buddhism of this type prevails.

(e) *Korea and Siam*.—Neither Korea nor Siam, the two chief homes of the Buddhist faith other than those to which reference has already been made, adds materially to the history and records of Buddhist pilgrimage. Korean pilgrims in no great numbers make their way to the sacred places of Mongolia, N. China, and Tibet; but their native land contains no sanctuary of wide repute which attracts the worshipper from afar. In Siam, although the monasteries and temples are thronged at the many and popular festivals, and reverence is paid by all at the shrines, the festive seasons are occasions for friendly intercourse and conviviality, and there is little, as far as can be judged, of the true pilgrim spirit. Nor do Siamese monks make a habit of journeying overseas to the sacred shrines of other lands, although they may be found occasionally at Rangoon, and in the past at least have visited and exercised much influence on the Buddhist thought and observance of Ceylon.

6. *Summary*.—A brief summary, therefore, of pilgrim usage and wont in Buddhism would describe it as an almost universal practice, held in the highest esteem, which in all probability was adopted soon after the death of Gautama Buddha, the principal motive being reverence for his person and for the places where the relics of his cremated body were believed to have been preserved. To a certain extent also, which it is impossible exactly to estimate, his disciples were influenced by a more or less conscious desire to follow on the lines of ancient Hindu custom. With the earlier Hindu practice of pilgrimage they were familiar; and they seem to have wished to break as little as possible with ancestral usage. Whether the Buddha himself by his word enjoined or sanctioned the habit the uncertainty as to the dates and history of the written records makes it impracticable to decide. It is hardly probable or quite in harmony with what is known of his character and teaching to suppose that he did. If, however, the contention of the Mahāyāna school is justified that in his later life he taught a mystical and esoteric doctrine entirely different from that of his earlier years as expounded in the Pāli canonical books,

¹ See A. J. Little, *Mount Omi and Beyond*, London, 1901, p. 63 ff.

² For the pilgrim practice of Japan see art. PILGRIMAGE (Japanese).

then the injunctions and regulations as to pilgrimage and sacred places also may have a similar origin, and may have been framed and announced by Gautama himself, possibly as a concession to the Hindu prepossessions of his followers. The custom was certainly taken up and eagerly followed immediately after his death, and has been ever since a marked feature of popular Buddhism in the East. Nor to any appreciable extent does the practice seem to have lost its hold upon the faith and affection of the Buddhist peoples to the present day.

ASCETICISM (Buddhist), IMAGES AND IDOLS (Buddhist), MAHAYANA, MONASTICISM (Buddhist), and on the several countries.

A. S. GEDEN.

PILGRIMAGE (Christian).—I. Introductory.—Pilgrimage played a very prominent part in religious life in the Christian Church, particularly in the Middle Ages. The fact that it has so largely disappeared from the religious life of England to-day is apt to conceal its importance in the past and in the countries where it is still in vogue even in the present. A pilgrimage is a journey undertaken to visit sacred places, such as the scenes of our Lord's earthly life in Palestine, the 'threshold of the Apostles' at Rome, or the shrines of saints and martyrs. There were many motives at work; it might be to fulfil a vow or as an act of penance. In some cases it is difficult to say whether a given journey is a pilgrimage or not. The mere use of the word *peregrinatio* in a mediæval source can hardly decide the question. It can be considered better historically and geographically, though the purely religious and psychological sides must always be remembered. The latter are better left over and studied in connexion with the effects of the practice and its place in the history of religion.

Peregrinatio and its cognates in classical Latin refer simply to wandering, and so *peregrinus* was just a stranger. In ecclesiastical terminology a 'pilgrim' was one who went to visit sacred places while his ordinary occupation, whether he was clerk or layman, was something different, whereas a 'palmer' was one who spent his whole life in thus journeying from place to place. Dante gives a rather fanciful explanation of the terms:

'Pilgrim' may be understood 'in the wide sense, in so far as whoever is outside his fatherland is a pilgrim; in the narrow sense none is called a pilgrim save him who is journeying towards the sanctuary of St. James or is returning from it. . . . Chiamansi *Peregrini* in quanto vanno alla casa di Galizia, però che la sepoltura di santo Jacopo fu più lontana dalla sua patria, che d'alcuno altro Apostolo'—they are called *palmieri* because they bring back palm-branches and *romei* as they journey to Rome.¹

2. Palestine.—It was natural that men should wish to tread again the paths trodden by the Saviour, though the first generations of Christians did not seem to feel this as strongly as their successors. From the 3rd cent. certainly the sacred places were visited. The pilgrimages of Firmilian, bishop of Caesarea, and a bishop Alexander from Cappadocia are mentioned by Jerome and Origen respectively. When the empress Helena visited Jerusalem and discovered what was supposed to be the true Cross, pilgrims flocked thither and the stream was ever on the increase. Many records of such journeys and also numerous itineraries have been preserved. 'The

Bordeaux pilgrim' visited Jerusalem in 333. The record of this man is the earliest now extant of a Christian pilgrimage, and is very important as showing the condition of the holy places and the traditions growing up round them at the time. On his way thither he travelled from Bordeaux, south of the Garonne, through Toulouse, Narbonne, Arles, up the valley of the Rhone to Valence, then by way of Milan, Verona, Aquileia, Mitrowitza, Sophia, and Constantinople, through Bithynia, to Tarsus, Alexandretta, Antioch, Tripoli, Beirut, Sidon, Tyre, Acre, Ptolemais, Caesarea Palestina, then by Jezreel, Bethshean, and Shechem to Jerusalem. He did not, however, visit Galilee. Many Christians have felt far greater attraction to the scene of our Lord's passion and resurrection than to those of His earthly ministry.¹

Paula, a friend of St. Jerome, went on pilgrimage to Jerusalem, and she corresponded with him about it.² The teaching of St. Jerome much increased the popularity of the movement. Another famous pilgrim in early times was Etheria (Egeria or Echeria),³ the author of the *Peregrinatio Silviae*, or *Peregrinatio Echerie*, put by critics in either the 4th or the 6th century. From the 5th cent. onward the number of pilgrims steadily grew, and, though the journey was a long and arduous one, many thousands were willing to undertake it. Pilgrims came from all parts, and not least numerous or important were those from the British Isles—representatives alike of Roman, Celtic, and Anglo-Saxon Christianity in Britain, such as St. Cathaldus (bishop of Taranto, about 680) and Willibald (bishop of Eichstätt, 741).⁴ The ardent wishes of Christians to see Jerusalem and the hardships which they were sometimes obliged to suffer are of the greatest importance for secular as well as ecclesiastical history, for they were among the causes which contributed to the Crusades. When Saracen rulers were tolerant, Christians had little to fear, but in times of persecution the difficulties of the journey were further increased, and thus eventually the crusading spirit was generated (see art. CRUSADES, I. 3). No doubt motives of political conquest and worldly ambition entered into the Crusades as well as into the practice of pilgrimage. Meanwhile pilgrimage gave rise to the great military orders. While the Hospitallers cared for pilgrims after their arrival in Jerusalem, the Templars protected them on the way from Antioch thither (a hospital which had first been founded by Charles the Great was destroyed in 1010 and another was built).

St. Jerome, though he believed strongly in pilgrimage, nevertheless wrote:

'Et de Hierosolymis et de Britannia aequaliter patet auiæ celestis: "Regnum enim Dei intra vos est." Antonius, cuncta Aegypti, et Mesopotamiae, Ponti, Cappadociae, et Armeniae examina Monachorum non videre Hierosolymam: et patet illis absque hac urbe paradisi janua. Beatus Hilarion, cum Palaestina esset, et in Palaestina viveret, uno tantum die vidit Hierosolymam, ut nec contemnere loca sancta propter viciniam, nec rursus Dominum loco claudere videretur.'⁵

St. Gregory of Nyssa wrote a special letter *de iis qui adeunt Hierosolyma* (PG xlv. 1010 ff.).

The adventures of British pilgrims have a special interest, and almost every Welsh or Irish saint went on pilgrimage.

¹ *La Vita Nuova*, xli; Dante also refers to pilgrims in *Paradiso*, l. 51, xxxi. 48.

From the 13th cent. pilgrimages to the Holy Land, though still frequent, were less numerous than those to Rome. Despite the difficulties of the journey, William Wye, Fellow of Eton, visited Compostella (see below, II) in 1456 and travelled thence to Palestine in 1458 and again in 1462. From his MSS Wynkyn de Worde, the disciple of Caxton, compiled his *Informacion for Pylgrymes into the Holy Land* (printed in 1498, 1515, and 1524). The pilgrimages from England to the Holy Land went on continuously to Reformation times. Sir Richard de Guildforde and John Whitby, prior of Guisborough, went to Palestine, embarking at Rye, in 1506; and in 1517 Sir Richard Torkyngton, rector of Mulberton, Norfolk, visited Jerusalem.¹

From all the countries of Europe pilgrims travelled to the Holy City. It was natural that most should come from those countries which had taken part in the Crusades, but they came also from elsewhere. Russian pilgrimages commenced soon after the country was converted, about A.D. 1000.

¹ In 1022 allusion is made in the Life of St. Theodosius of Kiev to Russian pilgrims in Palestine; the first known name is that of St. Varlaam, abbot of the Laura of Kiev, who visited Jerusalem in 1062.²

The earliest extant record is that of Daniel, an abbot whose identity is not certain. He spent Easter of 1107 in Jerusalem. His work shows devout feeling; and, though a Greek priest, he was friendly to the Latin clergy. He travelled by way of Constantinople, Abydos, Tenedos, Mitylene, Chios, Ephesus, Samos, Patmos, Rhodes, Patara, Cyprus, thence crossing the sea to Jaffa and Jerusalem.³ He saw the miracle of the holy fire (see below, 17) and visited the Virgin's tomb—the traditional scene of the Assumption. Though Italy had so many places sacred to the Christian, particularly the Eternal City, Italian pilgrims came in large numbers to visit Palestine. Venice sent her convoys, and the citizens of Lombardy visited Venice on the way. Among the earliest Italian pilgrims to Palestine was St. Antonio Piacenza, who went to Jerusalem in 570 and wrote *de Locis sanctis quæ perambulavit Antoninus martyr*. Pantaleone, a citizen of Amalfi, went to Palestine about 1065, and a pilgrim hostel was established by him in Jerusalem. In 1219 St. Francis of Assisi went on pilgrimage. In the 14th and 15th centuries pilgrimages became far more numerous. Roberto da Sanseverino set out from Milan in 1458. In 1486 Fra Girolamo Castiglione (or de Castellione), a native of Milan, went to Palestine and thence to Arabia and Egypt. The Cavalier Santo Brasca went to Jerusalem in 1480. He wrote an account of his journey, and his information may have stimulated Canon Pietro Casola, a member of a noble Milanese family, who undertook a pilgrimage in 1494. Casola travelled via Milan, Brescia, Verona, Vicenza, Padua, Venice, Ragusa, Corfu, Navarino, Candia, Rhodes, and Cyprus to Jaffa, and thence to Jerusalem. His account is quite interesting reading and has recently been made accessible to English readers.⁴ The pilgrim traffic was so great that it had to be officially regulated, and, considering the discomforts of travelling at that time, it is remarkable that so large a number were willing to face the risks.

² Hans von Mergenthal, who accompanied Duke Albert of Saxony to the Holy Land in 1476, recounts that the sleeping place allotted to each pilgrim was so narrow, that the

passengers almost lay one on the other, tormented by the great heat, by swarms of insects, and even by great rats which raced over their bodies in the dark. If a luckless pilgrim succeeded in dozing in spite of the general discomfort, he was soon awakened by the stamping of the animals penned up on deck, or by the talking, singing and shouting of his neighbours. Most of those who fell sick died. "God be gracious to them!"¹

In the 16th cent. the number of Italian pilgrimages continued to fall off, though they never entirely ceased.

3. Rome.—Next after Jerusalem, Rome was the city which drew the largest number of pilgrims. The causes which contributed to the rise of the papacy made Rome a pilgrim resort; more especially the tombs of St. Peter and St. Paul exalted it into the goal whither Roman Catholics flocked. One centre of interest was the catacombs. At first used as burial-places, they afterwards became sacred places, hallowed by the bones of martyrs and visited by thousands of pilgrims (see art. CATACOMBS). These came from Britain both before and after the English conquest (King Ina of Wessex founded an English school for Saxon pilgrims and scholars in Rome in 727), and Irish and Welsh saints were among the most indefatigable in their pious journeyings.² Archbishop Usher observes:

¹ Britanni hinc temporibus Romam, Hierosolymam, et Syriam invisere soliti.³

So St. Bridget journeyed to Rome as a pilgrim; likewise Findan of Leinster in 847 to fulfil a vow.⁴ Several Celtic saints, having performed their pilgrimage, settled permanently on the Continent, sometimes obtaining bishoprics. Ninian visited Rome during the pontificate of Pope Damasus (366-384), who had given all Christian pilgrims access to the catacombs.

As time went on, the intercourse between Britain and the Continent became more intimate, so that there was a continual stream of pilgrims to Rome, especially after the failure of the Crusades; the difficulties of travelling, pestilence, and other causes had checked the number of those who went to the Holy Land. The papal jubilee proclaimed by Boniface VIII. in 1300 with its special indulgences drew more than 20,000 pilgrims to Rome. Again at the jubilee of 1450 under Nicholas V. thousands of visitors assembled. In the English College at Rome from 100 to 200 pilgrims were provided with hospitality every year in post-Reformation times. Pilgrims have never ceased to visit Rome; the large number of churches and relics have been continuous sources of attraction.⁵

4. England.—The pilgrimages, however, which left the deepest mark on Britain as elsewhere in Europe were, perhaps, not those to distant lands, however holy, but those to sacred spots nearer home. There were several famous shrines in England not only of national but of world-wide fame, and many others which were prominent in religious life, although not often visited by strangers from a distance. Earliest among British shrines was Glastonbury. When first it became famous is unknown. It was a place renowned in Celtic tradition, and therefore it had become sacred before the advent of Christianity in England, and probably even before the time of Christ. It was very likely on the site of a Celtic temple. Perhaps the particular form of heathen worship there celebrated was the cult of the dead (see artt. BLEST, ABODE OF THE [Celtic] and GRAIL, THE HOLY). There was a Celtic settlement of pre-Roman date

¹ Casola's *Pilgrimage*, introd. p. 91.

near by, which has recently been excavated.¹ Various legends grew up to account for its fame. In the Glastonbury Chronicle under 1259 there was this entry:

'Anno ab Incarnatione XLIII. discipuli sanctorum Philippi et Jacobi Apostolorum venerunt in Britanniam; a quibus primum Oratorium in insula Avalioniae.'

King Ina of Wessex founded a monastery at Glastonbury, then went to Rome on pilgrimage and died there.² Dunstan was abbot of Glastonbury; it grew in fame and importance, and became associated with many saints and heroes—St. Joseph of Arimathea and St. Patrick, King Arthur and Guinevere; and its monks gathered together a wonderful collection of relics—portions of the Crown of Thorns, the True Cross, and the Holy Sepulchre, and bones of St. John the Baptist, St. Peter, and St. Paul. Its fame outlasted the Middle Ages, and a miracle was believed to have been performed there in 1751.³

After Glastonbury in historical sequence, though in the later Middle Ages of even greater fame as a pilgrim resort, was the shrine of St. Thomas à Becket at Canterbury. His murder in 1170 profoundly shocked the whole of Europe, and crowds of pilgrims soon began to visit the spots made sacred by his life and death. His shrine became ever more splendid, and boasted many famous jewels, including the 'Regale' of France. The Jubilee of 1470 brought 100,000 pilgrims to Canterbury. Many of these would be from foreign countries. The pilgrims went first to the transept of the martyrdom in the Cathedral.

'Before the wooden altar the pilgrims knelt, and its guardian priest exhibited to them the various relics confided to his special charge. But the one which surpassed all others was the rusty fragment of Le Bre's sword, which was presented to each in turn to be kissed. The foreign pilgrims, by a natural mistake, inferred from the sight of the sword that the martyr had suffered death by beheading.'⁴

Then the pilgrims went to the choir and saw the general relics, about 400 in number, then to St. Andrew's Tower, and, last of all, to the shrine itself. It had a wooden covering which, till lifted, concealed the gold, silver, and jewels with which it was encrusted. Among foreign pilgrims Leo von Rotzmital was sent on an embassy to England in 1446. Two accounts of his adventures were written, one in Bohemian, preserved in a Latin translation, the other in German. He went and saw the sights usually shown to pilgrims. He and his companions visited the shrine.

'Ibi vidimus sepulchrum et caput ipsius. Sepulchrum ex puro auro confiatum est, et gemmis adornatum, tamque magnificis donariis ditatum, ut par ei nesciam. Inter alias res preciosas spectatur in eo et carbunculus gemma, qui noctu splendere solet, dimidi ovi gallinaei magnitudine.'⁵

The German account relates:

'Da zeigt man uns das schwert, damit man im den kopf abgeschlagen hat. Da weiset man auch ein merklich stuck des heiligen cruzes, auch der nigel einen und den rechten arm des lieben herrn Ritter sant Gorgen und etlich dorn in einer mostranzen von der dünnen kron.'⁶

The Canterbury pilgrimage is remembered among those who take little interest in ecclesiastical history because of Chaucer's *Canterbury Tales*. The journey from the Tabard Inn at Southwark was one of the three ways by which Canterbury was regularly approached by pilgrims. In 1513 a visit was paid to it by Colet and Erasmus; the wealth displayed and the superstition encouraged roused the feeling in Colet which was soon to break forth in him and others in the Protestant Reformation. Erasmus was more reserved and quiet in his strictures, less prone to depart from

Catholic practice and tradition.¹ The last Jubilee at the shrine was that of 1520. The reverence shown to the memory of St. Thomas à Becket was annoying to Henry VIII., and in 1538 the shrine was destroyed by royal command.

Next in importance in mediæval England was the shrine of Our Lady at Walsingham in Norfolk. The special relic that attracted pilgrims here was a small phial reputed to contain a few drops of her milk. This shrine was likewise destroyed at the Reformation. A poem written in 1595 (of uncertain authorship) laments the desolation which had overtaken the scene of the piety of former ages. It concludes:

'Sin is where Our Lady sat,
Heaven is turned to Hell,
Satan sits where Our Lord did sway,
Walsingham, oh! farewell.'²

Other famous places of pilgrimage in mediæval England were Durham (for the shrine of St. Cuthbert), Lichfield, Bury St. Edmunds, and Peterborough. A special feature of English pilgrimage was its anti-royalist character—to revere as a saint one who had been condemned as a traitor.³

5. Wales.—All the Celtic parts of Britain were specially rich in shrines, just as their inhabitants went as diligently as any to Rome and the Holy Land. The chief Welsh shrine was the Holy Well of St. Winifred in Flintshire.

'It is a significant circumstance that the only road through Wales from north to south started at Holywell and ended at St. David's, both conspicuous pilgrim resorts in the Ages of Faith.'⁴ A monastery was founded at Holywell in 1119, which was destroyed at the Dissolution. The history of the shrine is important as showing the connexion of pilgrimage with sacred wells. When any well became famous, and its waters were reported to have either medicinal or miraculous qualities, it soon became a place of pilgrimage. This has been so not in Catholic Christianity alone but in the whole history of religion.

6. Scotland.—The earliest Scottish shrine to which pilgrims resorted was Whithorn ('Candida Casa'). The church there was built by St. Ninian in memory of St. Martin of Tours about 397. Ninian himself was buried there in 432, and the place was renowned among the Irish and among the Welsh of Strathclyde. Like Walsingham, it was popular as a place of royal pilgrimage. Another Scottish shrine was that of St. Mary of the Rock at St. Andrews. This has now been swept away by the sea. It was on the rock at the foot of the cliff on which the Cathedral now stands. Other Scottish places were Dunblane (for the relics of St. Mordoc), Dunfermline (for the shrine of St. Margaret), St. Margaret's Chapel at Edinburgh Castle, St. Nicholas' Chapel, Leith, St. Kentigern's Chapel on Loch Lomond, and St. Mungo's Chapel at Culross.

7. Ireland.—Pilgrimage has been for centuries a dominant feature of Irish religious life, for among the Celtic peoples every hill and well and stream has its own tutelary god or spirit or fairy. Christianity only reconsecrated many places sacred already in Celtic (possibly even in pre-Celtic) times; and, despite spasmodic efforts made by Protestant governments to repress them, Irish pilgrimage has gone on with no real interruption from the Reformation until the present day.

Most famous of Irish shrines was St. Patrick's Purgatory on Lough Derg in Donegal. In the lake there is an island round which various legends grew. It was said that a knight, Owain,

⁶ *Ib.* p. 258.

descended to Purgatory from there and came back to this present life.

'This pilgrimage has been ascribed to insatiable greed and wilful deception on the part of monks, who fostered it with an eye to their own advantage; but the matter cannot be so summarily dismissed. The usage lies, doubtless, in the deep-rooted beliefs of the pre-historic period, and is a reflex of the old Druidic doctrines colouring Christianity. . . . The origin of the pilgrimage must be therefore sought, partly in the geological features of the island (suggestive to the credulous in Ireland, as in other European countries, of an entrance into the Nether Regions) and partly in a native pre-Christian mythology, the implicit belief in the existence of spirits of woodland and water, and the supposed communication carried on between them and mortals.'¹

The connexion with St. Patrick is probably legendary, but it enhanced the glory of the place. Abuses and superstitions grew apace, and in 1497 the pilgrimage was 'abolished' by Pope Alexander VI. The Privy Council ordered its suppression in 1632, and in the second year of Queen Anne it was again prohibited.

'And whereas the superstitions of Popery are greatly increased and upheld, by the pretended sanctity of places, especially of a Place called St. Patrick's Purgatory in the County of Donegal and of Wells to which Pilgrimages are made, by vast numbers at certain seasons. . . . Be it further enacted that all such meetings and assemblies shall be deemed and adjudged Riots and unlawful Assemblies.'²

A fine of ten shillings was to be imposed if the offender refused to be publicly whipped. But suppression was of little avail, and the pilgrimage has continued under ecclesiastical supervision until our own day. Pilgrimage thither is now observed in the Roman Catholic Church as a penitential exercise, and 'it seems the only pilgrimage of modern times conducted like those of the Middle Ages' (CE xii. 95). Other places of pilgrimage in Ireland were Downpatrick in Co. Down (sacred to St. Patrick, St. Bridget, and St. Columba), St. John's Well in Meath, and Cranfield in the parish of Drummaul, Co. Antrim.

8. France.—Among famous French mediæval shrines was Chartres :

'Avant que le christianisme eût été prêché dans les Gaules, les druides étoient dans l'usage de s'assembler tous les ans aux environs de Chartres. On prétend qu'ils avoient en ce lieu un sanctuaire révéré. C'étoit, dit-on, une grotte, où ils honoroient une statue qui représentoit une femme assise, tenant sur elle un enfant, et l'autel portoit cette inscription *Virgini paritura*. Lors de la prédication de l'Evangile on bâtit sur cette grotte une église, vers le milieu du III^e siècle, au plus tard.'³

Chartres therefore, like Glastonbury and St. Patrick's Purgatory, seems to have been the scene of an ancient Celtic cult. The wooden statue of the Virgin was destroyed at the Revolution.

Among modern French shrines the chief is Lourdes (q. v.). Others are La Salette in Dauphiny and Liesse.

9. Switzerland.—Of Swiss shrines the most important is Einsiedeln. There was a monastic community there in the 9th century. It is in the canton of Schwyz, became famous as a centre of pilgrimage in the 10th cent., and has continued to be so until the present time, despite the preaching of Zwingli in the 16th cent.⁴ and the destruction of the monastery in 1798 by the French invaders. The yearly pilgrims are now more than 150,000.

10. Italy.—Besides Rome itself numerous other Italian cities were pilgrim resorts, though none attained special pre-eminence except perhaps Assisi, because of its connexion with St. Francis and in a lesser degree with St. Clare. Siena was associated with St. Catharine; and Venice, with its splendid

basilica of St. Mark, was often visited on the way to the Holy Land. See also art. LORETO.

11. Spain.—Foremost of the shrines of Spain was that of St. James, or Santiago di Compostella, which attained a fame in the Middle Ages greater than that of almost any other city save Rome. It is said that St. James appeared there in a vision in 816, and that his remains were discovered there. The shrine became associated in legend with Charles the Great, but it was not till the 12th cent. that the foundations of its greatness were really laid. Not only Spaniards but pilgrims from all over Europe worshipped there, especially those from Wales and Ireland. In Welsh bardic literature there are many allusions to Compostella.¹ A Latin hymn to St. James has been finely translated by George Borrow.² The pilgrimage flourished till the 14th, but considerably diminished from the 18th century.³

12. Germany.—Chief among German places of pilgrimage was Aachen (Aix-la-Chapelle), the mediæval capital of Germany, which possessed numerous relics. The most important were the white robe in which the Virgin was clothed in the stable at Bethlehem, the swaddling clothes of the infant Christ, the linen cloth in which the body of John the Baptist was wrapped after his execution, and that in which our Lord was crucified; there were many lesser relics besides. The pilgrimage to Aix has continued till the present time. In 1881 there were 158,968 pilgrims. Another mediæval city renowned for its pilgrimage was Trier (Trèves), which possessed the seamless holy coat worn by our Lord before His crucifixion. Cologne was famous as containing relics of the three kings, traditionally called Gaspard, Melchior, and Balthasar.

13. The Syrian Church.—The pilgrimages so far considered have all been either of the West of Europe or else in Palestine itself. But beyond the frontier of the Roman Empire the Syrian Church grew and flourished, though on lines in some ways different from those of the Græco-Roman world. Pilgrimage was made by Syrian Christians at a date earlier than by those of the West. Noh, bishop of Adiabene (163-179), had been taken as a child by his parents to Jerusalem on what may fairly be called a pilgrimage.⁴ Pilgrims continued to visit Jerusalem; the subject, however, is still involved in some obscurity.⁵

In 858 a Nestorian synod considered the subject: Canon ix. declares that no new monasteries shall be built without the knowledge of the bishop of the diocese; if one were built and the bishop knew, he would give it a revenue sufficient for its upkeep and for hospitality to pilgrims. Canon xv. proclaims that the faithful ought to give their offerings and perform their vows for the remission of their sins in the places where they live, and not wander far afield. Why should they go to distant places? It is a puerile habit which gives satisfaction to the senses but not to the soul. If any of the faithful, after having visited the churches and convents of their own country, desire to visit those that are further away, not with the idea that God will there favour them more, but to give some part of their goods to the head of the convent, they are not to be hindered. But, if they wander about as people who have lost their God, not knowing where they will find Him or where He will hear them, they are sick souls in need of health and should be led to the doctrine of perfection.⁶

This shows that the abuses of pilgrimage were quite obvious at this time, and they must have been widely spread to have called down ecclesiastical censure in these terms. Gregory Bar-Hebræus, bishop of Guba (probably Bear Omshash, north-east of the Gulf of Akaba) and primate of the East († 1286), quotes from a letter of one John Bar-Finchoje to a monastic friend describing the

pilgrimage to the Holy City and what was to be seen and done there.¹

14. The Reformation.—Changes so wide in the religious life of Europe as those which came to pass in the 16th cent. were bound to leave their mark not only on the Protestant countries, but within the bounds of Catholicism as well. Much purging of abuses took place at the Counter-Reformation; and, while in some countries Protestantism lost its first conquest, with the advancing tide of Catholicism not everything that had been destroyed was built up. Under Mary Tudor, *e.g.*, no attempt was made to restore the shrine of Becket in Canterbury Cathedral. The Continental Reformation brought with it the abolition of pilgrimage. Thus, in the programme of reforms of the bishop of Pomesania in 1525, art. 4 declares: 'Henceforward there shall be no pilgrimage nor wanderings to holy places, since they aid no man's salvation.'²

In Sweden the Lutheran Synod of Örebro in 1529 decreed:

'Peregrinationes ad loca sancta quanta fieri possit moderatione removebuntur.'

showing that, as in other things, Lutheranism dealt more gently with Catholicism than did Calvinism.³ Calvin in the prefatory letter to Francis I. (23rd Aug. 1536) of his *Christianæ Religionis Institutio*, wrote:

'Cur ergo tanta sævitia et acerbitate pro missa, purgatorio peregrinationibus, et id genus nugis belligerantur, ut sine eorum explicatissima, ut ita dicam, fide salvam fore pietatem negent, cum tamen nihil eorum a verbo Dei esse probent?'⁴

The Edict of Reformation of Bern for the Pays de Vaud (24th Dec. 1536) declared in art. 17:

Bénitions.—'Nous avons aussi ordonné que toutes bénitions de voyage et pèlerinages soient ôtées, et que nul soit si hardi d'aller en lieux sous peine, l'homme de dix florins, la femme de cinq florins.'⁵

The Council of Trent (1563; sess. xxv.) condemned those who affirmed that 'places dedicated to the memories of saints are vainly visited.'

15. Royal pilgrimage.—Throughout the Middle Ages pilgrimage was a constant observance among kings and princes; to show honour to the saints of their country was a natural thing, and sometimes a king went in penitence, as did Henry II. to the shrine of Becket, after the murder of the archbishop. The Scottish kings continually went to Whithorn. Margaret, daughter of Christian I. of Denmark, wife of James III. and mother of James IV. of Scotland, went thither after the birth of her son in 1473, though her journey has been described as a 'pleasant outing rather than a penitential exercise.'⁶ James IV. himself went there several times, as also did James V., though not so often as his father. James IV. visited also Whitekirk in E. Lothian, where in 1430 James I. had built a house for the reception of pilgrims.

Some interest attaches to the pilgrimage of one who later became a king: Henry, Earl of Derby (afterwards Henry IV.), visited Prussia and then went on to the Holy Land. He travelled by way of Dantzic, Frankfort-on-Oder, Prague, Vienna, Treviso, Venice, Corfu, Rhodes, Jaffa, Ramah, and Jerusalem, returning through Rhodes, Cos, Corfu, Ragusa, Venice, Treviso, Pavia, Vicenza, Verona, and Milan.⁷

16. The effects of pilgrimage.—It is quite clear that a custom so wide-spread must have left its effect not simply on the religion but on the entire life of the world. It helped, as has been seen, to

produce the Crusades; it drew far afield men who would otherwise have been content to stay in their own country, and gave them a knowledge of distant lands. The countries of Europe had, by means of the pilgrims, far more intercourse with each other in the Middle Ages, not only in religion, but also in commerce, literature, and art. The economic effect of pilgrimage was also considerable. Though many cities already famous became pilgrim resorts, in some cases towns or villages hitherto obscure became, by virtue of a shrine or the relics of a saint, places of national, perhaps even of world-wide, fame. These facts, however, must never obscure the essential religious importance of pilgrimage (it is wrong, *e.g.*, to put as one of the chief 'effects' of the custom the fame of the *Canterbury Tales*; that the pilgrimage to Canterbury afforded the occasion for some of the most famous English poetry is after all only incidental).

In post-Reformation times in Catholic countries pilgrimage has often been undertaken for the sake of cures such as those (some of which are genuine) wrought at Lourdes.

17. The place of pilgrimage in the history of religion.—It has already been noted that pilgrimage is not confined to Catholic Christianity, and also that pre-Christian shrines were consecrated to Christ and to His saints. This fact is of importance for the comparative study of religions, and, like other facts in that science, should be neither minimized nor wrongly emphasized. How far, all over the world, Christian and pre-Christian customs and rites were interwoven is not yet known for certain. As S. A. Cook says in a letter,

'The visit to the grave of the more or less deified hero, the annual meeting on the occasion of initiation or other ceremonial, the periodical festivals at which different towns or clans assembled—all these represent universal ideas.'

Some observances of Christian pilgrimage have close analogies elsewhere—*e.g.*, the miracle of the sacred fire at Jerusalem,¹ Glastonbury, St. Patrick's Purgatory, and Chartres (see above, 4, 7, 8) are instances of pagan holy places being consecrated to Christian pilgrimage.

The pilgrim with his staff, his broad flat-crowned hat, and his mussel-shell or other badge, has now disappeared, but thousands still go every year on pilgrimage. Shall we dismiss it as a mere superstition? It is something more than, although it is akin to, the sentiment that has made it the supreme desire of many whose relatives have fallen in action to visit their graves when the war is over. The underlying idea, conscious or unconscious, is that definite sanctity attaches to certain places because of what has happened there, as though some of the personal magnetism of the person who had lived or died there still survived and could communicate itself to the visitor. A similar idea would explain a so-called 'ghost,' not as the actual spirit of a dead person surviving after his bodily death in a given spot associated with him in lifetime, but rather as an impress or influence left by him still capable of affecting those who come to the place. Thus the study of pilgrimage leads us into psychic and psychological problems the solution of which is still beyond our range.

L. D. AGATE.

PILGRIMAGE (Hebrew and Jewish).—The origin of the Hebrew pilgrimage is to be sought in the early Semitic life. To the primitive religious conception the deity was not ubiquitous, but was localized—by the nomads within the confines of a sacred district, frequently an oasis, by agriculturists in the sanctuary of a village or town. The performance of certain religious duties, therefore, normally involved a journey of greater or less length, which in time increased as the renown of particular sacred places, and the advantages for trading offered by a larger concourse of people, led to the further centralization of worship. Economy of time and effort, also, reduced the visits to a limited number at regularly recurring periods, to which was postponed the payment of vows replacing intervening religious duties. There thus was instituted the annual family or clan pilgrimage, as pictured in 1 S 1⁵. At times a lengthier pilgrimage into strange territory resulted in a protracted stay as a *gēr*, or even in permanent settlement; Abraham is the archetype of the pilgrim immigrant, and perhaps in Dt 26⁵ *‘ōbēd* (AV ‘ready to perish’) contains the ideas of the Arabic root *‘abada*, ‘strange,’ ‘long from home,’ ‘permanent dweller.’ Moreover, every traveller into strange territory was in a sense a pilgrim, a prospective visitor to the local shrine; hence, apparently, the right of sanctuary, of protection, was extended to cover the entire journey within the tribal territory—a supposition which may in part explain the sacred character of the primitive Semitic institution of hospitality (*q.v.*). At all events, the journey itself became an essential part of the religious celebration, assuming a quasi-sacred character—in itself a meritorious act.

The development of the pilgrimage of the clan into one of larger groups was due in part to the advantages of combination when the journey was long and led into strange territory; and this development was hastened when the period of pilgrimage was made to coincide with that of nomadic or, especially, with agricultural festivals. The Hebrew term *hagh* denotes both the pilgrimage journey and the festival ceremonies at the shrine; but which of these two ideas is the original denotation is uncertain. The concept ‘encircle,’ which seems common to various triliteral extensions of the biliteral root *h-g*, may be seen both in the

dance and in the circumambulation which concludes the pilgrim journey; nevertheless, if in Arabic *hagh* originally did not denote the circumambulation of the Meccan shrine but only the visit to ‘Arafah (J. Wellhausen, *Reste arabischen Heidentums*, Berlin, 1897, pp. 79–84)—i.e. a visit, from the standpoint of Quraish, to a strange shrine under protection from the tribal adherents of that shrine—an original meaning ‘pilgrimage,’ ‘recourse to a place of refuge,’ should be preferred (cf. the roots *hajā* and *haja’a*).

The origin of the Hebrew *hagh* as involving a nomadic journey seems discernible in some of the regulations for the Hebrew festival celebrations, especially the Passover (though the latter is associated in the Pentateuch with an agricultural epoch and with traditions of a definite historic departure from Egypt). A three days’ journey into the desert is made antecedent to the first Passover celebration; and the extension of the celebration of the festivals in general over an entire week is in part a reminiscence of the journey period (cf. the pilgrimage month of the Arabs). But especially the eating of unleavened bread (the nomad’s usual bread), the roasting of the lamb whole (in nomad fashion), and the start by night (as frequently in the case of desert caravans) offer the setting for a dramatic revival of the ancient desert life and wanderings; therein sanctity and religious significance are attached to archaism, in the same manner as in the regulation for the building of an altar of dirt or unheaven stones (Ex 20). The pilgrimage of Tabernacles is a similar religious-dramatic revival of tent life (Hos 12¹⁰ reads ‘tents’ for the ‘booths’ of Lv 23⁴; cf. also 2 Ch 7¹⁰, if the phrase ‘into their tents’ is to be understood literally here).

The pilgrimage had also a political importance. The close association in a common purpose of large numbers of people from different tribes and communities afforded the basis for the development of a more permanent national unity, and played a part no less in ancient pan-Hebraism than in modern pan-Islāmism. In the Pentateuchal legislation which purposed the centralization of worship in Jerusalem the attempt is clear to increase the spirit of unity by bringing all males together in pilgrimage to one shrine at three different periods of the year (the festivals of Passover, Weeks, and Booths). That this legislation, however, reflects actual conditions—that all the male inhabitants of Palestine simultaneously left their homes three times every year to make what for some would have been an extended journey—seems improbable; and the special emphasis laid upon the Passover in certain passages (Nu 9¹³) or upon the Feast of Tabernacles in others (1 K 8⁶⁸), shows perhaps that one or the other was in reality the pilgrimage period at different epochs in the national life, or (more likely) for different clans or families at the same epoch. Jeroboam testified to the political value of the pilgrimage in his attempt to counteract its unifying force by changing the place and time of it (1 K 13⁷, with which cf. the reported action of Walid ibn ‘Abd al-Malik in promoting the pilgrimage to a certain mosque in Jerusalem as against the Ka’bah, or that of the papal monarchy in diverting the pilgrimage to Rome).

After the building of the Second Temple in Jerusalem the Holy City was without rival as the objective of Jewish pilgrimage. Jews journeyed thither from Mesopotamia, and the journey itself became an even more important factor than before, often involving considerable hardship and danger; the old laws of hospitality to the pilgrim became correspondingly broader, and the inhabitants of Jerusalem took special measures to accommodate

visitors in the city as well as along the roads leading thereto.

But after the destruction of the Second Temple conditions changed; though there was still an annual celebration of the Feast of Tabernacles (on the Mount of Olives), with the cessation of sacrifice the pilgrimage, too, ceased to be an obligatory act. It assumed in general a personal and emotional character and lost much of its former joyousness. Pilgrims to the site of the Temple now came principally to mourn and to pray for the restoration of Zion, and they were not always welcomed by the non-Jewish population of the land. Conditions improved under Muhammadan rule; and in the 9th cent. many Karaites in particular made the pilgrimage. During the Crusades the pilgrimage seems to have ceased again; but with Saladin it was resumed,¹ and recovered something of its ancient joyous character. In many cases the desire to visit Jerusalem was coupled with the purpose of living and being buried on holy ground, and the pilgrimage thus became a pious immigration; as early as the 11th cent., indeed, a fully organized Jewish community existed at Ramlah; and there was a marked influx of Jews from Spain somewhat later, and from other parts of Europe in the 15th and 16th centuries. Earlier than this impulse from persecution there is found as a secondary cause of pilgrimage the general purpose of travel (as in the case of Judah Halevi and Ibn Ezra), the frequency of which is evidenced by a special travellers' prayer in the Jewish ritual.

At the same time Jerusalem again had its rivals as the object of pilgrimage. In Egypt there was a famous synagogue at Dumūh (modern Ṭammūh), near Cairo, to which Jewish families journeyed to celebrate the Feast of Weeks. But in Muhammadan countries the multiplication of shrines was due to the development especially of another type of pilgrimage—that to the tombs of pious men, of saints and reputed miracle-workers. Though evidence of the belief in the supernatural power of tombs may perhaps be found in 2 K 13²¹, and such a belief among certain classes of Jews may have persisted along with other beliefs in miracles, the custom of visiting graves in order to pray and ask for divine intervention seems to have been borrowed by Jews from their Oriental neighbours; at any rate such a *ziyārah* (lit. 'visit') is sometimes made by Muhammadans and Jews to the graves of the same Biblical heroes. By the Oriental Jews themselves no distinction in reverence is made between the supposed tombs of Biblical characters and those of later saints. Palestine has many tombs of local, and several of more than local, veneration. To the supposed tomb of Zebulun at Sidon, e.g., pilgrims come from all parts of Palestine, and also to that of Rabbi Meir (q.v.) at Tiberias. That of Simeon ben Yohai at Merom near Safed has long been visited by Jews even from Persia and Africa; indeed, in the 16th cent. Safed rivalled Jerusalem, especially as a place for permanent settlement, for it offered hospitality such as neither the Muhammadans nor the Jews of the Holy City any longer extended.

Outside of Palestine pilgrimages are made to several tombs in Kurdistan (e.g., that of Nahum near Mosul), in Mesopotamia (e.g., that of Ezra near Bassorah and that of Ezekiel near Babylon), and in Persia (that of Mordecai and Esther at Hamadan). In Algeria and Morocco are several tombs of Jewish worthies of local renown, and these, too, are sometimes visited by Muhammadans and Jews together. In Europe only Galicia, Volhynia, and parts of Poland have their pilgrim

¹ In the 13th cent., e.g., there is recorded the visit of 300 rabbis from Spain and France.

shrines, though the travelling instinct as such has sometimes found expression in a sort of pilgrimage to various famous synagogues, such as at Prague, for purposes of prayer; and the wandering student, journeying far to sit at the feet of renowned rabbis, was a familiar figure until the 19th cent. in Germany and still later in Poland and Hungary.

In some cases the tomb-pilgrimages take place at fixed annual dates which, especially in Palestine, often coincide with the various festivals of the Jewish calendar; in other cases they take place at the pleasure of the individual. In Muhammadan countries a relationship with the older Semitic pilgrimage is seen in the joyous festival character which the celebration assumes, even beside the tomb.

WILLIAM PÖPPER.

PILGRIMAGE (Indian).—I. Origin.—Pilgrimage in India is the result of the animistic basis of the popular beliefs, reflected in the higher forms of Hinduism and even in the local developments of Islām. Nothing strikes a new-comer to the country more than the crowds of pilgrims travelling by road or rail towards some holy river, the local abode of some god or godling, the tomb of some saint or martyr.

'It seems not unlikely that the virtue of a pilgrimage arises mainly from the sacred character attaching to the place itself and not so much from the desire to honour the deity whose shrine it is. If this is so, the feeling which prompts the undertaking of the journey is not a very great advance on the primitive reverence for certain places as the abodes of spirits' (R. V. Russell, *Census of India*, 1911, vol. xiii., Central Provinces Report, pt. I. p. 91).

To this may be added the fact that water, by the analogy of the removal of physical impurities, is a potent agent in the removal of sin. Thus, in many sacred places there are pools dedicated to the god Rāma, which take his name, not because he is worshipped there, but because he bathed in this place when he wished to free himself from the sin of having killed the demon Rāvaṇa, who is held to have been a Brāhman. The germ of the idea of pilgrimage is found in the words of Indra to Haris-chandra:

'There is no happiness for him who does not travel; living in the society of men, the best man often becomes a sinner; for Indra is the friend of the traveller. Therefore wander' (*Aitareya Brāhmaṇa*, vii. 15).

But, though in the *Rigveda* the animistic worship of rivers appears, pilgrimage, in its modern sense, is not referred to, and even in the *Brāhmaṇas*, while a particular sanctity attaches to river fords (*tirtha*) and certain privileged regions, like the banks of the Sarasvatī, there is no knowledge either of pilgrimages or of holy places (A. Barth, *Religions of India*, Eng. tr., London, 1882, p. 62). Even Manu (*Laws*, viii. 92) regards visits to the Ganges or to Kurukshetra as comparatively unimportant.

Gautama, however, declares that 'all mountains, all rivers, holy lakes, places of pilgrimage, the dwellings of *ṛṣis*, cow-pens, and temples of the gods are places which destroy sin' (xix. 14 [*SBE* ii. (1879) 276]).

The origin of the modern practice may be traced to the revival of Brāhmanism and its absorption of local cults. Every place where a local spirit was propitiated or worshipped soon came under the control of a body of local priests, interested in attracting visitors because their offerings formed their means of livelihood.

2. Places of Hindu pilgrimage.—The number of places to which pilgrims resort is enormous. In

the following list the more important holy places are classified according to their geographical position and the deities mainly worshipped, it being understood that many places combine the cults of more than one deity :

(a) *Places*.—Bengal: Barābar, Gayā, Deogarh, Kālighāt, Kāmakhya, Sāgar Island, Tarakeswar; Bihar and Orissa: Pārasnāth, Puri-Jagannāth; Panjāb: Dera Nānak, Jwālamukhi, Kātās, Kurukshetra, Takht-i-Sulaimān; United Provinces of Agra and Oudh: Allāhābād, Badarināth, Batesar, Benares, Bindhāchal, Brindāban, Chitrakūt, Debipātan, Deoprayāg, Gangotri, Garhmukhtesār, Hardwār, Jammotri, Kedārnāth, Mahāban; Bombay: Alandi, Bechrāji, Chāpōd, Dwārka, Jejuri, Nāsik, Pālitāna, Pandharpur, Shetrunjāi; Madras: Bābā Badan, Bhavāni, Chidambaram, Comorin, Conjeevaram, Gokarn, Rāmeswaram, Seringapatam, Srirangam, Tirupati; Central Provinces: Māndhātā; Balūchistān, Hinglāj; Rājputāna and Central India: Abu, Ajmer, Amarkantak, Barwāni, Nāthdwāra, Pushkar, Rakhabh Dev.

(b) *Culte*.—Brahmā: Pushkar; Viṣṇu: Badarināth, Gayā, Hardwār, Nāthdwāra, Pandharpur, Puri-Jagannāth, Tirupati; Kṛṣṇa: Mathurā, Gokul, Brindāban, Mahāban, Dwārka; Śiva: the twelve great *līngas*: Somnāth in Kāthiawār, Mahākālā at Ujjain, Omkāra in the Narbadā, Trayambak near Nāsik, Nāganāth in the Nizām's Dominions, Vaidyanāth in the Deccan, Bhīmasankar on the river Bhīma, Kedāreswar in the Himālaya, Viṣvanāth at Benares, Mallikārkjuna in the Karnātik, and Rāmeswar at the extreme south of the peninsula; other places sacred to Śiva are Bakreswar, Barābar, Chidambaram, Deogarh, Gokarn, Hardwār, Jejuri, Kātās, Kedārnāth, Tarakeswar; various forms of the mother-goddess, Kālī, Durgā, Devī, etc.; Arasū, Ambā Bhavāni, Bindhāchal, Comorin, Devipātan, Hinglāj, Jwālamukhi, Kālighāt, Kāmakhya; sacred rivers: Allāhābād, Amarkantak, Bāgheswar, Batesar, Bhavāni, Chāpōd, Deoprayāg, Gangotri, Garhmukhtesār, Jammotri, Nāsik, Sāgar Island. The chief places visited by Buddhists are: Bodh Gayā, Kuśinagara, Potala, Sarnāth; by Jains: Barwāni, Gīrnār, Pālitāna, Rakhabh Dev, Shetrunjāi. Worshipers of Rāma and Sitā visit Ayodhya, Chitrakūt, Nāsik, and Sitākund. The heroes of the *Mahābhārata* are venerated at Kurukshetra and Thānesār. The cult of the dead is performed at Benares, Hardwār, Gayā, and Siddhpur. In the number of sacred places few regions rival the Himālaya, and, in particular, Kāśmīr. The latter is a country where there is not a space as large as a grain of sesame seed without a *tirtha*—a place of pilgrimage (Kālhaṇa, *Rājataranginī*, ed. M. A. Stein, London, 1900, li. 367, 376; *Āin-i-Akbari*, tr. H. S. Jarrett, li. 354 ff.).

3. *Pilgrimage among the Buddhists*.—The great monasteries, *stūpas*, and *dāgabas* erected over the relics of Buddha, many of which had disappeared, have been unearthed by the Archaeological Survey. Bodh Gayā, where Buddha gained his title, and where the *bodhi*-tree beneath which he sat became an object of veneration, still commands respect among Buddhist pilgrims from Burma and farther east. In 1905 the Tāshi Lāma of Tibet visited the ruins at Sarnāth, near Benares burned vast quantities of butter and incense, and scattered flowers. At the close of the rite of adoration the Tāshi Lāma was transfigured and the other Lāmas worshipped him (*The Times*, 20th Dec. 1905). Next to the Tree of Wisdom at Bodh Gayā, the sites regarded as most holy are the scene of Buddha's death at Kuśinagara (*q.v.*), the eight great *chaityas* which enshrined his relics, Mt. Potala in S. India, Sthambala in the north, and the *guru's* Fairy-land in Udyāna to the west. The Indian sites are seldom visited by Lāmas and Tibetans on account of the great distance and the expense of the journey. Probably for the sake of convenience and economy, they have transferred the site of Buddha's death from Kuśinagara to a place known as Sālkuśa in Assam (L. A. Waddell, *The Buddhism of Tibet*, London, 1895, p. 305 ff.).

4. *Places of Jain pilgrimage*.—The Jains, probably on account of the retiring character of the cult and the desire to avoid pollution from animal slaughter, selected as their sacred sites places far from the abodes of men, like Mt. Abū in Rājputānā, Pālitāna and Gīrnār in Kāthiawār, Samet Sikhar or Pārasnāth in Bengal. The southern Jains have special places of pilgrimage at Padmāvati in Mysore and Guṇeswar in S. Kānara (*BG* xxii. [1884] 118).

5. *Holy places shared by different religions*.—Some places are shared by the followers of more than one religion. Hindus and Muhammadans

both visit the ledge below the Takht-i-Sulaimān, from which King Solomon is said to have taken his last view of India before he carried off his dusky bride (T. H. Holdich, *The Indian Borderland*, London, 1901, p. 73 f.; cf. *ERE* vi. 709).

6. *Pilgrimages by the ascetic orders*.—Some of the most extended pilgrimages are those performed by Goṣāins, Sannyāsīs, and other ascetics.

Jonathan Duncan (*Asiatic Researches*, v. [1799] 37 ff.) gives an interesting narrative of the pilgrimages performed by Frānpuri Sannyāsi, an Ūrdhvabāhu, i.e. one whose arms had become rigid by being constantly held over his head (M. Monier-Williams, *Brahmanism and Hindūism*, London, 1891, p. 88). He journeyed to all the chief Indian shrines, Kābul, Bamiān, Baku on the Caspian Sea, Astrakan and Moscow, through Persia and Bokhara, and thence across the Himālaya to the source of the Ganges at Gangotri. Then he went to Nepāl and the sacred lake Mānasarovar and Lhāsā, whence he returned to India bearing dispatches to Warren Hastings, who gave him a rent-free estate. When this account was written, he was still in the habit of making excursions to Nepāl and to other parts of India.

Ascetics often wear symbols of such journeys, a white conch-shell denoting a journey to Rāmeswar in the south, iron, brass, or copper armlets indicating pilgrimages to Paśupatināth, Kedārnāth, and Badarināth in the Himālaya.

7. *River pilgrimages*.—The favourite form of Indian pilgrimage is to shrines on the banks of the great rivers, like the Ganges, Jumnā, Narbadā, or Godāvarī. The Indus and the Brahmaputra are too far from the Holy Land of the Hindus to have acquired special sanctity. The great rivers, though places on their banks have been occupied by the votaries of special deities, are unsectarian, and any Hindu, whatever his rank may be, may bathe, provided he avoids causing pollution to high-caste worshippers. The places at which these rivers rise, like Gangotri, Jammotri, or Amarkantak, and sites on their upper waters, like Nāsik or Hardwār, are sacred. Even more highly regarded are the junctions (*sangam*) of two or more holy rivers, like the meeting of the Ganges, Jumnā, and the mythical Sarasvatī at Allāhābād, known to Hindus as Prayāga, 'the place of sacrifice' *par excellence*; Bāgheswar, Deoprayāg, and other junctions higher up the stream; and Sāgar Island, where the river joins the sea. Such places are often dedicated to the worship of Śiva, a god of fertility. Bathing in these holy places cleanses both body and soul, and brings the pilgrim into communion with the benign water-spirits and with the honoured dead whose ashes have been consigned to the waters.

8. *Rules of pilgrimage*.—The dates and hours at which bathing is auspicious are fixed by the local priests, and depend on various considerations connected with the local cultus. Thus, at Allāhābād the chief bathing fair is held on the new moon of the month Māgh (Jan.-Feb.), at Hardwār at the beginning of the Hindu solar year. At both these places specially important assemblies occur every twelfth year when the planet Jupiter enters the sign of Aquarius (Kumbha), such fairs being known as the Kumbh Melā (for the importance of the sidereal revolution of Jupiter, which is completed in 11 years, 314·92 days, as affecting religious observances, see *GB*³, pt. iii.; *The Dying God*, London, 1911, p. 49). From ancient times bathing during eclipses has been a means of expelling the evil spirits which are abroad at this time. According to tradition, the Yādavas bathed at Somnāth during an eclipse.

An important rite performed at sacred places is the circumambulation of the sacred object in the course of the sun, keeping the right shoulder towards it (*pradakṣiṇā*). Sometimes, as at Benares (*ERE* ii. 467), there is a holy road surrounding the sacred area along which the pilgrims march. Sometimes, as at Mathurā, where the sites associated with the life of Kṛṣṇa are spread over a considerable space, they are visited in rotation under

the direction of a Brāhman, who usually recites at each holy place the local religious guide-book (*mahātmyā*), which embodies the religious lore. These Brāhman guides form a special class, often notorious for roguery and rapacity, like those known as Gangāputra, 'sons of the Ganges,' the Chaubē of Mathurā, the Gayāwāl of Gayā, the Prayāgwāl of Allāhābād (Crooke, *TC*, Calcutta, 1896, ii. 387 ff.; *BG* ix. pt. i. [1901]; Kalhana, *Introd.* i. 20). These men usually keep lodging-houses for entertainment of guests, tout for pilgrims, and keep books which record for many years the arrival of persons of particular castes or families. There is an elaborate system of touting for pilgrims to Jagannāth (W. W. Hunter, *Orissa*, London, 1872, i. 140).

When the holy place is, like Hardwār, Benares, Gayā, or Siddhpur, associated with the cult of the dead, the ashes of relatives, which have been preserved until this opportunity, are consigned to the water, and the mind rites (*śrāddha*) are performed. It is an interesting development that since the introduction of the Government parcel-post the ashes are often sent by it to a Brāhman competent to perform the rites, without the attendance of the relatives being required.

In the case of serious sin a special rite of atonement (*prāyāścitta*) is performed during the pilgrimage. The hair of the penitent, which is supposed to hold his sins, is cut off, only a single tuft being left on the crown of the head. He bathes in ten different ways, each with the use of an appropriate text, dresses in clean clothes, worships the deity, and, while the Brāhman performs the fire sacrifice (*homa*), presents ten kinds of gifts, the last being the 'shadow' gift, a cup of melted butter in which he has beheld the reflexion of his own face. He then says to the priest: 'This penance of mine must be rendered valid by you,' to which the reply is made: 'It is rendered valid.' If a sinner should die leaving this rite unperformed, it is the duty of his successor to perform it; if it be neglected, father and son descend to hell (A. K. Forbes, *Rās Mālā*, London, 1878, p. 631 f.).

9. Austerities practised by pilgrims. — Besides the suffering caused by long journeys in ox-carts over ill-kept roads, the crowding in railway carriages, the inconveniences of camping on the river bank, and the bad accommodation in the pilgrim lodging-houses, special austerities are undergone. One form of penance for grievous sin is the measuring of the length of the pilgrim's body by successive prostrations on the ground as he journeys to the sacred place. Waddell notes this as a Buddhist practice at Lhāsa, where some zealots traverse the Circular Road in this way—a distance of about 6 miles, the number of prostrations being over 40,000; in some cases the hands of the pilgrims are protected by padded wooden clogs, the soles of which are studded with hob-nails (*Lhasa and its Mysteries*³, London, 1906, pp. 364, 375).

According to the historian Rashid-din (H. M. Elliot, *Hist. of India*, London, 1887-77, i. 67), at Somnāth 'many of the more deluded devotees, in performance of their vows, pass the last stage crawling along the ground upon their sides; some approach walking upon their ankles, and never touch the ground with the soles of their feet, others go before the idol upon their heads' (for similar customs at Pandharpur see *BG* xx. [1884] 470).

On several occasions the emperor Akbar, in imitation of the Hindu practice, walked on foot from Agra to Ajmer to visit the shrine of the saint Mu'īnu-d-din Chishtī (Elliot, v. 328).

The original custom of branding the pilgrim with the sacred symbol of the god as a proof that he had performed the pilgrimage is now often superseded by a mark made with moistened clay. But in S. India, among the Sri-Vaiṣṇavas and Mādhavas, the visitor to the monastery (*matha*) is branded on both shoulders (E. Thurston, *Ethnographic Notes in S. India*, Madras, 1906, p. 403 f.). The practice of piercing the cheeks and tongue with a silver needle when going on pilgrimage is more common in S. than in N. India (*ib.* p. 402 f., *Castes and Tribes of S. India*, Madras, 1909, v. 399). Occasionally in S. India pilgrims keep a

handkerchief tied over their mouths to show that they are subject to a vow of silence during the pilgrimage, or they wear a mouth-lock, a silver band over the mouth, with a skewer piercing both cheeks (Thurston, *Castes and Tribes*, v. 399). Abū al-Faḍl says of Nagarkot in the Panjāb:

'Pilgrims from distant parts visit it and obtain their desires. Strange it is that in order that their prayers may be favourably heard, they cut out their tongues: with some it grows again on the spot, with others after one or two days. Although the medical faculty allow the possibility of growth in the tongue, yet in so short a space of time it is sufficiently amazing' (*Ain-i-Akbari*, tr. H. S. Jarrett, ii. 313).

On the sacrifice of joints of the fingers at certain Indian shrines see *GB*³, pt. iii., *The Dying God*, p. 219 f. At the pilgrimage to the temple of Sasta in Travancore the Aiyappans (for in these pilgrimages the worshippers call themselves by the name of the god) have to undergo a preliminary course of 41 days' scanty diet and sexual abstinence (*Census of India*, 1901, vol. xxvi., Travancore Report, pt. i. p. 98).

10. Muhammadan pilgrimages. — It does not fall within the scope of this article to describe the pilgrimage (*hajj*) to Mecca, Medina, or Kerbela, that to Mecca having succeeded the old pagan spring feast (W. R. Smith, *Lectures and Essays*, London, 1912, p. 546). In India the number of tombs of saints (*pir*, *auliyā*) or martyrs of the faith (*shahid*) is legion, and they attract large bodies of pilgrims.

For N. India see A. O'Brien, 'The Muhammadan Saints of the W. Panjab,' *JAI* xli. [1911] 509 ff.; W. R. Lawrence, *The Valley of Kashmir*, London, 1895, p. 286 ff.; Malik Muhammad Din, *Bahawalpur State Gazetteer*, Lahore, 1904, p. 169 ff.; *Census of India*, 1911, vol. xlii., N.W. Frontier Province Report, p. 87 f.; for Balūchistān, *FL* xlii. [1902] 259 ff.; for S. India, S. H. Bilgrami and C. Willmott, *Historical and Descriptive Sketch of the Nizam's Dominions*, Bombay, 1883-84, ii. 571 ff.; *BG* ix. pt. i. [1901] 360.

Such monuments abound in the vicinity of Muhammadan capital cities, like Delhi, Agra, Lahore, or Lucknow, and they are visited by low-class Hindus as well as by Muhammadans. Some shrines, like those of Mu'īnu-d-din Chishtī at Ajmer, the martyr Ghāzī Miyaṇ at Bahraich and Gorakhpur, and Shāh Madār of Makanpur, vie with Hindu holy places in attracting both Hindu and Muhammadan pilgrims. But the erection of tombs, and still more the superstitious veneration of them, is opposed to the laws of orthodox Islām, and Wahhābis—the puritans of Islām—prohibit visits to them. The practice now so common among Muhammadans of visiting such places is clearly derived from the practices of the Hindus, and the rites performed differ little from Hindu and Buddhist custom. The pilgrims circumbulate the building in the course of the sun, crush into the tomb chamber to imbibe the breath of the saint which is supposed to survive round his remains, or, as a special privilege to be gained by payment of a fee, they are allowed to observe or even to touch clothes which are supposed to have been worn by the saint or martyr—his turban in particular, or some other article which may have belonged to him. Many of these shrines are potent in the cure of disease, and at some—e.g., at the tomb of Hanwant Nāik at Sāngamner in the Ahmadnagar District—wooden legs or arms are offered to secure relief (*BG* xvii. [1884] 737). Many of the Panjāb shrines are efficacious in the cure of leprosy and other diseases (*Census of India*, 1911, vol. xiv., Panjab Report, pt. i. p. 385 f.).

11. Opposition to tomb-worship among some Hindu sects. — Some modern sects which aim at restoring the primitive usages of Hinduism have protested against the worship of tombs and relics, and even against pilgrimage.

The Ārya Samāj (q.v.) discourages the practice of bathing in holy rivers, of pilgrimage, of the use of beads and sectarian marks, of gifts to worthless

mendicants, and of all the many rites of modern Hinduism (H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province*, Lahore, 1911-14, ii. 231). The Sikh guru Nānak (q.v.) said :

'Religion consisteth not in wandering to tombs or places of cremation, or sitting in attitudes of contemplation' (M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, i. 60).

Guru Amar Dās endeavoured to prevent Sikhs from visiting Hardwār, Benares, and other places of Hindu pilgrimage (*ib.* ii. 87). But this rule is now generally disregarded, and Hardwār in particular is visited by crowds of Sikh pilgrims. Guru Govind Singh opposed the worship of saints like Guggā and Sakhi Sarwar, as well as visits to Muhammadan cemeteries and places of cremation (*ib.* v. 158). But Nānak visited the tomb of Shaikh Farid at Ajodhan, and modern Sikhs frequent Ambala and Kartarpur (*ib.* i. 84, iii. 26). Veneration of the Sikh saints, or *bhagats*, prevails widely (*ib.* vi. 1 ff.). One of the leading principles of the Lingāyat sect in S. India is that between God and His worshipper no mediator is required, and that sacrifices, penances, pilgrimages, and fasts are unnecessary (*BG* xxii. [1884] 105; *Census of India*, 1901, vol. xxiv., Mysore Report, pt. i. p. 533).

12. Social aspect of pilgrimages.—The desire for change, the relief of the dull everyday life of the village, is an incentive to pilgrimage often stronger than religious enthusiasm. Hence women, who see little of the outer world, lose no opportunity of making these journeys. Trade is carried on at all the great religious fairs, where cattle, horses, elephants, and camels are readily bought and sold, and where women purchase their annual stock of necessities and trifles. This movement of the people on pilgrimage has done something to relieve the parochialism of village life; the possibility of meeting an out-caste in a crowded railway carriage weakens caste restrictions, while the need of food from uncertain sources diminishes some of the precautions which the Hindu by the rules of his caste is compelled to adopt. The improvement of communication by road and rail has certainly increased the numbers of pilgrims. But Brāhmans and other managers of sacred places assert that their profits have not increased with the larger crowds. The tendency now is naturally to visit the most sacred places, while those of less religious importance are neglected. The pilgrim makes a shorter visit, and the reaction against the influence of Brāhmans tends to reduce the amount of his benefactions. The chief danger from pilgrimages is the risk of the spread of epidemic disease, and on some occasions in recent years cholera seems to have spread into Central Asia and even into E. Europe and the Mediterranean area by contagion from pilgrims visiting Hardwār and other sacred places in N. India. The burden imposed on the executive and sanitary officials in managing crowds of excited peasants, ignorant of the elementary rules of sanitation, has become increasingly arduous.

LITERATURE.—There is no monograph on the subject of Hindu and Muhammadan pilgrimage. A full list of places of pilgrimage will be found in *IGI*, Index, s.v. 'Pilgrimages'; for Hindu pilgrimages see W. Ward, *A View of the History, Literature, and Mythology of the Hindoos*², Serampore, 1818, ii. 324 ff., and elsewhere; W. J. Wilkins, *Modern Hinduism*, London, 1887, p. 240 ff.; for an interesting popular sketch see W. H. Sleeman, *Rambles and Recollections of an Indian Official*, Oxford, 1916, p. 585 ff.; for Madras, J. E. Padfield, *The Hindu at Home*, Madras, 1896, p. 174 ff.; for Muhammadan and Hindu pilgrimages in N. India see Abū al-Fadhl, *Ain-i-Akbari*, tr. H. S. Jarrett, Calcutta, 1878-94, iii. 303 ff.; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, Oxford, 1906, p. 597 ff.

W. CROOKE.

PILGRIMAGE (Japanese).—The practice of religious pilgrimage in Japan may be traced back to the 8th cent., when the Buddhist missionaries opened mountain passes and consecrated some of

the peaks to be places of worship (see art. MISSIONS [Buddhist], vol. viii. p. 704). In the course of the 9th and 10th centuries groups of mountaineering priests gradually established definite series of pilgrim itineraries. Legend has it that an emperor (reigned 934-985), in the distress occasioned by the death of his consort, left his palace and paid a visit, wearing monastic robes, to the thirty-three sanctuaries dedicated to Kwannon (Skr. Avalokiteśvara) in the central provinces. However this may be, we know that at the end of the 10th and the beginning of the 11th cent. frequent pilgrimages were made by the court nobles to Buddhist and Shintō temples (on the same itineraries), and that the pilgrimage to the thirty-three sanctuaries of Kwannon was, from the 15th cent., one of the most popular. In the former case the pilgrimage was combined with pleasure, and rhyming meetings were often held in front of the sanctuaries. In the latter case the pilgrimage was undertaken as an act of penance and accomplished by stiff climbing, for the majority of the thirty-three sanctuaries stood, and still stand, on hills or precipices—in accordance with the conception that the deity Kwannon looks down with compassion from on high upon the human world.

The pilgrim-bands to the thirty-three Kwannon sanctuaries consisted usually of a few persons, often a family, parents and children; they wore white robes, on which they received stamps of the various sanctuaries, and, while marching, they chanted hymns supposed to have been revealed by the respective deities of the places. At the places of pilgrimage acts of penance were performed, such as fasting, bathing in water-falls, and sleepless prayer. On the way the pilgrims subsisted on alms, and, when they died, they were tenderly buried by the villagers, these acts of protection to the pilgrims being considered of similar merit with the pilgrimage itself. The same may be said of all other religious pilgrimages, and that was the reason why, even in the ages of warfare and disturbance in the 15th and 16th centuries, the practice of pilgrimage came more and more into vogue, stimulated as it was by the sense of misery and by many distressing experiences. In these centuries, and more decidedly after the restoration of peace and order at the beginning of the 17th, the places of pilgrimage were multiplied enormously, being arranged in groups of from six to eighty-eight in number. Most of these were Buddhist sanctuaries dedicated to certain deities or connected with the life incidents of Buddhist saints. The distribution of the places in one group was various—sometimes limited to a certain locality, sometimes scattered over a wide area. Besides the places arranged in series there were several isolated ones, to which the pilgrims, in company or individually, paid a visit after long tiresome journeys.

A noteworthy feature in some of these pilgrimages was that they were practised as a kind of initiatory ceremony introducing young people to religious mysteries when they were entering adult life. Most pilgrimages of this kind were mountaineering trips over dales and precipices, paying homage at the sanctuaries erected here and there, and finally worshipping the chief deity enshrined on the summit. The pilgrims were guided by trained leaders, who were mostly regular mountaineering priests, and who directed the ceremonies. The most famous of the mountains visited were Kimpusen in Yamato, Ontaké in Shinano,¹ a group of three peaks in the north-east, the well-known Fuji, etc. Besides these and other Buddhist-Shintō sanctuaries there were several purely Buddhist or Shintō centres of pilgrimage, one of

¹ Percival Lowell, *Occult Japan*, Boston, 1895, a book chiefly based on the author's observations on Ontaké.

the most prominent being the temple of Isé dedicated to the sun-goddess. Every spring groups of pilgrims composed of young men and women made a journey of many days to it and paid homage to the supreme deity of Shintō. This pilgrimage to Isé had nothing austere in it, but was merely a pleasure trip. Yet sometimes a form of maniac frenzy took possession of many of the young people, who started on the journey without any money or provisions but were well provided for by alms. This pilgrimage and many others have, in the peaceful times since the 17th cent., more and more assumed the character of pleasure trips.

Besides the regular religious pilgrimages there was in Japan a curious kind of pilgrimage connected with poetry and romance. The classical poetry of Japan, dating chiefly from the four centuries from the 9th to the 12th, sang of places eminent for natural beauty (in many cases the poets did not compose their poems on the spots). In the course of time these places became the classical names for the respective excellences, such as Yoshino for the cherry-blossom, Sarashina for the moonlight in autumn, Fuji for snow, etc. The visit of poets to these places was called the pilgrimage to see the *uta-makura*, literally, 'the pillows of poetry'—the basis or source of poetic inspiration—and it was conducted with a certain amount of religious zeal or piety, as a cult of the beauty of nature. There was also a pilgrimage of romantic interest which consisted in paying visits to the places described in epic or romantic stories. In this case the pilgrims, whether individuals or parties, knew well enough that the stories were fictions, and yet they wandered among the mountains and forests and along the sea-coasts and streams mentioned in the stories, in order to keep alive their interest in the stories and heroes. This pilgrimage was less religious than the lyric pilgrimage, although some itinerant monks performed religious services on various spots in memory of the heroes or heroines who were said to have died there, as if their souls were still hovering about. Both of these pilgrimages have grown in fashion since the 17th cent. and have become more and more mere pleasure trips.

Another modification of pilgrimage was the wandering in search of one's enemy for the sake of revenge, for vendetta has been regarded, since the 14th cent., but more definitely since the 17th, as the duty of the son or brother of a murdered person. In this case the man aiming at revenge dressed himself as a pilgrim, and was, indeed, a true pilgrim, in so far as he naturally worshipped in various sanctuaries on his way and prayed for a speedy discovery of the enemy. The disguise of a pilgrim was also adopted by political or military spies, in this case serving a totally ulterior purpose.

Finally, we may add that pilgrimages, whether of an austere religious character or combined with pleasure, are much in vogue even to-day,¹ and that many pilgrims can be seen in the country districts marching along in the costumes that have been customary for pilgrims for centuries.

LITERATURE.—Besides works mentioned in article, see B. H. Chamberlain, *Things Japanese*,² London, 1905; *Encyclopædia Japonica* (Japanese), Tokyo, 1911, s.v. 'Jūrei.'

M. ANESAKI.

PILGRIM FATHERS.—The Pilgrim Fathers movement is one of the most cherished memories of British and American Christianity. It has (1) a religious, and (2) a political significance. As a religious movement, it rested on the supremacy of Jesus Christ in His own Church and the sufficiency of the Bible for all the purposes of Church rule and guidance, and it did much to restore these elements of a living religion to their proper place

in the Christian life of England. The experiment then made of relying solely on the constructive and regulative power of the gospel in building a Church has been of great value. It has had an influence far beyond the limits of the Churches which inherit directly the Pilgrim tradition. The political importance of the movement lies in the fact that it was a conspicuous experiment in democracy conditioned by religious motives and restraints, so that democracy is seen at its best. C. Borgeaud (*Rise of Modern Democracy in Old and New England*, Eng. tr., London, 1894) has shown how the parent stem of democratic constitutions in England and in the United States is to be found in the Church covenants of Independent Churches—the line of descent being, in England, through the 'Agreement of the People' (1647) to the theory of the Social Contract, and the Settlement of 1688, in America, through the contract first made in the cabin of the Mayflower to the constitutions of Connecticut, Massachusetts, and Rhode Island, and so to the constitution of the United States itself (see esp. Borgeaud, pp. 164–116, for summary of argument of the book).

1. Name.—The name 'Pilgrim Fathers' belongs properly to the company of exiles for conscience' sake who founded the settlement of New Plymouth, Massachusetts. The word 'pilgrim' is not used in the ecclesiastical sense of a visitor to a shrine, but in the original meaning as a wanderer in distant lands. It became familiar to the members of the Separatist Churches owing to their compulsory migrations from England to Holland and from place to place there. It was first used about the time when plans were discussed for leaving Leyden, and may be traced to the description in the Epistle to the Hebrews (11¹²⁻¹⁵) of those who 'seek a better country' as 'strangers and pilgrims on the earth.' The classic passage is in Bradford's *Hist. of Plymouth Plantation* (Coll. of Mass. Hist. Soc.), p. 59:

'And ye time being come that they must departe, they were accompanied with most of their brethren out of ye citie, unto a towne sundrie miles off, called Delfes-Haven, wher the ship lay ready to receive them. So they left ye goodly and pleasant citie, which had been their resting place near 12 years: but they knew they were pilgrims, and looked not much on those things, but lift up their eyes to ye heavens, their dearest countrie, and quieted their spirits.'

It is important to distinguish the Separatist Pilgrims from the colonists who founded the commonwealth of Massachusetts, with which their settlement was afterwards incorporated. The Separatist was the product of gathered churches formed on a basis of spiritual affinity and the acceptance of regulative Christian principle. The distinguishing features of the colony are found chiefly in the religious ideals which inspired the Pilgrims, the association of their religion with a democratic civil government, the character of the men who formed the settlement, and the social structure of a colony cemented by religious feeling and principle.

2. Origin.—The impulse which formed Separatist Churches came through zealous Puritan preachers, such as Richard Bernard, Thomas Toller and Robert Gifford, who did not themselves become Separatists. Applying the principles learned from these men, a more resolute company in Gainsborough, Scrooby, and Austerfield formed communities of worshippers who bound themselves by 'express vocal' covenant 'as the Lord's free people, to walk together in all His ways, made known, or to be made known to them, according to their best endeavour, whatsoever it should cost them, the Lord assisting them' (quoted by John Brown, in *Early Independents*, p. 103; for other covenants see John Cotton, *The Way of the Churches of Christ in New England*, London, 1645, quoted in Borgeaud, p. 82; and for the covenant of Salem

¹ Cf. E. F. Calthrop, 'Pilgrimage in Tokyo,' in *Proceedings of Japan Society* (London).

see Mather, *Magnalia*, i. 18, quoted in Brown, *Pilgrim Fathers of New England*, p. 286). Their aim was to constitute a Church on the lines of the NT, and they separated from the Church by law established, because (1) 'the profane and ungodly multitude' was admitted to communion; (2) the 'various ecclesiastical offices and callings, courts and canons were unlawful and unchristian, and had no warrant in the Word of God'; and (3) the Church was 'in subjection unto an antichristian and ungodly government, clean contrary to the institution of our Saviour Christ' (Harl. MSS 360, fol. 70, quoted in Brown, p. 85).

For about ten years from 1590 there was one church formed on these principles worshipping in Gainsborough. When its numbers increased and the members from the surrounding district found the distance too great, a second church was formed at Scrooby, meeting in the house of William Brewster, an ancient manor-house which had once belonged to the archbishops of York. The pastor was Richard Clyfton, formerly a Puritan rector of Babworth in Lincolnshire, 'a grave and reverend preacher, who by his paines and diligens had done much good, and under God had been a means of ye conversion of many' (Bradford, p. 10).

3. Leading personalities.—*Robert Browne* (1550–1633).—See art. BROWNIISM.

Barrowe, Greenwood, and Penry.—In 1592–93 Henry Barrowe (Clare Hall, Cambridge, 1570, Gray's Inn, 1576), a converted barrister, John Greenwood, a Cambridge graduate (Corpus, 1581), and John Penry (b. 1559, executed 1593), a Welshman and Cambridge graduate (Peterhouse, 1580), were put to death for refusing to abjure Brownist principles at the bidding of Archbishop Whitgift. The Conventicle Act of 1593 provided that persons above the age of sixteen who refused to repair to church as by law established, or attended a conventicle, should be imprisoned, and, if they failed to conform in three months, should be banished from the realm. If they returned, they should be hanged. That act led to the migration to Amsterdam and Leyden, and eventually to Massachusetts. Barrowe left his property to the church of which he had been a member, and with the help of his legacy most of the members were able to emigrate to Holland in 1593. They settled first at Kampen and then at Naarden on the Zuyder Zee, where they were so needy that the magistrates voted a small sum of money for their relief. In 1595 they were settled at Amsterdam.

Francis Johnson (1562–1618).—The pastor of the 'Ancient Church' in London—by 'ancient' the Brownists meant 'primitive'—was Francis Johnson, formerly a Fellow of Christ's College, Cambridge (1584, M.A. 1585), and a popular Puritan preacher. He was expelled from the university, and imprisoned, for a sermon preached at St. Mary's, maintaining Presbyterianism to be of divine right, liberated on the petition of 68 members of the university, and allowed to emigrate to Middelburg (1589–92), where he became pastor of a Puritan church. His conversion to Separatist principles was due to a book by Barrowe and Greenwood sent out in 1591 from the Fleet prison, named *A Plaine Refutation of M. Giffard's Booke, intituled A short Treatise gainst the Donatistes of England*. Johnson was authorized by the magistrates of Dort, where the book was printed, to confiscate the whole impression. He publicly burned all but two copies. Taking up one of these 'to see their errors,' he was convinced by its argument, gave up his pastorate, and visited Barrowe in prison. He then joined the Separatist Church in London and became its pastor. When his flock emigrated, he was left behind in prison, and it was not until 1597 that he rejoined them and

resumed the pastorate. He had meanwhile made a voyage in the Hopewell to the Gulf of St. Lawrence, but was obliged to return to Amsterdam owing to the misfortunes that overtook his ship.

Johnson's autocratic temper led to some unfortunate disputes in the church of which he was pastor, the more discreditable that they were largely personal, concerned with his wife's dress and the criticisms of his brother George. Johnson aimed at intra-congregational Presbyterianism, maintaining that 'a body of simple church members, aggregated without Elders, had no power except to elect Elders. It could not even ordain them. It could not excommunicate an erring and unrepentant member' (H. M. Dexter, *Congregationalism of the last Three Hundred Years*, p. 326).

Henry Ainsworth (1571–1623) became a scholar of Caius College, Cambridge, in 1587. In 1593 we find him serving as a bookseller's porter in Amsterdam and a professed Brownist. He was a man of sensitive, scholarly temperament, and played an important part in the history of the church at Amsterdam, where for a time he held the office of teacher under Francis Johnson. No fewer than 23 treatises came from his pen between 1598 and 1641 (see Dexter, p. 346), of which perhaps the best known are the *Counterpoison* and the *Apologie or Defence of such true Christians as are commonly (but unjustly) called Brownists; against such Imputations as are laid upon them by the Heads and Doctors of the University of Oxford*, which he, jointly with Francis Johnson, prepared for presentation to James I. and afterwards published in 1604 (*ib.* pp. 306–309). He was a man of wide and accurate learning, especially eminent as an Orientalist and commentator on the OT. Beginning in 1616, he published annually a book of annotations on the five books of Moses, the Psalms, and the Song of Solomon, which were greatly admired by the Hebrew scholars in the university of Leyden:

'They thought he had not his better for the Hebrew tongue in the University, nor scarce in Europe' (quoted in Mackennal, *English Separatists*, p. 209).

He gave up the allegorizing method of exegesis which was then general, in favour of the more modern method. His commentaries were thought worthy of republication in Edinburgh as late as 1843. Many unverifiable stories are told of Ainsworth in Amsterdam, illustrating his poverty, piety, learning, and Christian conviction. He was chosen pastor of the church at Amsterdam during the absence of Francis Johnson in Newfoundland, and later, when Johnson's autocratic rule had made unity impossible, Ainsworth withdrew. The dispute began with a discussion on the power of excommunication, in which Ainsworth maintained, against Johnson, that the power belonged to the congregation as a whole and was not to be used by the elders and officers alone. In 1610 Ainsworth and thirty others who shared his views formed a third Congregational church in Amsterdam.

D. Neal's story of Ainsworth's death is as follows:

'It is reported, that having found a diamond of very great value in the streets of Amsterdam, he advertised it in print, and when the owner, who was a Jew, came to demand it, he offered him any acknowledgment he would desire; but Ainsworth, though poor, would accept of nothing but a conference with some of his rabbies upon the prophecies of the Old Testament relating to the Messias, which the other promised; but not having interest enough to obtain it, and Ainsworth being resolute, it is thought he was poisoned' (*Hist. of the Puritans*, London, 1837, i. 421).

John Robinson (1576–1625) entered Corpus Christi College, Cambridge, in 1592 and became Fellow in 1599. For four following years he appears to have been a lecturer or preacher in Norwich, where he was 'worthily revered of all the city for the grace of God in him' (Ainsworth,

Counterpoison). He records his own unwillingness to break with the Puritan ministry :

'Had not the truth been in my heart as a burning fire shut up in my bones, Jer. xx. 9, I had never broken those bonds of flesh and blood' (*Works*, ed. E. Ashten, London, 1851, II. 52).

In 1603 or 1604 he was suspended for his disregard of conformity, and united himself to the church at Gainsborough. He accompanied the members of the Scrooby church to Amsterdam, expecting to join with the church already established there. They found that church troubled by dissensions about its own discipline, and decided to go on to Leyden. In the Amsterdam discussion Robinson sided with Ainsworth against John Smith, Thomas Helwys, and Francis Johnson, who were Presbyterianizing the internal government of the church. Robinson published a moderate and able statement of the Congregational position, rejecting all sectarian names and maintaining simply its justification as an original Christian type. In Leyden Robinson was admitted to the university in Sept. 1615, where he attended lectures by Episcopius and Polyander. An attempt has been made on very slight grounds to discredit the account of a debate between Robinson and Episcopius, in which Robinson defended Calvinism against the famous Arminian. Bradford's account of the debate (p. 21) is partisan, but obviously reliable, and the debate accounts for the position which Robinson holds in the Dutch records of the Pilgrim church. From this time the Independents in Leyden were known as 'Robinsonians.' A debate with Episcopius on a theological subject had all the ardours of a political contest, for the Remonstrants, who were Arminians, followed John of Barneveldt, who wanted an Erastian National Church and was in favour of the unpopular truce with Spain. The Contra-Remonstrants, who were Calvinists, were on the side of Prince Maurice—in favour of a free Church in a free State, and bent on continuing war against Spain.

Robinson's published writings are the most authoritative, balanced, scholarly, and positive statement of Separatist principles that we have. They combine the claim for liberty of worship with catholicity of feeling and belief. He debates counsels of peace, considers dissuasions against Separation, discusses reasons against it, confutes errors alleged to be held by Separatists, and deals with the nature of Christian fellowship. His teachings may be said to have leavened all Churches with the idea that spiritual affinity is the basis of Christian fellowship. In 1617 he joined with Brewster, who was associated with him as elder of the church in Leyden, in presenting 'seven articles' to the Privy Council, detailing the ecclesiastical position of the Pilgrims, in order to satisfy the Lords of the Council that they were proper persons to settle in Virginia. From that time till the actual migration in the Mayflower (1620) he was a leader in the correspondence with Sir Edwin Sandys and the negotiations with the Merchant Adventurers. It was in Robinson's clear mind that the reasons against settlement in Holland first took definite form. The Pilgrims cherished loyal attachment to the British crown and wished to live under it; their children were being drawn into service as soldiers and sailors under the Dutch government; the difficulty of earning a respectable living in Holland prevented other Englishmen from joining them, and they had 'a great hope and inward zeal of laying some good foundation or at least to make some way thereunto for ye propagating and advancing the gospel of the Kingdom of Christ in those remote parts of earth; yea, though they should be but even as stepping-stones unto others for ye performing of so great a work' (Bradford, p. 24).

The facts as to Robinson's famous address to the departing Pilgrims are as follow.

That address appears first in a brief narrative attached to Edward Winslow's *Hypocrisie Unmasked*, published in 1646, i.e. 26 years after the time when it was spoken. Winslow says: Robinson 'used these expressions or to the same purpose' (*A Brief Narration*, p. 98). Bradford, in his *History of Plymouth Plantation*, makes no quotation from this address, nor does Morton mention it in his *New England's Memorials*, published in 1669. Cotton Mather, writing in 1702 (*Magnalia Christi Americana*), turns the address into the first person, and changes 'ers long' into 'quickly.' It seems probable that the address embodies the substance of a sermon preached on Ezr 8²¹, mentioned by Bradford as following a day of solemn humiliation. Bradford says that 'he spent a good part of the day profitably and suitable to their present occasion' (p. 59). Dexter (pp. 407-409) thinks that the famous words, 'He was very confident the Lord had more truth and light yet to breake forth out of his holy Word,' refer to polity, and not to doctrine. He defends this interpretation on the ground that this alone explains Winslow's quotation in a pamphlet defending the Plymouth settlers from Separatist exclusiveness. The attempt to discredit the address as being beyond Robinson's powers, as shown in his other writings, is one of the extravagances of historical criticism. It is more within Robinson's scope than that of any others of the Pilgrims or founders of New Plymouth. The fact that the speech was duly recorded when it became of special value to the needs of the colony is in the line of experience in matters ecclesiastical and political. Such records are sometimes verbally, and almost always substantially, accurate.

With regard to the Church of England, Robinson was classed as a Semi-Separatist, Semist, or Independent, because he 'approved of communion with the Church of England, in the hearing of the word and prayer (though not in sacraments and discipline)' (John Shaw's *MS Advice to his Son*, 1664, quoted in *DNB*, art. 'Robinson, John'). He also approved of 'private communion' with godly members of the Church of England, and he preached the lawfulness of attending Anglican services as early as July 1617. He left a *MS on the Lawfulness of Hearing of the Ministers in the Church of England*, which was found in his study after his death and published in 1634. Robert Bailie (1599-1662), the Presbyterian, writes that Robinson was 'the most learned, polished, and modest spirit that ever that sect [Independents] enjoyed' (*A Dissuasive from the Errors of the Time*, London, 1645, p. 17). The English government prevented Robinson from joining the Pilgrims in the Mayflower owing to his authoritative influence with them, and, before the embargo was withdrawn, Robinson died (1st March 1625), after an illness of eight days. In 1891 the National Council of Congregational Churches of the United States affixed a memorial on the outside wall of the Pieterskerk in the Kloostieg opposite the site of Robinson's house in Leyden.

William Bradford (1590-1657) is the historian of the Pilgrim colony. He was born at Austerfield, in Yorkshire, and became a friend of William Brewster, who was 23 years his senior. He joined the Brownists in 1606, followed the Scrooby exiles to Amsterdam in 1607, and accompanied them to Leyden in 1609. He is entered in the books there as a fustian-weaver. He was one of the signatories of the letter from Leyden to Carver and Cushman in England in June 1620. In the same year he sailed in the Mayflower, and unfortunately, while he was on an exploring expedition, he lost his first wife, Dorothy May (of Wisbech, Cambridgeshire), by drowning, while the ship lay in Cape Cod harbour. Chosen governor of New Plymouth in 1621, he was re-elected every year (with exceptions at his own request) for twelve years till he 'by importunity got off' (*Hist. of Plymouth Plantation*, p. 307). He had literary and methodical habits which make his record of the doings of the Pilgrims of great value. His history of the passengers in the Mayflower, with personal notes, is priceless to the American genealogist. He left in *MS* a full *History of Plymouth Plantation*, which lay unidentified for many years in Lambeth Palace library, till it was recognized by Joseph Hunter,

and published by the Massachusetts Historical Society. Bradford began his history, which he modestly calls 'these scribbled writings,' in 1630 'and so pieced up at times of leisure afterward' (p. 6). The last sentence was written in 1650, when the narrative stops abruptly without any formal ending.

Miles (or Myles) Standish (1584-1656) was the soldier of the Pilgrim movement. He came of a Lancashire family, the Standishes of Standish, and had served in the Netherlands before 1602. Longfellow, who has popularized in verse the story of his courtship, says that he could trace his pedigree plainly back to Hugh Standish of Duxbury Hall in Lancashire, England, and that he was heir to vast estates, of which he was basely defrauded. Duxbury Hall is between Wigan and Chorley, lying off the highway, and it is true that a page in the registers of the parish church for 1584, the supposed year of Myles Standish's birth, shows signs of having been tampered with. He became friendly with the exiles in Leyden, and, though probably not a member of the church, he went with the Pilgrims as a military protector. He was chosen military captain of the colony, and did much to secure its safety by his rapid and skilful measures of defence against the Indians. The estates of Duxbury, New England, where he died in 1656, are still the property of his descendants. His force of character and romantic career have made him a favourite with poets and novelists.

Edward Winslow (1595-1655) of Droitwich was, according to Hutchinson, 'of a very reputable family and of a very active genius' (quoted in *Chronicles of the Pilgrim Fathers*, p. 269). He happened to pass through Leyden on his travels, and was so impressed with what he saw of the life of the Christian brotherhood there that he identified himself with them, and eventually went with the emigrants in 1620. Twenty-five years later he wrote:

'I persuade myself never people upon earth lived more lovingly together and parted more sweetly than we the Church at Leyden did: parting not rashly in a distracted humour, but upon joint and serious deliberation, often seeking the mind of God by fasting and prayer, whose gracious presence was not only found with us, but His blessing upon us from that time until now' (Young, *Chronicles of the Pilgrim Fathers*, p. 380).

His name stands third among the signers of the compact on board the Mayflower. He was in England as agent for the colony in 1623-24, and for Plymouth and the Massachusetts settlement in 1635. In 1646 he was chosen to rebut in England the charges against the colonists of religious intolerance and persecution. He died at sea on an expedition against the Spaniards in the W. Indies.

Other eminent men among the Pilgrims were:

John Carver (1575-1621), an English Puritan, who, having been chosen deacon in the church at Leyden, sailed in the Mayflower, and was made first governor of New Plymouth.

Thomas Brewer, a wealthy Puritan from Kent, who established himself as a printer in Leyden. Persecution followed him thither, and drove him to join the Pilgrims, where he was associated with William Brewster in printing and publishing several important documents.

Robert Cushman, who was closely associated with Carver in the business arrangements of the new colony. He accompanied the Pilgrims as far as Plymouth, England, but remained in England to act as their agent. In 1621 he was in the new colony.

4. *The Pilgrim company in Leyden.*—The piety of New England descendants of the Pilgrim Fathers has moved them to investigate every record of the sojourn of the exiled Pilgrim colony in Holland. A list of the Pilgrim company in Leyden,

compiled by H. M. and M. Dexter and published in their *England and Holland of the Pilgrims*, contains 584 names, including children. The majority of these were men and women in the common walks of life. Between 7th Nov. 1598 and 4th Jan. 1617, the names of 118 Englishmen occur in the marriage records of Amsterdam.

Of these 102 have recorded their occupations: 38 are tustian-workers, six are tailors, four are glovers, three are masons, and two are classed in each of the following trades: bombazine-finishers, button-makers, chandlers, cutters, damask-weavers, embroiderers, hodmen, schoolmasters, smiths, trunk-makers, and turners. Besides these, 28 trades or professions are represented by one barber, carpenter, cobbler, compositor, cooper, draper, engraver, fireman, furrier, goldsmith, hat-dresser, ligature-worker, mercer, minister, painter, pewterer, physician, printer, sailors' barber, seaman, sheath-maker, silk-ribbon-weaver, smith's journeyman, Spanish-chair-maker, sword-cutter, tobacco-pipe-maker, turner in ivory, and wood-sawyer.

These are typical of the whole company, apart from the leaders. They were people of good sense, native intelligence, solid habits of industry, frugality, and self-reliance, and with some education in the primary sense. They were not trained by the experience of high commerce to take large risks, nor by the owning of land to the duties of rule and government. The eminent qualities needed to explain their great venture are a regnant conscience and a wide apprehension of the presence and will of God, making everything else second to the supreme endeavour to get God's will done on earth as in heaven; and these are the qualities which come out in their later history in New England. With the increasing complexity of social life, they found it difficult to agree on methods of determining the will of God in their circumstances, and this led to an increasing reliance on democratic methods and measures.

5. *The Pilgrim migration.*—The Separatist church existed for eight or nine years in Leyden, marked chiefly by the sustaining and conciliatory ministry of John Robinson. But it was not possible for its members to remain there. Their children began to drift into the habits and customs of the young Hollanders, and the elders realized that the next generation would probably have lost distinctive character. They had no identity of interest with the country in which they were living, and, above all, they realized that Holland offered no scope for their providential calling. They believed that it was their lot to lay the foundations of a Church and to advance the Kingdom of God in some remote part of the world. It was not enough to have 'freedom to worship God.' Their principles were constructive, and they wanted a fair field for their exercise. Robinson and Brewster privately discussed the idea of removal to America—New England or Virginia. It was then made public, and, after much discussion between enthusiastic optimists and fearful pessimists, the enthusiasts carried the day. The period of negotiations for starting a colony in New England was protracted and dreary, extending from 1617 to the sailing of the Mayflower in 1620. The usual method of launching a colony was for a company to secure a patent—or charter—from the king. The Pilgrims applied to the London Virginia Company, which numbered among its councillors Brewster's friend, Sir Edwin Sandys. But the company was torn by dissensions; and the Pilgrims' agents, John Carver and Robert Cushman, found it almost impossible to get their business through. More than once negotiations were on the point of being dropped. The church had hoped to have the right of liberty of religion granted to them and confirmed under the king's seal; but the king refused this, although he promised not to molest them if they were peaceable. When, on 19th June 1619, a patent was at last granted by the London Virginia Company and confirmed under

the company's seal, it was found that no financial help was forthcoming, for the company was penniless. At one point the problem of securing help seemed so hopeless that the church entered into treaty with some Dutch merchants who were willing to transport them to the Hudson river and to provide them with cattle if they came under the Dutch government. In this extremity help came from one Thomas Weston, a London merchant, who visited the church in Leyden. He and some Merchant Adventurers, who were his friends, had taken out a patent from the Virginia Company in the name of John Pierce, and offered to advance money to supplement what the Pilgrims had and to supply them with shipping. Articles of agreement were drawn up in London, but afterwards altered in favour of the Adventurers—much to the confusion of Cushman, who had to accept what he could get lest he should lose their help altogether. At last, as the summer of 1620 threatened to pass with nothing done, a great effort was made to speed preparations, and two ships were got ready—the *Speedwell*, a pinnacle of 60 tons, bought and fitted in Holland, and the *Mayflower*, a vessel of 180 tons, hired and fitted in London.

The departure from Leyden, which is immortalized in poetic and pictorial art, is the departure of the *Speedwell* from Delfshaven. A day of humiliation was appointed by the Leyden church. John Robinson gave the farewell address from the text *Ezr 8*²¹: 'Then I proclaimed a fast there by the river Ahava, that we might afflict ourselves before our God, to seek of him a right way for us, and for our little ones, and for all our substance.' It was on this occasion that he used the words afterwards recorded by Winslow. A small majority of the church had decided to stay behind, and by agreement the pastor was to stay with the majority. They accompanied the rest to Delfshaven, and committed them affectionately to the care of Almighty God. The *Speedwell* arrived at Southampton on 5th August, and was there met by the *Mayflower*, which had sailed from London with the rest of the company.

Difficulties still awaited them. There were financial difficulties with Weston, as the body of Pilgrims refused to sign the altered articles, and he refused to give them money that they had expected. They had to part with their stock of butter to clear their debts in Southampton. When the two ships at last got away, it was found that the *Speedwell* was leaky. She had been overmasted and had strained her timbers. The ships put back to Plymouth, where the Barbican quay which they used is still pointed out. The *Mayflower* took on board the most effective part of the *Speedwell's* company and the latter ship was then dismissed. Among those who remained (about eighteen in all) was Cushman, who despaired of the voyage, but later recovered courage and joined the colony, where he did good service. After a voyage of nine weeks in a crowded vessel, which encountered the usual autumn storms of the Atlantic, the Pilgrims were overjoyed to sight land on 19th November. They recognized the headland as Cape Cod. Passengers and officers consulted together and decided to sail southward towards the Hudson river in the direction of the land secured by their patent. But the ship was entangled in dangerous shoals and currents, the wind failed them, and they made back to Cape Cod. The change in their destination brought with it some dangers. The Virginia Company had no rights in New England. Their patent, therefore, had no authority and could confer none. To avoid the risks of disorder under these altered circumstances, the adult males were called into the cabin of the *Mayflower* and all signed the memorable compact

which became the basis of the constitution of the colony:

'In y^e name of God, Amen. We whose names are underwritten, the loyal subjects of our dread sovereigne Lord, King James, by y^e grace of God, of Great Britaine, France and Ireland King, defender of y^e faith, etc., having undertaken, for y^e glorie of God and advancement of y^e Christian faith, and honour of our King and countrie, a voyage to plant y^e first colonie in y^e Northerne parts of Virginia, doe by these presents solemnly and mutually in y^e presence of God, and of one another, covenant and combine our selves together into a civill body politick, for our better ordering and preservation and furtherance of y^e ends aforesaid; and by vertue hereof to enacte, constitute and frame such just and equall lawes, ordinances, acts, constitutions and offices from time to time, as shall be thought most meete and convenient for y^e generall good of y^e Colonie, unto which we promise all due submission and obedience. In Witnes whereof we have hereunder subscribed our names at Cap-Codd y^e 11 of November, in y^e year of y^e raigne of our sovereigne lord, King James of England, France and Ireland y^e eighteenth, and of Scotland y^e fiftie-fourth, Anno. Dom. 1620' (Brown, p. 201 f.).

Then follow forty-one names—the most notable list of names in the history of New England.

The landing of the Pilgrims by Plymouth Rock, as they called the solitary rock which marks the sandy shore, ended one series of troubles. The problems that they had now to meet were those of a new settlement, wresting at first a bare living from nature in a severe climate and surrounded by watchful enemies. That the faith and courage of the little community were sufficient to meet and overcome these difficulties was largely due to the severe school of experience through which they had already passed successfully.

6. The Plymouth colony, Massachusetts.—As with most communities starting on a religious basis, the methods of the Pilgrim colony were at first communistic. The capital for starting the colony had been advanced by the Merchant Adventurers—a commercial undertaking, whose profits were to be derived from the sale of beaver-skins, timber, etc., collected and sent over by the colonists. The Plymouth settlement agreed that all the profits of trade and labour were to be held in common till the end of seven years, and no individual enterprise could be started by the planters for their own benefit. The land-system was completely communistic, all the land being the property of the community and all the labour expended on it being for the common good. The people were conscientious and public-spirited, full of sympathy and mutual helpfulness, but, in spite of this, their honest effort at communism broke down. Men disliked the fact that their wives had to work for other men, and complained that, as they could not command the labour of their own servants, the servants that they had brought with them were a burden without corresponding compensation. In the spring of the third year each man was given a small plot of corn-growing land for himself. The allotment was only for present use, not for inheritance; but the value of the additional incentive was at once felt. The men worked harder, and women and children went willingly to work on their own piece of land.

The following summary of the economic system of Plymouth Plantation is supplied by C. W. Eliot:

The Pilgrims were plain, labouring people who all worked with their hands and expected to get their living as 'planters'. They made their living by farming, fishing, hunting, and practising the elementary trades of a new settlement. . . . They sailed from England under articles of agreement which were to govern the proceedings of a (joint-)stock company, the shares of which were held by two classes of persons, one called 'adventurers' and the other 'planters.' The adventurers merely put capital into the outfitting of the expedition. The planters were persons who crossed the ocean and were to bear the hardships and labours of the expedition. The planters might or might not put capital into the venture. Some did acquire shares in the joint-stock company as adventurers by putting in money or money's worth in goods: but the greater part did not hold shares except as planters. Every planter aged sixteen years and upwards received on going a single share in the stock company rated at ten pounds. A planter who carried

with him his wife and children or servants was allowed a share in the company for every person sixteen years old and upwards and for every two children between ten and sixteen years old. Every child under ten who went in the ship was to receive in the ultimate division of the holdings of the company fifty acres of unmanured land. All the planters were to be fed and clothed out of the common stock and goods of the company. Each planter was to work four days in each week for the company, and two for himself and family. At the end of seven years each planter, head of a family or a group, should own the house and garden land occupied by him and his. The undertaking entered into on these terms was a strong case of co-operation and co-operative management for a short term of years, with acquisition by every head of a family, at the end of that short term, of a house and garden (*The Road toward Peace*, p. 169 f.).

For the protection of the colony, every able-bodied citizen was expected to bear arms. Every youth learnt the use of the simple weapons which were then available for the chase and for war. The Pilgrims started the New England muster and military system, prototype of the admirable military organization of republican Switzerland (*ib.* p. 174).

In the fourth year the communal system was still further abandoned. A piece of land was granted in perpetuity to each family in the proportion of one acre to every person, as near to the town as might be. Gradually room had to be made for the encouragement of enterprise in the collection of furs. In 1628 the Merchant Adventurers sold their rights in the plantation to Isaac Allerton and some associates for £1800. All 'heads of families and able young men of the colony' then became partners. The land and cattle were divided, and each received by lot twenty acres of land. Bradford, Allerton, Standish, Winslow, Brewster, and three others accepted responsibility for the debts of the colony, and hired the trade of the whole community for a term of years to enable them to discharge the debts. The community then definitely broke with its communistic tradition and entered on that capitalistic phase of social organization which is still an outstanding feature of American life.

A reply to critics.—The charge most frequently levelled against the Pilgrim colony is that of illiberality. It is urged that they adopted the very methods which had driven them out of England. John Lyford, who had been sent out by the London Merchants as a clergyman, was sent home for trying to set up the ritual of the Church of England, though his offence was confined to occasional use of the Prayer Book. They persecuted Roger Williams and drove him out to become the founder of Rhode Island. They severely repressed the Quakers, and they were guilty of the confusion of Church and State functions against which they had protested in England.

The reply to this charge is twofold. (1) In the early days of the colony it existed in the midst of enemies. Its Brownist reputation exposed it to constant criticism both from England and from other colonies on the Atlantic seaboard. Its very existence depended on maintaining the purity of its own communion and its solidarity in the face of hostility. Bradford's conduct towards Roger Williams was personally merciful and considerate. He regarded him as a man 'godly and zealous . . . but very unsettled in judgement' (p. 310), and this was true. Williams was allowed to go to Rhode Island, which was within the Plymouth patent. In each case of so-called persecution other elements were involved besides those of religious opinion. Action was taken on the ground of civil order rather than religion. The colony could not afford to be hospitable to divergences of conduct which would break up its solidarity. Measures of caution even carried to the point of excess were preferable, in the interests of public policy, to taking risks which might jeopardize the main witness and even the existence of the colony.

(2) Another line of reply is that Plymouth, in virtue of its democratic method, contained the remedy for its own mistakes. The argument for

democratic liberalism is not that it will always be right, but that, when it goes wrong, it can right itself. An authoritative autocratic government is necessarily dogmatic, and, having gone wrong in a matter of judgment or policy, generally makes the wrong worse by using force to make the wrong appear right. Thus it goes from bad to worse and hastens to a catastrophe. A democratic government may make as many mistakes as an autocratic government, but the mistake, once discovered, is easily repudiated and remedied by a change of leaders and of policy. The appeal in democracy is always to some principle of reason and justice within the minds of the people, and the democratic method is the surest way of allowing that principle to assert itself. The Plymouth colony was responsible for acts that in the modern judgment, though not in its own, were illiberal, but it was never illiberal in principle. It worked out in its own way a distinction between civil and religious policy, and ultimately established a much greater freedom of individual opinion than England has yet achieved. It led the way towards the discovery that in order to live peaceably and helpfully beside each other it is only necessary that men should cherish the same ideals of public liberty, public justice, and co-operative management.

The Pilgrim colony—Plymouth—existed as a separate State only from 1620 to 1691, when it was incorporated with Massachusetts. By far the most important part of its history is included in the years before 1660. During the years 1620-60 it was under the leadership of such men as Bradford, Standish, and Brewster, and its influence was due to the precedents laid down by these outstanding personalities. For more than thirty years Plymouth was fortunate in enjoying the benefits of democracy without its drawbacks. The disadvantages of popular rule are well known: it tends to be unstable; it lacks authority; it encourages place-seeking and popularity-hunting, and sets a premium on self-advertisement. From all these Plymouth was saved by the massive character of its first leader, Bradford. He held office without salary, and so stimulated public spirit. He promoted unity in the colonial government by maintaining the pre-eminence of Plymouth and by supervising the growing townships. He gave stability to the government by preventing it from going to extremes, and he introduced social and philanthropic reforms so far in advance of the general custom in England that many have attributed them to his sojourn in Leyden, when he may have reaped the benefits of centuries of Dutch experience. So consistently was Bradford elected to the post of governor that the colony is perhaps best pictured as a large family over which this wise leader presided with paternal authority. With the exception of about five years, when at his request Winslow or Prince held office, Bradford was governor from 1621 till his death in 1657.

During his long period of office the characteristic features of the Pilgrim spirit in public affairs had time to get well established, such as local self-government based on the primary or township meeting, elective unpaid officials, State registration of births, deaths, and marriages, the registration of land transfers, State schools and pensions. The foundation of Harvard University was begun in 1636 by John Harvard, a citizen of Massachusetts, a 'godly gentleman and a lover of learning who gave one half of his estate, it being in all about one thousand seven hundred pounds, towards the erecting of a college, and all his library' (*Chron. of the Pilgrim Fathers*, p. 142). His foundation was made effective by gifts from New England towns which gave them a voice in the administration of its affairs. The public hand of the State added

the rest (Hunter, *Collections*, i. 242). The importance of those methods lies not in their local value, but in their having created a type that was imitated far and wide as settlements multiplied and colonization spread over the hinterland behind Plymouth.

7. **Survivals of Pilgrim influence.**—Heroic figures in the dawn of a nation's history constitute one of its most precious assets. Such figures are the Pilgrim settlers as they stand out against the background of battle with nature and unsympathetic governments, inspired only by great principles and a great religion. Americans have learned to treasure the memory of the men of the Pilgrim migration, and both directly and indirectly the influence of these men may be traced in the national ideals. At Plymouth in Massachusetts an obelisk commemorates the landing of the Pilgrims. The original rock on which they landed is enclosed to prevent curio-hunters from carrying away mementos. Articles of furniture belonging to the Pilgrims are preserved in a special museum. The names and genealogies of the Mayflower families are carefully preserved. A society of Americans in England is known as 'the Pilgrims,' and it has recently co-operated in the erection of a beautiful minaret at Southampton marking the spot from which the Pilgrims sailed. In the Pilgrim clubs, such as that of Philadelphia, which hold an annual dinner, diminutive models of the Mayflower are distributed to the guests; and the heroic virtues of the Pilgrims still appear in post-prandial perorations. The religious significance of the Pilgrim migration gives way on such occasions to their importance as national founders and pioneers.

More significant are such institutions as Thanksgiving Day—26th Nov.—which commemorates a turning-point in the experience of the first settlers. In October of each year the President of the United States issues a proclamation recalling occasions for special thanksgiving and recognizing providential guidance in the events of the year. The governor of each State issues a proclamation for his own State with the same general object. The people are invited to spend a day of thanksgiving on the date mentioned. Either on this day or, more commonly, on the preceding evening public and united services are held, at which an address is given on the religious significance of some public event. This is probably one of the most genuine illustrations of national religion in any country, and its general observance is the more notable as there is no Established Church in any State. It is an adequate illustration of the observance of national religion without an Established Church. 'Forefathers' Day,' which celebrates the landing of the Pilgrims at Plymouth, is also observed annually on 22nd Dec., though 21st Dec. (new style) more accurately represents the date of the event.

The Pilgrim colony of Plymouth exercised an influence out of proportion to its numbers on New England States with which it was incorporated, and that influence was specially marked in the direction of (1) *self-government*. The tradition of the other colonies, such as Massachusetts, had more of the old-world reliance on authority, tradition, and force. The Pilgrim colony had been founded on the basis of self-government, and, although everything was done in the king's name, it was both in principle and in effect left to evolve its destiny from its own resources. It is to the relative success of these experiments that America owes its unbounded faith in the adequacy of democracy for the guidance of the affairs of a nation.

(2) Although the Pilgrims were compelled to defend themselves by the use of arms, their principles were *peace* principles. Their first effort was

to live at peace with their neighbours. If other white men had not disturbed their relations with the Indians, they might have continued free from the disturbances of war. They never left peace for war willingly and without regret. This original bias in favour of peace methods has grown stronger with the history of the States, and has left its mark in the fact that America had at the beginning of the present century the smallest army in proportion to its population of any nation in the world. Its long frontier with Canada had known no fort and only one ship of war for a century. American influence in Europe is thrown consistently on the side of peace. The peace treaties of President Woodrow Wilson's Democratic Government are the most careful and ingenious instrument yet devised by any nation for the settlement of disputes without resort to the final arbitration of war.

(3) The special genius of the American people is a singular combination of *practical philanthropy* and *commercial shrewdness*. It is weak on the side of governmental co-ordination, strong on the side of individual initiative and personal development. It regards education up to the university standard as a right of the American born, and relies on education as the principal method of producing national unity and patriotism. It has profound confidence in its own standards of value, and is generously active in promoting philanthropy and Christian missions. It is strongly averse to class distinction, and accepts alien immigration so long as the immigrants conform to American standards of citizenship. In spite of numerous personal eccentricities, the general standards of morality are Puritan. The relations of the sexes are natural and healthy, and a 'New England conscience' is a synonym for an exact moral rectitude that produces a high level of personal character. It would be fanciful to trace all these characteristics to one origin, but undoubtedly they have flourished in America owing to the fact that Separatist Puritanism was hospitable to those features of human progress and hostile to the opposing influences. Democracy in America is not quite so triumphant over all the evils of the Old World as some of its advocates have claimed, but it has encountered so many difficulties in its course with success that it has reasonable confidence that it will be found adequate in meeting the remainder.

LITERATURE.—I. **REPRINTS OF ORIGINAL DOCUMENTS.**—*Chronicles of the Pilgrim Fathers*, with intro. by John Masefield ('Everyman's Library'), London, 1910, contains Nathaniel Morton's *New England's Memorial* and supplement, Robert Cushman's *Discourse*, John Smith's *New England's Trials*, and Edward Winslow's *Relation and Brief Narration* (all except *New England's Trials* reprinted from the edd. of the Boston Congregational Board of Publication); William Bradford's journal, *The Hist. of Plymouth Plantation*, Massachusetts Historical Society, Boston, 1856 (ed. V. Paget, *Bradford's Hist. of the Plymouth Settlement*, London, 1909); William Brewster, *Letter Book*, Massachusetts Historical Society, Boston, 1794; G. Mount, *Relation*, with intro. and notes by H. M. Dexter, do. 1866; S. Purchas, *Hakluytus Posthumus or Purchas His Pilgrimes*, Glasgow, 1905-07, vol. xix, with abridgments of Winslow's *Relation* and *Good News from New England*; John Winthrop, *Journal*, *Hist. of New England, 1630-43*, ed. J. K. Hosmer, New York, 1908; William Wood, *New England's Prospect* (1634), ed. C. Dean, Boston, 1865; Edward Arber, *Story of the Pilgrim Fathers as told by Themselves, their Friends and their Enemies*, London, Boston, and New York, 1897; Oliver Cromwell's *Soldiers' Bible*, facsimile, ed. E. Calamy, London, 1894; Robert Browne, *A New Year's Gift*, Congregational Historical Society, do. 1904.

PINDAR.—**I. Life.**—Pindar, the greatest lyric poet of Greece, was born at the village of Kynoskephalai near Thebes in Boeotia in (522 or) 518 B.C. The date of his death is not certainly known, but *Pyth.* viii. is assigned to the year 446 B.C. As his earliest poem, *Pyth.* x., belongs to 498 B.C., his poetical activity covers a period of more than half a century of the most stirring epoch of Greek history.

The ancient lives of Pindar, which are full of the usual type of legend attaching to the youth of genius, have little or no independent value. His family was of aristocratic blood, claiming descent from the Aigeidae (*Pyth.* v. 75 f.: ἱκοῦτο Θήρηνδε φάσιν Αἰγείδαι, ἐμὸι πατέρες); his father's name is variously given in the ancient lives as Daiphantos, Pagondas, Skopelinos, his mother's as Kleodike or Myrto. In the course of his poetic career he was brought into intimate relations with the ruling families of Greece proper, as well as of Macedonia, Sicily, and Kyrene in Egypt. He appears to have had a specially close connexion with Delphi, where in the temple of Apollo, according to Pausanias,

ἀνέκνεται οὐ πόρῳ τῆς ἐστίας θρόνος Πινδάρου· σιδήρῳ μὲν ἔστιν ὁ θρόνος, ἐπὶ δὲ αὐτῷ φασιν ὅπότε ἀφίκοντο ἐς Δελφοῦς, καθέζεσθαι τε τὸν Πίνδαρον καὶ ᾄδειν ὅπῃσιν τῶν ἱεράτων ἐς Ἀπόλλωνά ἐστιν (x. xxiv. 5).

He is said to have died in Argos. His tomb in the hippodrome at Thebes is mentioned by Pausanias (ix. xxiii. 2).

Arrian (*Anab.* i. ix. 10) and Plutarch (*Alex.* 11) record the pleasing story that, when Alexander the Great razed Thebes to the ground, he spared the house of Pindar as well as the descendants of the poet 'out of reverence for Pindar.' The ruins of this house were still shown in the time of Pausanias and beside it a 'temple of the Dindymene Mother (Kybele), dedicated by Pindar, the image being the work of Aristomedes and Socrates of Thebes. The practice is to open this temple on one day in the year and no more. I had the good fortune to visit it on that day and saw the image of Pentelic marble, as well as the throne' (Paus. ix. xxv. 3). To this temple Pindar himself seems to refer in *Pyth.* iii. 77 f.: 'But I will pray to the Mother, the awful goddess unto whom with Pan beside my door the maidens sing ofttimes by night.'

2. Works.—Pindar's lyric production covered a wide variety of subject and form. His poems were distributed by Aristophanes of Byzantium in 17 books: ὕμνοι, παιᾶνες, διθύραμβοι (6 books); προσόδια (2); παρθένια (3); ὑπορχήματα (2); ἐγκώμια, θρήνοι, ἐπινίκια (4). Fragments of the various types survive, but only the epinikian odes are extant in any completeness.

The ἐπινίκια are classified—not always quite accurately—as Olympian, Pythian, Nemean, and

Isthmian, according to the games at which the particular victory celebrated was won. It might seem surprising at first sight that round a theme so apparently trivial as an athletic victory Pindar should have been able to weave poetry of enduring interest and charm. But, indeed, the details of the victory are, as a rule, only lightly touched upon. The central theme of the poem is a myth connected with the history of the victor's family or city, which Pindar introduces with surprising propriety and skill. This myth, and the moral reflexions which it suggests and illustrates, constitute the real substance of the Pindaric poetry.

But, further, it is to be remembered that the great games for which Pindar wrote were much more than mere athletic gatherings such as we are familiar with in modern times. Part of the regular ritual at the funeral of a dead chieftain was an athletic contest—an ἀγὼν ἐπιτάφιος—such as that described in *Iliad* xxiii., embracing competitions in feats of physical strength and skill as well as in music and poetry.

Hesiod (*Works and Days*, 654 ff.) tells us that at the funeral of Amphidamas, king of Chalkis in Euboea, 'his great-hearted sons advertised many prizes: and there I say that I was victorious in the hymn and carried off an eared tripod.'

Celebrations of this sort held annually in honour of a local hero and accompanied by the due performance of offerings (ἐθυσίματα) to the dead are attested all over Greece. It was an amalgamation of such local hero-cults with the worship of Zeus, Apollo, and Poseidon that gave rise to the great national games of Olympia, Delphi, and the Isthmus.

Thus these meetings were essentially in the nature of religious festivals, of national and not merely local meaning and importance. And as national festivals they conferred on the victor and his city a glory to which it is difficult to suggest a modern parallel. Politically, too, they were of immense value for the realization of Hellenic unity, none but competitors of acknowledged Greek blood being admitted to participation in them. In the brilliant period at which Pindar wrote the Greeks had everywhere repelled the barbarians—Persian, Etruscan, Carthaginian. They had vindicated their 'place in the sun,' and had entered into full possession of their heritage of intellectual freedom, champions of civilization and conscious of their power. The games celebrated at the hallowed sanctuaries of Greece were not only for the Greeks of the mother-country but for their distant colonies beyond the seas an opportunity of meeting together to worship the gods of their ancestors and to realize amid the splendour of the festival their common pride and glory of Hellenic blood. Small wonder that the victor at Olympia or at Delphi seemed to have attained the pinnacle of earthly success.

'The victor for the rest of his life hath a honeyed calm, so far as touches games' (*Ol.* i. 97 ff.).

This is the feeling which the sculptor of the famous statue of the charioteer discovered at Delphi in 1896 has sought to realize.

'Le conducteur de char est beau, paisible, heureux d'avoir gagné le prix: il s'en contente' (E. Bourguet, *Les Ruines de Delphes*, Paris, 1914, p. 237).

3. Leading thoughts.—(a) *The frailty of man.*—We are told that at a Roman triumph it was customary for a slave to ride behind the general in the triumphal car, whose duty it was to remind him of his mortality: 'Respie post te, hominem memento te.'

'et, sibi consul

Ne placeat, curru servus portatur eodem' (Juv. x. 41 f.).

So in Pindar over against the brilliance of festal joy and splendour looms always the shadow of mortality. Thus in *Nem.* xi.—a poem which is, however, not an ἐπινίκιον—he says:

'Now if a man hath wealth and in beauty surpass others,

and foremost in games also hath displayed his might, let him remember that his raiment covers mortal limbs and that last of all he shall put on a garment of earth' (16 ff.).

But it cannot be too strongly emphasized that this is no pessimism which should blunt the edge of enthusiasm. It is only the sober colouring which human life presents 'to an eye that hath kept watch o'er man's mortality.' Hence, so far as it works in practice, it is made an incentive to redeem the time by some deed of glory which shall annul the triumph of death.

'The high adventure accepts not the coward; since we must die, wherefore should one sit in darkness nursing a nameless age without lot in glorious deeds?' (*Ol. i.* 81 ff.). 'A man forgets Hades when he attains his heart's desire' (*ib.* viii. 72 f.). The right spirit is the spirit of the Argonauts, in whom 'Hera kindled the all-persuasive sweet longing for the ship Argo, that none should stay behind, nursing by his mother's side an unadventurous life, but rather, even at the price of death, should earn along with his fellows valour's drug' (*Pyth.* iv. 184 ff.).

It is worthy of remark that in no single passage of Pindar are the brevity of life and the certainty of death made a plea for a life of sensual pleasure in the present.

Nothing is more characteristic of Pindar than the earnestness with which he preaches this sane and clear-eyed recognition of the limitations of mortality. Men and gods are, indeed, the children of one mother, Earth, but they are born to different destinies:

'One is the race of men, one the race of gods, and from one mother do we both have breath; but an altogether separate power (*δύναμις*) divideth us; man is naught, but the brazen heaven abideth, an habitation unshaken for ever' (*Nem.* vi. 1 ff.).

Human life has its own appropriate goods: health, wealth, the blessing of children, a good name; to the stable and unbroken felicity of the gods a mere mortal must not aspire.

'I come to pray that thou, O Olympic victor, mayest carry a cheerful old age unto the end, thy sons, O Psauis, standing by thy side. If a man waters his prosperity to health, sufficient in possessions and adding thereto fair fame, let him not seek to become a god' (*Ol. v.* 21 ff.). 'Mayest thou weave life's web in happiness unto the end and thy children's children have evermore the portion that now is and better in the after days' (*Nem.* vii. 98 ff.). 'A god might have a heart untouched of woe, but happy and worthy to be sung is that man in the eyes of the wise, whose, victorious with his hands or the excellence of his feet, hath won the mightiest of prizes by his daring and his strength, and, while he yet lives, hath seen his son duly attain the Pythian crown. The brazen heaven he may never climb; but all glories that we of mortal race attain, these he accomplishes unto the farthest voyaging. By ship nor on foot shalt thou find unto the meeting of the Hyperboreans the wondrous way' (*Pyth.* x. 21 ff.). 'If the son of Aristophanes, being beautiful and doing deeds worthy of his beauty, hath set his foot upon the utmost heights of valour, it is not easy farther to pass the trackless sea beyond the pillars of Herakles' (*Nem.* iii. 19 ff.). 'If together with many possessions a man hath won proud renown, it is not possible that a mortal should reach with his feet any farther height' (*ib.* ix. 46 f.). 'Whatever records are blown among men touching the infinite glory of the dead or the living, these they have attained utterly; in deeds of utmost valour they lay their hands from home upon the pillars of Herakles; seek no farther excellence' (*Isth.* iii. (iv.) 27 ff.). 'If any man fares well and is well spoken of, seek not to become Zeus; thou hast all, if this share of glory be thine. Mortal things befit mortals' (*ib.* iv. (v.) 13 ff.).

Change and uncertainty are the dominant characteristics of human life:

'Surely man's death hath no appointed term nor know we when we shall end a quiet day with enduring good; divers streams at divers times come unto men, fraught with joy or with sorrow' (*Ol.* ii. 33 ff.).

The life of man is in its very essence a tangled skein, a chequer of good and evil. For a man to aspire to more would be to seek to overstep the boundaries of justice (*δικη*)—the *alte terminus hærens*, which divides the destiny of mortals from that of the gods.

'A man with his mortal mind should seek such things from the gods as are meet, knowing that which lies at his feet, such destiny as we are born to. Aspire not, O my soul, to deathless life, but exhaust thy practicable means' (*Pyth.* iii. 59 ff.). 'If thou, O Hieron, canst understand the sum of words, thou knowest by hearsay from men of old—for one good thing the Immortals deal to mortals two evils together. Now this the foolish are not able to bear in orderly wise (*κόσμιω φέρειν*), but only good men who turn the fair things out' (*ib.* iii. 81).

On no other condition can human prosperity attain such relative stability and permanence as are attainable by mortality than that it be made up both of 'these and those' (*τὰ καὶ τὰ*), of good and evil.

'Yet quench the boast in silence; Zeus giveth both these and those, Zeus the lord of all' (*Isth.* iv. (v.) 51 ff.). 'They say that just so a man's felicity, if it blooms enduringly, must take both these and those' (*Pyth.* vii. 16 ff.). 'Even for men who strive there is uncertainty of Fortune till they reach the very end. For she giveth both of these things and of those' (*Isth.* iii. (iv.) 52 ff.).

(b) *The strength of the gods.*—Over against the frailty and mutability of mortality Pindar emphasizes the strength and stability of the gods:

'Time (*αἰών*) with the rolling days brings ever other changes; but the children of the gods are unwounded' (*Isth.* iii. 18). 'In a little while the pleasure of men grows up, and even so it falls to the ground when shaken by an adverse doom. Creatures of a day! what is anybody? what is nobody? Man is the dream of a shadow' (*Pyth.* vii. 92 ff.).

The background of Pindar's theology is the orthodox traditional theology of his race, with its anthropomorphic representation of the gods as a race of beings superior, indeed, to men but of like passions with them. But the reasoned beliefs of the worshipper are inevitably framed in a setting of tradition, much of which is repugnant alike to his intellect and to his moral sense. It is quite evident that Pindar, like Æschylus, felt strongly that the orthodox theology held much that was inconsistent with a worthy conception of the gods. He would have sympathized with Xenophanes in his censure of Homer and Hesiod, 'who have attributed to the gods all things that are a shame and a reproach among men,' and he would have agreed with the famous line of Euripides (*ap. Plut. Mor.* 21 A): *εἰ θεοὶ τι δρώσι φαῦλον, οὐκ εἰσιν θεοί*. 'Meet is it,' says Pindar, 'that a man should speak noble things of the gods: the blame is less' (*Ol.* i. 35).

This feeling is well illustrated by the manner in which Pindar on occasion refines the grosser elements of the traditional mythology.

Thus in *Ol. i.* he deals with the story of Pelops, son of Tantalos. Legend told how Tantalos invited the gods to a banquet at which he served up to them his son Pelops. The gods did not partake of the flesh, save only Demeter, who ate a portion of his shoulder, which was afterwards replaced by a piece of ivory. This story Pindar rejects. It is a mere invention of the envious neighbours to account for the supernatural carrying off of Pelops by Poseidon; the ivory shoulder (referring probably to some family birthmark) was congenital: he had it even 'when Klotho took him from the basin of purification' (*l.* 26)—the *ἄεθρος καθαρὸς*, the bath of purification, not a Medea-cauldron in which, Pelias-like, the *membra disiecta* of the boy were cooked into a new life.

Again, take his treatment of the story of Neoptolemos, son of Achilles, in *Nem.* vii. There was a persistent tradition that Neoptolemos was slain at Delphi. According to one version, he had come to plunder the temple of Apollo (*Paus.* x. vii. 1: *Ἰππῶνος ὁ Ἀχαιῶν ἐπεχίρουν αὐτῷ*) and was slain at the instance of the Pythian priestess by the Delphians (*ib.* i. xiii. 9: *Ἰππῶνον δὲ τὸν Ἀχιλλεύου ἡ Πυθία προσέταξεν ἀποκτείνειν Δελφοῖς*) or by Apollo's priest himself (*ib.* x. xxiv. 4: *δέδασαι δ' ἂν ἐνταῦθα καὶ ἑστῖαν ἐφ' ἧ Νεοπτόλεμον τὸν Ἀχιλλεύου ὁ ἱερεὺς ἀπέκτεινε τοῦ Ἀπόλλωνος*). In Pindar's version all the untoward elements of the myth disappear. Neoptolemos came, not as an enemy, but to offer to Apollo the firstfruits of the spoil of Troy. His death was the result of a chance quarrel that he might fulfil the destiny which required that one of the house of Aiasos should dwell within the grove of Apollo and be the presiding genius at the hero-celebrations; so far from the Delphians causing his death, they were much grieved by it: 'He went unto the god, bringing treasure of firstfruits from Troy; and there in a quarrel over meats a man slew him with a knife (*μαχαίρᾳ*). The hospitable Delphians were grieved exceedingly. Yet he but fulfilled his destiny: it was decreed that within that most ancient grove there should be in time to come, beside this well-walled abode of the god, some one of the lords Aiakidai, and that he should dwell there to be keeper of judgments for the sacrificial hero-processions to maintain justice of fair name' (*Nem.* vii. 40 f.).

Yet again, Homer tells us in *Iliad* v. 395 ff. how Herakles wounded Hades at Pylos (Elean): 'And giant Hades therewithal suffered a swift arrow, when this same man, the son of Zeus, smote him in Pylos amid the dead and gave him over to pain. And he went unto the dwelling of Zeus and high Olympus, grieved at heart and pierced with pain; for the arrow was driven into his shoulder and grieved his soul.' Pindar, in emphasizing the prowess to which men may attain by favour of the gods, instances this feat of Herakles. But, as the issue

seems to reflect upon a god, Pindar, employing the figure of apologetics, breaks off suddenly and says nothing of the wounding of Hades: 'By favour of God (*δαίμων*) are men good and wise. For how else could Herakles have brandished in his hands his club against the trident, what time as Pylos Poseidon stood and pressed him hard: pressed him, too, Phoibos warring with his silver bow, nor did Hades keep unmoved the wand, wherewith he brings down to the hollow way of them that die the mortal bodies? Flung from thee, O my mouth, this tale! To speak evil of the gods is hateful skill, and untimely vaunting strikes a note of madness. Prate not, then, of such things; leave war and battle altogether apart (*χωρίς*) from the immortals' (*Pyth.* ix. 28 ff.). The word *χωρίς*, which Pindar uses here, is almost technical in this special sense; cf. *Aesch. Ag.* 636 f.:

εὐφρόνῃς ἡμᾶρ οὐ πρᾶττει κακαγέλλῃ
γλώσση μάλιστα χωρὶς ἡ τιμὴ θεῶν.

The same tendency is seen in his treatment of the story of the Danaids in *Pyth.* ix. 111 ff. and in the emphatic *μόνον* in *Pyth.* iii. 100 f. (*ὅπερ μόνον ἀθάνατά τίκεν ἐν θείᾳ θέτις*), which rejects in passing the gruesome saga which represented Achilles as the sole survivor of seven children (*Lycophr.* 178; schol. *Il.* xvi. 87, etc.). Pindar's position is, in fact, precisely that of Euripides, *Iph. in Taur.* 886 ff., where Iphigenia rejects the idea of human sacrifice being pleasing to Artemis:

ἐγὼ μὲν οὖν
τὰ Ταντάλον θεοῖσιν ἐστίαματα
ἀπιστὰ κρίνω, παῖδες γῆθηνα βορᾷ,
τοὺς δ' ἐνθάδ', αὐτοὺς οἷας ἀνθρωποκτόνους,
εἰς τὴν θεὸν τοῦ φαῖλον ἀναφέρειν δοκῶ.
εὐθένα γὰρ οἶμαι δαίμονας εἶναι κακῶν.

'Si Dieu a fait l'homme à son image, l'homme le lui a bien rendu.'

The gods, according to Pindar's view, though they had birth, like men, are deathless and ageless, free from disease and pain (*frag.* 143, *ap. Plut. de Superstit.* 6), omniscient (*Ol.* i. 64), and all-powerful:

'God accomplishes every purpose according to his hopes; God who overtakes the winged eagle and outstrips the dolphin in the sea, and brings low many a proud man, but to others gives ageless glory' (*Pyth.* ii. 49 ff.). 'Swift is the doing and the ways are short when gods are fair' (*ib.* ix. 67 f.). 'For me no marvel is beyond belief when it is wrought by gods' (*ib.* x. 48 f.). 'God is able to raise undefiled light from black night and to hide the clear radiance of day in cloudy darkness' (*frag.* 142, *ap. Clem. Alex. Strom.* v. 708).

The gods are the authors of all human success and achievement:

'From the gods are all means (*μαχάνας*) for mortal excellence (*ἀρεταί*); from them are men wise and mighty of hand and eloquent of tongue' (*Pyth.* i. 41 f.; cf. *Ol.* x. (xi.) 10). Only such success as the gods give is to be desired: 'May I desire glory from God' (*θεῶθεν*) (*Pyth.* xi. 50). Only such success can be enduring: 'The prosperity that is begotten by the grace of God is more enduring for men' (*Nem.* vii. 17). Man proposes, God disposes: 'Now I hope, but the issue lies with God' (*Ol.* xiii. 104 f.). What is done without God is better left unsung: 'Each thing that is without God is not worse hushed in silence' (*ib.* ix. 103).

The ineluctability of fate or destiny is strongly affirmed in Pindar, but it is not an uncompromising fatalism and is in no way inconsistent with an overruling Providence, or deterrent of the initiative and effort of men. A man should cherish good hope (*Isth.* vii. (viii.) 15)—not the *κενὰ ἐλπίδες* whose issue is vanity (*Nem.* viii. 45, *Pyth.* iii. 23); not the desire of the moth for the star: that way lies madness (*Nem.* xi. 48). A man's duty is to aim at a reasonable ambition (*ib.* xi. 47); in the perplexities of life to look to the immediate duty (*Isth.* vii. (viii.) 13 f.). In pursuit of his aim he must spend and be spent, though the issue is uncertain (*Ol.* v. 15 f.). He cannot foresee the future, and fortune now bestows and now withholds:

'The black fields do not give their fruit continuously nor will the trees in every circling year bear their fragrant flowers with equal wealth, but only alternately. Even so Fate (*μοῖρα*) guides the race of men. There is given of Zeus no certain mark for men. Yet do we embark on high enterprise and plan many deeds; for our limbs are chained by hope unabashed; but the river of Foreknowledge is set afar' (*Nem.* xi. 39 f.).

We must be content to accept what fate has in store for us—not an austere impersonal fate, but the will of God: *τὸ μόριμον Διὸθεν πεπρωμένον* (*Nem.* iv. 61; cf. *Pyth.* xii. 28 ff.).

'The mighty mind of Zeus steers (*κυβερνᾷ*) the destiny (*δαίμονα*) of men whom he loves' (*Pyth.* v. 122 f.).

In this conviction Pindar says:

'To me whatsoever excellence sovereign Destiny (*Πότμος*) has assigned, I know well that Time in his course shall bring it

to its fated fulfilment' (*Nem.* iv. 41 ff.)—words which might almost seem to have been in the mind of Milton when he wrote:

'Yet, be it less or more, or soon or slow,

It shall be still in strictest measure even

To that same lot, however mean or high,

Toward which Time leads me, and the will of Heaven

(*Sonnets*, ii. 9 ff.).

The cruder form of the doctrine of the envy of the gods was of course familiar to Pindar. It is clear that Pindar, who calls envy 'the companion of fools' (*φθόνον κενεοφρόνων ἐταῖρον* [*frag.* 128]), would not seriously attribute envy to the gods. When he alludes to it, it will be seen that it is merely a *façon de parler* and ethically means simply that a man should not seem to encroach on the prerogatives of the gods,

'Or pass beyond the goal of ordinance

Where all should pause as is most meet for all'

(Tennyson, *Tithonus*, 80 f.).

That this is so becomes clear upon an examination of Pindar's references to the doctrine. In *Pyth.* x. 19 ff. the train of thought is evident. The Aleuadai have had great success; may they not meet with envious reversals (*φθονεῖν μεταρροπία*) from the gods; a god may have perfect and unbroken felicity, man must expect alternatives of weal and woe; he cannot climb the brazen heaven. In the second passage, *Ol.* xiii. 25, it is little more than a form of speech. The third passage, *Isth.* vi. (vii.) 39 ff., rightly interpreted, is an admirable commentary on the ethical content of the doctrine of the *φθόνος θεῶν*:

'Let not the envy of the immortals disturb (cf. *Ol.* vi. 97) whatsoever pleasant thing of the day I pursue quietly unto old age and for my destined life. For all alike we die, but destiny differs. But if one looks for far things, his stature is too short to reach the brazen abode of the gods: the winged Pegasus threw his master Bellerophon when he would have come to the habitations of Olympus amid the company of Zeus.' That is to say: I recognize my mortality; I will not seek the things afar; being the creature of a day, I will pursue quietly (*ἑκαλός*, not with violence and wantonness, but *ἡσυχῇ νεμόμενος*; cf. *Pyth.* xi. 54 ff.: *φθονεῖν δ' ἀμύνεται ἄται* 'εἰ τις ἄκρον ἐλὼν ἡσυχῇ τε νεμόμενος αἰὼν ὕβριν ἀπέσπυνε'), not the far things, but the good of to-day which is ever the highest for a mere mortal (*τὸ δ' αἰεὶ παρόν* *ἐσλὸν ὕπαινον ἐρχεται παντὶ βροτῷ* [*Ol.* i. 99 f.]). So shall I not be liable to the envy of the gods.

Pindar's attitude may be summed up in three words—*ὕβρις*, *κόρος*, *ἄρη*. The precise meaning of these terms is somewhat fluctuating and the relation of the first two is sometimes reversed. *ὕβρις* is 'insolence', 'wantonness', 'pride' (*Pyth.* ii. 28, viii. 12, x. 36, xi. 55, *Ol.* vii. 90, *Isth.* iii. (iv.) 23), or 'violence' (*Nem.* i. 50, *Pyth.* iv. 112). *κόρος* is 'satiety' (*Ol.* ii. 95, *Pyth.* i. 82, viii. 32, *Nem.* vii. 52, x. 20) or the resulting 'insolence', 'pride' (*Ol.* i. 56, *Nem.* i. 65). Hence Pindar (*Ol.* xiii. 10) makes "Τέβρις the bold-mouthed mother (*μητέρα θρασύμυθον*) of *Κόρος* (so, too, the oracle in Herod. viii. 77: *διὰ Δικῆς σβέσσει κρατερὸν Κόρον* "Τέβριος υἱόν), whereas elsewhere (Theognis, 153; Solon, *frag.* 8) *Κόρος* is father of "Τέβρις. "Ἄρη is in Pindar 'woe' (*Ol.* i. 57, xi. (x.) 37, *Pyth.* xi. 55, *Nem.* ix. 21, and *frag.* 42 (171. 4), but *αἰδρά* is 'infatuation' (*Pyth.* ii. 28, iii. 24). The doctrine of sin implied in these terms is illustrated by the following passages:

'He [Tantalos] could not digest his great prosperity, but for his insolence (*κόρος*) won an exceeding woe (*ἄται*)' (*Ol.* i. 55 ff.); Ixion was greatly blest, 'but lust (*ὕβρις*) drove him to an exceeding infatuation (*αἰδρά*) and speedily he suffered his deserts and won a choice affliction' (*Pyth.* ii. 28 f.).

The sequence is success (*δλσος*), pride (*ὕβρις*), infatuation, or moral blindness (*ἄρη*)—"quem deus vult perdere, demat prius." Aeschylus, rejecting, as Pindar does, the crude conception of the envy of the gods, gives a similar sequence (*Ag.* 750 ff.): old "Τέβρις begets a young "Τέβρις and unholy *Θράος*, which are dark "Ἄται for the house. In other words, success leads to pride, whence springs sin; one sin leads to another, and with repeated sin comes greater boldness (cf. 222 ff.: *βροτὸς θρασύνει γὰρ αἰσχρομῆτις τάλανα παρακοτὰ προσηπῆμι*). Precisely so in the OT 'Jeshurun waxed fat, and kicked: . . .

then he forsook God which made him, and lightly esteemed the Rock of his salvation. They moved him to jealousy with strange gods, with abominations provoked they him to anger' (Dt 32^{1st}).

(c) *Man's relation to the gods and to fellow-men.*—Man's duty in relation to the gods (*εὐσέβεια*) necessarily includes the performance of his duty to his fellow-men, but it involves, further, the specifically religious duties of prayer and sacrifice. According to Hesiod, the doom of the silver race came upon them because they did not refrain from violence to one another, 'neither would they worship the immortals nor do sacrifice upon the holy altars of the blessed ones' (*Works and Days*, 134 ff.). So in Pindar:

'Success is given for the sake of their piety (*εὐσεβείας χάριν*) in answer to the prayers of men' (*Ol.* viii. 9). 'Me anywise my spirit bids declare that to the Emmenidai and to Theron glory hath come by gift of the Tyndaridai of goodly steeds, forasmuch as they more than any other among men visit them with hospitable tables, with pious mind maintaining the rites of the blessed ones (*εὐσεβείῳ γυνῶν φυλάσσοντες μακάρων τελετὰς*)' (*Ol.* iii. 38 ff.). Similarly in *Ol.* vi. 77 ff. success in the games is directly connected with such observances:

'Surely as thy mother's brothers, O Hagesias, in their home beneath Kyllene's hill presented with many prayerful sacrifices (*λατρίαι θυσίαις*) piously (*εὐσεβέως*) Hermes, the herald of the gods, who keeps contests and the dispensation of games, . . . it is he with his father the thunderer who accomplishes thy success.'

The duty of man towards his fellows is summed up in the word *δίκη*. This in its essence is the due observance of use and wont, νόμος, τρόπος, *Sittlichkeit*. Eunomia is the daughter of Themis (*Ol.* ix. 15 f.) and sister of Eirene and Dike, worshipped by the Korinthians, who are fain to keep from them Hybris, the mother of Koros (*ib.* xiii. 6 ff.). Ixion's temptation of Hera is described as *εὐναὶ παράτροποι* (*Pyth.* ii. 35). Men are tempted to accept a guileful gain in preference to justice, but they travel to a stern reckoning (*ib.* iv. 139 f.). Dike regulates also the relation of man to the gods; any encroachment on the prerogatives is sternly punished:

τῷ δὲ πᾶρ δίκαν γλαυκὴ πικροτάτα μένει τελευτὰ (*Isth.* vi. (vii.) 47 f.).

First in the list of specific virtues we may put *εὐορκία*, keeping of oaths. Those who enjoy eternal happiness after death are briefly described in *Ol.* ii. 65 as those who rejoiced in keeping their oaths (*ἔχαρον εὐορκίας*). Next comes truthfulness:

'In every sort of state the man of straight speech (*εὐθύγλωσσος*) is best: in a tyranny and when the loud mob (*λαβρός στρατός*) and when the wise (*σοφός*) keep the city' (*Pyth.* ii. 86 f.).

The slanderer, on the other hand, is an unmitigated evil:

Rhadamanthus fares well because he reaped the blameless fruit of his soul (*καρπὸν ἀμώμητον φρονέον*) and delights not his heart with deceits, such as ever attend the wiles of whisperers; an invincible evil to both parties are the suggestions of slander, like to the mood of the fox' (*Pyth.* ii. 73 f.).

And it is not only straightness of speech that Pindar praises but also straightness in action:

'Divers are the arts of divers men, but a man must walk in straight paths (*εὐθείαις ὁδοῖς*) and fight according to his nature' (*Nem.* i. 25 f.).

Diagoras, the heavy-weight from Rhodes, is described as a 'huge straight-fighting (*εὐθυμάχων*) man' (*Ol.* vii. 15). In one passage, indeed, Pindar does seem to suggest that craft should be met with craft, when he speaks of an athlete who made up for deficiency of stature by the cunning of the fox:

'One must do everything to bring low the foe' (*Isth.* iii. 66 (iv. 48)).

Already Plutarch (*Mor.* 21 A) had noted this as inconsistent with other passages of Pindar. Next the duty of gratitude is pointed by the fate of Ixion, who was a signal example of ingratitude:

'Bound by command of the gods to his winged wheel he declares to men that one should repay the benefactor with kindly recompense' (*Pyth.* ii. 21 f.).

On the other hand, the poet grieves to see 'envy requiting noble deeds' (*Pyth.* vii. 18 ff.). Kindness

is commended, cruelty condemned, by the examples of Kroisos and Phalaris (*Pyth.* i. 94 ff.). The second *Pythian* is beset with many difficulties of interpretation, but it is impossible to quote as Pindar's own view:

'Let me love him who loves me: but towards my enemy as an enemy I will run upon him like a wolf, treading now this way now that, in crooked paths' (*Pyth.* ii. 83 f.).

Rather Pindar's position is expressed in *Pyth.* ix. 93 f.:

'Therefore a citizen be he friend or be he foe, let him not hide that which is well done for the common weal, nor make void the saying of the old man of the sea who said that one should praise even a foe who doth good deeds.'

Among the primary duties are honour to parents and patriotism:

'In that thou keepest thy father at thy right hand, thou maintainest the precept which of old among the hills they say that Philyra's son gave to the fatherless son of Pelus: to honour above all the son of Kronos . . . but never to rob of like honour the destined life of his parents.' Of old Antilochos (*φιλοπάτωρ* [*Xen. Kyneg.* i. 14]) had this mind, who died for his father' (*Pyth.* vi. 19 ff.).

'Whoso in this cloud wards off the hail of blood for his dear fatherland, inflicting death upon the foe, let him know of a surety that he wins the highest glory for his fellow-citizens, whether he live or die' (*Isth.* vi. (vii.) 27 f.).

Although Thebes occupied an unworthy position in the great struggle against the barbarians, Pindar speaks with real feeling of the glory of the victory which removed the 'Tantalos-stone' which hung over the head of Hellas (*Isth.* vii. (viii.) 10; cf. *Pyth.* i. 76, *Isth.* iv. (v.) 48 ff.). Pindar recognizes, too, the duty of kindness to the stranger within the gates (*Ol.* ii. 6, *Isth.* ii. 39 f., and *passim*). It is noteworthy that the *μύσται* in the *Kanæ* of Aristophanes base their claim to bliss on the two grounds that *μεμνήμεθ' εὐσεβῆς τε διήγομεν τρόπον περὶ τοὺς ξένους καὶ τοὺς ἰδιώτας* (456 ff.).

Pindar, as an aristocrat, insists much on the virtues of heredity:

'That which is by nature is always best' (*Ol.* ix. 100; cf. *Il.* 85 ff., etc.);

and he is much impressed with the splendour of a tyranny such as he witnessed in Sicily:

'On a tyrant, leader of a people, looks the high Fortune if on any man' (*Pyth.* iii. 85); 'Divers are the kinds of greatness, but the crown of greatness is for kings' (*Ol.* i. 113 f.).

But his personal predilection is for a modern aristocracy in which the government is in the hands of the *σοφοί* or *ἀγαθοί*. The middle estate is the more enduring. The great virtues are those of social service, those which exalt the State (*Pyth.* xi. 52 ff.).

There be some who mock at a man who jeers at those who spend money on the great games and hoard their own wealth, forgetting that at the last they shall 'render their souls to Hades without glory' (*Isth.* i. 68).

Pindar's own ideal of life is beautifully expressed in the following:

'May I cleave to the simple paths of life that, when I die, I may attach to my children no evil fame. They pray for gold and some for limitless lands. Mine be it amid the love of my townsmen to hide my limbs in earth, praising what is worthy of praise, and scattering rebuke on sinners' (*Nem.* viii. 35 f.).

(d) *The soul.*—A special interest attaches to Pindar's views of the origin and ultimate destiny of the soul. According to the typical Homeric conception, when death occurs, or in any case after the body has been consumed on the funeral pyre, the soul goes to the sunless house of Hades under earth, leaving behind its 'manhood and youth,' existing still in a dim half-life, and no more affecting or affected by the things of the upper world. Only some favoured mortal, like Menelaos, may by special dispensation of the gods pass without dying to the Elysian plain (*Od.* iv. 563), an idealized earthly paradise.

According to Hesiod (*Work and Days*, 156 ff.), the fourth race, i.e. the race immediately preceding our own, was the race of heroes or half-gods:

ἀνδρῶν ἥρώων θεῶν γένος, οἳ καλέονται
ἥμιθεαι πρότερόν γεγενῆσθαι ἀπειρώνα γαῖαν.

These were the men who warred at Thebes and Troy, and, after death,

'Zeus the son of Kronos gave them a life and an abode apart from men, at the ends of the earth, far from the immortals. Among them Kronos rules. And they, with heart free from sorrow, dwell in the Islands of the Blest beside deep-eddyed Okeanos, happy heroes, for whom the bounteous earth bears honey-sweet fruit, blooming thrice a year' (*ib.* 166 ff.).

Now both these ideas are familiar to Pindar. We have first the Hyperboreoi, worshippers of Apollo (*Ol.* iii. 16), whose life is perpetual bliss:

'Disease nor age touches that holy race, but they dwell apart from toil and battle, escaped from overjust Nemesis' (*Pyth.* x. 41 ff.; cf. *Isth.* v. (vi.) 23).

Then we have the miraculous carrying off of Pelops and Ganymede to Olympus (*Ol.* i. 40 ff.); the swallowing up of Amphiaraios by the earth (*Nem.* ix. 24); Ino (Leukothea) lives an immortal life with the Nereids (*Ol.* ii. 28 ff.); even after death Semele is raised to Olympus (*ib.* ii. 25 f.), Polydeukes is raised to alternate life with his brother Kastor—'half the time beneath the earth and half in the golden halls of Heaven' (*Nem.* x. 87 f.); and so on.

But of far more importance is the Hesiodic passage. The conception of the 'heroes'—the great men of the heroic past—as being after death exalted to perpetual felicity had become part of the orthodox Greek belief. And the word 'hero' (*ἥρως*) had taken on a new meaning. It was no longer confined to the great figures who had fought at Thebes and Troy. Great men of a less remote past who had deserved well of their fellow-men were conceived as enjoying an exalted state after death and received the honours and offerings of hero-worship. The founder (*οἰκιστής*) of a city, especially, was worshipped as a hero in the city which he had founded.

The full content of this hero-conception cannot be discussed here. The offerings made to them were specifically called *ἐναγίσματα*; thus Pollux, viii. 91, in enumerating the duties of the *ἀρχων πολέμαρχος*, says:

θύει μὲν Ἀρτέμιδι ἀγορῆς καὶ τῷ Ἐνναλίῳ διατίθεται δὲ τὸν ἐπιτάφιον ἀγῶνα τὸν ἐν πολέμῳ ἀποθανόντων καὶ τοῖς περὶ Ἀρμάδων ἐναγίσζει.

They were conceived as occupying an intermediate state between men and gods, though they seem rarely to have been appealed to as intercessors for man with the gods (but see *Nem.* vii. 95 f.). As compared with the gods, their range for good or evil is restricted, their worship and their influence being local and attached to the place of their grave. Hence we hear constantly of the bones of a hero being brought home from a foreign land where he had died, that they might find sepulture there, and there form the centre of his worship. But, like the gods, the heroes could take on bodily shape, human or otherwise, to aid their worshippers in a crisis, and such phantom appearances (*φάσματα*) are often referred to—e.g., Echelios or Echelaios (the man of the plough-stilt), who appeared at Marathon and, like Hay of Luncarty, dealt havoc with his plough (Paus. i. xxxii. 5; cf. i. xv. 3), Neoptolemos and others, who helped to repel the Gauls at Delphi (τὰ τε τῶν ἡρώων τηρικαυτὰ σφισιν ἐφάνη φάσματα, δ' Ἰπέρροχος καὶ δ' Λαδδίκος τε καὶ Πύρρος [Paus. x. xxiii. 2; cf. i. iv. 4]).

Hero-worship is closely akin to the cult of the chthonian deities and the veneration of the dead, and found an especially congenial soil in Boeotia, and hence interests prominently the Boeotian poets Hesiod and Pindar. Pindar knows of the hero-cult of Pelops at Olympia where 'in his grave by the stream of Alpheos he hath part in splendid blood-offerings' (*Ol.* i. 90 f.), of Neoptolemos and others at Delphi (*Nem.* vii. 31 ff.; cf. *Neoptoléμου* . . . τάφος καὶ οἱ κατὰ ἔτος ἐναγίζουσιν οἱ Δελφοί [Paus. x. xxiv. 6]), and, besides others, most significantly of all, Battos (Aristoteles), founder of Kyrene (c. 630 B.C.):

'Aristoteles . . . built greater groves of the god and laid down a straight-out horse-trodden way across the plain for the

processions of Apollo; where at the end of the marketplace he lies apart in death. Blessed was he while he dwelt with men, and thereafter a hero worshipped by the people (*ἥρως λαοσφής*)' (*Pyth.* v. 89 ff.; cf. R. M. Smith and E. A. Porcher, *Hist. of the Recent Discoveries at Cyrene, 1860-61*, London, 1864).

Pindar's deep interest in the state after death is unmistakable. He likes to imagine the dead still touched by the fortunes of their living descendants:

'And apart in front of the halls are other holy kings (*βασιλεῖς ἱεροὶ*) who have Hades for their lot, and when great deeds are bedewed with song, they haply hear with the hearing of the dead (*χθονία φρεσὶ*) of the success which is common to them and to Arkesilas' (*Pyth.* v. 96 ff.). 'Go now, Echo, to the dark-walled house of Persephone, bearing to his father the glorious tidings . . . of his son's victory at Pisa' (*Ol.* xiv. 19 ff.). 'The dead too have some part in things duly done, and the dust hides not the good grace of their kin. May Iphion hear from Argelia, daughter of Hermes, and tell Kallimachos of the bright honour at Olympia which Zeus hath granted to his kin' (*Ol.* viii. 77 ff.; cf. *Nem.* iv. 86).

At the supreme moment of the family's fate

Entsteigen ihren Gräbern manche Schatten,
Die Seelen schweben von dem Himmel nieder,
Die Heimat und die Freunde zu besuchen.
Sie nahen dir mit geisterhaften Schreien,
Umstrahlt von heiligem überird'schem Glanz.
Sie bringen doch die alte Liebe mit'

(W. Hauff, *Der Schwester Traum*).

But of quite special importance are certain other passages of Pindar, which are best considered together:

(a) *Ol.* ii. 53 ff.: 'Wealth adorned with deeds of excellence brings occasion for these things and for those, bringing a deep wild mood—a bright star it is, a most true light (*φῆγος*) for a man. And if he that hath it knows that which is to be—that of the dead the helpless souls (*φρένες* here, not *ψυχαι*) straightway here pay the penalty, while the sins done in this realm of Zeus one judges under earth, pronouncing doom by hateful constraint. And, ever more equally by day and night enjoying the sun, the good receive a life free from travail, vexing not the earth with labour of the hand nor the waters of the sea in that shadowy life, but with the honoured of the gods those who rejoiced in keeping their oaths live a tearless life; but the others endure woe not to be betheld. But whoso, abiding unto three times on either side, have endured to keep their soul (*ψυχήν*) utterly from iniquity, rise by the way of Zeus unto the tower of Kronos. There round the Islands of the Blest the breezes of Okeanos blow and flowers of gold are glowing, some ashore on glorious trees, while others the water feeds, with chains whereof they entwine their hands and twine garlands, according to the just council of Rhadamanthus, whom the mighty sire, husband of Rhea throned in the highest, hath as ready assessor. Pelus and Kadmos are numbered among these, and thither his mother carried Achilles, when she had persuaded the heart of Zeus by her prayers.'

(b) Frag. 129 (*ap. Plut. Consol. ad. Apoll.* 35): 'For them shines the strength of the sun below while it is night here; and in meadows (*λειμῶνες*) of purple roses their suburb is shady with frankincense and laden with golden fruits. . . . And some in horses, some in feats of strength, some in draughts, and some in the lyre take their delight, and by them blooms all fair-flowering bliss. And fragrance is spread about the lovely place (*χῶρος*) as they mingle evermore all manner of offerings in far-shining fire on the altars of the gods.'

(c) Frag. 131 (*ap. Plut. loc. cit.*): 'By happy dispensation all (travel to) an end that delivers from travail (*ἀνσίπονον τελευτάν*). And the body indeed of all men follows overmastering death; yet is there left alive a copy of life (*αἰῶνος εἰδωλον*); for this alone cometh from the gods; and it sleeps while the limbs are active; but to sleeping men it reveals (*δείκνυσιν*) in many a dream the coming judgment of happiness and woe.'

(d) Frag. 133 (*ap. Plato, Meno*, 81 B): 'From whomsoever Persephone accepts atonement for the ancient woe (*ποινὰν παλαιὸν πένθος*), the soul of these she sends back again in the ninth year to the upper sun. From these spring glorious kings and the swift of strength and the mightiest in wisdom. And for the time to come they are called by men holy heroes (*ἥρωες ἄγιοι*).'

(e) Frag. 187 (*ap. Clem. Alex. Strom.* iii. 518): 'Happy is he who hath seen these things ere he goes beneath the earth; he knows the end of life, and he knows its god-given beginning.'

We take no note here of frag. 132, which is generally regarded as spurious.

A full discussion of these passages is impossible in the scope of this article. There are many difficulties of interpretation, due in some cases to absence of the context, in others to the fact that some of the words used may have possessed an esoteric meaning which we do not fully realize—e.g., *φῆγος* ἐνυμμάτων (cf. Aristoph. *Ran.* 454 ff., where the Eleusinian μύσται say: *μόνοις γὰρ ἡμῖν ἥλιος καὶ φῆγος διαρὸν ἐστίν, δοσι μνημήμβ' εὐσεβῆ τε διήγομεν τρόπον περὶ τοὺς ξένους καὶ τοὺς ἰδιώτας*), *ἀγορτέρων* (it seems significant that this is an epithet

of Artemis; cf. the sacrifice offered by the polemarch [Pollux, viii. 91; Plutarch, *de Malign. Herod.* 26]), and so on. Also we do not know how far the passages represent one consistent doctrine.

But in general outline the essentials are as follows. The soul and the soul alone 'comes from the gods.' By reason of ancient sin—*πένθος*, suffering which is sin—the soul is imprisoned in the body. Then it passes through a period of trial 'three times on either side.' Some commentators take this to mean three times in all—once here, once in Hades, and lastly here. But it more naturally means once here and then below; then here and again below; then once more here and once more below. Having passed these six alternating periods successfully, in the ninth year—the sacred *évvaerñpis*—Persephone accepting atonement, the soul enters its final life in the body of a king, a mighty athlete, a poet, or a philosopher, after which it passes in the guise of a hero to the Isles of the Blest.

How much Pindar in these speculations owed to the mysteries of Eleusis (to which frag. 137 especially seems to refer), how much to the rise of Orphic and Pythagorean doctrines in the latter part of the 6th cent. B.C., we need not here inquire. Nor can we discuss the influence which, through Pindar, these doctrines exercised on Plato and later thinkers. What is important is that Pindar expounds, with all the earnestness of personal conviction, the doctrine that the soul is in her origin divine and that she carries in her the seed of emancipation from the flesh—an emancipation to be attained, not by some peculiar dispensation of the gods, but by her own effort towards purity.

A. W. MAIR.

PIR.—1. The term and its synonyms.—*Pir* is a term denoting a spiritual director or guide among the Sūfis, or mystics of Islām. The functionary described by the title is known also under other names: *shaikh*, *murshid*, *ustadh*. *Pir* is a Persian word, but is applied to a spiritual guide more commonly in India and Turkey than in its native home; *shaikh* in our special sense is in general use throughout Islām; *murshid* is also wide-spread, but in Turkish- or Arabic-speaking countries rather than in India; *ustadh* is found in Persia.¹

2. The authority of the spiritual guide.—Theoretically speaking, any one who has advanced sufficiently in the mystical experience of divine reality may undertake to give spiritual guidance to others. But, as a matter of fact, the *pir*, or *murshid*, nearly always bases his right to direct souls on the authorization of some teacher who has directed him in the mystic way (*ṭarīqah*). This authority is valid only in so far as the teacher traces his claim to teach through a succession of teachers, or *murshids*, to the founder of some one of the numerous Darwish orders. The *murshid*

¹ *Shaikh* is used also of the *khalīfahs*, or deputies, of a *pir*, or *murshid*. These men may have their own disciples, usually of the poorer class or such as are at a distance from their own proper guide. They may give the mystic way (*ṭarīqah*) to those who seek it, and may even confer the rank of *shaikh* upon such as have advanced sufficiently. *Shaikh* often describes the official head of a Darwish community rather than the same man as the spiritual director of a narrower group of disciples (*murids*). *Pir* is employed also somewhat loosely of the founder of a Darwish order, and still more generally of a *waḥī*, or saint. In Persia, India, and Turkey the term is current among non-Muslims as well as Muslims. The Hindus apply it to their dead saints, and in Persia and Turkey it designates an inferior priest among the Yezidis. In this non-Muslim usage the same extraordinary gifts of knowledge and miracle-working are implied as the Muslims ascribe to their *pirs*.

follows the tradition of the order to which he belongs. He is under the grand *shaikh* of his order, who resides at the place where the tomb of the founder of the confraternity is found. The grand *shaikh*, for his part also, proves an authority lineally derived from the founder.¹ He makes little or no attempt to control the local *shaikhs* of his order. It is in his power to summon a general council of *shaikhs*, whose action would be binding on each of them and on the Darwishes subject to them; but such councils are and always have been of exceedingly rare occurrence. In reality there is little official restraint on the independence of the Darwish *shaikhs*.² Even in their relation to the civil power they occupy a position of special privilege, and *shaikhs* of pre-eminent sanctity or strong character make a large place for themselves in public life. The local influence of many *shaikhs* is very significant; their word is felt to have the force of law, and the demands which they may make on the community are granted without dispute. If they levy a fine because of some offence against a member of their order, it will be paid. Government officials pay them respect in various ways.³

On the whole, the part played by the *shaikhs* in the communities of the Muslim world has been in favour of order and public welfare. They have taught by example and precept the principle of loyalty to authority, and they have been devoted to the interests of Islām, which they recognize to be inseparable from the interests of the sovereign State.⁴

3. The *pir* and the mystical life.—In order to act as a spiritual guide in the life of the mystic (*ṭāṣawwuf*, 'to live the life of a Sūfi') the *pir*, or *murshid*, must hold a *sanad* from his teacher. This is a written permission (*ijāzah*) giving him the right to pass on to others the *ṭarīqah*, or mystical discipline, as he has learned it, and also conferring upon him the authority to perform healing miracles and to work signs. The validity of the *sanad* depends upon the chain of guides whose names connect the name of the issuing *shaikh* with that of the founder of the *ṭarīqah*, or order.⁵ The *shaikh* may hold the *ijāzah* of more than one teacher if he has followed more than one

¹ The grand *shaikh* is described as occupying the *sajjādah*, or prayer-carpet, of the *pir*, or founder.

² The Shaikh al-Bakri, who is supposed to be descended from Abu Bakr, the first *khalīfah*, is appointed by the Egyptian Government to have supervision over the Darwish orders in Egypt, and within the borders of that country exercises a real official authority. The office which he holds finds no analogy in other Muslim countries, and in Egypt its purpose is not to dictate but to prevent excesses.

³ (a) Occasionally a specially forceful *shaikh* may be accorded a controlling influence over several local Darwish fraternities, and the recognition may even be given to his son after him. This does not necessarily imply the right to modify the spiritual discipline of these fraternities or the direction of novices. The influence is more or less irregular and affects the general well-being of the orders rather than their respective *ṭarīqahs*. The conduct of the latter is in the hands of the *pirs*, or *murshids* (*shaikhs* who are spiritual directors). (b) The history of Morocco in former times was that of a country governed by Sūfi *shaikhs*. In Persia the political power of the *shaikhs* has been a constant factor in the history of the kingdom. The great poets of Persia in most cases have been Sūfi teachers. In Turkey the highest places of power sometimes have been held by Darwish *shaikhs*—e.g., Abu Hūdā, the personal *imām* of the Sultān Abdū'l-Hamid. The weight of influence exerted by hundreds of powerful Darwish *shaikhs* throughout the Ottoman empire is admitted by competent observers.

⁴ The principles of Sūfism, if pressed to a logical conclusion, are anarchistic, but Sūfi practice knows little of revolt against either civil or religious authority. Even the Darwish excesses which are promoted by the *shaikhs* have in them no spirit of antagonism to the public order. The Wahhābī, Maḥdīst, and Senūsī movements are, indeed, revolutionary in character, but neither professedly nor really are they part of the Sūfi movement.

⁵ The chain of supporting names (*isnād*) is, of course, carried back from the founder to the Prophet and thence back to Abraham, Adam, and God Himself. The *sanad* usually bears the seals of other *shaikhs* as additional credentials.

ṭarīqah and has been admitted to membership in more than one Darwish order.

The presupposition is that one who holds a *sanad* has attained to that stage of advancement in the mystic path which brings him to an intuitive knowledge of God. He has attained to *ma'rifah* ('gnosis') and is himself an '*arīf*' ('gnostic'). The consciousness of self has been absorbed in the consciousness of Allāh (*fanā fi'llah*) and he is regarded as *majdhūb* ('attracted'). The one who is to guide others in the *ṭarīqah* must have gone at least thus far himself. He through his teacher has become possessor of the *silsilah* ('spiritual chain'), which ensures that the teachings and spirit (*rūḥaniyyah*) of the founder of his order have come down to him. Spiritual guides possess a trained susceptibility to hypnotic influences, whether mediated through the environment, through other persons, or through autohypnosis. Training also enables them to arrange conditions adapted to produce hypnotic states in others.¹

It may be allowed that a great many of the *Ṣūfī shaikhs* meet fairly well the conditions laid down by the great *Ṣūfī* al-Ghazālī for the *murshid*. They are orthodox, faithful to the *sunnah* of the Prophet, and correct in life. They are not usually well trained in the higher branches of Muslim learning. Very many are of humble attainments outside of the tradition and ritual of their particular order. The greater number hold scientific knowledge in slight esteem, as conveying a false conception of reality and so hindering progress towards an immediate perception of truth (*dhawq*).² A relatively small number of *shaikhs* are serious students of theology and law, and some of these have established for themselves a secure reputation as teachers of these sciences.³

4. The *shaikhs* and learning.—The attitude of the *faqīhs* and '*ulamā*' towards the spiritual guides of *Ṣūfism* is not now so hostile as it was in the early centuries of the movement. Many are still covertly suspicious or jealous, but nearly all recognize that the *shaikhs* are meeting a deep craving of the Muslim world for a satisfying experience of communion with God. They infuse a spiritual vitality into Islām which theology and law have never been able to contribute, and the orthodox doctors admit this. The majority of the learned teaching class have put themselves under the direction of spiritual directors and are members of some Darwish order.⁴

The *Ṣūfī* view of knowledge is that to be true it must be given to the heart by God (*ilhām*). The task of the *Ṣūfī* guide is to prepare the heart that Allāh may open it and lodge therein the apprehension of reality. The impartation of ideas and cultivation of logical capacity are not his special task, but rather the development of the power of suggestion and direct emotional impression. If this is secured, the vivid and immediate states of

¹ The Oriental is much more subject to hypnotic influence than the Occidental, but the hypnotic powers possessed by individual *shaikhs* vary. There are those who may induce hypnosis with little or no exercise of will. The vulgar account of hypnotic states is that the persons concerned are *meibūs* (possessed by the power of Allāh).

² The ordinary believer looks upon the *murshid* as one who has been directly taught of God, and therefore has a superior kind of knowledge to that of him who merely learns from others.

³ The literary activity of the *shaikhs* does not commonly extend beyond tracts or manuals of direction for the use of their disciples (*murids*). The disciple is cautioned sometimes against allowing others to see his books. The *shaikhs* often direct specially gifted pupils to study the works of the great mystical writers in order to attain more fully the advantages of the mystic life. Sometimes the *shaikh* himself will teach his disciple theology and subsequently initiate him into the *ṭarīqah*. This order of instruction is that approved by the '*ulamā*'.

⁴ The open opposition of the orthodox authorities to *Ṣūfism* is now directed for the most part against the cheap love of wonders, the hypocritical asceticism of the begging *faqīrs*, and the loose living of such as claim falsely to be above the common obligations of morality and law.

mind which result seem to the untrained observer to be of the nature of supernatural communications. Highly wrought feelings and ecstasy become themselves the most perfect apprehension of the real. Ineffable emotions, because of the intense pleasure which they afford, are in themselves the experience of the divine; and as, for the time being, they suspend deliberate attention and volition, except in relation to themselves, all knowledge and all being are swallowed up in the immediate consciousness of God, and God becomes the only reality. Every other thing is but phenomenal; the real is He. The discipline of the *shaikhs* seeks to bring the *murid* to the point where this inference from an absorbing emotional consciousness becomes a fixed belief furnishing a powerful and constant motive for life. In the greater number of cases the motive of those who follow the guidance of the *murshid* is a mixed motive. The emotional satisfactions are made an end in themselves and not merely an index of divine reality. In view of the moral danger involved in the dominance of this lower motive, al-Ghazālī taught that the true *Ṣūfī* should be careful to fulfil ethical obligations, and should make his mystical experiences subserve that end. The *shaikhs* of greatest influence to-day follow this rule.

5. The *shaikhs* and their circle of influence.—There are certain moral aspects of the Darwish life which, indeed, are rarely if ever wanting. The disciple chooses his spiritual director without constraint, binds himself to him freely, and holds to him to the end, though the relation between them is under moral sanctions only. The devotion given is complete, spontaneous, and marked by affectionate veneration amounting almost to worship. The *shaikhs* live for their followers, and inculcate on all the duties of brotherliness towards one another and general benevolence towards all. Hence the assistance given to wayfarers and needy persons at the *takiyyahs* (or *zāwiyyahs*, Darwish houses), and the readiness of Darwishes to share even a meagre portion with those in want.

The greater *shaikhs* are men of agreeable and magnetic personality, and show conspicuous gifts of leadership and organization.¹ They do not impress one as fanatical or as lacking in practical wisdom in the direction of affairs. The success of the *Ṣūfī shaikhs* in providing for a real spiritual need has made them effective propagandists in the cause of Islām. They have been more successful in this regard than the *mullas* and other orthodox agencies. The mystical fellowship of the Darwish fraternities has been of itself an attraction to outsiders, but the *pir* himself, with what he has to promise, has been the indispensable factor.²

Among the *shaikhs* of a lower type are found some men of weak or unbalanced minds. Many of these are looked upon as saints (*walīs*) and *faqīrs*, and are consulted in sickness or other special need. Their influence lies in this direction and not in the control and guidance of a group of disciples.

The influence of the *shaikhs* touches women as well as men. Indeed, as far as occasional consultation of the *pir* goes, women turn to him more frequently than men. There is no prohibition against their being admitted to the *ṭarīqah*, and there is eminent *Ṣūfī* authority for the view that the female mind is more sensitive to mystical

¹ The temper of the *Ṣūfī* movement admits the assertion of individual leadership rather than the effective co-operation of leaders.

² The *shaikhs* have in their *khalīfahs* very effective agents to second their influence. The *murids* also actively recommend their own *shaikh* to others.

impressions than the male mind; still, the number of women Darwishes is not relatively great.¹

The *shaikh's* high standing with God is attested by the miracles (*karamāt*) with which God honours him. The *shaikh* is not said to perform miracles; God gives them to him.² In all parts of the Muslim world healing miracles are attributed to *walis* and *murshids*; they are a mark of their special holiness. The most famous instances of these healings occur in connexion with wounds or serpent-bites inflicted in the *dhikrs* (Darwish religious exercises) of the Darwish orders. *Shaikhs* of the soundest reputation do not favour the extravagant self-mutilations inflicted in the *dhikrs* of special orders, and in general give their approval only to the miraculous cure of disease or wounds resulting from accident. They are inclined to demand also that those to be cured shall be known to be of good character. There are as striking instances of cure by means of suggestive therapeutics in the Darwish circles as are to be found anywhere, and, similarly, the immunity from injury which may be secured through hypnotic suggestion is very strikingly illustrated in the self-inflicted woundings and burnings and the serpent-bites permitted, e.g., in the societies of the Rifā'iyyah order. In hundreds of instances neither pain nor permanent injury follows.³

The power to reveal the unseen and to predict the future is explained also as a gift with which Allāh honours the holiness of his servants. In certain cases the *shaikhs* show remarkable powers of mind-reading, telepathy, and clairvoyance, and some quite accurate verifications of their predictions are on record.

The *shaikh's* circle of influence includes those who are in the habit of consulting him when need arises; those who take part occasionally in the *dhikrs* which he directs, because they find it either pleasant or helpful to do so; those who have chosen the *shaikh* as their *murshid*, or spiritual guide, and either look forward to joining his order or are already members of it; and those who occupy a cell in the *zāwiyah*, or *takiyyah*. The first three classes have not separated themselves from the world; the last have done so and are living a celibate life under the constant superintendence of the *shaikh*. It is possible to have such a class only where there is a *zāwiyah* that is large enough to provide lodging for a group of brothers in addition to the assembly room of the fraternity.

6. The vocation of the *shaikh*.—The *shaikh* may hold his position by nomination on the part of his predecessor, or, if the latter is his father or brother, possibly by right of inheritance, or he may be elected by the vote of the local group of Darwishes. His appointment will be confirmed by the *muftī* of the place, in rare cases by the Sultān himself, and regularly by the grand *shaikh* of his order. The celibate life is not binding upon him, and in certain cases the rule is that his office is inherited by his son. Where there is no *zāwiyah* with a resident group of disciples, the *shaikh*, unless he is a mendicant, will follow some secular vocation. If there is a Darwish hostel, it may have land attached to it, which will be cultivated by the resident *murids*. The *shaikhs* who do not follow any trade are supported by gifts from their disciples and others. The *zāwiyahs* over which

¹ There exist orders of women Darwishes, and among the outstanding Sūfī leaders of history one or two women *shaikhs* are named.

² The *karamāt* of the *shaikh* are of a different genus from the authenticating miracles (*mu'jizāt*) granted to a prophet.

³ In the *Dausa* ceremony, where a mounted *shaikh* rides over the prostrate bodies of his followers without injury to them, the immunity from harm is credited to their faith. Both the *shaikh* and the disciples in this instance are under the stress of intense religious excitement.

they preside are provided for by income from local endowment funds, grants from public endowment funds (*waqf*), or private gifts. The gifts which fall to the *shaikh* he regularly devotes to the purposes of his community.¹

As the *shaikh* may arrange, meetings of the local fraternity are held in the assembly room of the *zāwiyah* from time to time. If there is no *zāwiyah*, the group meets regularly in a mosque. The usual meetings are a daily meeting, a more important weekly one (often held on the eve of Friday), a monthly observance in honour of the founder of the order, a similar service for the Prophet, and a yearly celebration of the birthday of the Prophet (*Maulid en-Nabī*). The assembly room serves not merely for the performance of the *dhikrs*, but as a meeting-place for the brothers and those interested in the order. Not all present are permitted to join in the religious exercises, and not all care to do so.

7. The *murid* and the *ṭarīqah*.—The life of the disciple (*murid*) who has chosen for himself a spiritual guide is subject in all respects to the direction of the latter. He confides in him implicitly, and refers to him all his concerns and plans. The disciples resident in the *zāwiyah* take part in the regular *dhikrs* (religious exercises), and, in addition, are assigned special exercises for their own private observance. In a general way the *shaikh* instructs each *murid* how to conduct his life with a view to the attainment of the mystic goal. He may from time to time visit the *murids* in their cells. They visit him each week in his cell for the purpose of disclosing to him their religious progress and receiving from him necessary directions.² The *shaikh* is one who is practised in noting the signs of spiritual advancement in his disciples.

The nature of the *shaikh's* relation to the *murid* in the *ṭarīqah* is well illustrated in the typical instance of Tawakkul Beg's initiation at the hands of Mulla Shah.³ Tawakkul Beg chose Mulla Shah as his spiritual director and was accepted by him as a *murid*. The *ṭalīb* ('seeker') usually undertakes a long course of penitential discipline prescribed for him by his guide with a view to securing a complete detachment from the world of sensuous things and an utter humility which will prepare him to receive the positive blessings of the mystic way.⁴ The *shaikh* then admits him as a *sālik*, or traveller on the way. He takes the 'ahd, or oath, declaring particularly his devotion to the founder of the order whose *ṭarīqah* he is following and to the special guide whom he has selected. These steps are not described by Tawakkul Beg, but in those which follow he shows how through private exercises of devotion⁵ and the hypnotic influence of Mulla Shah and his *khalīfahs* the initiate reached the goal of union with God.

The method of guidance is expressed by the term *dhikr*, 'recollection.' This implies the fixing in the mind of some object of thought. It is accomplished by concentrating the attention upon the conception and its name, or upon some religious idea and its corresponding formula of expression. To assist in fixing the notion the mental effort is accompanied by vocal repetition of the name or formula with varying tone, pitch, and force of voice. In the vocal exercises the breathing is timed and adapted to accord with the strict rhythm and time of the vocal utterance. In the collective *dhikrs* of the

¹ Some *zāwiyahs* have endowments more than adequate to meet their expenses. The erection of *zāwiyahs* is provided for by gifts which may be supplemented by grants from the public religious endowments (*waqf*).

² The formal instruction of the *shaikh* is called *talqīn*.

³ Cf. Macdonald, *Religious Attitude and Life in Islam*, pp. 195-200. Mulla Shah had attained the mystic goal without the aid of a *shaikh*. Nowadays it is held to be enormously difficult to do this, and the choice of a *murshid*, or spiritual director, is insisted on.

⁴ This 'repentance' (*taubah*) is for the purpose of eradicating the *shahwah kadhībah*, or evil impulses.

⁵ The exercises include oral or silent repetition of formulas taken from the Qur'an, the recitation of longer sections from the Holy Book, the repeated thought or expression of one of the sacred names of Allāh or of a pronoun referring to Allāh. The repetitions may be assisted by means of a rosary of 35, 66, or 99 beads. Such is the usage of the Darwishes to-day.

Darwish fraternity the *shaikh* fixes the programme of exercises and determines the number of repetitions of a given formula and the manner of recitation in each part (*dharb*) of the *dhikr*. He or his *khatifahs* superintend the ceremonies, exercising constant and close control in order to secure perfect harmony of voice and movement among those taking part.¹ Each *shaikh* holds to the traditions of his own order, but at the same time there is a large element that is common to the *dhikrs* of the various Darwish orders. It is in the exercises prescribed for the private use of individuals that particular *shaikhs* feel free to adapt their spiritual directions to the needs of special cases.

The advancement of the *sâlik* is in the hands of the spiritual director, who lays down the means by which it is to be realized, and decides when the respective stages of progress have been reached. There are four major objectives which are to be successively attained. The first of these is described by the technical term *fanâ fi-l-shaikh* ('disappearance' in the *shaikh*). The disciple is directed to fix attention upon the thought and mental image of the spiritual director, while the director projects himself into the consciousness of his disciple.² By these means and by the help of various external exercises such as have been already referred to hypnosis is at last effected and the *sâlik* feels that his identity is merged in that of the *shaikh*. He declares to his instructor, no longer 'I am I,' but 'I am thou.'

When *dhikrs* have served their purpose in this way, the director introduces into the mystic discipline exercises in meditation (*murâqabah*) to fix firmly certain convictions and to intensify spiritual longing. The next major objective³ is designated *fanâ fi-l-lâh* ('disappearance in God'), and the *shaikh* declares it to have been attained when, through the hypnotic influence of his will exercised upon the *murid* and through assistance of the prescribed discipline, the *murid* feels 'I am He' (God). His own identity has become an element in his consciousness of God, and, similarly, his sense of the phenomenal world has ceased to be separately true and has passed over to be an element in his sense of God. The *sâlik* who has travelled on the way (*ṭarîqah*) until he has attained to God in the way described is 'united' (*ittiḥād*) or 'attracted' (*majdhûb*) and henceforth will travel on in God.⁴ He will be permitted to enter the circle of the initiated, may wear the characteristic garb of his order, and may receive authority to pass on the *ṭarîqah* to others as a *murshid*. Before the last objective shall have been reached he must still seek to reach *fanâ ul-fanâ* ('disappearance of *fanâ*'), in which he loses all sense of 'union,' 'attraction,' or 'absorption,' and the sense of God which results from these processes is all in all. Beyond that is the ultimate goal, *baqâ*, in which the heart returns to express itself in the relations of the phenomenal world, while never losing the true vision of reality, namely, that there is but one real being and that the world and self are but phenomenal manifestations of the one.⁵

¹ In many orders the actions of the participants in the *dhikrs* are accompanied by music rendered by attendant *murshids*. This accompaniment materially assists the process of hypnosis desired by the *shaikh*. The motions of the body in time with the regulation of the breathing tend in the same direction.

² *Fanâ* is an equivalent of *ghaiba*, 'disappearance,' 'absence.'

³ The process is helped forward by the novice fixing his eyes upon the face of his director.

⁴ Intermediate objectives may be placed before the *sâlik* (traveller), namely, *fanâ fi-l-ptir* ('disappearance in the founder') and *fanâ fi-n-Nabî* ('disappearance in the Prophet'). A synonym for *fanâ fi-l-lâh* is *fanâ fi-l-ḥaqq* ('disappearance in the real').

⁵ When one has become *majdhûb*, his soul and its motions are ruled by gnosis, the mystic knowledge of the real, and love, the mystic fulfilment of desire. Such an one has attained a status (*waqfah*).

⁶ In *baqâ* the traveller has reached the *qutb*, the focal point in which the onward movement of the spiritual life rests. It

It is obvious that this pantheistic teaching of the Sûfi *shaikhs* is not logically consistent with the theology and law of Islâm. Sane Sûfi teachers have explicitly said that one who was *majdhûb*, or attracted, was above the law; and the division of the Darwish orders into Ba-Shar' ('within the law') and Bi-Shar' ('without the law') gives ground for the suspicion which the orthodox have felt towards certain of the orders. For most of the *shaikhs* a reconciliation with the law has been possible. They have looked upon it as useful in the penitential preparation (*taubah*) for the mystic way, and they have regarded the observance of it on the part of the Sûfi initiates as a useful condescension for the sake of common believers (*ahlu-ttaqîd*). It may help them to gain paradise, though for Sûfis (*ahlu-l-ḥaqq*) it may afford no help in their practice of the mystical life (*taṣawwuf*).

In relation to the *sunnah* a large majority of the *shaikhs* are Sunnis, but in Persia and N.W. India there is a substantial Shî'ah element. The movement is of Shî'ah origin, and much of the Sûfi teaching and method may be traced through the Shî'ah to Yoga and Vedântist influences in India.

Finally, there are *shaikhs* who look upon the desire to guide souls as a lingering attachment to the world and therefore something to be renounced in order to an unconditional oneness with God, the only reality.

W. M. PATTON.

PISĀCHAS.—In modern India a *pisācha* is a kind of ghou, usually the ghost of some one who has died an unnatural death, or for whom the requisite funeral rites have not been performed. He is classed as a *bhūta*, or ghost, and the term *bhūt-pisāch* is commonly used to indicate demons generally. *Pisāchas* haunt burial-grounds and places of cremation, and eat human flesh. Their speech is a kind of gibberish, and hence modern English is called *pisācha-bhāṣā*, or 'goblin language,' by those who cannot understand it.¹ In S. India the small circular storms, called 'devils' by Europeans, are called *pisāchis*, or 'she-ghouls.'²

In ancient India *pisāchas* played a much more prominent part. They are frequently mentioned in Vedic literature. Here they are also called *kravyād*, a term which, like *pisācha*, is said to mean 'an eater of raw flesh.'³ Most scholars agree that these Vedic *pisāchas* were malignant demons,⁴ but A. Hillebrandt⁵ considers it to be quite possible

may be remarked that the discipline imposed by the *shaikhs* quite frequently brings to those who subject themselves to it a weakening of the power of nervous resistance, a loss of will power, and a general weakening of character. Through self-absorption, and even autohypnosis, their social value and their value for work are lessened.

⁴ *Vedische Mythologie*, Breslau, 1902, iii. 426.

that they were ancient enemies who subsequently became traditional fiends, while Macdonell and Keith (*loc. cit.*) admit that in later times the name may have been given in scorn to human tribes. In one place (*Rigveda*, I. cxvii. 21) the commentator Sāyana explains the word *dasyu*—generally explained as meaning non-Aryan aborigines—by ‘the *asuras*, *pisāchas*, etc., who destroy.’

In the *Rāmāyana* they do not appear very often, and then only as ghouls; but in the *Mahābhārata*, while the demon character is most often assigned to them, they also over and over again appear as a race or races of men inhabiting N.W. India, the Himalaya, and Central Asia. They are described as performing human sacrifices and as eaters of raw flesh. They have a form of marriage which consists in embracing a woman who is asleep or drugged, and are guilty of other abominable practices. Two *pisāchas* are specially mentioned as living by the river Vipāśa, who were progenitors of an impure W. Panjāb tribe known as Bahikas. On the other hand, individual *pisāchas* are here and there referred to as pious ascetics living by holy streams in N.W. India.¹

In later Sanskrit literature, with important exceptions to be noted below, the human nature of the *pisāchas* has disappeared, and they are merely demons. Sometimes they serve men for a *quid pro quo*. Thus, in the *Kathāsaritsāgara* (11th cent. A.D.), I. ii. 262) a *pisācha* is possessed of surgical skill, and will cure a wound, provided he is always given a new wound to cure as soon as his present job is finished. Otherwise he kills his patient. With this we may perhaps compare the unknown science called *pisācha-vidyā*, or *pisācha-vidyā*, mentioned in two works of the late Vedic period.²

According to the *Purāṇa* legends, the valley of Kashmir was once a lake. When the water had been drained off by the god Śiva, it was peopled by the Prajāpati Kaśyapa. This Kaśyapa had several wives. Three were Kadrū, Krōdhavaśā, and Khasā. By the first he had as offspring the *nāgas*, or snake-gods, by the second the *pisāchas*, and by the third the cognate *yakṣas* and *rākṣasas*.³ In Buddhist literature the *yakṣas* and *pisāchas* are confounded, and both had cannibal propensities.⁴ Similarly, Kalhana, the non-Buddhist chronicler of Kashmir (12th cent. A.D.), in the *Rājataranginī* (i. 184), uses the word *yakṣa* as equivalent to *pisācha*. At the present day, in Kashmir and the neighbouring countries lying south of the Hindū Kush, while the word *pisācha* has fallen out of use, *yakṣa*, under the form of *yachh*, is still the name given to malignant demons who are cannibal.

This brings us to the work known as the *Nīlāmata*, a legendary account of Kashmir certainly older than the 11th cent. and perhaps as old as the 6th or 7th. According to it, when the valley of Kashmir was formed, Kaśyapa at first peopled it with his sons, the *nāgas*, who were the former inhabitants of the now dried-up lake. He wished to introduce men (i.e. people from Aryan India?) also, but the *nāgas* objected, and he thereupon

¹ For further details and references see G. A. Grierson, ‘*Pisāchas* in the *Mahābhārata*,’ in *Festschrift für Wilhelm Thomsen*, Leipzig, 1912, p. 138 ff. Cf. also G. A. Grierson, ‘*Paisāchi*, *Pisācas*, and “Modern *Pisācha*,”’ in *ZDMG* lxi. [1912] 68.

² *Gopatha Brāhmaṇa*, i. i. 10; and *Āśvalāyana Śrauta Sūtra*, x. viii. 6, both quoted by Macdonell and Keith, *loc. cit.*

³ The various Purāṇic accounts of these legends are conveniently summarized in H. H. Wilson and F. Hall’s tr. of the *Viṣṇu Purāṇa*, London, 1866, ii. 74. The *nāgas*, of course, not only were mythical demi-gods, but also represented memories of a race of men so called. According to other legends, the name of the mother of the *pisāchas* was Kapiśā, with which may be compared the name of the ancient town Kapiśā at the southern foot of the Hindū Kush (see F. Thomas, in *JRAS*, 1906, p. 461). Kapiśā looks like a metathesis of Kaśyapa, the feminine of Kaśyapa.

⁴ See, e.g., *Jātaka*, tr. H. T. Francis, Cambridge, 1906, p. 128, note 8.

cursed them, so that thenceforth the country was peopled for six months of each year by his other sons, the *pisāchas*. These came from an island in the sand ocean, i.e. from an oasis in the Central Asian desert, possibly Khōtan, where there are also found similar traditions of *yakṣas* (i.e. *pisāchas*) superseding the *nāgas*. In after generations the Kashmir *pisāchas* were finally expelled, and the country became inhabited only by *nāgas* and men, as it is at present.¹ All over the so-called Dard country north and west of Kashmir, as far as Kāfiristān, there are still told numerous legends, some of them intimately connected with the foundation of a tribe or of its religion, in which cannibalism plays a prominent and important part.²

F. Lacôte³ maintains that there is no sufficient reason for assuming that there was ever a tribe or tribes known as *Pisācha*, and this opinion is shared by S. Konow;⁴ but a consideration of the legends just recounted and of the references to *pisāchas* in the *Mahābhārata* entitles us to believe that (1) there were actual people whom the Aryan Indians called *Pisāchas*—*Πισάχοι*; (2) this name and also the name *yakṣa* were possibly opprobrious epithets, derived from the names of demons; or, as an alternative, they were names of tribes, which hate in later times converted into names of demons; (3) the *Mahābhārata* considered these people as inhabiting the north-west of India and the neighbouring mountainous tracts, and Kashmir tradition connected their original home with an oasis in the Central Asian desert.

The question next arises as to the language spoken by these *pisāchas*. There are two independent streams of tradition concerning this. In the first place, there is the great encyclopædia of stories appearing in Sanskrit under various forms, the best known of which is the famous *Kathāsaritsāgara*.⁵ All these collections come from the Himalaya—one from Nēpāl and two others from Kashmir.⁶ They purport to be translations into Sanskrit made from an older version, entitled the *Bṛhatkathā*, which is said to have been communicated to one Guṇādhyā by a *pisācha*, in ‘*Paisāchi*.’ ‘*Paisāchi*’ means ‘the *pisācha* language,’ and is usually explained as signifying the language believed to have been spoken by these demons or by these people. Lacôte, however, maintains (p. 45) that the language was given this name simply because the original narrator was represented to be a *pisācha*, and that *Paisāchi* was really a literary adaptation of the vulgar speech of the tribes of the north-west. As it has been shown above that there were people in the north-west who were called *Pisāchas*—a fact denied by Lacôte—the point so far is of little importance. The other stream of tradition is contained in the works of the Indian grammarians. Several of their grammars of the Prakrit language contain sections dealing with *Paisāchi*. The oldest of them—Vararuchi (c. 6th cent. A.D.)—knows only one *Paisāchi* dialect, but, as time went on, the number of dialects mentioned increased till Markandēya (17th cent.) discusses no fewer than thirteen. Without doubt the later grammarians included under the name many local dialects spoken in various

¹ Nowadays the *nāgas* are the presiding deities of the numerous springs in Kashmir. For full details of the above legends, and also for other legends of the supersession of *nāgas* by *yakṣas* or *pisāchas* in other localities of the same tract of country, see G. A. Grierson, in *ZDMG* lxi. 70 ff.

⁴ ‘The Home of *Paisāchi*,’ *ZDMG* lxi. [1910] 102.

⁵ Tr. C. H. Tawney, Calcutta, 1880–84.

⁶ For full particulars see F. Lacôte, *op. cit.*, and also his ed. of Budhasvamin’s *Bṛhatkathā Śloka-saṃgraha*, Paris, 1908.

parts of India which had nothing whatever to do with Paisāchi; and it will be safest to accept the statement of Hēmachandra (13th cent.) that of the real Paisāchi there were at most three varieties. The later grammarians gave lists of the localities where Paisāchi was spoken, but these differ greatly among themselves, and the localities are very widely scattered over the whole of India, north, south, east, and north-west. They all agree in regard to one, and only one, locality—Kēkaya, a country on the east bank of the Indus, in the N.W. Panjāb, i.e. in the extreme north-west of modern India. Moreover, Mārkaṇḍeya, in his treatment of this Kēkaya Paisāchi, which he calls the standard, or principal, dialect, and which closely agrees with the form described by Vararuchi, quotes in his examples a phrase that he specially says is taken from the *Bṛhatkathā*. We may therefore assume that at least this grammarian, who is our only authority on the point, considered that the Paisāchi of this work belonged to N.W. India. Except the accounts of these grammarians, no traces of Paisāchi have survived in Indian literature.

All scholars do not, or did not, accept the theory of a north-western origin for Paisāchi. An account of the various theories will be found on p. 74 of the present writer's article on 'Paisāci, Pisācas, and "Modern Pisācha"' already quoted, and the following is a brief summary:

In 1830 A. F. Hoernle considered it to be the low Prakrit spoken by Dravidian aborigines. In 1836 E. Senart suggested that it was merely the name of the popular language of India. In 1900 R. Pischel claimed it as an independent Prakrit dialect of N.W. India. This theory was adopted by the present writer in 1906. In 1903 F. Lacôte argued that it was an Aryan language of N.W. India, but spoken by non-Aryan people. In 1910 S. Konow returned to Hoernle's opinion, and considered it to be an Aryan language spoken by Dravidians in Central India.

Konow's theory—ably argued in his article in *ZDMG* already quoted—is partly based on the fact that much of the main story of the *Bṛhatkathā* deals with events occurring in Central India, but the evidence for a north-western home for the language seems to the present writer to be overwhelming. It must at the same time be admitted that there is clear linguistic evidence of traces of Paisāchi in the modern languages not only of Central but also of W. India, and this can best be explained by the assumption that the speakers of Paisāchi spread from the north-west, as from a nidus, down the Indus, into Gujārat, Central India, and the Marāṭhā country of the western coast.

Konow has, on the other hand, made an important contribution to the discussion by pointing out the close connexion that exists between Paisāchi and the Pālī language of the Buddhist scriptures. Pālī has been localized, without great success, in many parts of India, and, if Paisāchi is, as Konow maintains, a Central Indian language, then the arguments favouring the localization of Pālī round Ujjayini in that tract would be greatly strengthened. But there is an alternative, and, to the mind of the present writer, a much more likely theory. In the country of Kēkaya was situated the famous university of Takṣaṣilā, a home and centre of Buddhist learning.¹ This at once explains the close connexion between Paisāchi and Pālī, and will entitle us to consider the latter as the literary and polished form of the folk-speech of the country in which the university was situated.

It remains to consider whether Paisāchi has left any traces of its former existence in the modern languages of N.W. India. This is denied by Konow; but the present writer, in his article in the *ZDMG* already quoted (p. 78 ff.), has shown numerous points of agreement. The subject is of a character too minute to be discussed here. Suffice it to say that the writer considers that the inhabitants of the W. Panjāb and of the wild country to the north below the Hindū Kush may be taken as in the main representing the ancient *pisāchas*, and that the many varying languages of these tracts, including Kāshmiri, though in later times much subjected to Iranian influence and possibly retaining peculiarities from the proto-Iranian stage of the Aryan language, have at their basis a form of speech not dissimilar from the ancient Paisāchi. At the same time the extremely mixed character of all these tongues prevents him from calling them 'Modern Paisāchi,' and he prefers to group them, under the name of the people, as 'Modern Pisācha.'²

LITERATURE.—This is indicated throughout the article.

G. A. GRIERSON.

PISTIS SOPHIA.—I. Characteristics.—The *Pistis Sophia* is a miscellany of weird, fantastic fragments which apparently voice the theosophy

¹ See, e.g., the *Jātakas*, *passim*.

² See also G. A. Grierson, *The Pisāca Languages of N.W. India*, London, 1906.

of some Gnostic Christian circles in Egypt (*ERE* iv. 115). The particular type of Gnosticism cannot be identified, however, as it exploits the mythological romance of Sophia's redemption; some critics have ascribed it to the Valentinians (*q.v.*) or even to (a disciple of) Valentinus himself,¹ others to the Ophites, others, again, to the Barbelo-Gnostics (cf. *ERE* vi. 239^a, 241^b). The first point to notice is that Coptic scholars generally agree that the extant MS represents the Sahidic translation of a Greek original. The MS itself, written in double columns on both sides of a parchment, cannot be dated earlier than the end of the 4th or the opening of the 5th century. How much earlier the original was composed it is impossible to say; the fact that the Epistles of the NT are quoted as Scripture seems to fix a *terminus a quo* not earlier than c. A.D. 140; but the internal evidence is too uncertain to allow any precise inferences to be drawn with regard to the period at which it was compiled. What is certain is that the *Pistis Sophia* is a product of the later Gnosticism, especially of Gnosticism as it grew upon Egyptian soil; and, as few of the Gnostic documents have survived in their entirety, this invests it with special value for a student of the movement; its contents are often tedious and occasionally trivial, but they are of first-rate importance for the comparative criticism of the scattered pieces which in most cases represent all that is extant of the rich Gnostic literature. We have here the morbid craving for an esoteric revelation, as well as the blending of mythology and ritual, which made some of the Gnostic circles more than mere schools of religious philosophy. We have sacramental rites combined with Christology,² in a form whose spirit is sometimes not far from Catholicism. We have theurgical elements fused with ceremonial (cf. *ERE* viii. 277). We have also astrological mysticism in a peculiar combination of Christian faith and intricate theosophical speculation, whose general outlook is most nearly parallel to the attempt of Bardesanes on more orthodox and sober lines. Finally, from the point of view of literary form, we have in the *Pistis Sophia* an illustration of how Gnostic writers could employ the dialogue and the hymn³ in order to convey their opinions, and of how they personified abstractions as Æschylus had done more dramatically in the *Prometheus Vinculus*, and the Hebrews in the *Sophia* of Proverbs and of the Wisdom-literature more simply.

The affinities of the theosophy reflected in the *Pistis Sophia* are with that branch of Ophitism which is called Barbelo-Gnosticism (*ERE* vi. 238^a); the description of this sect, as given by Irenæus (*adv. Hær.* i. 29) in what seems an extract from the Gnostic 'Gospel of Mary' (cf. *DAC* i. 502^a), does not exactly tally with the details of the *Pistis Sophia*, but this is not surprising, as the latter reflects innovations and modifications of any Gnostic scheme. The Barbelo-Gnostics seem to have been originally Syrian, and to have passed south-west into Egypt. The characteristic feature of their occult speculations was the place assigned to the female principle (*ERE* v. 827 ff.), which led to an exploitation of the term 'Barbelo.' This was applied by them to the female deity, either as the supreme *ἑρμῶα* of the invisible God⁴ or as the

¹ Appealing incautiously to Tertullian's language in *adv. Valentin.* ii. ('porro facies Dei spectatur in simplicitate quaerendi, ut docet ipsa Sophia, non quidem Valentinus, sed Solomonis'). So F. Legge, 'Some Heretic Gospels,' in *The Scottish Review*, xxii. [1893] 133-162.

² Cf. E. Bevan, 'The Gnostic Redeemer,' *HJ* xi. [1912-13] 187-152.

³ On the development of the hymn in Syriac Christianity see *ERE* vii. 12.

⁴ According to Irenæus, Barbelo was 'an æon, in virgin-shape, who never aged,' existing with the 'innominabilis Pater.' The

lower Sophia, and it gave them their distinctive name. It is this figure, not the serpent of the specific or narrower Ophites, that appears in the cosmology of the *Pistis Sophia*. The representation thus resembles the account of the Gnostics given by Epiphanius (*Hær.* xxvi.); whether or not the *Pistis Sophia* in its present form or in the original form of any part is to be identified with the 'Little Questions of Mary' which Epiphanius mentions as a document of that sect, the similarity of physiognomy is unmistakable. The insistence on the virgin-birth of Jesus, the salvation of the spiritual through initiation into the mysteries, and the identification of the Highest Being with supreme light recall these Ophites, and, even more so, the description of the tyrants who guard the portals of eternity (cf. Origen, *c. Cels.* vi. 30 f.); but the functions of Ialdabaoth (cf. *ERE* vi. 236) differ, and the adventures of (*Pistis*) Sophia are not quite the same as those of Sophia Achamoth in the Valentinian scheme or in the Ophite; in the *Pistis Sophia* she is not connected with the origin of matter, and she is represented as the object of redemption by Christ, not as a medium or principle of redemption, much less as a sister or as the mother of Christ. The conception of the light-maiden Barbelo, again, is variously defined in the extant notices of the Gnostic theosophies, and her ill-defined characteristics in the *Pistis Sophia* differ from the views which dubbed her Pruniceus or set her in the eighth heaven, as the mother of Sabaoth or of Ialdabaoth (= לורט ברתא, son of Chaos?), who, to her sorrow, usurped the seventh heaven. In the *Pistis Sophia* she is a great Power of the invisible God, but she does not produce Jesus as 'the Light'; she merely confers on Him His vesture of light, and Ialdabaoth is in the chaos of the under world, a torturing fiend instead of a demiurgus. The Barbelo-Gnostics were evidently not homogeneous, but the occurrence of Barbelo in the *Pistis Sophia* assigns that miscellany to some circle more or less allied to the pious theosophists of the 2nd cent. whom we know as the Ophites collectively, and as the Nicolaitans, Simonians, and Barbelo-Gnostics specifically. For the Ophites, though numerically insignificant, were influential, and the tenets which they started seem to have been capable of permutation and modification in several directions.

Five etymologies of the term 'Barbelo' (Βαρβελώ) have been proposed: (a) 'daughter of the Lord,' an equivalent for ברתא דלורט; (b) 'God in the Tetrads,' מלכות אלהים, which is probably the most satisfactory explanation; (c) 'the supreme limit,' *paravela*, from the Indian *vela*, 'limit'—a suggestion made by Julius Grill (*Untersuchungen über die Entstehung des vierten Evangeliums*, Tübingen, 1902, pp. 395-397), who connects it with the Valentinian *Opoe*, the Barbelo being called 'the supreme limit' in relation to the Πατρις ἀκατονώματος on the one side and to the lower syzygies on the other; (d) Bousset (*Hauptprobleme der Gnosis*, Göttingen, 1907, p. 14 f.) suggests, on the lines of (a), that the word is a mutilation of *παρθένος*—the intermediate form, *παρθενώς*, actually occurring in Epiphanius (*Hær.* xxvi. 1) as the name of Noah's wife; (e) finally, Hort's (*DCB* i. 235, 249) conjecture has to be chronicled, which regards 'Barbelo' as identical in meaning with its equivalent 'Babel' in the Gnosticism of Justinus (Hippol. *adv. Hær.* v. 26), i.e. as the chaotic germ of manifold existence—though the seductive, cosmological functions of Babel are very different from the celestial position of Barbelo and her Christological significance in the *Pistis Sophia*.

The only quotations are from the OT and the NT, the former including the Odes of Solomon among the canonical Psalms, the latter ranging over the four Gospels and most of the Epistles (with the exception of Hebrews). Instead of depreciating the OT, the *Pistis Sophia* believes in its inspiration; the divine power in Christ is traced in the OT as well as in the NT, and this absence of anti-Semitic bias differentiates the

latter produces the female tetrad of *ἐνοια, πρῶτονσις, ἀπαρσις, and ζωαίσις*, while Barbelo produces the male triad of *φῶς, (= Christ), νοῦς, and λόγος*.

miscellany from the general class of Gnostic (Ophite) speculations. Furthermore, it makes no appeal to outside myths, as did the Ophites and the other Gnostic sects described by Hippolytus. Whether this was intentional or not, whether the *Pistis Sophia* documents came from a circle less cultured than the rest or from Gnostics who were shy of syncretism, it is a feature which allies them, in spite of their fantastic cosmogony and kabbalistic expressions, to the main body of the Church. Nor is it the only feature of this kind. Belief in the absolute efficacy of the sacraments, a certain reserve in exploiting mythology, a real devotion to Christ, and an evangelical sense of 'God for all the world' shimmer through the coloured and wavering mists of theosophy in the *Pistis Sophia*, and suggest that a genuine faith lay behind the chimeras and amalgamated texture of these Gnostics' cosmology.¹

2. Contents.—The esoteric mysteries are as usual represented to be a revelation—in this case, as in many other Gnostic documents which are known more or less fragmentarily, a revelation made by the Risen Christ to the inner circle of His disciples. The precedent for this method had been furnished by the Catholic Church, in the interests of apostolic tradition. Thus Justin Martyr (*Apol.* i. 67) closes his account of the Christian sacraments and teaching by claiming that he was only setting before his pagan readers what 'Jesus had taught when He appeared on Sunday to His apostles and disciples'—an amplification of Mt 28²⁰. In the *Pistis Sophia* the main purpose of Christ is to reveal and institute mysteries, and mysteries of a sacramental order, by which alone redemption from sin is possible for the elect. The starting-point is the same as in the uncanonical gospels which dealt with the Resurrection and passed into Apocalypses, viz. the period of forty days which, according to Ac 13, Jesus spent with His disciples between the Resurrection and the Ascension. The communications which He was supposed to have imparted to His followers during this interval were shaped into fantastic revelations of heaven and earth. The *Pistis Sophia* (1-5)² starts also from the instructions given by the Risen Jesus to the disciples on Mount Olivet; but the remarkable and unique feature is that the writer extends the period to eleven years. Even this prolonged period did not enable the Lord to impart more than an elementary knowledge of the mysterious Light-world. Since He had not yet ascended, the esoteric meaning of the moons and spheres which intervene between the human soul and the supreme Light had still to be revealed, although the disciples complacently thought that they had already attained a perfect insight. Hence, after the ascension to the Prime Mystery (or Supreme God) on the 15th day of the month Tybi³ (cf. *ERE* iii. 93) at full moon, when the passage of Jesus through the firmaments into the higher world had produced confusion among the powers of heaven and an earthquake which dismayed the disciples, He returned (cf. W. R. Newbold, *JBL* xxi. [1912] 168-209) next day in dazzling glory and, to their delight, promised to complete their knowledge of the heavenly world, i.e. to describe the Ineffable One, who was above the Prime Mystery. The gnosis is practical; it is a revelation of the proper methods by which the disciples can attain, and help others to attain, the goal of their quest, viz. the attainment of the Light-world,⁴ instead of the present mixed (*κερασμός*) world which is destined to perish at the end.

The remainder of the first book (6-82) is devoted to this exposition, Jesus being occasionally questioned in the course of it by Mary Magdalene, Philip, Peter, Martha, John, Andrew, Thomas, Matthew, James, Salome, and the Virgin Mary, all of whom not only put questions but reveal for the approval of Jesus what is in their minds. The literary quality is not high, but the setting of the dialogue is sometimes quaint—Mary 'grazing into the air for an hour' (17) before she ventures to ask a question, Philip sitting and writing down the words of Jesus (22), Peter angrily complaining that Mary talked too much (36), and James reverently kissing the breast of Jesus before he speaks a word (51). The exposition itself is from time to time linked to mystical interpretations of OT texts; e.g., one of the grotesque applications of Ps 85¹⁰ ('mercy and truth are met together') is that these words denote the meeting of the Virgin Mary and Elisabeth (Lk 140), since 'Mercy' was the divine

¹ Christ breaks the power of fate (*εἰμαρμένη*) over the soul (22 f.); but this preoccupation with the problem of destiny, which haunted the early centuries (cf. Gilbert Murray, *HJ* ix. [1910-11] 15 f.), like a nightmare, was faced by Christian thinkers in the Church, like Origen and Bardesanes, as well as by Gnostics (cf. the *Excerpta Theodoti*).

² Schmidt's numbering of the chapters, in his standard ed. (see under Literature), is followed throughout this article.

³ Basilides and his school generally made this day the date of the baptism of Jesus (Clem. *Strom.* i. 21. 146) in the fifteenth year of Tiberius.

⁴ Cf. and cf. the basal idea of Manichæism (*ERE* viii. 397, 400), and the discussion in the second book (xlxi f.) of the Clementine *Recognitions*. But the *Pistis Sophia* is prior to the rise of Manichæism, and less dualistic in tone.

Power in Mary which issued in the shape of Jesus, while 'Truth' in Elisabeth developed into John the Baptist, the herald of the Truth (62).

Jesus begins (7) by describing the origin of the twelve apostles not from the rulers of the *aeons* (i.e. the zodiac), as in the case of ordinary men, but from twelve Powers¹ taken by him from the twelve saviours of the Treasure of Light and placed in their mothers' wombs. John the Baptist's soul is similarly formed from a Power granted to Jesus by the beneficent 'little Iad' and from the soul of Elijah.² His own incarnation (8) is due to His implanting of 'the first power I had received from Barbelo, that is to say, the body (*σῶμα*) which I had borne in the height, and instead of the soul (*ψυχή*), the power I had received from the great Sabaoth, the beneficent,' in Mary His mother. He then describes His investiture with three robes of light and His ascension through the various compartments or spheres, His victorious conflict with the archons and hostile powers of the twelve *aeons*,³ who were organized to thwart the redemption of the light, and His discovery, behind the veils of the thirteenth *aeon*, of poor lonely Pistis Sophia (29) seated underneath that *aeon* and mourning over her exclusion. The story of this pathetic figure is now told. She was the last and lowest of the twenty-four emanations, and she had incurred the hatred of the twelve *aeons* by desiring the light of the Highest; furthermore, Arrogant (*αἰδέσθης*), who sought control of the thirteenth *aeon*, did his best to keep her out by issuing a lion-faced Power and other emanations in chaos (including Ialdabaoth), whose evil fascinations drew Pistis Sophia down through the twelve *aeons* until, harried and darkened by her foes, and having abandoned her consort (*συνζυγος*), she reached chaos itself. Then, coming to herself, she repents of having mistaken the deceptive light of Ialdabaoth for the True, and cries to the Light of lights; by a twelvefold act of repentance, elaborately explained, she expiates the twelve *aeons*, succoured at every stage by help from on high against Arrogant and his allies, and finally (67), having repented for abandoning the thirteenth *aeon*,⁴ she is led from chaos by a Power of Light sent by Jesus,⁵ which crowns her with unquenchable radiance and inspires her to praise the Power of Light in a song.

An interpolated paragraph of alphabetical gibberish⁶ has been inserted at this point (62). The following section (63-148) is entitled 'the second book of Pistis Sophia', but the division is artificial and the name of the original document evidently was not 'Pistis Sophia' at all; at the close of 100 we read 'a portion of the books or texts (*τεκμήρια*) of the Saviour'—which covers 63-100. The next section (101) appears to be the conclusion of a different document altogether. Another 'portion of the books of the Saviour' follows (102-135), and the final section (136-148) has a later note appended, which recalls the contents of Mk 16:9-20.

The so-called 'second book of Pistis Sophia' continues the heroine's career. She is driven down by a fresh attack of her foes, but Jesus orders Gabriel and Michael to assist her by means of a stream of light against the archons and emanations who still thwart her progress; finally she is set in the centre of the Light itself, triumphing over the hostile *aeons* of darkness by the direct aid of Jesus, who paralyzes Arrogant and his emanations. Her songs of praise and the revelations made to her are expounded at length; she accompanies Jesus into the thirteenth *aeon*; then, after a hymn of praise, she passes suddenly, singing, out of the story. No more is heard of her. The remainder of the book (83 ff.) is occupied by an elaborate Gnostic survey of hierarchies, *aeons*, and spheres. The drama gives place to exposition, and the theme is the next world, with special reference to the destiny of the soul and its varying fortunes there. The literary method is the same as in the first book; Jesus invites His hearers from time to time to guess the meaning of what He has said, and praises the answer; or He allows Himself to be questioned. But Mary does nearly all the speaking in the second book, though she confesses (72) that

she is in terror of Peter—'I fear Peter, for he threatens me, and he hates our sex.'⁷ She even, by permission of Jesus, explains at a later stage the mystic sense of Ex 21:17 to Salome (132). The special feature of the dialogue is a severe rebuke of Andrew² for ignorance, but he is pardoned, at the humble request of the others (100). At this particular point the book becomes heterogeneous. The extract from 'the books (*τεκμήρια*) of the Saviour' gives place suddenly to the brief (101) conclusion of some lost Gnostic treatise or apocalypse of Jesus; this beatitude on the members who are initiated into the mysteries breaks the thread of the story, and, when a second extract from these books (102-135) opens, we find ourselves in a different world. The bizarre element predominates. Conversations between Jesus and the group continue, but the topics are less ethereal and speculative, connected for the most part with the gnosis of the initiated—e.g., the power and limits of forgiveness, the influence of the living over the souls of the departed, the efficacy of baptism, the rules for imparting the mysteries of the faith, the meaning of destiny, etc. The sense of sin is deep, but the hope for sinners³ lies in the rites of the Gnostic faith thus revealed. Finally, Mary exclaims: 'My Lord, lo, we know plainly, openly, and clearly (*φανερώς*) that thou hast brought the keys of the mysteries of the realm of light, which forgive the sins of souls and purify them and make them pure light, and bring them into the light' (185). The entire section is a blend of puerile speculation, austere ethics, and sincere piety of the sacramental order, which some critics have thought to connect with the Marcosian sect.

The MS then contains a section which is usually called the fourth book (136-148). It has no connexion with the foregoing. Substantially it is a piece of Gnostic sacramentalism, couched in eclectic and often crude terms. The disciples, including the women (and, for the first time, Simon the Canaanite and Bartholomew), come to Jesus after the Resurrection, as He stands, clothed in white linen, on the shore of the ocean; their cry is, 'Our Lord, have pity on us, for we have left father and mother and all the world and have followed thee.' Jesus, then, by a mystic incantation pronounced 'at the altar,' moves the spheres⁴ right and left, transporting Himself and the disciples to an aerial region lying between, where He discourses to them upon the celestial hierarchies and the various torments endured by souls before they are released from the different rulers of the spheres. He comforts them, in view of all this, by reaffirming His gift to them of 'the keys of the heavenly realm' (141). A fresh incantation raises them to a sphere of light, where they receive a vision of fire, water, wine, and blood, which is explained as the meaning of Lk 12:49, Jn 4:10-14, Mt 26:27, and Jn 19:34: 'I brought nothing into the world, when I came, except this fire, this water, this wine, and this blood; the water and the fire I brought from the region of the Light of lights, from the treasure of light, and the wine and the blood I brought from the region of Barbelo. Shortly afterwards, my Father sent me the holy spirit in the form of a dove. The fire, the water, and the wine were for the purifying of all the sins of the world; the blood was a sign for me of the human body which I received in the region of Barbelo, the great Power of the invisible God. The Spirit, again, draws all souls and leads them to the region of light.' Jesus then transports them back to the mountain of Galilee, institutes (cf. ERE vii. 408*) a mystic sacrament (142) of water, wine, and bread, intercedes successfully with the Powers who remit sins, on behalf of the disciples, and explains the efficacy of the supreme Name as a charm against the rulers of the spheres. There is a gap in the MS at this point. When it recommences, we are listening to a recapitulation, uttered with gusto and gloating, of the Dantesque punishments inflicted on the soul guilty of cursing, the slanderer, the murderer,⁵ the thief, the scornor, the blasphemer, the sodomite, the obscene sorcerer,⁷ and the good man who has not been

¹ An indication of the Gnostic claim to apostolic authority and of the apostolic prestige in their theosophy. The treason of Judas is ignored.

² This is held to explain Mt 17:11-12.¹¹⁴ The older Gnosticism, described by Irenaeus, made John the Baptist and Jesus emanations of Sophia herself, through the unconscious agency of Ialdabaoth. Here, as elsewhere, the *Pistis Sophia* departs from the Christology of the earlier schools of Gnostic speculation.

³ Even in the medley of celestial figures Christ is supreme over these tyrannical lords of destiny (*εὐαγγελιστῆς*). According to the *Pistis Sophia*, which tallies here with the Ophite system in general, the stars in their courses fight against the saints, and Jesus has to intervene in order to shorten the times for the sake of the elect.

⁴ This is held to explain Ps 51:4.

⁵ After His ascension. Her fall and preliminary rise seem to be prior to the advent of Christ; the completion of her rescue and uplifting is accomplished by the Ascended Christ.

⁶ The jargon of foreign syllables and names in the *Pistis Sophia* prompted this scribe to try such composition on his own account. In 137, e.g., we read a Word of Jesus to this effect: 'He (Jesus) drew another Power from *ἡλιαρχου χαίρου χαίρου*—who is one of the three gods of triple power—and bound it to Ares; and he drew a Power from *χαίρου χαίρου*—who is also one of the three gods of triple power—and bound it to Hermes; and again he drew a Power from Pistis Sophia, the daughter of Barbelo, and bound it to Aphrodite.' Cf. C. Bigg, *The Church's Task under the Roman Empire*, London, 1906, p. 631.

¹ This may reflect a Gnostic claim for women in the prophetic ministry of the Church, as against an attempt on the part of the (Roman?) authorities to put them down.

² He gets the rebuke of Mt 17:17 for wondering how the disembodied soul can escape the archons and powers.

³ It is a free gospel. 'I have called and said to all men, sinners and just persons, "Seek that ye may find, knock that it may be opened to you; for everyone who seeks in truth shall find, and to him that knocketh it shall be opened. For I have said to all men, that they are to seek the mysteries of the realm of Light, which will cleanse them and purify them and bring them to the Light"' (133).

⁴ This cry for more light than the old gospel could furnish on the problems of the universe marks, as Harnack observes, the common plea of Gnosticism and catholicism; the simple gospel of Jesus had to be expanded to meet the speculative problems of the age.

⁵ Among the grotesque semi-Egyptian colours of this sketch, it must be noted that the spherul powers included 'the basis (*βάσις*) of the moon, which was like a ship steered by a male and a female dragon, and drawn by two white oxen. On the poop of the moon there was the figure of a child who drove the dragons that had seized the light from the archons. At the bow was the face of a cat.'

⁶ At this point Peter again protests that the women (Mary and Salome) are putting too many questions, and Jesus bids them let the men have a chance of speaking (146).

⁷ These denunciations show how the *Pistis Sophia* abjured the libertinism which was rampant in some of the ultra-spiritualistic circles of Gnosticism. For the Egyptian basis of the Gnostic hell see E. A. Wallis Budge, *The Gods of the Egyptians*, London, 1904, I. 265 f.

initiated. Each case is proposed by a disciple, and answered by Jesus. He closes by declaring that (148) a man is punished separately for every sin, but that the penitent initiate is sure of pardon; also, He describes the best time for those to be born who shall be initiated into the mysteries. The original MS then ends with the words, 'When Jesus spoke thus to his disciples in Amenti, the disciples wept and wailed: "Woe, woe to the sinners on whom the indifference and forgetfulness of the archons lies, till they leave the body and are led to these punishments! Have pity on us, have pity on us, Son of the Holy One, and take compassion on us that we may be delivered from these punishments and judgments prepared for sinners—for we too have sinned, our Lord and our Light!"' The entire fourth book is kabbalistic as none of its predecessors is; the moral demand, which counteracted the magical element (*ERE* iv. 115^b) in the sacramental doctrine, begins to fall away, and the religious temper narrows as well as hardens.

3. **Composition.**—The problem of the *Pistis Sophia* is twofold—literary and religious. The literary problem is to analyze the structure of the miscellany. Even when the first three books are taken by themselves, their original title cannot have been *Pistis Sophia*. This designation¹ may be retained for the sake of convenience, but it is the addition of a later scribe, and is just as appropriate as 'The Book of Una' would be for the *Faerie Queene*; the miscellany is much more comprehensive than such a title would suggest. Either 'The Books of the Saviour' or 'Questions of Mary and the Disciples concerning Repentance and Forgiveness, with the Answers of the Lord' would cover the contents more accurately. Even this, however, does not explain the juxtaposition of the fragments. One theory (Schmidt) is that the fourth book, together with the allied books of Jeû in the Bruce MS, must reflect an earlier stage of this Gnostic theosophy, at which the 'lower' mysteries as yet consisted mainly of a baptismal sacramentalism (*ERE* ii. 388^a). The rival hypothesis (Liechtenhan) reconstructs an original document by omitting 64-80 as an interpolation. These theories are complicated by (a) the probability that the *Pistis Sophia* is based upon earlier Gnostic treatises of the 2nd cent. which are known to us, as far as they are known at all, mainly by their titles;² and (b) by the obvious connexion between our miscellany and the 'two books of Jeû',³ which happen to be preserved in the allied Sahidic MS of Bruce. The *Pistis Sophia* mentions these books (134) as containing the higher mysteries and as 'written by Enoch when I spoke with him from the tree of knowledge and from the tree of life.' But the books mentioned here can hardly be the books of the Bruce MS, for the latter do not profess to have been composed by Enoch. Nevertheless, there is a general similarity between the two MSS, which involves literary and religious questions that have not yet been answered definitely by experts. In the extant books of Jeû Jesus is also revealing the mysteries of the celestial spheres to His disciples, the sacramentalism is still more emphatic, the ascetic note is loudly struck, and the underlying aim is, as in the Egyptian *Book of the Dead*, to provide a safe passage for the initiated soul through the hostile regions of the other world. The latter aim, more explicitly than

in the *Pistis Sophia*, dominates the sacramental interest; it must be admitted that the entire scheme of both works presents a grotesque, weird elaboration of the sacramental mysteries, compared with which the later Catholic construction may be described as simple and sober (cf. *ERE* v. 548^b).

LITERATURE.—The literature may be grouped under the successive stages of criticism. The MS of the *Pistis Sophia*, originally possessed by A. Askew, passed into the keeping of the British Museum (MS Add. 5114) towards the end of the 18th century. Some passages had been already copied and noticed by C. A. Woide, the Coptic expert (cf. J. A. Cramer, *Beiträge zur Beförderung theologischer . . . Kenntnisse*, Kiel and Hamburg, 1778, p. 82 f.), who assigned it, on paleographic grounds, to the 4th cent.; and in 1843 it was discussed by J. Matter, *Hist. critique du gnosticisme*², Paris, 1843-44, ii. 41 f., 550 f. E. Dulaurier (*JA*, 4th ser., ix. [1847] 534-548) ascribed the work to Valentinus; but his Fr. version was never published, and the first ed. of the MS did not appear till 1851 when M. G. Schwartz's Lat. tr. was posthumously ed. by J. H. Petermann (*Pistis Sophia, opus gnosticon Valentini adindicatum*, Berlin, 1851), who attributed the document to the Ophites, an opinion shared by K. R. Köstlin in his exhaustive essay on the Gnostic system of the *Pistis Sophia* (*Theologische Jahrbücher*, xlii. [1854] 1-104, 137-196), and by R. A. Lipsius (*DOB* iv. 405-415). Portions were translated from Schwartz's version into Eng. by C. W. King, *Gnostics and their Remains*², London, 1887. A Fr. version by E. Amélineau followed (*La Pistis Sophia: Ouvrage gnostique de Valentin, traduit du copte en français, avec une introduction*, Paris, 1895), which was severely criticized by E. Andersson (*Sphinx*, viii. [1904] 237-253) and C. Schmidt (*GGA*, 1891, p. 640 f., 1892, p. 201 f.). An Eng. version, based on Schwartz and Amélineau, was published by G. R. S. Mead (*Pistis Sophia, a Gnostic Gospel . . . now for the first time Englished*, London, 1896). C. Schmidt's Germ. tr. (*Koptisch-gnostische Schriften*, Leipzig, 1905, I. 1-254) had been preceded by his ed. and study of the allied Gnostic documents in *TU* viii. 1-2 [1892] ('Gnostische Schriften in koptischer Sprache aus dem Codex Brucianus'), as well as by A. Harnack's monograph, 'Ueber das gnostische Buch Pistis-Sophia,' in *TU* vii. 2 [1891]. Harnack's views are summarized in his *Gesch. der altchristlichen Literatur*, i. (Leipzig, 1893) 171 f., ii. 2. (1904) 193 f. Schmidt's theory, that the two books of Jeû (in the Bruce MS) represent, along with the (so-called) fourth book of the *Pistis Sophia*, an earlier stage, is criticized adversely by E. Preuschen (*ThLZ* xix. [1894] 188-187) and defended by Schmidt in *ZWT* xxxvii. [1894] 555 f.; Harnack tends to think that Schmidt has not proved his thesis at this point, and a similar scepticism, accompanied by an independent, positive reconstruction, is reflected by R. Liechtenhan in his 'Untersuchungen zur koptisch-gnostischen Literatur' (*ZWT* ix. [1901] 236 f.) and in *PRE* xiv. 404 f. The discovery of the *Odes of Solomon*, five of which were already preserved in the *Pistis Sophia*, has reopened the problem of the latter book; cf. J. Rendel Harris, *The Odes and Psalms of Solomon*, Cambridge, 1909, pp. 10-35, and W. H. Worrell, 'The Odes of Solomon and the *Pistis Sophia*,' *JThSt* xlii. [1911] 29-46. The most recent discussions of the *Pistis Sophia* will be found in W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, which brings out the syncretistic features; E. de Faye, *Introd. à l'étude du gnosticisme*, Paris, 1903, pp. 109-139, and *Gnostiques et gnosticisme*, do. 1913, p. 247 ff., the latter of which thinks highly—some will feel, too highly—of its religious value; P. D. Scott-Moncrieff, *Paganism and Christianity in Egypt*, Cambridge, 1913, p. 148 ff., which elucidates the Egyptian characteristics of the miscellany; and F. Legge, *Forerunners and Rivals of Christianity*, Cambridge, 1915, ii. 134 f.

PITRS.—See ANCESTOR-WORSHIP (Indian).

PITRYĀNA.—See DEVAYĀNA.

PITY.—Pity is pre-eminently a human emotion; it is either not shared at all or shared in a very inferior degree by the brutes. As a human emotion it is very widely spread, but affects men at different times and in different races in different degrees. Women are more moved by pity than men, civilized men than savages, and probably the northern more than the southern races. Among the Greeks and Romans pity was less felt than among Christian nations, in the mediæval life less than in the modern world. This is, perhaps, due to the increased ease of communication between one part of the world and another, and, as a consequence of this, to the growing solidarity of the human race. Hostility and anger are both apt to obliterate pity, or at any rate greatly to diminish it; on the other hand, affection for and contiguity to the sufferer enhance it.

1. Greek.—In Homer pity is recognized as a

¹ E. Dulaurier and E. Renan (*Marco-Aurèle*³, Paris, 1882, p. 120 f.) proposed to read *πιστις σοφία* ('faithful or believing Wisdom'), but 'Faith-Wisdom' is quite intelligible, especially when it is remembered that the twelvemons posited by Valentinus commence with *πίστις* and end with *σοφία*.

² The discovery of the *Odes of Solomon* (*ERE* vii. 13^a) has put one of these treatises in our hands; the *Pistis Sophia* quotes, among the canonical Psalms, from five of these *Odes* (I., v., vi., xxi., xxv.).

³ Jeû in the *Pistis Sophia* is the father of Sabaoth, and consequently (see above, p. 47^a) 'the father of the father' of Jesus. The pre-existence of Christ is assumed in the story of these books' origin; indeed, the pre-existence and the ascended activities of Christ in this literature are much more vital than the historical life and mission on earth, the main significance of the latter being that it inaugurated the sacramental rites. Jeû, in the *Pistis Sophia*, keeps the lower archons in order, but his principal mission is to transmit light from the higher Treasure to the regions below him, by way of revelation; he is more important as a medium than as a celestial potentate.

quality which prevails to some extent and ought to prevail among both gods and men. Yet no great stress is laid upon it, nor does its absence excite much indignation. In one passage (of doubtful authority) it or, rather, the respect which gives rise to pity is described as a quality 'which greatly injures and also greatly benefits men' (*Il.* xxiv. 45). In the tragedians the feeling of pity is more marked and occupies a more prominent place. Indeed, as Aristotle points out, tragedy could not exist and would have no point, did not human misfortune excite pity and were not people capable of being moved by the imaginary misfortunes of their fellow-men. He says that the object of tragedy is 'by means of pity and terror to effect a purging of such emotions' (*Poetics*, 1459^b, ed. Bywater, Oxford, 1909).¹ In some ways the most remarkable instance of pity exhibited in Attic tragedy is Prometheus's self-sacrifice for the good of mankind, brought about by the pity which he felt for their forlorn condition; with this is contrasted the pitiless inexorability of Zeus. This has in it some touch of the Christian doctrine of God's pity for man, though in spirit it stands greatly opposed to it. In Plato there is no formal treatment of the emotion of pity, though he recognizes it as a natural and proper human sentiment (e.g., *Phaedo*, 58 E). It is further characteristic of Plato that he thinks the condition of ignorance or mistake more to be pitied than that of those who fall into misfortune (*Rep.* 539 A). In Aristotle the emotion is treated more formally and at greater length. But in the *Ethics* he describes it along with desire, anger, and fear as a feeling (*πάθος*) (*Nic. Eth.* ii. 1105^b); in the *Rhetoric* he discusses at length the character of the emotion at least as it can be used for rhetorical purposes. Of course, as a simple emotion pity defies definition; no one could ever make the feeling of pity intelligible to a man who had never known it; but it is possible to analyze the circumstances in which it will arise and be felt, and this is what Aristotle attempts.

He describes it as 'a painful feeling arising on the sight of evil either destructive or painful, which happens to one who is unworthy of it, an evil of a kind which one might expect to suffer oneself or that one of one's friends should do so, and this when the evil appears close at hand. For it is clear that it is necessary that he who should feel pity should be such as to think that he might suffer the evil either in his own person or in that of one of his friends, and that the evil should be such, or very much such, as has been described in the definition' (*Rhet.* ii. 8).

The definition gives at first sight a somewhat selfish complexion to the feeling of pity; yet there can be no doubt that it lays the conditions down under which pity is most readily felt, and, though there is a pity which transcends this account of it, the definition accurately describes the pity by which the great majority of ordinary men are moved.

2. Roman.—In Latin literature the sentiment of pity occupies no prominent place; the Romans were not a compassionate people, and their literature faithfully reproduces this trait of their character. The passage where the feeling of pity is most finely touched upon in Latin literature is in Virgil:

'Hic . . .
Sunt lachrymae rerum, et mentem mortalia tangunt'
(*En.* i. 462).

There is also a striking passage in which Tacitus contrasts the pity felt by some of the rough soldiers after the battle of Bedriacum, at the horrors which the field of battle displayed, with the callousness of Vitellius and his entourage (*Hist.* ii. 70). Cicero also knew what pity was; he described it as 'ill ease of mind growing out of the misfortune of another' (*Tusc. Quest.* iii. 10), and 'the ill ease excited by the misery of another who suffers wrongfully' (*ib.* iv. 8).

¹ What the precise meaning of Aristotle's definition of the object of tragedy is has been much debated, and need not be discussed here.

3. Biblical.—In the Bible it is to be observed that the terms 'pity,' 'compassion,' and 'mercy' are used as practically synonymous (being all used in different places as translations of the same Hebrew and Greek words), and that they occupy a position which is unique in the religious literature of any people. For God is represented in Hebrew as well as in Christian literature not only as a God of justice but as pitiful, compassionate, and merciful. That such are the characteristics of God was a conviction which grew upon the prophets of Israel and the religious leaders of Jewish thought till it culminated in the teaching of our Lord Himself.

In the earlier books of the OT the pity and compassion of God are comparatively little emphasized. The most important passage occurs in the decalogue in both of the forms in which it has come down to us:

'Shewing mercy unto thousands of them that love me and keep my commandments' (Ex 20⁶, Dt 5¹⁰ [ποίων έλεος εις χιλιάδας τοις αγαπώντι με και τοις φυλάσσουσιν τα προσταγμάτά μου]);

but in the Psalms and in certain of the prophets the thought is very prominent—e.g., Ps 86⁵ 103⁸.¹² 130⁷ etc., Is 54⁸.¹⁰ 63², Jer 12¹⁵, Hos 17.

In the NT the belief in God's pity or mercy follows as a direct consequence from the doctrine of God's fatherhood and God's love (e.g., Lk 6³⁶). To St. Paul God is a God of mercy. God is the Father of mercies (2 Co 1³); He is rich in mercy (Eph 2⁴); mercy and peace come from God through Jesus Christ our Lord (1 Ti 1³, 2 Ti 1³, Tit 1⁴, 2 Jn³).

Pity towards men is commended to us in the Bible as a consequence of the pity and mercy of God, and particularly of His pity and mercy as expressed by and revealed in the sending of Jesus Christ. Pity and mercy towards aliens and strangers were in early days perhaps no more recognized as a duty by the Israelites than they were by the Greeks and Romans; indeed, there is a passage (Dt 13⁸) in which it is expressly forbidden that pity should be felt or shown towards those who try to pervert God's people from the worship of Jahweh into the worship of any strange god; but throughout the OT mercy and pity are inculcated towards members of the house of Israel, and the failure to have pity on the widow, the fatherless, and the destitute is strongly reprobated. In the NT the command to be pitiful has no such restrictions. The teaching of the parable of the Good Samaritan implies that our acts of charity, pity, and mercy are by no means to be limited to those of our own nation, and, as a matter of fact, under the teaching of Christianity pity has been extended so as to embrace sufferers of the whole human race, and in our day embraces the animal world as well.

4. Augustine.—In Augustine's *de Civitate Dei* there is an interesting chapter (ix. 5) devoted to the manifestation of pity as exhibited by God and man. He maintains against the Stoics, who asserted that God could not be moved by pity, that, while the claims of pity must always be subordinated to justice, it is yet an emotion which is not unworthy of God and should be exhibited by men to their fellow-men, being naturally called out by the sight of distress. The pity of God, of course, must depend on the repentance of man; yet, granted this condition, God's pity can flow out towards man, and, it would seem, inevitably does so. The pitiful God of the Christians stands thus contrasted with the passionless God of the Stoics, just as the compassionate man under the Christian dispensation is opposed to the unfeeling man of the Stoical ideal.

Yet, in spite of what Augustine urges, the idea of a pitiful God is not altogether an easy one

to embrace. It has to be taken in close connexion with the teaching of the NT on repentance. The good will, the love, the fatherhood of God to man, is a permanent attitude which remains, whatever man's conduct. Sin turns man's thoughts and his affections away from God; repentance makes possible the renewal of the relation between God and man, which has been there potentially all the time, but has been interrupted. The changed attitude of God to man consequent on repentance expresses itself in pity. The bearing of this doctrine on the question of the Atonement is outside the present article (cf. EXPIATION AND ATONEMENT [Christian]).

5. English moralists.—In the English moralists the phenomena of pity and the cognate emotions held a considerable place. Hobbes started the investigation:

'Griefe, for the Calamity of another,' he says, 'is Pity; and ariseth from the imagination that the like calamity may befall himselfe; and therefore is called also Compassion, and in the phrase of this present time a Fellow-feeling: And therefore for Calamity arriving from great wickedness, the best men have the least Pity; and for the same Calamity, those have least Pity, that think themselves least obnoxious to the same' (*Leviathan*, pt. i. ch. 6).

This selfish doctrine of pity is vehemently opposed by Butler in his two sermons on compassion (*Sermons*, v. and vi.). Having stated Hobbes's definition of pity as given in his treatise on *Human Nature*, ch. ix. § 10, as 'the imagination or fiction of future calamity to ourselves, proceeding from the sense (he means sight or knowledge) of another man's calamity,' he proceeds to criticize it in the following way (*Sermon* v. 'Upon Compassion').

In the first place, he contends that it is no account of pity or compassion at all. The sight of a friend's misfortune might in some minds give rise to the feeling of fear for ourselves which Hobbes describes, but, if it gave rise to such a feeling, the feeling would not be one of pity or compassion, but something quite different. Again, there are objects which give rise to a sense of our own danger—e.g., a sudden sight or sound, or some association of ideas—but no one would say that we compassionate or pity such objects; it would be ridiculous to do so. Again, fear, pity, and compassion would be on Hobbes's showing the same sentiment and a fearful and compassionate man the same character—which every one immediately sees are totally different. Again, while compassion and pity exhibited towards others, and especially towards our friends, commend us to the favour of all good men, fear or anxiety on our own account by no means equally recommends us. Pity, then, and compassion, Butler concludes, are not forms of self-love, but original affections, being grief at the distresses or misfortunes of others, are a primitive sentiment in human nature, a sentiment implanted in us, intended to prompt us to relieve those many miseries and sufferings of which, in Butler's view, life is so full. The emotion does not supplant reason, but fortifies it, reason being often too weak to induce men by itself to alleviate or attempt to banish the sufferings of our fellow-men unless supported by those feelings of compassion and pity with which, as a matter of fact, the better class of men are endowed.

One other question Butler touches upon in the course of these two sermons. Pity and compassion were regarded by many of the Stoics in earlier days and by some of Butler's own contemporaries as a weakness which the 'wise man' will seek to get rid of. To this Butler replies that the gratification of the affection may be, and often is, a source of pleasure to him who indulges it, and certainly makes compliance with the dictates of the sense of duty and reason easier and more possible than without such a sentiment they are likely to prove to the majority of mankind. In this way he answered by anticipation the objections of Kant, who took up on this point a position even more extreme than most of the Stoics. Kant said: 'The passions themselves, being sources of want, are so far from having an absolute worth for which they should be desired, that, on the contrary, it must be the universal wish of every rational being to be wholly free from them' (*Grundleg. zur Metaphysik der Sitten* [Sämmtl. Werke, ed. K. Rosenkranz and F. W. Schubert, Leipzig, 1838-40, viii. 56]).

Hume has a good deal to say about pity and compassion. Pity is defined by him as 'a concern for the misery of others' (*Treatise of Human Nature*, bk. ii. pt. ii. § 7). He does not accept Hobbes's view, that it is an affection springing from the sight of others suffering which makes us apprehensive on our own account. It has its source in the imagination, in the power which we have of putting ourselves in the place of others and gaining an impression of the ideas which they

actually experience. It is a peculiarity of the passion, he continues, that the communicated passion of sympathy sometimes acquires strength from the weakness of its original feeling.

'A man who is not dejected by misfortunes is the more lamented on account of his patience' (*ib.*).

This principle of sympathy is largely invoked by Adam Smith to explain some of the phenomena which pity and compassion exhibit. Why is it, he asks, as Hume had also asked, that we feel more compassion for the man who exhibits greater magnanimity in his sufferings than for one who allows himself to be overwhelmed by them? The reason is, he answers, that we can more easily enter into, or sympathize with, the actual feeling which he displays.

'We wonder with surprise and astonishment at that strength of mind which is capable of so noble and generous an effort' (*Theory of Moral Sentiments*, Edinburgh, 1849, pt. i. sect. iii. ch. 1).

6. Conclusion.—Pity, then, is a universal or almost universal human feeling, of the existence of which as a fact of human nature there can be no doubt, though the explanation of the feeling itself, and still more of the phenomena which it exhibits, may be in doubt; it is a feeling the presence of which in men, and still more in women, we approve, the absence of which we blame and deplore, but on condition that it leads to active interposition on behalf of those who are in distress; it is a feeling, moreover, which we readily attribute to God Himself, because we recognize that it is a form which love takes, a proof not of weakness but of strength.

LITERATURE.—The authorities are cited throughout the article. W. A. SPOONER.

PLACES (Sacred).—In primitive religious conceptions the gods are not exempt from general limitations of space and time. Arguing by analogy, the savage ascribes to all material objects a life similar to that of which he himself is conscious, and he easily confounds the spiritual force with its visible embodiment. Hence in primitive myth we find animate and inanimate things equally capable of feeling and action, while transformations of men into animals are perfectly natural. The gods have a physical environment, on and through which they act. Nowhere ubiquitous, they are conceived of as bounded by certain local limits: the god's land is the land of his worshippers, and his immediate sphere of influence is his residence. Among the early Semites ideas of divine preference came to be associated with the fertility of particular places, whether from rainfall or from springs and watercourses, the local gods, or *b'ālim*, being recognized and appeased by a tribute of firstfruits, and, by a natural extension of meaning, of firstlings of cattle and men. Thus the idea grew that the gods have their proper homes or haunts where the worshippers lay their gifts on sacred ground, hang them on a sacred tree, or, in the case of sacrificial blood, pour it over a sacred stone. Later the home or sanctuary of a god was a temple, which could be erected only in a place where a god had manifested his presence. A theophany was held to justify the act of sacrificing on the spot (Gn 12^f, Ex 17¹⁵ etc.). Hence came the idea of the sanctity of such places as Bethel, Mamre, Shechem, Beersheba, etc. The theophany in Ex 3 took place on Sinai, because it is holy ground, Jahweh's habitual dwelling-place (W. Robertson Smith, *The Religion of the Semites*, London, 1894, p. 118). Thus we see that holy places are older than temples, and that places become holy as the natural haunts of a god, these being in their earlier forms a cave, a rock, a fountain, or a tree. These places and things, as

the favourite haunts of divine beings, come naturally to be regarded as holy, as opposed to common, and are reserved for the use of the god and his ministers. In relation to man such sanctuaries come to be surrounded by restrictions as to access, especially for such persons as are physically unclean or have shed blood. The right of asylum in the OT was limited to involuntary homicide, and confined to certain old sanctuaries—the cities of refuge. But at some Arabian sanctuaries all fugitives were admitted to shelter. The idea of holiness had thus come to involve restriction or prohibition, together with the idea of protection from encroachment, as may be seen in the root-meaning of the Hebrew word *himā*, a sacred enclosure or *temenos*. The god and his worshippers belong to a community of kinship, most probably on the basis of a totemistic conception of mutual relationship. Hence men naturally fell into the way of observing rules of holiness—a system of restrictions on man's arbitrary use of natural things, enforced by the dread of supernatural penalties' (*ib.* p. 152), as found among all primitive peoples. This is the primitive institution to which the name 'tabu' has been given, including both rules of conduct for the regulation of man's contact with propitious deities and precautions against the approach of evil spirits and the like. The distinction between the holy and the unclean is real enough, though it may not be always precise, and both may overlap, as in the Levitical legislation.

The sanctuary, being protected by rigid tabus, had of course to be clearly marked in its limits. The *himā* in Arabia sometimes included a large tract of pasture land marked off by pillars, and the *haram*, or sacred territory, of Mecca extends for miles on almost every side of the city. The whole mountain of Horeb was sacred ground. The customary symbol or permanent visible object at and through which the worshipper comes into direct contact with his god is sometimes a natural object, as a fountain or tree, or an artificial erection, as a pillar or pile of stones. It is easy for the primitive imagination to connect ideas of animate life and quickening energy with running water or with the rustling leafage of a tree. And we find ideas of sanctity attached to rivers, as the Belus and the Adonis, and to springs at shrines with healing qualities, as the seven wells of Beersheba, etc., into which propitiatory gifts were cast with a view to divination or prophetic inspiration. The extension of the idea of sanctity to purposes of adjuration and ordeal is obvious enough. Trees were adored as divine among all the Semitic peoples, and still are as *manāhil* by the modern Arabs. The local sanctuaries of the Hebrews were altar-sanctuaries erected under trees, but the altar had an *āshērāh*, or pole, beside it (Dt 16²¹). Again, grottoes or caves were supposed to be specially sacred, and the oldest Phœnician temples took this form. The holy cave was the original sanctuary of the temple of Apollo at Delos, and the *adytum*, or dark inner chamber, was common alike in Semitic and in Greek temples, being frequently the place where oracles were delivered. The sacrificial stone or altar in the Semitic sanctuary was the locality of most intimate communion between the worshipper and his god, on which sacrifices were burned and offerings set forth. The Arabian form was usually a cairn or heap of stones, upon which, or at the base of which, the sacrificial blood was poured out, as was the case also with the Greeks and Romans. We read in the OT of monoliths (*maššēbhōth*) at sanctuaries, as at Shechem, Gilgal, etc.

'It seems clear that the altar is a differentiated form of the primitive rude stone pillar, the *noḡb* or *maššēba*. But the

sacred stone is more than an altar, for in Hebrew and Canaanite sanctuaries the altar, in its developed form as a table or hearth, does not supersede the pillar; the two are found side by side at the same sanctuary, the altar as a piece of sacrificial apparatus, and the pillar as a visible symbol or embodiment of the presence of the deity, which in process of time comes to be fashioned and carved in various ways, till ultimately it becomes a statue or anthropomorphic idol of stone, just as the sacred tree or post was ultimately developed into an image of wood' (*ib.* p. 204).

Such sacred stones are found in connexion with the worship of the most various gods, in all parts of the world, as among the Ainus, the Brazilian tribes, the Samoans, etc. The *āshērāh* develops into the wooden idol, the primitive unhewn monolith into the marble statue of the god, with which the altar still continues to be associated, and from these elements eventually the temple was built. The primitive altar grew out of totemistic ideas, and there is in the earlier stages no need to suppose that the stone or image in front of which the rites of worship are performed actually contained the god. The identification of the god and the abode in which he may be pleased to make his resting-place is, however, an easy transition. Thus among the American Indians the place of national worship for the Oneidas was the Oneida stone from which they claimed descent. The Dakotas and Ojibwas had similar stones, which they called 'grandfather.' The shaping of a likeness to the human face was natural enough, but by no means universal, as we see in the unchanged idol of Astarte at Paphos. It must be clearly understood that the idea of the stone becoming the permanent rather than an occasional dwelling-place of the god represents a later stage of development. The existence of sacrifice implies an earlier totemistic stage, in which the blood sprinkled is that of the totem-animal, and the object is the renewal of the blood-covenant between the totem-clan and the totem-god (F. B. Jevons, *Introd. to the Hist. of Religion*, London, 1914, p. 141). This superstition lingered long. It was condemned by the Council of Nantes in 895, but it survives to this day in some corners of France and Norway.

In ancient Rome, in the earliest times, there was no temple or image representing a deity. Certain places were regarded as *religiosa*, affected by tabu, as distinguished from *loca sacra*, places made over to the deity by certain formule, under the authority of the State, by the processes of *consecratio*. Such a place, in which a deity had taken up his abode, was a *fanum*, containing a *sacellum*, or small roofless enclosure, with an *ara*. Among *loca religiosa* were the spots where thunderbolts had fallen and burial-grounds. This feeling or scruple (*religio*) as applied to places finds expression in Virgil's lines describing the visit of Æneas to the site of the future Rome:

'Hinc ad Tarpelam sedem et Capitolia ducit,
Aurea nunc, olim silvestribus horrida dumis.
Jam tum religio pavidos terrebant agrestis
Dira loci; jam tum silvam saxumque tremebant.
"Hoc nemus, hunc," inquit, "frondoso vertice collem,
(Quis deus, incertum est) habitat deus"
(Æn. viii. 347 ff.).

The temple on the Capitol, with its statue of Jupiter, and that of Diana on the Aventine, with its reproduction of the *ἑκάρον* of Artemis at Masiolia, were the earliest statues of the gods in roofed temples at Rome. From the earliest times the Roman boundaries, house, burial-place, and spring were considered as in a special sense sacred, needing constant religious care. The hearth (*focus*) was the 'natural altar of the dwelling-room of man' ('Aust's admirable expression,' as Warde Fowler styles it, quoting E. Aust, *Die Religion der Römer*, Münster, 1899, p. 214), and the seat of Vesta, the spirit of the fire. Behind the hearth was the *penus*, or storing-place of the household, inhabited or guarded by spirits, the *di penates*,

who together with Vesta represent the material vitality of the family (W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, lect. iv.). The protecting door-spirit was Janus; and in the *Janus bifrons* in the symbolic gate of the Forum Fowler sees a developed form of the spirit of the house-door. The *Iar* was originally the presiding spirit, not of the house, but of an allotment, or the whole of the land of a *familia*, including that on which the house stood. The *terminus* was the boundary-mark of the land belonging to the *familia*, or the *pagus* (an association of farms and homesteads), and its care was marked by detailed religious ceremonies. The *lustratio*, or purification, of land, city, etc., was carried out by means of a solemn procession accompanied with sacrifice. And, as the *ager* of the city-state had its boundary made sacred by a *lustratio*, so the city had its *pomerium*, or boundary-line between the sacred and the profane, like that of the farm, within whose limits alone the *auspicia* of the city could be taken. See, further, art. LANDMARKS AND BOUNDARIES.

The earliest Teutonic word for temple means also wood, and the primitive shrine of the deity was a holy place untouched by human hand, a grove. A god may inhabit a mountain-top, a cave, or a river, but the general worship was a forest cultus, its seat a sacred tree (cf. Tac. *Germ.* ix.). This is not pure nature-worship, for the gods dwelt in these groves, although as yet no walls were built or images set up. Among the Saxons and Frisians the veneration of groves long survived the introduction of Christianity. At the beginning of the 11th cent. Bishop Unwan of Bremen had all such woods cut down in his diocese, and Grimm (*Teutonic Mythology*, i. 73f.) tells us of a holy oak near Wormeln, Paderborn, to which even in his time the neighbouring peasants made a solemn procession every year. The earliest temples were built on the sites of the more ancient trees or groves, and, later, Christian churches were erected on the same spot, so that the old sacredness did not depart from the place, but merely passed into a higher relation.

PLAINS INDIANS. — 1. **Distribution and history.**—The region that gives a geographical name to this group of American Indians is of an irregular oblong shape, some 2500 miles from north to south and 1000 to 1500 miles from east to west. Roughly speaking, the Plains extend from the Rio Grande in S.W. United States to the Saskatchewan River in Canada, and from the base of the Rocky Mountains to Lake Winnipeg in Canada and the Missouri and the Mississippi in the United States. Down the long easterly slope of this broad stretch of land flow many streams that take their rise in the Western mountains. Trees border these numerous waterways, but the country is barren of forests. This was formerly the home of over twenty different tribes, belonging to six different linguistic stocks. They were as follows:

(1) Algonquian: Arapaho, Blackfeet (or Siksika), Cheyenne, and Cree; (2) Athapascan: Apache; (3) Caddoan: Arikara and Pawnee; (4) Kiowan: Kiowa; (5) Shoshonean: Comanche; (6) Siouan: Assiniboin, Crow (or Absaroka), Dakota, Hidatsa, Iowa, Kansas, Mandan, Missouri, Omaha, Osage, Otoe, Ponca, and Quapaw.

To and fro over the wide Plains formerly moved vast herds of buffalo, which gave abundant food

and furnished the Indians with pelts for clothing as well as covering for their tents. The tribes regarded these animals as specially provided for the sustenance and welfare of the native people, and this gift was gratefully recognized in their religious rites.

The Indians of the Plains had been attracted thither by the buffalo herds. Some of the tribes had come from the woods on the north, east, and west, where the game, although plentiful, was more or less difficult to secure; others had come up from the south for similar reasons. After the settlement of the white colonists on the Atlantic coast a new force was felt over the land. A gradual displacement of the native tribes formerly dwelling on the eastern littoral and its streams began and went on increasing, until it was felt as a westward pressure up to the eastern border of the Plains. This steady displacement, added to the influence of the white traders, the adventurers, and the 'opening up of the country,' brought to the Indians new diseases, intoxicants, and many other evils which greatly reduced their number.

The horse reached the Plains with the expedition of Coronado in 1541. Later, strays multiplied rapidly, and finally formed the herds of wild horses that became the principal source of the Indian supply. What tribe introduced them on the Plains and used them for hunting is not known, but they were first met by tribes of the Siouan stock, among the Comanche, who were famous for their horsemanship, and from that tribe knowledge was obtained of the use and care of the horse. Not only did the horse modify hunting methods, but it introduced a new species of property, changed social customs, and led to foraging expeditions and to wars.

Although the Plains was never a peaceful country, the changing conditions increased its turbulence until it became a great battle-field as well as a hunting-ground. The greatest blow that the native life of the Indian ever received came during the first decades of the latter half of the 19th cent., when, in the interests of trade, the buffalo were slaughtered by the thousand, until within a few years they were practically extinct. What that catastrophe meant to the Indian it is difficult for one of our race fully to appreciate. The present writer can never forget the occasion, some thirty years ago, when its meaning was really borne in upon her.

The aged Omaha keeper of the sacred rites that inaugurated the annual tribal buffalo-hunt consented to recite the rituals, for historic preservation; he stood alone in his little cabin before the graphophone to voice for the last time the words that told of the birth of the buffalo-herds. When he came to the promise given by Wakonda, in answer to man's appeal, that the herds should come to the people from all directions, the tears rolled down his withered cheeks as he sobbingly murmured: 'Not now, not now!' To him, Wakonda had abandoned the Indian and the world had become desolate.

The old man did not long survive this recital.

2. **Religious and social ideas.**—The social organization and religious ceremonials of the Plains Indians varied in a number of particulars. Those tribes belonging to the Algonquian linguistic stock had formerly dwelt under sedentary and agricultural conditions, and many of the habits then formed were lost under the stress of hunting; the binding force of a close social organization also gave way, with the result that religious rites and social customs were modified. With the affiliated Arapaho and Cheyenne tribes the 'Sun-dance' became the principal ceremony of the people. This composite rite spread to some tribes of the Siouan linguistic stock. It was not directly connected with the worship of the sun, as its name might imply. It is true that the 'dancer' turned towards the sun, but it was viewed as a symbol of the unseen Power that had granted the prayer of

the dancer—usually a supplication for the recovery of a sick relative, the sincerity of the request to be proved by the suppliant going through the torture of the Sun-dance. The Sun-dance witnessed by the writer in 1882 was the fulfilment of a vow made that the life of a sister might be spared to her family. There was therefore an altruistic teaching in this seemingly barbarous rite.¹

Among the Cheyenne there is an ancient ceremonial connected with four sacred arrows that have been preserved time out of mind, which was related to the teaching of the sanctity of life within the tribe. Little is known of this rite, as no one having any white blood has ever been allowed to witness it. See art. CHEYENNE.

The tribes of the Caddoan linguistic stock had long been familiar with the cultivation of the maize which figured in their tribal rites. These were elaborate, and presented phases of anthropomorphism that were not met with elsewhere.

The tribes of the Siouan linguistic stock dwelt on the eastern border of the Plains, along the banks of the Missouri River and the lower part of some of the tributaries of the Mississippi. The people lived in villages and cultivated maize, beans, and a few other plants; they went out to hunt buffalo and other game, returning home with their supply of meat and pelts. Early in the 17th cent. these tribes came into touch with French traders from the south, by way of the Mississippi, and across country to the north and east from the lakes and the St. Lawrence River. With the influx of wares during the 18th and 19th centuries, the native arts of weaving, pottery-making, and the manufacture of implements and weapons from stone, bone, and wood declined and finally ceased altogether. Under these influences hunting grew to be more or less a mercantile pursuit, and the religious rites formerly connected with it began to lose their power.

During the latter half of the 19th cent. the life of the tribes became greatly modified and at its close hardly a tribe was practising its ancient vocations and rites, or was dependent for social order upon its tribal form of government. The entire country was under the control of the white race, railroads stretched from the Atlantic to the Pacific, the mountains were no barriers, and portions of the Plains once regarded as a desert yielded to modern methods of land cultivation, so that the old life passed for ever out of sight. The native race survived under the new conditions, nor were their ancient beliefs wholly obliterated; these had too long been vital to the race to yield to mere external pressure. What those beliefs were has assumed new importance to the student of the development of the mind and thought of man while under the direct and sole tutelage of nature.

The American Indians belong to an observant, thoughtful, out-of-door people who for generations have lived on intimate relations with an unmodified environment. All animals pursued their own untrammelled mode of life, only the dog being domesticated. With few exceptions, the plants were undisturbed in their manner of growth; there were no highways to break the wide expanse of grass, or bridges to span the streams. There was nothing to suggest any break in the continuity of the natural relation between man and his surroundings. It is difficult for one of our race to conceive of that once unbroken stretch of country, giving no sign of the master-hand of man or of his permanent occupancy. It was amid such untouched, unforced conditions that the American Indian attentively watched the various phases of life about him and pondered upon what he saw.

¹ For a description of the Sun-dance see art. PHALLIAM, § 2.

Everywhere he seemed to discern that dual forces were employed to reproduce and so to perpetuate living forms. The fructifying power of the sun was needed to make the earth fruitful, and only on the union of the two, sky and earth, was life in its various forms made possible. Upon these two opposites he projected human relations and made them, to a degree, anthropomorphic; the sky became masculine, the earth feminine. Finally, by thinking along these lines, as his rituals reveal, he was led to conceive of the cosmos as a unit, permeated with the same life force of which he was conscious within himself—a force that gave to his environment its stable character, to every living thing on land and water the power of growth and of movement, to man not only his physical capacities but the ability to think, to will, to bring to pass. This unseen, undying, unifying force is called by the Omaha and cognate tribes Wakonda. Through Wakonda all things came into being, are ever related, and made more or less interdependent. Consequently, nature stood to the Indian as the manifestation of an order that had been instituted by Wakonda, of which man was an integral part. To this order he turned for guidance when establishing those means, religious and secular, that would ensure to him, individually and socially, safety and continuous life.

Finding himself to be one of a wide-reaching cosmic family, the Omaha (and his cognates) planned the tribal organization upon the type of that family. The people were divided into two great sections, one to represent the sky, the other the earth. Each section was composed of a number of kinship groups, called by a general term meaning 'village.' (These are spoken of by our students as 'clans' or 'gentes.') Each village stood for some one of the forms of life seen in Wakonda's instituted order. The sky was the abode of the sun, the stars, the winds, and the storm-cloud with its thunder and lightning, and to each village of that section was committed something regarded as symbolic of one of these manifestations. The earth, with its land and water, was the abode of the trees, grasses, and the various animals so closely allied to man and his needs, and to each village of that section was committed something typical or symbolic of one of these manifestations of life. In this way the tribal organization aimed at mirroring man's environment, as ordained by Wakonda, and was primarily religious in character, and secondarily political in its function. The tribal rites were instituted to emphasize that which the tribal organization portrayed, and to provide means by which the people should together acknowledge the order inaugurated by Wakonda, of which man was a part. In these rites all the villages of the two sections had a share, as well as the symbols committed to their keeping, so that the people, standing in the appointed order, with one voice appealed to the invisible Wakonda for help to secure food, safety, and long life.

A few words are necessary regarding the symbolic objects committed to the villages, as there has been considerable misconception of these and the Indian's use of them. Each village, according to the section to which it belonged, had charge of one of these symbols. The term by which it was designated in the Omaha language meant 'that by which they make themselves known as a people.' It is to this object that the term 'totem' has been applied. The symbol, representing, as it did, one of the forms of life in the sky or on the earth, as created by Wakonda, had a sacred significance to the people of the village and held the central place in their ceremonies. It bound the people together by a sacred tie, made them.

distinctive among the other villages, and was a link between them and the invisible Wakonda. The symbol belonging to a village was always metaphorically referred to in the name of the village, and also in the personal name ceremonially given to every child born within the village. The symbol might be an animal (*e.g.*, the buffalo) or a force (*e.g.*, the wind), and the people might be spoken of by the name of the symbol of their village (*e.g.*, the buffalo people, or the wind people). This form of speech never meant to imply that the people were descended from the buffalo or any other symbolic object. Certain articles were regarded as associated with the different symbols; these were always treated with marked respect, and the people of a village never touched the articles associated with their own sacred symbol.

The tribal rites of the Omaha and cognates were composed of dramatic acts, the recitation of rituals, and the singing of ritualistic songs. In these are embodied the myths setting forth the genesis of man and his relation to nature. The stories, symbols, and metaphors are often highly imaginative and not infrequently touched with poetic feeling. These formed a nimbus about the rites that both illuminated and made elusive their meaning.

In the tribal rites can be traced the gropings of the Indian's mind to find that power, greater than man, which was the source of visible nature, to discover a way for man to approach it and receive help from it, and to search for the meaning of the activities that were everywhere apparent. The religious and social ideas developed through this search, extending through generations, as evidenced in the rituals, were gradually evolved and formulated in the tribal rites, wherein were clearly set forth the importance of the perpetuation of human life and the recognition that Wakonda is ever present in all things that surround man.

There were no specially designated persons in the tribe whose duty was to teach religion or ethics, nor were there any succinct, practical commandments as to the beliefs or actions. Religious and ethical teachings were embedded in the tribal and other rites. The duty of explanation and instruction to the laity, concerning the meaning and the teaching of these rites, devolved on the thoughtful elders of the tribe, who generally belonged to those eligible for the office of keeper and who formed a kind of hereditary priesthood.

3. *Wakonda*.—The term *wakonda* is not modern and does not lend itself to analysis. It is distinct from the word meaning 'spirit' and has nothing in common with it. *Wakonda* is not a synonym of 'Great Spirit,' of nature, or of an objective god, a being apart from nature. It is difficult to formulate the native idea expressed in this word. The European mind demands a kind of intellectual crystallization of conceptions which is not essential to the Indian and which, when attempted, is apt to modify the original meaning. *Wakonda* stands for the mysterious life-power permeating all natural forms and forces and all phases of man's conscious life. The idea of *wakonda* is therefore fundamental to the Indian's relation to nature and to all living forms, including man. While the conception of *wakonda* may appear vague, certain anthropomorphic attributes were ascribed to it, approximating to a kind of personality. Besides the insistence on truthfulness in word and deed, there were qualities involving pity and compassion, as shown in certain rites. All experiences of life were directed by *wakonda*—a belief that led to a kind of fatalism.

PLANTS.—See TREES AND PLANTS.

PLATO AND PLATONISM.—1. Life.—Aristocles, known always in after life as Plato (Πλάτων), was born at Athens (or, as some say, at Ægina) on 26th or 27th May 427 B.C. (or, as some say, 5th or 6th June 428 B.C.). He was well born, his father, Ariston, being of the family of Codrus, and his mother, Perictione, or Potone, of that of Solon; he was well bred; he was well-to-do. In his youth he received the customary education in music and gymnastic, and he performed the usual military service. He is said to have had poetical aspirations—dramatic, epic, lyric. In all probability he looked forward to a political career. Having been in early years introduced to the Heraclitean philosophy by Cratylus, he became acquainted about 407 with Socrates, and henceforward was one of his 'familiaris' or 'associates' (ἑταῖροι). Presumably Plato shared Socrates' political unorthodoxy; that is to say, he was a 'moderate' of the type of Theramenes, and, whilst he had no sympathy with Critias and the extreme oligarchs, desired a stringent reform of the 'unmixed democracy.' Accordingly, he was one of those Socrates who, on the death of their master in 399, withdrew from Athens and found a refuge with Euclides at Megara. It is possible that Plato returned to Athens in or about 394. Then came a time of travel, when he is said to have visited Egypt, Cyrene, Magna Græcia, and Sicily. At Syracuse he made acquaintance with Dion, and with Dion's brother-in-law, the 'tyrant' Dionysius the Elder. It is said that Dionysius, taking offence at remarks made by Plato about the ethics of tyranny, revenged himself by delivering Plato to one Pollis, a Spartan diplomatist; that Pollis sold Plato in the market-place of Ægina, as though he were a prisoner taken in war; that Anniceris of Cyrene bought him and set him free; that Plato's friends proposed to repay to Anniceris the sum which he had expended; and that, when Anniceris declined their offer, the money was spent in the purchase of the garden of Academus. Whatever may be thought of this curious story, Plato, when he returned to Athens about 387, established, first in the gymnasium of Academus and afterwards in the garden hard by, the school known henceforward to all time as the Academy. Here he lived, thought, taught, and wrote. It may be conjectured that in the earlier days of the Academy Plato not only delivered formal lectures, but also gave personal instruction to his abler pupils, using his written dialogues as texts for catechetical teaching; and that he shared the common life of the school. But there is reason to believe that in later years he delegated the personal teaching to others, and that towards the end of his life his public lectures were few and far between. In 367 he made a second journey to Syracuse in the vain hope of winning the younger Dionysius to philosophy, and thus realizing his scheme of an ideal polity governed by a philosopher-king. A third journey to Sicily in 361, having for its object the reconciliation of Dionysius with his uncle, Dion, was conspicuously unsuccessful. Plato died at Athens in 347.

2. Writings.—In the age of the emperor Tiberius the grammarian Thrasyllus framed a canon of Plato's writings, and included in it the *Apology of Socrates*, which purports to represent the unpremeditated defence addressed by Socrates

to his judges; the *Epistles*, a collection of letters supposed to have been written by Plato to his friends; and 34 dialogues on philosophical subjects. There has been, and there still is, controversy about the epistles, some thinking that all are genuine, others that some, and in particular vii. and viii., are genuine, and others again (with whom the present writer ranges himself) that all are spurious. Doubts have been raised about certain of the 34 dialogues; but no serious critic of the present day questions any of the more considerable of them. It is easy to see why Plato gave to his writings a conversational form. Socrates had held that the teacher should elicit and suggest rather than inculcate and dogmatize, and had therefore preferred spoken to written discourse, question and answer to continuous exposition. Plato accepted his master's principle; and accordingly, though he deserted his example so far as to make use of writing, he was careful in so doing to imitate conversation. In most of the dialogues Socrates is the chief speaker; but Plato's Socrates is an idealized Socrates, who has an urbanity foreign to the Socrates of history, and he sometimes propounds physical and metaphysical doctrines which could not have found favour with a philosophical agnostic. In the *Parmenides* Socrates takes the second place; in the *Sophist*, the *Politicus*, and the *Timæus* he retires into the background; and in the *Laws* he does not appear. The dialogues differ in structure, inasmuch as the conversation is sometimes written down in the words of the supposed interlocutors; sometimes is reported by X, who has taken part in the discussion or has been present at it; once is reported by X, who heard the story from Y; and once is reported by X, who heard it from Y, who heard it from Z. They differ also in literary character and treatment. Some are lively and dramatic; some are eloquent and poetical; some are severely dialectical. Though in general the conversational form is studiously maintained, there are upon occasion great stretches of continuous discourse; and in particular there are imaginative interludes called myths (*μῦθοι*), which, making no pretension to exactitude of statement, claim notwithstanding to be substantially true, and, where experience fails, to fill a gap by provisional hypotheses (*Phædo*, 114 D). Thus, the making and the maintenance of the universe, prehistoric society, the day of judgment, and the future state are mythically described. In a word, the myth is a profession of faith. The introductions prefixed to some of the dialogues and the description of the last hours of Socrates in the *Phædo* are the very perfection of continuous narrative. The style is always the best possible for the occasion; for Plato's harp has many strings.

3. The grouping of the dialogues.—Assuming that, when Plato began to write, the fundamentals of his system were already settled, and that accordingly the order of the principal writings was determined by the needs and the conveniences of exposition, Schleiermacher,¹ the father of the modern study of Platonism, recognized three groups of dialogues: elementary, transitional, and constructive. The *Phædrus*, he thought, was the earliest of the dialogues; the *Republic*, the *Timæus*, the *Critias*, and the *Laws* were the latest. On the other hand, K. F. Hermann,² denying that the system came into existence full-grown, saw in the several dialogues the results and the evidence of Plato's doctrinal development, and distinguished three periods of his literary activity: (1) the years

immediately following the death of Socrates; (2) the residence at Megara; and (3) the years 387–347. Subsequent inquirers, however much they differ in detail from one another and from Hermann, seem on the whole to agree in accepting his principle of interpretation.

It will be convenient to note, first, the principal points in which the critics are agreed; secondly, the principal points in which they differ. The critics are for the most part agreed in recognizing a group of dialogues in which Plato, despite certain differences of nomenclature and method, has not yet advanced beyond the Socratic standpoint; and it is obvious to assign these to an early date. Again, tradition ascribes to the *Laws* the last place; and modern scholarship readily assents, adding that the *Timæus* and the *Critias* come next before it. Further, on internal evidence it is obvious to suppose that certain dialogues which are critical of educational methods—*Protagoras*, *Gorgias*, *Phædrus*, *Euthydemus*, *Symposium*, and *Meno*—preceded the *Republic*, in which Plato propounds his own educational theory. Thus far there is little disagreement. But there is an eager controversy about certain dialogues which have been described as 'dialectical' or 'professorial,' namely, the *Parmenides*, the *Philebus*, the *Theætetus*, the *Sophist*, and the *Politicus*, and about their relation to the *Republic*, some regarding them as dialectical exercises preparatory to the dogmatic teaching of that great dialogue, whilst others find in them a style later than that of the *Republic*, reasoned criticism of its metaphysical doctrine, and substantial contributions to a revised and reconstituted system. The present writer, who holds that the five dialogues called dialectical or professorial look back to the *Phædo* and the *Republic*, forward to the *Timæus*, and together with the *Timæus* represent Plato's philosophical maturity, would arrange the principal dialogues in five groups corresponding to successive stages in Plato's intellectual development, namely: (1) Socratic dialogues, (2) educational dialogues, (3) *Republic*, *Phædo*, *Cratylus*, (4) professorial dialogues, *Parmenides*, *Philebus*, *Theætetus*, *Sophist*, *Politicus*, together with *Timæus*, (5) *Laws*. An attempt must now be made to characterize these several stages of Plato's intellectual development, and to show how the principal dialogues illustrate and elucidate them.

4. The five stages of Plato's intellectual development.—(1) *The Socratic dialogues*.—About the middle of the 5th cent., say 450 B.C., the philosophers who sought knowledge for its own sake were faced and baffled by three questions: (a) What is being? (b) What is knowledge? (c) What is predication?; and, for the moment, philosophical inquiry seemed to be at a standstill. Democritus indeed had not abandoned the attempt to provide a scientific cosmology and cosmogony; and, towards the end of the century, the neo-Heracleitean Cratylus, recognizing that, if all things are in flux, there is nothing to be perceived, looked to etymology for evidence of something permanent underlying the perpetual process of phenomena. But Democritus belonged to the past, and the etymological theory of Cratylus never established itself. Accordingly, in the latter half of the 5th cent. (450–400) the main stream of thought set strongly in the direction of philosophical agnosticism, and the intellectual aspirations of central Greece found expression for the most part in humanism—that is to say, the literary humanism of the Sophists and the ethical humanism of Socrates. Plato's youthful study of Heracleitean flux had made him a philosophical agnostic; for, even in early days, he must have recognized the futility of Cratylus's etymological

¹ *Platons Werke*, Berlin, 1855–62, i. 1. 32–36.

² *Geschichte und System der platonischen Philosophie*, pt. I. (do. 1839) p. 384, etc.

theory. He was then ready to receive and assimilate the positivism of Socrates; and for a time he found a refuge in dialectical theory and practice. But, whereas Socrates had seen in the study of ethical consistency a sufficient occupation for his energies and had rested in it, Plato, taking his departure from the logic of consistency, proceeded to build upon it, first, a philosophy, secondly, a science, and, thirdly, a sociology. Moral error, Socrates had thought, is largely due to the misapplication of general terms which, once affixed to a person or an act—possibly in a moment of passion or prejudice—stand in the way of a sober and serious judgment. In order to guard against error of this sort, and to secure in the individual at any rate consistency of thought, and, in so far, consistency of speech and action, Socrates spent his life in seeking, and helping others to seek, 'the what,' or the definition, of the words by which the moral quality of actions is described. This statement of the aim which Socrates had steadily pursued exactly describes the end which Plato proposed to himself in the Socratic dialogues of his first period. But Socrates had talked, and Plato wrote. Consequently, whereas Socrates, who talked, having satisfied himself that the *ἔλεγχος*, or cross-examination, had made the hearer aware of his ignorance, might, and did, point the way to a definition, Plato, who wrote, if he was not to sacrifice the advantage of the elenctic stimulus, was obliged to stop short of dogmatic reconstruction.

E.g., in the *Euthyphro* Socrates invites his interlocutor to define 'piety' or 'holiness.' At first Euthyphro does not understand what Socrates means by a definition. Socrates explains. Then Euthyphro propounds in succession several definitions, and Socrates shows their insufficiency. Again and again confuted, but in no wise abashed, Euthyphro pleads an engagement, and the dialogue ends. We may perhaps conjecture that Plato intends to define piety or holiness as 'that part of justice which is concerned with the service of the gods'; but, in order that the reader may be compelled to think for himself, Plato carefully refrains from formulating his result.

The Platonic dialogue of this period is, then, an exercise in Socratic dialectic; but, whereas the destructive process is set out at length, the constructive process is left to be supplied by the reader. Contrariwise, Xenophon, who, being apologist rather than educator, cares little for the *ἔλεγχος*, and is chiefly anxious to justify his master's morality, neglects the destructive process and dwells upon the constructive results. Besides the *Euthyphro* (piety), the *Charmides* (temperance), the *Laches* (courage), the *Lysis* (friendship), and the *Hippias Major* (beauty) are characteristic dialogues of the first or Socratic period. In this period Plato uses the terms 'form' (*εἶδος*) and 'idea' (*ἰδέα*) to mean the characteristic or characteristics included in a Socratic definition, i.e. 'the one in the many,' the element common to a plurality of things which we propose to call by the same name. But, inasmuch as the Socratic definition of a term of morality or art does not presume, either in or out of nature, any objective unity corresponding to it, the 'form' or 'idea' has no separate existence, it is not *χωριστὸν τι*. In this stage, then, the forms or ideas are moral and aesthetic concepts framed by the individual in order that he may be consistent in thought, word, and deed; and that he and his interlocutor may not misunderstand one another.

(2) *The educational dialogues.*—The dialogues of the second period show a notable advance upon the dialogues of the first both in their style and in their doctrine: in their style, for they are more complex, more literary, and more dramatic; and in their doctrine, for Socrates, the protagonist, propounds doctrines unknown to the Socrates of history, the Socrates of Xenophon, and the Socrates

of Plato's Socratic writings. These dialogues are primarily concerned with the criticism of earlier and contemporaneous theories of education. Thus the *Protagoras* brings the educational methods of Protagoras and the Sophists face to face with the educational method of Socrates; the *Gorgias* and the *Phaedrus* deal respectively with the moral and intellectual aspects of the forensic rhetoric of Gorgias and the political rhetoric of Isocrates; the *Meno* criticizes the makeshift method of those who, despising systematic teaching, regarded the practical politician as the true educator; the *Euthydemus* caricatures the contemporary eristic; and all these dialogues, together with the *Symposium*, whilst they demonstrate the superiority of Socratic dialectic to the current sophistries, show a growing consciousness of its limitations and insufficiency. If education is to do what we expect of it, surely it should have for its basis, not personal consistency, but objective truth. Where, then, is truth to be found? Not in objects of sense, which are confessedly imperfect, but in the type or form with which we instinctively compare them. In the words of John Stuart Mill:¹

'All the objects of sense are that which they are, in only an imperfect manner, and suggest to the mind a type of what they are, far more perfect than themselves; a "something far more deeply interfused," which eye has not seen nor ear heard, but of which that which can be seen or heard is an imperfect and often very distant resemblance. . . . What, then, could be more natural than to regard the types as real objects concealed from sense, but cognisable directly by the mind? . . . The self-beautiful, the self-good, which not only were to all beautiful and good things as the ideal is to the actual, but united in themselves the separate perfections of all the various kinds of beauty and goodness—must not they be realities in a far higher sense than the particulars which are within sensible cognisance? particulars which indeed are not realities: for there is no particular good or beautiful or just thing, which is not, in some case that may be supposed, unjust, evil, and unbeautiful.'

This paragraph is not indeed what Mill meant it to be, a complete and final summary of Plato's theory of ideas; but it cannot be bettered as a statement of the imaginative speculation out of which that theory was afterwards to grow; i.e. as a description of the process by which Plato arrived at the conception of a sole reality, eternal, immutable, perfect, whereof perishable, mutable, imperfect things are, in the language of Goethe, no more than 'likenesses.'

For the exposition of this imaginative speculation in its primitive and poetical form the *Phaedrus* and the *Symposium* are all-important. There are, we are told in the *Phaedrus* (247-250), certain real existences (*ἄνυσ δῆρα*), such as self-justice, self-temperance, self-knowledge, of whose transcendental perfection, revealed to us in a previous existence, we are reminded by their imperfect earthly counterparts. This rudimentary theory of being becomes a rudimentary theory of knowledge when we are further told in the *Symposium* (210 A ff.) that the lover of beauty rises from the sight of persons, souls, and institutions, which are imperfectly beautiful, through the corresponding universal or Socratic definition, to the knowledge of the eternally existent self-beautiful (*αὐτὸ δ' ἔστι καλόν*). In a word, Plato postulates really existent unities, of which unities phenomenal pluralities are imperfect likenesses, and supposes the really existent unities to become known to us, through Socratic definitions, by means of *reminiscence* (*ἀνάμνησις*). But he makes no attempt to explain how the imperfectly beautiful particular is related to the perfect self-beautiful; nor does he define the content of the world of ideas. In this second period, then, the forms or ideas are moral and aesthetic unities, eternal, substantial, separately existent; but we are not told how their particulars participate in them, nor what the things are which have ideas corresponding to them.

¹ *Dissertations and Discussions*, London, 1867, III. 348

(3) *The earlier theory of ideas.*—And now, in a third period, taking his departure from the rudimentary conception of eternally existent unities, Plato proceeds to develop a systematic theory which shall afford answers to the three great questions, What is being?, What is knowledge?, What is predication? This systematic theory, the earlier theory of ideas, may be summed up in four propositions—a fundamental proposition and three supplementary articles. The fundamental proposition is the proposition already indicated in the poetical speculation of the second period, and henceforward steadfastly maintained: beside pluralities of phenomena, transient, mutable, imperfect, which become, and are objects of opinion, there are unities, eternal, immutable, perfect, which really exist, and are objects of knowledge. The supplementary articles which convert the poetry of the *Phædrus* and the *Symposium* into the philosophy of the *Republic*, the *Phædo*, and the *Cratylus* are: (a) wherever a plurality of particulars are called by the same name, there is a corresponding idea or form (*Republic*, 596 A; cf. *Phædo*, 65 D); thus there are now ideas, not merely of good, just, beautiful, but also of bad, unjust, unbeautiful; of chairs and tables; of fever; of hot and cold; in short, of every common term; (b) it is the presence, immanence, communion (*ἡ παρουσία, κοινωνία*) of the form or idea in the particular—or, in other words, it is the particular's participation (*μέθεξις*) in the idea—that makes particulars what they are (*Phædo*, 100 D; cf. *Republic*, 476); that is to say, a thing is beautiful because the idea of beauty is present in it; a thing is unbeautiful because the idea of unbeautiful is present in it; a thing is both beautiful and unbeautiful because both the ideas are present in it; (c) foremost of the ideas is the idea of good.

'For,' says Socrates (*Republic*, 509 B), 'just as the sun furnishes to the objects of sight not only their capacity for being seen, but also their generation, growth, and nutrition, even so the objects of knowledge derive from the good not only their capacity for being known, but also their existence and their reality, though the good is not reality, and is on the other side of it, transcending it in majesty and power.'

With the help of these supplementary articles, the fundamental proposition becomes a theory of being, a theory of knowledge, and a theory of predication. It is a theory of being inasmuch as the ideas are eternal, immutable unities. It is a theory of knowledge inasmuch as in the *Republic* (vi. *ad fin.*) Plato hopes to ascend from observed particulars through Socratic definitions to a definition of the self-good, and thus to convert provisional definitions of things into certified representations of ideas. It is a theory of predication inasmuch as it affords or seems to afford an answer to certain logical paradoxes which had sorely perplexed Plato's contemporaries and for the moment himself. For, whereas the proposition 'Likes cannot be unlike, nor unlikes like,' which Zeno had regarded as a truth, seemed to his successors to cut at the root of all predication, Plato in this stage conceived that, though the unities like and unlike cannot be affirmed the one of the other, a particular can be simultaneously like and unlike in the sense that the ideas of like and unlike are simultaneously present in it. That this was the origin of the hypothesis of the particular's participation (*μέθεξις*) in the idea is plainly affirmed in the *Parmenides*; and it would seem that, when Plato wrote the *Republic*, he was not yet aware of the limitations and inconsistencies which were speedily to prove fatal to this, the earlier theory of ideas.

(4) *The later theory of ideas.*—Plato's fourth period, in which his philosophy reached its consummation, is represented by six remarkable dialogues, of which three—*Parmenides*, *Philebus*, and *Timæus*—are chiefly ontological, and three—

Theætetus, *Sophist*, and *Politicus*, or *Statesman*—are chiefly logical. In all of these, unmistakable references to the *Republic* and the *Phædo* show that Plato has now finally renounced the supplementary articles of the earlier theory of ideas; but the critical or destructive element is especially conspicuous in the *Parmenides* and the *Philebus*, which may be placed respectively first and second at the beginning of the series. The *Theætetus*, the *Sophist*, and the *Politicus*, which deal with the logical problems of the time and clear the way for the reconstruction of the system, naturally follow; cf. Aristotle's statement (*Metaphysics*, A. vi.) that Plato's theory of ideas, i.e. the later theory, rested upon a logic which was all his own. The series ends with the *Timæus*, which, if it does not formulate a dogmatic ontology, at any rate lays the foundations of what R. D. Archer Hind has well called 'a thorough-going idealism.' Of each of these dialogues something must now be said.

In the *Parmenides* Plato takes up again the proposition 'Likes cannot be unlike, nor unlikes like.' Socrates, a mere stripling, disputes Zeno's supposed truth, and maintains that the same thing may be at once like and unlike by reason of the immanence in it of the ideas of like and unlike, or, in other words, by reason of the particular's participation in those ideas. That is to say, he attempts to dispose of the contemporary paradox of predication by an appeal to the characteristic doctrine of the *Republic* and the *Phædo*. Hereupon Parmenides—not the Parmenides of history, but an anachronistic Parmenides; in fact, Plato himself in the fullness of his powers—intervenes, and shows (a) that, whereas by assumption the idea is a unity (for otherwise the difficulties which beset the particular would beset the idea also), if two or more things are called by the name of the idea in virtue of their common participation in it, the unity of the immanent idea is sacrificed, either by multiplication or by division, in the world of sense (*Parmenides*, 130 E ff.); (b) that, if without participation in the idea there is no predication, the unity of the idea is sacrificed in the world of ideas; for the particular man and the idea of man are both called man, and by assumption this common predication implies the existence of a secondary idea of man, and so on *ad infinitum* (131 E, 132 D); (c) that the theory of the *Republic* and the *Phædo* does not explain how the idea, which is a unity, can be the subject of predication; for by assumption the subject of predication is not a unity, but a complex or bundle of ideas (129 C, E); (d) that the dogma 'Every common term has an idea corresponding to it' conflicts with the theory of the idea's perfection (130 C); (e) that, while without ideas there can be no knowledge, the unconditioned idea can no more be apprehended by man than the conditioned phenomenon can be apprehended by God (134 A ff.). That is to say, the theory of immanence, by which Plato in the earlier time had sought to explain the supposed paradox of the one thing and its many predicates, involves another paradox, the paradox of the one idea and its many particulars; and it will be necessary for us, if we are to attempt a reconstruction of the theory of being, to provide a new solution of the paradox of diverse attributions. For this new solution, so far as *relations* are concerned, we must look to the latter part of the dialogue. Here, at the instance of the other two, Parmenides proceeds to investigate his own doctrine of the existence of the one; but he extends the scope of the inquiry so that it shall take account of the antithesis of the one and the many whether that one or that many is supposed to be or not to be, and not only as the antithesis was understood by himself and by Zeno, but also as it was interpreted by their successors, and in particular by

Plato himself both in his earlier theory and in his later. In the course of the inquiry the antithesis of the one and the others, i.e. of the one thing and its many attributions, is brought before us in eight hypotheses: and in each case we ask ourselves, How does this particular hypothesis deal with the paradox of likeness and unlikeness? Does it recognize that the same thing can be like and unlike, old and young, and so forth, in which case cognition of some sort is possible? Or does it deny these attributes, and thus bring philosophy to a deadlock? The eight hypotheses and their results may be briefly stated as follows:

(i.) If the One is one, that is to say, in a strict sense a unity, the attributes like and unlike, great and small, resting and moving, old and young, etc., cannot be predicated of the One, and there can be neither knowledge nor sensation nor opinion of it.

(ii.) If the One participates in existence and, through a finite many (*πολλὰ*), becomes an infinite many (*ἄπειρα*), diverse predicates such as like and unlike, etc., can be affirmed and denied of the One in its relations to itself and to the others; and the One can be known, opined, perceived.

(iii.) If the One is, and, through a finite many, an infinite many can be conjoined in the One, diverse predicates such as like and unlike, etc., can be affirmed of the others in relation to themselves and to one another.

(iv.) If the One is, but, inasmuch as there is no finite plurality to mediate between the others and the One, the others are wholly dissociated from the One, diverse predicates such as like and unlike, etc., cannot be affirmed of the others.

(v.) If the One is not, i.e. if the One is negatively determined by its otherness from what is, diverse predicates such as like and unlike may be affirmed about the One and it can be known.

(vi.) If the One is not, i.e. if the One is absolutely non-existent, diverse predicates cannot be affirmed about it, and it cannot be known.

(vii.) If the One is not, and yet there are others—i.e. things other than one another—the others may have the semblance of grouping, even if there is no finite plurality to determine the groups, and in this way diverse predicates may be affirmed of the phenomenal others, and opinion, though not knowledge, is possible thereof.

(viii.) If the One is not, and there is no semblance of grouping, the others being no more than disconnected particulars, diverse predicates cannot be affirmed of them.

Now of these eight hypotheses four, namely i., iv., vi., viii., give negative results only; that is to say, there can be neither predication nor knowledge either of the One or of the others as here described. But (a) of the One and the others as conceived in ii. and iii., where the finite many mediates between the unity and infinite plurality, and (b) of the One of v., which is negatively determined, there may be predication and knowledge, and (c) vii. permits qualified predication and opinion in the region of sense. Accordingly, we shall find that ii. and iii. are the foundation of the *Philebus* and the *Timæus*, and that v. and vii. find a place in the three logical dialogues, *Theætetus*, *Sophist*, and *Politicus*. In a word, the *Parmenides* not only rejects the earlier theory of ideas, but also maps out the later. And this is not all. From the eight hypotheses *Parmenides* draws the enigmatical conclusion:

'Whether One exists or does not exist, both One and the others are, and are not, all things in all ways, and appear to be, and do not appear to be, all things in all ways, both in relation to themselves and in relation to one another.'

This summary of the eight hypotheses is Plato's resolution of the paradox of likeness and unlikeness. For he has shown practically in many particular instances that, whether we suppose the One to be existent or to be non-existent, and howsoever we conceive it, we can affirm and deny, of it and of them, in its and their relations to itself and to themselves, diverse predicates such as like and unlike, resting and moving, small and great, etc. Thus, when we affirm diverse predicates of any thing, there is no inconsistency such as Antisthenes has supposed; because what is affirmed or denied is always a relation, and the same thing can be like in one relation and unlike in another. And this resolution of the contemporary difficulty carries with it an important corollary; it is now open to us to expunge relations from the list of the *εἶδη*, and in this way to escape, so far as relations

are concerned, from the paradox of the multiplication or the division of the idea. Or, if we prefer still to recognize *εἶδη* of relations, distinguishing between *εἶδη* which are *αὐτὰ καὶ' αὐτὰ* and *εἶδη* which are not *αὐτὰ καὶ' αὐτὰ*, we may relegate *εἶδη* of relations to the latter class.

But again, as has been said, the *Parmenides* affords hints for reconstruction: (1) the second and third hypotheses show that, if exact predication and knowledge are to be possible, a finite plurality must needs intervene between unity and infinite plurality; i.e., as is affirmed in the *Philebus*, a finite number of kinds must needs intervene between the unity of existence and the infinity of particulars; (2) from the fifth hypothesis we learn what is shown at length in the *Sophist*, that a member or members of the finite plurality can be negatively described; (3) the seventh hypothesis shows that, where there is no finite plurality, there may still be a finity of apparent, artificial groups, by which inexact predication, and opinion, but not knowledge, become possible. It would seem, then, that the *Parmenides*—which some have regarded as a dialectical exercise preparatory to the *Republic*, and most have deliberately neglected—not only disposes of the earlier doctrine, and maps out the later, but also announces that withdrawal of ideas of relation which Aristotle plainly regarded as a notable characteristic of Plato's maturity (*Met. A. ix. 990^b 16*).

The work of reconstruction begun in the *Parmenides* is continued in the *Philebus*. Here Socrates reverts to the question propounded in *Republic*, vi. 505 A ff., What is the *summum bonum*? Is it pleasure? Is it intelligence? This ethical question is quickly and summarily disposed of: the chief good of man is a mixed life of intelligence and pure pleasure. But a new question, wider in its scope, arises out of it and takes its place. What is it that makes the mixed life, or anything else, good? In the *Republic* and the *Phædo* Plato had made answer: 'A thing is good because, side by side with the constitutive idea, the idea of good, the *αὐτὸ ἀγαθόν*, is present in it.' But in the interval the theory of the immanent idea has been discredited, and now in the *Philebus* we start anew from the dogma foreshadowed in the second and third hypotheses of the *Parmenides*: 'All things which are or exist in our universe are combinations of finity (*πέρας*), and infinity' (*ἄπειρα*); and we call them good or bad according as they approximate to, or diverge from, the *πέρας ἔχοντα*, their constitutive ideas. Whence it would seem (1) that, inasmuch as the particular is good by reason of its approximation to its formative idea, the intervention of the idea of good is no longer required to account for the particular's excellence, and (2) that, inasmuch as particulars approximate to, and diverge from, their respective ideas, the particular imitates (*μιμεῖται*) the idea and no longer participates in it (*μετέχει*). Incidentally it appears that we no longer need ideas of 'hot' and 'cold,' inasmuch as these qualities are divergences from an indifference point which is neither the one nor the other.

The *Theætetus*, the *Sophist*, and the *Statesman* are a trilogy, not only in the sense that the conversation begun in the first of the three is continued in the other two, but also inasmuch as the *Sophist* and the *Statesman*, though ostensibly they discuss a new question, Are sophist, statesman, and philosopher one, two, or three?, resume and dispose of the question left unanswered in the *Theætetus*, What is knowledge?

According to Aristotle (*Met. A. vi. 987^a 32*), Plato, who in early years had been the pupil of the Heracleitean Cratylus, was true in later life to the Heracleitean principle, 'All sensibles are in

flux and therefore cannot be known,' whence he inferred the existence of things other than sensibles, and these things he called *forms* or *ideas*. The *Theaetetus* is Plato's justification of the Heraclitean principle; and, if the corollary is not explicitly formulated, at any rate the way to it is made plain. Knowledge, we find, is not sensation, which has sensibles for its object; nor is it true opinion, opinion being judgment about sensibles; nor is it true opinion supported by a definition, Socratic or otherwise. Hence, if there is to be any knowledge—and Plato does not despair—there must be things other than sensibles, and such are the ideas, which, in the second and third hypotheses of the *Parmenides*, mediate between the unity of being and the infinity of particulars.

In the *Sophist* and the *Statesman* the interlocutors of the *Theaetetus* together with an Eleatic stranger, who now appears for the first time, discuss the question, 'Are sophist, statesman, and philosopher one, two, or three?', and come to the conclusion that the true statesman is identical with the philosopher, and the mere politician identical with the sophist. Thus in our search for the sophist we stumble upon the philosopher (253 C); and it is therefore unnecessary either to suppose that a dialogue about 'the philosopher' was planned but remained unwritten, or to find a 'philosopher' in one of the extant dialogues. Incidentally, the definition of the philosopher carries with it a definition of knowledge, and in this way the *Sophist*, hereafter to be supplemented by the *Statesman*, resumes the discussion raised and dropped in the *Theaetetus*, and the unity of the trilogy is assured.

In the search for a definition of 'sophist' the Eleate finds himself obliged 'in violation of the principle of our father Parmenides,' to attribute existence to the non-existent or non-ent. An investigation of the non-ent (μη ὄν) thus becomes necessary; and, as in the *Parmenides* the investigation of the existent unity involves that of unity which is non-existent, so here the study of the non-ent involves that of the ent also. In the investigation of the two taken together the following discoveries are made: (1) beside αὐτὰ καθ' αὐτὰ εἶδη, which are incommunicable, incapable of being predicated of one another, there are γέννη or εἶδη, not αὐτὰ καθ' αὐτὰ, which communicate, some within narrow limits, others generally but not universally, such as 'rest' (στάσις) and motion (κίνησις), and others, again, universally, namely ent (ὄν), same (ταυτόν), other (ἄλλοτερον); (2) there is no αὐτὰ καθ' αὐτὰ εἶδος of sophist; (3) the function of dialectic is classification according to kinds (τὸ κατὰ γέννη διαίρειναι), whereby we are preserved from thinking that which is the same different or that which is different the same; and he who can thus classify is the philosopher whom we seek; (4) ent (ὄν) and non-ent (μη ὄν) are intercommunicable, if by non-ent we mean, not that which is contrary (ἐναντίον) to ent, but that which is different (ἕτερον) from it, and accordingly μη μέγα and μη καλόν may be as truly existent as μέγα and καλόν (cf. the fifth hypothesis of the *Parmenides*, and cf. *Republic*, v. *ad fin.*); (5) the troubles of contemporary logic principally depend upon misunderstandings in regard to the negative. The merits of this great dialogue cannot be exaggerated.

The method of division (*dialpeusis*) announced in the *Sophist* is developed and illustrated in the *Statesman* (πολιτικός). Division is indeed no new thing; but the use now to be made of it is novel and important. In the *Philebus* (16 B) Socrates professes himself enamoured of it, though it has often left him stranded: and as early as the *Phaedrus* (263 A) he has employed it in framing Socratic definitions with a view to consistency in

the use of debatable terms (ἀμφισβητήσιμα) such as just, unjust; in other words, in making artificial groups where nature does not give us definite kinds. In the *Sophist*, when we seek definitions of ἀσπαλιεντική and σοφιστική, and even in the *Statesman*, when the stranger starts upon his inquiry, division has no more ambitious aim than ὁμολογία. But at 261 D ff., and especially at 266 A ff., we find ourselves applying it to animal kinds with a view to the discovery of incorporeal αὐτὰ καθ' αὐτὰ εἶδη. That is to say, *dialpeusis* is now used, not with a view to the creation of artificial groups in the region of ἀμφισβητήσιμα, but as a means of ascertaining the likenesses and the unlikenesses of nature's fixities, the αὐτὰ καθ' αὐτὰ εἶδη. In other words, the natural types, or αὐτὰ καθ' αὐτὰ εἶδη, are the proper objects of knowledge, and what can be known about them is their mutual resemblances and differences. And, when it is understood that the end of *dialpeusis* is now the determination of the affinities of εἶδη, and not a mere definition 'per genus et differentias' of a single εἶδος, certain precepts here added and exemplified become for the first time intelligible. E.g., the longer dichotomy is, as such, the better, because we obtain by it fuller information about an ἐπιστητόν. We have then here the foundation of the classificatory science which was for a time to play so great a part in the Academy. The latter part of the dialogue prepares the way for the reconstituted sociology of Plato's fifth period.

The *Timaeus* is the keystone of the later theory of ideas. Here, in a cosmogonical myth, Plato shows that the universe, as we know it under conditions of time and space, may be conceived as the thoughts of universal mind together with the thoughts of those thoughts. The ideas are the thoughts of God (νοήματα θεοῦ), or, in other words, the laws of universal mind's thinking. But, whereas universal mind, the subject, thinks a plurality of thoughts, it thinks those thoughts, its objects, in space; and, in so far as it thinks them under spacial conditions, it thinks them in terms of certain regular geometrical figures—pyramid, octahedron, eikosaedron, cube—and these regular geometrical figures are respectively the ideas of fire, air, water, earth, the elements which go to make (a) the body of the universe, (b) the bodies of the stars, which are the first-born thoughts of creative mind, and (c) the bodies of the animals and vegetables, which creative mind thinks, not directly as it thinks the stars, but indirectly through the minds of the stars, its first-born thoughts; and, whereas God, or mind, the creator, thinks humanity or caninity, as an eternal unity, the stars, His first-born thoughts, when they think humanity or caninity corporealized under spacial conditions, conceive it, not as an eternal unity, but as a transient plurality. Thus particular men or dogs are, as it were, reflexions of the idea of man or dog, invested with bodily form under conditions of time and space; and in this way, in virtue of the hypothesis that 'that which superior mind conceives as a subjective thought is perceived by inferior mind, however imperfectly, as an objective thing,' Plato is able to show, at any rate, the possibility of expressing in terms of mind the materiality and the externality of things. And these results carry with them an important corollary. If particular men and particular dogs owe their respective existences to eternal, immutable ideas of man and dog, it should be possible for us—even if we cannot apprehend those ideas—to study by the method of division (*dialpeusis*) announced in the *Sophist* and the *Statesman* the bodily resemblances and differences of natural kinds. In a word, the proper function of the man of science is the study of classificatory zoology and botany, because in these subjects the

ideas of the respective animals and vegetables assure us of the existence of natural kinds. On the other hand, where there are no ideas, and therefore no determinate natural kinds, though we may 'study the subject as a recreation, and derive from it a sober and sensible amusement (59C),' there can be no exact science. *E.g.*, mineralogy, inasmuch as the several minerals are irregular, indeterminate, combinations of the four simple bodies, combinations which are not definitely marked off from one another by nature, is not an exact science. Nevertheless it would seem that Plato by no means confined his attention to the exact sciences, the sciences founded upon ideas; for in the latter part of the *Timæus* he has much to say both about inexact sciences, such as mineralogy, and about the parts and organs of the body and their several functions. His pronouncements on these subjects are highly speculative; but, as indications of his scientific aims, they are by no means unimportant.

We may now tabulate the later theory of ideas with a view to a comparison of its supplementary articles with those of the earlier theory. The fundamental proposition is still—as it has been ever since Plato freed himself from Socratic limitations—'Beside pluralities of phenomena, transient, mutable, imperfect, which come into being, and are objects of opinion, there are unities, eternal, immutable, perfect, which really exist, and are objects of knowledge.'

The supplementary articles are as follows: (a) there are substantive, self-existent ideas (*αὐτὰ καθ' αὐτὰ εἶδη*) of the universe; of fire, air, water, earth; of the several stars; and of the several animal and vegetable species; but of nothing else. (b) It is not the idea's immanence in particulars, but the imitation or reflexion of the idea in matter—*i.e.* in space—that brings particulars into existence and makes them what they are. (c) Unity = mind = good = God is the cause, the sole cause, of all things; it is the cause of the ideas, of particulars, and even of its own correlative—plurality = space = evil = necessity. (d) The ideas are the thoughts of the sole cause, namely, unity or mind. (e) Infinite mind develops within itself a complete universe of thoughts, primary and secondary; and this universe of thoughts, as seen from within by a finite intelligence included in it, is our universe of things.

In this stage, then, the forms or ideas are unities from which nature's fixities—the universe, the four simple bodies, the stars, and the animal and vegetable kinds—are respectively derived; they are substantial and eternal; they are the thoughts of universal mind; they are not immanent in particulars, but are imitated or reflected as particulars in space.

(5) *The Laws*.—We now come to the fifth period of Plato's philosophical and literary activity. Having given to his metaphysic its final shape, and having shown how, through the doctrine of natural kinds, it affords a foundation for the scientific study of animal and vegetable species, Plato leaves to his nephew Speusippus the direction of the biological studies of the school, and himself, reverting to ethics and sociology, revises his earlier conclusions about those subjects from the standpoint of his later philosophy. When he wrote the *Republic*, he had hoped to attain through the self-good to the knowledge of the ideas, and thus to establish a 'philosophical morality.' If man could know the self-good and the ideal virtues which spring from it, he would no longer—except in early years when he had not yet completed his education—require that 'popular and civic virtue' which society artificially builds up by means of rewards and punishments; the knowledge of the self-good would be his one and only end and his

exceeding great reward. Such had been Plato's aspiration when in a burst of enthusiasm he wrote the *Republic*. But since that time he had become aware of the limitations of human nature. Man cannot know the self-good; and, what is more, inasmuch as man has a bodily nature, the self-good and the human good are not identical. This being so, we cannot dispense with 'popular and civic morality,' and it becomes necessary to do what we can to strengthen and improve it. Hence, whereas in the *Republic* he plans a constitution and provides for its maintenance, but commits to his trained magistrates all the responsibilities of administration, in the *Laws*, recognizing that under existing conditions legislation is indispensable, he seeks to provide for the guidance of his countrymen a complete code of enactments. In this remarkable treatise Plato leaves metaphysic and science behind him; but there is one metaphysical pronouncement, and at first sight it flagrantly conflicts with the teaching of the *Timæus*. Whereas in that dialogue Plato claims to have found in universal mind the one and only cause of the infinite variety of things, here, in the *Laws* (896 E), he confidently affirms that there are two world-souls, the one beneficent, the other maleficent—God and devil. The truth is that, writing popularly, he stops short of his final analysis. The good world-soul and the bad world-soul of the *Laws* are the providence (*πρόνοια*) and the necessity (*ἀνάγκη*) of the *Timæus*; and the fact that in the unmetaphysical *Laws* Plato rests in the penultimate dualism of the great metaphysical dialogue is no reason for supposing that he had abandoned his ultimate henism.

Never perhaps was any other philosopher as progressive as Plato. In his early years he had studied the two philosophies which were afterwards to be the foundations of his own system—the Heraclitean theory of flux and the Socratic doctrine of ethical universals. In the first period of his independent thought he attempted no more than to carry on by written discourse the oral teaching of his master and thus to secure a greater consistency in the use of those terms of morality which have so great an influence upon actions. In the second, noting that, in moral and æsthetic practice, we find ourselves perpetually referring to an ideal standard, he conceives that in a previous existence we have known certain suprasensual realities such as goodness, beauty, and justice, of which their counterparts in this world imperfectly remind us. In the third, bewildered by Zeno's axiom that likes cannot be unlike, nor unlikes like, he assumes that for every predicate there is a suprasensual reality, and that this suprasensual reality, though separately existent and a unity, is present in every particular which bears the same name. In the fourth, having in the interval realized that things which are like in one relation may be unlike in another, and having disposed of other logical difficulties of the time, Plato now postulates ideas only where he finds fixities in nature. Such fixities are the universe itself, the four so-called simple bodies, the stars, and the animal and vegetable kinds. These are natural fixities because they derive their existence from the ideas, which are the eternal immutable thoughts of universal mind. Universal mind is the sole cause of the universe and all that is in it. In the fifth period, having learnt to limit his intellectual aspirations, Plato revises and supplements the sociological schemes of his third period.

5. *Ethical teaching*.—Plato's ethical teaching can hardly be called systematic. In his first period he is a Socratic, pure and simple. In his second he indicates, but does not develop, the theory of ideas upon which he at that time hoped to build a transcendental ethic. In the third, if we look to

the *Republic* for a positive morality, we find ourselves disappointed; for this great treatise, in which Plato discusses the well-being of the state and the well-being of the individual, merges ethic in education, and makes the educated man a law to himself and to his inferiors. In the fourth period the *Philebus* and the *Statesman* do something to correlate the earlier morality with the later theory of ideas. Finally, the *Laws* is written, not from the standpoint of the professional moralist, but from that of the legislator, who, recognizing the importance of political institutions and the value of rewards and punishments, endeavours to improve the contemporary methods. See, further, art. ETHICS and MORALITY (Greek), § 12.

6. The school of Plato.—It has been seen that Plato in his maturity was not only philosopher but also man of science. That is to say, the metaphysical theory of ideas carried with it the physical theory of natural kinds and thus provided a basis for the classificatory sciences of zoology and botany. But the two theories were not inseparable. Plato's nephew, Speusippus, who in 347 succeeded him as head of the school, rested his biological researches upon the theory of kinds, while he rejected the theory of ideas as a superfluous hypothesis. Aristotle, while he impatiently and peremptorily dismissed the theory of ideas, was careful to reconstitute the theory of kinds, taking his departure from the two principles οὐδὲν ἀρελές ποιεῖ ἡ φύσις and ἀνθρώπος ἀνθρώπου γεννᾷ. Xenocrates, indeed, who succeeded Speusippus in 339—a moralist rather than a metaphysician—attempted to maintain the idealist tradition; but his arithmetical interpretation of the phrase 'ideal number' shows a strange misconception of his master's teaching. Polemo, who followed Xenocrates in 314, took definitely the ethical direction. With Crates, who succeeded Polemo in 270, the so-called Old Academy ended. Platonism, i.e. the idealism upon which Plato rested the theory of kinds, ceased to be a living force when Plato died. For the subsequent history of the school see art. ACADEMY.

LITERATURE.—The following editions of Plato's writings deserve special mention: (1) whole works: I. Bekker, Berlin, 1816-23; J. G. Baier, J. C. Orelli, and A. W. Winckelmann, Zürich, 1839-42; K. F. Hermann, Leipzig, 1851-53; F. W. Wagner, Leipzig, 1841-77, with German translation and commentary; J. Burnet, Oxford, 1901-06 (an excellent conservative text); (2) selected dialogues: L. F. Heindorf, Berlin, 1802-28; (3) particular dialogues: W. H. Thompson, *Phædrus*, London, 1868, and *Gorgias*, do. 1871; R. D. Archer Hind, *Phædo*, do. 1888, and *Timæus*, do. 1888. The best-known English translation of the whole works is that of B. Jowett, Oxford, 1871.

For Plato's philosophy see E. Zeller, *Die Philosophie der Griechen*³, Leipzig, 1869-81, n. i., tr. S. F. Alleyne and A. Goodwin, *Plato and the older Academy*, London, 1876 (not always to be trusted); F. Ueberweg, *Grundriss der Geschichte der Philosophie*⁸, Berlin, 1894-97 (Eng. tr., H. P. Smith and P. Schaff, London, 1880), contains, together with a useful summary of Plato's teaching, a very valuable bibliography.

The writer of the present article has occasionally used in its sentences and phrases borrowed from a sketch of the history of Greek philosophy down to Aristotle which he contributed to *A Companion to Greek Studies*², Cambridge, 1906, pp. 163-187. His present statement of the later Platonism set forth in 'the six dialogues' is largely based upon papers published in *JPh* x. [1881-82] 253-298, xi. [1882] 1-22, 287-331, xiii. [1884-85] 1-40, 242-272, xiv. [1885] 178-230, xv. [1886] 280-305, xxv. [1897] 4-25, but the views there indicated, while they have in some respect modified themselves, have for the most part become more definite with the lapse of time. For certain recent speculations about Plato and the relation of his teaching to that of Socrates see A. E. Taylor, *Varia Socratica*, Oxford, 1911, and J. Burnet, *Plato's Phædo*, do. 1911, *Greek Philosophy*, pt. i., London, 1914.

HENRY JACKSON.

PLAY.—See DRAMA, GAMES, DEVELOPMENT (Mental).

PLEASURE.—Both pleasure and pain are too well known to require description and too elemental to admit of analysis. They are experiences which are co-extensive with all other forms of mental life

—sensations, images, memories, reasonings, willings, emotions, all being capable of taking on these pleasant or unpleasant colourings, although all, apparently, except perhaps the last, are able to exist in a neutral phase. Yet in spite of the familiarity and prominence of these states, both in daily life and in ethical controversy, the more exact determination of their nature is one of the most confused problems in modern psychology. As a problem it was seriously considered by Plato and by Aristotle, but it was not until the intellectualist tradition had been questioned by Rousseau, and interest in the more inarticulate phases of mental life had been quickened by evolutionary biology, that the feelings were made objects of exact investigation. Within the last twenty years, however, much has been done, and, while it is impossible to say that conclusions have been established, it is at least true that many facts have been determined and alternative theories defined.

1. The term 'pleasure' itself has been recognized as too ambiguous for technical use, and there has developed a tendency to substitute for it 'agreeableness' or 'pleasantness,' and to include both it and its opposite, pain or unpleasantness, under the common term 'affection' as denoting the non-cognitive aspect of mental life. Pleasantness and unpleasantness would thus be recognized as affective phases of mental complexes into which any of the other elements or phases might enter. For those complexes in which the affective phase is most prominent or characteristic the term 'feeling' has been suggested, as the feelings of gladness or depression. Pleasure, in popular usage, is generally identified with one of these complex processes of feeling and not with the abstract affective phase of pleasantness. It is the whole process of eating a good dinner or of enjoying a reunion that is called a 'pleasure.' Much of the confusion in ethical discussions of the good has arisen from failure to make this distinction between pleasure as affective tone and as complex feeling, the value recognized by common sense in the latter being identified by hedonistic theory with the former.

2. The historic problem of quality of pleasure also has light thrown upon it by this distinction. John Stuart Mill's revival of the Platonic doctrine of differences of kind in pleasures involves the failure to make this analysis into pleasantness and pleasant object, with the consequent apparent ascription to the one of the moral worth found in the other, the differences in the pleasures of the fool and Socrates lying not in the affective element but in the total feeling. So, too, the common popular classification into higher and lower kinds of pleasure is really a distinction between higher and lower forms of experience as a complex whole rather than between kinds of pleasantness as such.

Yet, even on the basis of this analysis, modern psychology is not a unit as to the quality of affection. Wundt insists upon a threefold distinction within affection itself—upon three pairs of opposites: pleasantness and unpleasantness, excitement and depression, tension and relaxation. Within each of these pairs, again, he recognizes an indefinite number of qualitatively distinct affective elements. This tri-dimensional theory of feeling involves the concept of pleasure mainly so far as concerns the recognition of varieties of pleasantness and unpleasantness, although undoubtedly much of what popular consciousness includes in pleasure would, under this theory, be assignable to excitement or relaxation. In his main contention for the greater complexity of the affections Royce agrees with Wundt, though seeing his way as yet to the recognition of only two antagonistic lines of difference—pleasantness and unpleasantness, restless

ness and quiescence, with their included minor distinctions.

On the other side are those who recognize only two antagonistic aspects of affection—pleasantness and unpleasantness—analyzing the other two dimensions into organic and muscular sensations. Certainly, when we have eliminated our sensations of muscular strain, the feeling of tension vanishes, and, equally, excitement seems to have little meaning apart from sensations of tension and respiration and consciousness of rapidity in the flow of ideas. On the whole, the dual theory seems to have the weight of testimony, both lay and expert, in its favour.

Incidentally, it may be remarked that the unpleasantness recognized in this analysis is not to be identified with the sensation of organic pain, which, while usually existing in an extremely unpleasant complex, may yet, when of slight intensity, have the pleasantness of interest.

The question as to whether pleasantness itself admits of qualitative differences is not to be answered with any positiveness. Introspection gives varying testimony on the point, and whereas, if we assume that the phases of affection correspond to a general central process, we are inclined to expect only differences of degree, when we also assume that every element in a complex varies with the changes in the total complex, we tend to look for qualitative differences in pleasantness according as the total process varies. Certainly the burden of proof seems to rest heavily on those who affirm such differences in quality.

3. As to the psychological status of pleasure—its place among other mental processes—three theories hold the field.

(1) *The qualitative theory* (Stout, Marshall).—Pleasure and pain are general qualities or attributes of mental process, either of which may be attached to any mental element. The term 'quality' is here explained as used in the same sense as when applied to intensity as a quality of sensation. Pleasantness thus has no substantive standing, but is always pleasantness of something, just as intensity never exists by itself but always as an essential attribute of another state.

(2) *The sensational theory* (Stumpf).—Pleasure and pain are sensations of the organic type. Pleasure is a diffused sensation of tickling or a weak sensation of lust. If pleasure were a mere attribute of sensation, it would not itself have attributes such as intensity and duration, nor would a sensation persist in the absence of its attributes as is the case relative to pleasure and pain.

(3) *The affective element theory* (Titchener).—Pleasure and pain are the two phases of a simple affective process which forms one of the two elementary constituents of mental life, if we group sensation and image together as the second. Affection is similar to sensation in possessing quality, intensity, duration, but it lacks clearness, and shows an antagonism and incompatibility of its opposite qualities which mark it off from sensation. Tickling has its own sensory quality, which may be either pleasant or unpleasant, but which is not synonymous with pleasantness.

While no consensus of opinion can be invoked on the questions involved in these theories, it may be remarked that the point at issue between (1) and both (2) and (3) seems to resolve itself into the somewhat profitless logical distinction between substance and quality. As between (2) and (3), while one may not be satisfied with the form in which the latter theory is usually stated, one cannot but feel that, in its recognition of the distinctness of pleasantness as an elementary aspect of mental life, it has in its favour the almost unanimous testimony of introspection.

4. As to the conditions of pleasure, our knowledge is still more incomplete. From the genetic point of view, it has been suggested that affection is undeveloped sensation or a mode of experience of which sensation is a later phase, and that the free sensory nerve-endings may be its organ (Titchener). We have also the biological generalization that pleasure is the accompaniment of actions useful to the organism (Spencer), but such a generalization needs qualifying conditions which it is beyond our present power to supply. A widely applicable psychological formula is that pleasure is the accompaniment of uninterrupted activity, of progress towards an end, whatever the end may be (Stout, Angell). This end may not be useful for life as a whole, and hence the activity may not have survival value, but in so far as it is an actual end the progressive realization of it gives pleasure. Such a formula seems more adequate for the more active type of pleasures but hardly for pleasure in its whole extent. From the physiological point of view, there is a general tendency to consider the conditions for affection as central rather than peripheral, but guesses differ as to whether it is a matter of general nutritive condition or of motor preparedness, as well as to whether a special cortical region is involved or the whole cortex.

5. For the place of pleasure in ethical systems see art. HEDONISM.

NORMAN WILDE.

PLEROMA.—This term has acquired a certain celebrity from its use in the later NT books, in relation to deity, and in one of the most fully developed systems of Gnosticism, as a designation of what may be called the Gnostic heaven—that supersensible spiritual sphere in which the Godhead was thought to exist and manifest itself above and apart from the material world. There were, of course, many fantastic and extravagant notions in the Gnostic idea, but every careful student who follows the course of Christian thought in the 2nd cent., at the time when Christianity came face to face with the advanced conclusions of speculative religious philosophy, will see how significant a phenomenon the Gnostic heaven is. This article will deal exclusively with the conception embodied in the word 'Pleroma,' and will endeavour to follow its use from the NT up to the form in which it finally appears in the Valentinian system of Æons. The various elements of thought which are there united, and which form a fairly well rounded system of God and the world, had grown up out of, and had been gathered from, the great systems which dominated the ancient world; but these appear here fused and blended with the new ideas that Christianity had introduced. It was the first great attempt to exhibit Christianity as a part of the system of the world—and no mean effort either, as we shall readily see, if we are able to thread our way through the tangled maze of grotesque and mythical phraseology in which the Gnostic teachers indulged. In its most fantastic shapes, however, there are usually visible some gleams of rational thought.

1. NT use.—The NT use of the term 'Pleroma,'

in relation to deity, is given in Col 1st 2^d, Eph 1st 3rd 4th, Jn 1st. The word is found in other parts of the NT in the ordinary sense of 'fullness' variously applied, but in these passages it stands in a context which seems to require a special theological connotation with which the reader is supposed to be already familiar. In St. Paul's language two great conceptions are affirmed or implied: (1) that the whole fullness of deity, the entire plenitude of divine excellences, energies, and powers resides in Christ; and (2) that, through union with Him, the Christian Church is destined to share in the fullness which dwells in Him. Both these conceptions appear in the subsequent phases of Gnostic thought, but they are placed in new connexions and relations, and in the handling of them the lead of Scripture and the limits within which they are viewed in Scripture are soon lost sight of. In the views which St. Paul combats at Colossæ we recognize some incipient forms of Gnosticism which are easily identified with well-known features of popular Jewish beliefs characteristic of the age—an undue prominence given to angels as mediators between God and the world, and the false authority ascribed to various ascetic practices. The revelation of God which was given in the incarnation and mission of the Son had for ever set aside the necessity for inferior mediators, whether angels or men; and the Apostle's contention is that all the energies and powers of deity, all divine functions in the order and government of the world, reside in Him, all things visible and invisible, thrones, dominions, principalities, and powers being subject to Him. The Jewish teachers at Colossæ had doubtless taken their stand upon the common belief that there were many mediators through whom God communicates His will to men, and that to each of these a measure of divine honour or worship might be due. They had not yet discovered that in Christianity was given the final and absolute revelation of God to the world.

The idea that the entire fullness of the Godhead is manifested in Christ is fundamental to Christianity, and is, indeed, a wide-reaching conception, difficult to grasp by the intellect—a mystery profoundly significant and precious to faith. The Christian recognizes in Him the embodiment of all divine excellence, the full glory of the Father. In the later books of the NT we note an important advance upon the Christology of the Acts and earlier Epistles. In the latter the chief aspects of His Messianic dignity and glory are set forth as the ground for faith in Him as the Mediator of the Messianic salvation. The full content of the Messianic idea was not laid open, and was probably not called for in the earlier preaching. But at a later stage, with the advance of thought and a growing faith, the doctrine of the person of the Son became richer and fuller. It was seen that He is the full and complete expression of the Father's nature and glory, 'the image of the invisible God,' 'the effulgence of His glory,' 'the very impress of His being.' The Fourth Gospel, the latest phase of NT teaching, exhibits this conception in relation to the earthly life of the Redeemer, showing that the Son is the entire and complete manifestation of the Father. It is doubtless the spiritual and ethical perfections of deity that are chiefly in view in the passages in which the Pleroma of the Godhead is ascribed to the Son, since these chiefly will be thought of as constituting the great essentials of the eternal life, which was with the Father, and which the Redeemer conveys to men. Yet, though we have difficulty in believing that all the recesses of deity are open to the knowledge of men, it is manifest that in the NT conception of the Incarnation there is given, besides the ethical perfections of the God-

head, a universal cosmic principle—the energies and powers which produce and sustain the course of the world. It is not easy to separate in thought the cosmic and ethical elements in the idea; in reality the two must meet and blend to form a complete whole. The ethical perfections of the Godhead are manifested not in empty space, but in the complex life of the material world, in which they must be sustained and vindicated by physical energies and powers. The Pleroma of the Godhead, therefore, contains not merely the totality of all ethical perfections, but all divine energies which the cosmos displays; and, all these being ascribed without limitation to the Son, there arises the necessary inference that He is the final and absolute manifestation of deity to men.

2. The Valentinian system.—From the various contexts in which the term 'Pleroma' is used in the NT it is to be gathered that the idea was new in the sphere of religion, and that towards the close of the Apostolic Age it was denied or opposed by other and contrary hypotheses, viz. that there were many mediating agencies between God and men, and that the whole fullness of deity could not be communicated to any one being or person, however eminent.

The last thought appears in various shapes in all the forms of Gnosticism, and it is usually implied that no entire or perfect revelation of deity is possible in material things, that all perfect manifestations of God are confined to the sphere within which deity is to be found—the sphere to which they apply the term 'Pleroma' in a local or topographical sense. In some passages where the word occurs incidentally we see that the idea is of capital importance, and we are prepared for the bold effort which is made in the Valentinian system to reach a definite and rounded doctrine in regard to it. Among the earlier Gnostics the attempt was made to obviate the difficulty involved in the incarnation and passion of the Son, either by assuming that our Lord's body was not real flesh and blood, but a form assumed for a time, or by saying that Jesus was the son of Joseph and Mary by ordinary generation, and that the Christ who descended upon him at his baptism, being a spiritual being and, as such, impassible, departed from him at the Crucifixion.

Irenæus describes this party as maintaining that Jesus was 'merely a receptacle of Christ upon whom the Christ, as a dove, descended from above, and that when He had declared the unnameable Father He entered into the Pleroma in an incomprehensible and invisible manner' (*Hær.* iii. xvi. 1). The same view appears in another passage, where it is said that 'the Christ from above . . . continued impassible,' and that, though He had descended upon Jesus the Son of the Demiourgos, He 'flew back again into His own pleroma' (iii. xi. 1).

These two examples serve to show the point at which the Gnostic view diverges from St. Paul and the NT. He teaches that all divine powers and energies reside in Christ in permanent form, while they maintained that only a single power—the Christ from above—had dwelt in Jesus for a time, and afterwards returned to the Pleroma, from which thought it is clear that the Pleroma is viewed as the special sphere or abode of deity, separate from the rest of the world and not homogeneous with it.

Turning now to the system of Valentinus as it is expounded by Irenæus and Hippolytus, we find that the Pleroma forms the centre of an elaborate theory of the world—of divine emanations, of creation, and redemption. It is the exclusive sphere of deity within which the evolution of the *Æons* is accomplished. It has over against it the *κένωμα*, the 'void,' the sphere of matter which includes all that is outward, corporeal, physical, sensible. These two spheres include the totality of being real or conceivable, and there is an absolute difference and antithesis between them,

such that the one is the home of all that is perfect, godlike, eternal, imperishable; while in the other things are corrupt, perishable, shadowy, unreal. The Æons which are begotten from the unfathomable abyss of deity are the divine energies, the functions of infinite life which manifest themselves in a definite order and succession; but towards the end of the series, where presumably their strength and purity have diminished, the last being far from the centre and source of life, one of them, Sophia, somehow passes out into the void beyond, and out of her tears, sorrows, and distresses the material creation arises. The antithesis between these two spheres as conceived by Valentinus himself is probably better expressed by the term *ὁστέρημα*, 'defect,' than by *κένωμα*, 'void,' since the view of matter or the world which is prominent in the teaching of the school regards it as having its origin in some disturbance in the life of deity itself, and therefore not of an opposite or contrary nature. The sphere of the Æons is marked off by definite bounds from the sphere beyond, but the movement implied in the generation of the Æons in some of its remoter effects passes over the limits into the sphere in which the world arises, so that an affinity is established between the two from the first. The later Æons—Sophia, Christ, and the Holy Spirit—carry over the living and redeeming energies of the Pleroma into the lower sphere where, divine seeds being already sown from the tears and labours of Sophia, all that is kindred with the Pleroma, after being redeemed and purified, returns to it at last as its ultimate home.

3. The Gnostic reconstruction.—From this outline we are in a position to see how far the Gnostic conception has parted from the NT standpoint, and where it passes over into a region unknown and unknowable to man. It has already lost sight of the spiritual and ethical quality of the concept of God, characteristic of Scripture, in which omniscience and omnipresence are implied, and sets about establishing bounds between the sphere appropriate to deity and an outer world. In this respect it still keeps to the old contrast of God and the world which dominated all the ancient systems. A parallel to this drift of thought is seen in the strong tendency towards the unknown and the marvellous exhibited in the apocryphal Christian literature which was contemporaneous with the great Gnostic movement. Yet the speculative effort to reach an adequate idea of God, in harmony with the new data which Christianity had established, has much interest and significance. It was really the first great attempt to construct a philosophy of religion with Christianity taken into account. In the Valentinian Pleroma there appear the chief conceptions regarding the nature of deity which speculative thought had then reached, but they are blended with the new view of the world which Christianity had established. In the doctrine of God taught in the Palestinian school the action of God in the material world was thought to be effected by various mediating agencies and powers of a supermundane angelic character, personal and impersonal. God Himself was too highly exalted in majesty and glory to come into immediate contact with man's world. Hence it was thought that the purposes of His will and government were carried through by various orders of ministering angels. This view had grown out of the earlier OT doctrine of the holiness and exaltation of Jahweh, which at first was preached mainly with reference to sin and the imperfections of man's life, but in the later theology of the schools it had practically separated the Godhead from all contact with the world, leaving only the abstract idea of a Being exalted above

all human thought, inscrutable and unnameable. With Philo and among the Alexandrians the same result was reached by much the same process, partly also by the help of Platonic conceptions. Here also God in Himself is defined in terms of absolute being, mostly negative, without attributes or qualities. His agency in the world is represented and sustained by His Logos, or reason, and the vast multitude of inferior *λόγοι* which determine all particular things. Among the Greeks, since Plato and Aristotle, God was defined as the highest good or the supreme cause far removed from the actual world, who leaves the care of it to inferior agencies or powers. With Plato (*Timæus*) the demiourgos, or creator of the world, acts the part of an inferior deity, since he must build the world on the patterns furnished by the eternal ideas and from material already existent.

Now, having such an idea of deity to start from, and with the conviction that Christianity had brought something new in the sphere of religion—that in fact it was revelation from the highest God, as was held in all the phases of Gnostic speculation—Gnosticism set itself to a reconstruction along the whole line of the theistic conception, to provide for the passing of deity from the primal silence of a past eternity into a process of self-manifestation in a series of Æons, in a Pleroma, or spirit-sphere, to constitute an ideal world, from and after which the existing system of material things arose, in such wise that the creative and redeeming agencies which Christianity reveals are found to be not only in accord with the laws of the higher sphere, but also the immediate revelation of them. The Gnostics all seem to have been greatly troubled with the imperfections of all earlier conceptions of God, Jewish as well as heathen, and, by assigning the various defects of the world and of earlier religions to inferior beings or agencies, they doubtless thought to secure a clear field for the new world which they saw in the new religion. To be thorough, they began their reconstruction from the beginning, and assumed a movement from within the depths of the Godhead outwards, towards a world different from itself, to arise out of itself, and destined in its purer parts to return to it again, by the process of redemption which Christianity reveals and accomplishes.

4. The process of emanations.—A tolerably clear account of the Pleroma in the system of Valentinus is given by Irenæus and Hippolytus. Their eagerness to expose the absurdities of the system has often led them off the points of greatest interest for us, who want to understand, and are outside the sphere of danger.

First of all, then, there exists in 'the invisible and ineffable heights above' a certain perfect pre-existent Æon whom they call Proarche, Propator, Bythos, invisible, incomprehensible, eternal, and unbegotten, remaining throughout innumerable cycles of ages in profound serenity and quiescence. Along with Him there existed Ennoia ('thought'), called also Charis or Sigē ('grace,' 'silence'). At last this Bythos determined to produce from Himself the beginning of all things. From the union of Bythos and Sigē ('depth' and 'silence') was produced Nous ('mind,' 'intelligence'), called also Monogenēs ('only-begotten'), father and the beginning of all things. Along with Nous was produced Alētheia ('truth') as his mate. These four constitute the first tetrad, and are called the root of things. From Nous and Alētheia arise Logos and Zoē ('reason' and 'life'), and from these again Anthrōpos and Ecclesia ('man' and 'church'), ideally conceived. Here, then, we have the first ogdoad, called (let us be careful to note) 'the root and substance of all things, the beginning and fashioning of the entire Pleroma.' In this ogdoad we have given the essential, the determining, part of the conception, the source or ground from which the others proceed according to the same principle. The first movements of life within the hidden recesses of deity give birth to the ideal forms of all rational life—mind or intelligence, truth or reality, reason, life, man, church. These must first exist in God, and be evolved in the divine self-consciousness as the essential and primary functions in the inner life of deity, the patterns or models of life also in man's world.

The first ogdoad, then, must be primary, since all the Æons

which follow are contained or given in them by implication. From Logos and Zoë arise other ten, from Anthrōpos and Ecclesiā twelve. Reckoning Bythos and Sigē as the first in the series, we have thirty in all—the complete number of the Æons. But, since Christ and the Holy Spirit are sometimes spoken of as Æons, they would have to be added as later developments, and probably in some computations Bythos and Sigē are not reckoned within the thirty, as being the fountain of all the rest. The language of our sources varies a good deal on this point. Sophia is repeatedly spoken of as the last of the Æons, through whom confusion was begun in the Pleroma, which confusion was afterwards allayed by Christ and the Holy Spirit projected by the will of the Father for this purpose. It would seem, then, that these two should be regarded as later developments which arise in view of the sorrows of Sophia and the world, which should arise out of her tears. Christ and the Holy Spirit undoubtedly belong to the Pleroma, but they differ from the earlier Æons in this, that, though belonging to the Pleroma, they are intermediate with it and the sphere of the world (for the significance attaching to them see below). Meanwhile, reckoning the thirty as complete without them, we have three series—an ogdoad, a decad, and a dodecad, thus:

The primary ogdoad:

Bythos (= Proarchē = Propator) and Ennoia (= Charis = Sigē),
Nous and Alētheia,
Logos and Zoē,
Anthrōpos and Ecclesiā.

The decad produced by Nous
and Alētheia (with some by
Logos and Zoē):

1. Bythos, 'deep,'
2. Mixis, 'mixture,'
3. Agératos, 'undecaying,'
4. Henosis, 'unification,'
5. Autophyēs, 'self-grown,'
6. Hédonē, 'pleasure,'
7. Akinatos, 'unmoved,'
8. Synthesis, 'composition,'
9. Monogenēs, 'only-
begotten,'
10. Macaria, 'blessedness.'

The dodecad by Anthrōpos and
Ecclesiā:

1. Paraclētos, 'comforter,'
2. Pistis, 'faith,'
3. Patricos, 'paternal,'
4. Elpis, 'hope,'
5. Metriōs, 'temperate,'
6. Agapē, 'love,'
7. Synesis, 'understanding,'
8. Ecclesiasticos, 'ecclesiastical,'
9. Ainos, 'praise,'
10. Macariotēs, 'felicity,'
11. Thelētōs, 'volition,'
12. Sophia, 'wisdom.'

In the sources there are some small variations in the lists of the Æons, as also a difference of opinion as to the pairs by whom the decad or the dodecad were produced. From the outline it will be seen that the terms in some cases overlap. A more rigid logic could easily reduce the number. It is probable that the symbolism implied in the numbers 4, 8, 10, and 30 may have suggested 30 in all, as the number denoting the highest perfection. All the Æons taken together were meant to represent an ideal outline of things, to be realized in the material sphere, for which reason their perfection as a whole is more in prominence than the logical proportion of the parts, if, indeed, we should speak of logic at all in a construction so largely mythical. The conception offers an outline of the supposed life of deity, within the sphere of the eternal, according to which the life of man is to be modelled, the decad and the dodecad being an ideal sketch of the Gnostic Church from different standpoints. It will also be seen that the emanations or projections follow a descending series in such manner as to show that each series in the succession is a further unfolding of the essential content of those above, and the entire company constitute a fellowship in which each is necessary to all, and the felicity of each is dependent on the felicity of all. It is an image of the life of deity, not in the abysmal solitude of a bygone eternity, but at the stage when it has entered on a process of self-manifestation in which all the life powers and functions latent from the beginning take their place in an order of being which constitutes a heaven self-sufficing and eternal.

But our view of it is not complete till we see how the process of emanation, begun in the depths of deity, terminates in the production of the world and the redemption of man. The process is not conceived in the manner of pantheism. It has definite bounds, and terminates at a point where a *δρος*, 'limit,' is placed at the boundary where the *πύγμα*, or the *ὕστέρημα*, a sphere of another nature, begins. The Æons are not nature-powers which

follow a necessity of nature; they are rather ethical personalities, and they constitute a spirit realm whose arrangements and working follow a Christian ideal. The frame for the conception was probably suggested by Platonism, from the place assigned to the eternal ideas in the building of the world, but the content is essentially Christian, and the heaven which they constitute is a Christian heaven. They furnish the model for the life of the lower world from which all that is purified and perfected at last ascends to dwell with the Æons. The first eight represent the great conceptions which underlie all forms of rational life. The next ten, which arise from Logos and Zoē, represent chiefly cosmical principles or powers which are necessary as a basis of ethical life. The last twelve, produced from Anthrōpos and Ecclesiā, are mostly the qualities of the perfected humanity which Christianity is destined to produce.

A scheme for a Pleroma was contained in the earlier system of Basilides, but the term does not seem to have been applied to it. Basilides confined the evolution of the divine life within deity to the seven powers—mind, reason, thought, wisdom, might, righteousness, and peace. But from this point the evolution continued through numberless grades of existence in a descending series—a conception which abandons the problem raised by Christianity.

5. The Pleroma and the world.—Returning, then, to the Valentinian Pleroma, how did the system account for the origin of the world, and what is the relation of the Pleroma to the world? The passage from spirit to matter, from the absolute and the perfect to the finite and the imperfect, is the great problem that confronts all philosophies which attempt to explain the origin of the world. The Gnostic attempts on this problem show great constructive skill and profound conceptions of what Christianity was expected to effect in the transformation of the world. Considerable difference of view appears, however, as to the manner in which the life of the Pleroma passes over into the region beyond. The myth of Sophia, which generally covers the origin of the world from the Pleroma, is put in various shapes, and it is not easy to gain a definite picture of the process as the Gnostics conceived it, if that was possible even to them. To a certain extent the myth of Sophia—i.e. the wisdom, or constructive skill, which had laboured to bring about the world—had taken various shapes before speculative thought had attempted the bolder task of picturing the life of deity in itself. We have seen that schools of opposite tendencies were agreed in placing supreme deity at the farthest possible distance from the world. But Jewish thought, while agreeing with the results of Greek speculation on this point, sought to explain the action of God in and upon the world by assuming the agency of various semi-divine mediating beings. Among these high prominence was assigned to wisdom (Sophia) as a world-building and world-ruling power. Closely allied to this conception was that of a demiourgos, or world-builder, which was introduced by Plato in his account of creation in the *Timæus*, and which became a favourite figure with the Gnostics. These personifications represented agencies more or less inferior to the highest deity, and, by ascribing the existing world with its many defects to these or similar beings, Gnosticism maintained a direct antithesis between God in Himself and all inferior agents who might have sway in the world. Deeply penetrated with the thought that Christianity was something absolutely new, that the Jewish dispensation which preceded it was mainly the work of inferior beings, that the mission and work of Christ were a revela-

tion from the highest God, the Gnostics sought for a conception of the Godhead which should stand in closer harmony with Christianity and explain the present anomalies of the world. To some extent, then, their speculative construction of the world had preceded their attempt at the heaven of the Æons, and the myth of Sophia had probably grown into some of its forms before the Æons of the Pleroma were fully established. The problem was, not to construct a material world by a process of emanation from the Pleroma, but to form a bridge between two systems of thought which had grown up apart and from the opposite ends of existence. Already in Christianity Christ and the Holy Spirit had been revealed as ethical and cosmic powers. They had come from the great unknown, and place must be found for them in the Pleroma of the Æons. The conception of the Pleroma would not be complete till it was shown how the life of the Godhead, already perfect in itself in the higher sphere, is reproduced in the lower, and draws up into itself all that is susceptible of redemption.

The passage of creative life from the Pleroma over the *δσος*, 'limit,' into the region beyond is represented somewhat thus :

The life of the Æons was not one of perfect rest and quiescence like that of the Eternal and the Unbegotten in the beginning; for the desire arose among the Æons to search into the depths of the uncreated which remained invisible and incomprehensible to all except Nous alone. He alone exulted in the greatness of the Father and he sought how he might reveal to the rest how mighty the Father was. The rest of the Æons also had a wish to behold the author of their being. However, this was not the will of the Father, and Nous was restrained in his desire. Yet the last of the Æons (Sophia), conceiving this passion by contagion from the others, desired to comprehend the greatness of the Father. But, aiming at what was impossible, she became involved in great agony of mind, and was with difficulty restored to herself, by the power of *δσος*. By another account, a fuller and larger part of the myth, Sophia, through the excess of her desire, gave birth to an amorphous spiritual substance which, being separated by *δσος* from the circle of the Æons, constituted the beginning of the material world. Thus arose three distinct kinds of existence, the spiritual, the psychical, and the material—distinctions which play an important part in Gnostic teaching.

Now these movements of desire within the circle of the Æons showed how disturbance might arise even in that world. Accordingly, by the forethought of the Father, Nous or Monogenēs gave origin to another pair of Æons—Christ and the Holy Spirit—lest any similar calamity should happen again, and to fortify and strengthen the Pleroma, and to complete the number of the Æons. By Christ and the Holy Spirit the Æons were instructed as to the knowledge of the Father, since such knowledge was given to Monogenēs alone. Being thereby restored to rest and peace, out of gratitude they brought together the best of what each possessed of beauty and preciousness, and, uniting the whole, they produced a being of the most perfect beauty, 'the very star of the Pleroma, Jesus, whom they name Saviour Christ, and everything, because he was framed from the contributions of all.'

Returning now to the offspring of Sophia, which was separated from the Pleroma and constituted the beginnings of the world, the myth represents the world as a growth from seed which has fallen from the Pleroma. It describes the effects produced upon it by the action of Christ as one of the heavenly Æons and Jesus the Saviour. The lower world is shown to be of a kindred nature with the higher. Spiritual men, who are the seed of the Pleroma in greatest perfection, yet share in the benefits secured by the heavenly Logos and the Saviour, and rise to the Pleroma, chiefly in virtue of their nature. Psychical men, who form the majority of ordinary Christians, stand in special need of the redemption which Christianity provides, while those who yield themselves to the seductions of the material world are subject to the destruction which awaits it.

6. Conclusion.—In this brief outline the reader will see much that is fantastic and strange to the Western mind. Yet there are many gleams of profound thinking. The nearest parallels in modern systems of thought will be found in those of Boehme and Schelling. For fuller details see art.

GNOSTICISM, and the literature mentioned below. A few general remarks may still be added.

The underlying conception of the Valentinian Pleroma implies a modified or weakened form of dualism. The antithesis to the heaven of the Æons is not a world of dead matter which resists and opposes the creative action of spirit. It is rather one of emptiness or defect which is waiting to be filled with the overflowings of divine life, which yet needs to be redeemed by powers that go forth from the heavenly sphere. The life of the world is an ethical process. The spiritual portion of mankind, having the largest share of pneumatic life, is already within the sphere of salvation. The psychical men, still wavering between flesh and spirit, are in need of redemptive help and ethical trial, while those who are buried in the life of sense are left to destruction.

It should also be noted that the life of deity within the Pleroma was liable to disturbance and had to be restored by the heavenly Logos and the Holy Spirit. The perfect felicity of the Æons lies in each keeping within the assigned limits. The fullness of deity does not belong to them as individuals, but as a whole. Disturbance arises when they desire to pass the limits assigned to each. Individually, therefore, they are beset with limitations, and exhibit the life of the absolute only in their totality. They present the manifold life and energies of the Godhead in a process of self-manifestation that results in an ideal spirit-realm, in which the life of each is perfected, not in itself, but in the whole. The original part of the conception does not lie in the view of an inscrutable fountain of unknown deity, for that was common to all the speculative systems of the time. It lies in the construction of a heaven of Æons which shall constitute the ideal of, and supply dynamic for, the world that Christianity reveals and creates. The Gnostic Pleroma is distinctively a creation of Christian thought, and was meant to exhibit a general scheme of the world on which Christianity was thought to be based, and which it was destined to realize and perfect. This fully appears in many other parts of Gnostic thought which aimed at reaching a comprehensive view of the whole scheme of revelation and the course of the world. It did, in fact, offer a special philosophy of the nature of revelation in the pre-Christian time, of the manner in which deity was given in the person of Christ, and of the perfecting of the susceptible portion of mankind through the Holy Spirit.

PLOTINUS.—See NEO-PLATONISM.

PLURALISM.—Pluralism is currently defined as the metaphysical doctrine that all existence is ultimately reducible to a multiplicity of distinct and independent beings or elements.¹ So defined, it is the obvious antithesis to monism (*q.v.*), and differs from dualism not only in emphasizing many as distinct from two realities, but also in providing for greater qualitative diversity among the many. Dualism (*q.v.*) is primarily a doctrine of two substances, one material and the other spiritual, and

¹ See, e.g., Baldwin's *DPH*, s.v.; *Bull. de la société française de philosophie*, xiii. [1901-05] 182; and R. Eisler, *Wörterbuch der philosophischen Begriffe*, Berlin, 1899. The *Bulletin*, however, recognizes in a *remarque* another form of pluralism which will be considered in the last section of this article.

is commonly stated in terms of the contrast between body and mind. It is apparent, however, that the material and the spiritual substance may each be regarded as reducible to many separate elements which, in spite of their likeness in kind, are really independent and self-existent. There may be many independent atoms of matter, and there may be many independent spirits or minds. In a case like this, dualism is essentially pluralistic. Even monism may be similarly pluralistic if it is conceived as only a doctrine of one substance, either material or spiritual, as opposed to more than one. For it is evident that the one substance may be considered as reducible to many elements independently existing although qualitatively alike. The possible forms which pluralism may take are, therefore, many. It is not important, however, either to attempt to classify them or to discuss them, because only materialistic pluralism and spiritualistic pluralism have had any significant presentation in the history of thought.

1. **Materialistic pluralism.**—Materialistic pluralism has been represented by the consistent atomists from the time of Democritus. The atom and the medium in which the atoms move have, however, been variously conceived. The view usually ascribed to Democritus, and held by many subsequent thinkers, is apparently the simplest statement of the theory. The atoms are very small particles of matter, so hard that they resist division or change. They are qualitatively alike, but differ in size and shape, i.e. in their geometrical properties. They have always existed and are indestructible. They move freely in space by their own natural motion. Space is mere emptiness, the void, and consequently offers no resistance to the movement of the atoms. The motion of each atom, if left to itself, would be rectilinear, but, since the atoms differ in size and shape, they collide with one another, and the motion of the whole mass is, consequently, turbulent. As a result the geometrically similar atoms tend to congregate and form selected and ordered systems, first the 'worlds' in space and then the particular things of each world. But the general instability of the whole mass keeps any particular combination of atoms from persisting indefinitely. There is, consequently, perpetual combining and recombining among the atoms; and, on account of the many geometrical differences between the atoms, the number of permutations and combinations is practically limitless. With Democritus, as with most of his followers, this view of the atomic structure of all things seems to have resulted from the attempt to generalize, solely in terms of the geometrical properties involved, the empirical fact of the divisibility of concrete masses of matter. The qualitative diversity which the world obviously presents is usually either disregarded or viewed as a consequence of our way of perceiving. Democritus is reported to have said that, while we commonly speak of colours, sounds, etc., in reality there is nothing but atoms and the void.

The atomic theory (*q.v.*) admits of many variations, but its pluralistic character is not affected so long as the atoms are kept intact and the medium in which they move is equivalent to empty space. The atoms may be qualitatively different or the ultimate elements of a limited number of different material substances; they may expand and contract; they may have natural affinities and repugnances; they may be acted on by forces exterior to them or be impelled by forces resident in them; they may be so closely packed as virtually to exclude the necessity of a medium, and yet be conceived as in themselves permanent and underived. When, however, the medium in which the atoms operate is not conceived as empty

space or its equivalent, the pluralistic character of the system is affected. For it is evident that the new medium—the ether, *e.g.*—cannot be atomic in structure, but must be continuous. The atoms cannot break the continuity. The medium must, therefore, penetrate them, but this penetration robs the atoms of their original simple character, and tends to make them appear as modes, rifts, involutions, or concretions of some sort in the medium itself. Such a direction as this recent chemistry and physics have taken, impelled thereto not only by speculative considerations, but also by experiments, like those of Sir William Ramsay, which have done much to make current once more the notion that material substances are convertible. The doctrine of relativity in physics moves in the same direction. Judged, therefore, by contemporaneous tendencies, materialistic pluralism as above defined does not represent the progressive ideas of the sciences which deal with matter. The tendency is rather towards a monistic conception or a complete relativism.

2. **Spiritualistic pluralism.**—The leading historical representative of spiritualistic pluralism is Leibniz (*q.v.*). Although thinkers in all ages have believed in the existence of many independent minds, few of them have, like him, made this belief the dominant and controlling factor in metaphysics. His philosophy, although among those which have had considerable historical influence, was not the result of the generalization of empirical fact such as marked the theory of atoms. It was the result rather of his attempt to avoid the monism of Spinoza, on the one hand, and atomism, on the other. In place of the atom he puts the monad—an ultimate, simple, and self-existent spiritual being. The monads do not have geometrical properties, nor do they exist in space as in a void. Their independence and metaphysical exteriority to one another constitute a kind of quasi-space in which they may be said to exist. Their properties are spiritual or psychical, such as appetite, desire, perception. Each is self-contained, 'windowless,' and neither influences nor is influenced by another. Each has its own inherent law of life or development, so that all the monads may be represented in a series from the lowest, or 'sleeping,' monads to the highest, or self-conscious, each differing from its neighbour by the least possible difference. They are thus all in a kind of 'pre-established harmony,' each reflecting, as it were, the whole range of possible development from its own peculiar position in the series. All things are made up of monads. The highest monad in the body is the soul, and the highest monad in the system is God. But God's relation to the other monads is not always clear. At times He is one of the monads, at times their creator, at times the unity in the system. Among the monads there is no spatial motion, for their life is not that of physical movement, but that of purposeful development. It is their externality to one another combined with their concerted life that gives us the phenomenon of physical movement in physical space.

This doctrine of monads may be taken as representative of spiritualistic pluralism generally. It has never had the influence on scientific procedure which the doctrine to which it is opposed has had. For the atomic theory is an attempt to generalize the empirical fact of the divisibility of matter and to employ the apparatus of mathematics to make this generalization workable. As a result it has been embraced by many who are not materialists, but who have found it a potent instrument in scientific investigation. The theory of monads—and similar attempts to construct a pluralistic system of spiritual entities—is, as already noticed,

fundamentally a protest against materialism. When it addresses itself to the concrete facts of nature, it amounts to little more than the attempt to make the atoms spiritual—to substitute psychological properties for physical, and internal purposeful development for external physical motion. That is why it appears to be more an ingenious speculation than a fruitifying hypothesis.

3. The new pluralism.—Although philosophical usage has recognized in the theories just considered the two classical forms of pluralism, it should be observed that neither of them denies the fundamental unity and wholeness of the universe. There may be many atoms or many minds, but in either case there is only one universe, and this universe is a coherent and self-contained whole. The resulting speculative opposition between the one and the many has probably done more to keep philosophical interest in these systems alive than any genuine illumination which they afford. For this opposition has proved itself repeatedly to be a potent stimulus to philosophical reflexion. In terms of it a different form of pluralism may be defined which has many supporters among contemporary philosophers.

This new pluralism is not a doctrine of many substances opposed to monism conceived as a doctrine of one. It is rather the doctrine that there is no absolute unity in the universe, and it is opposed to the controlling absolutistic—and in that sense monistic—systems of the greater part of the 19th century. Absolutism in some form had as its supporters nearly all the leading thinkers of the world, and had become almost a settled dogma in philosophy. In the face of an absolutistic logic and of the principle of the conservation of energy, few philosophers had the courage to deny that the universe is a thoroughly coherent system in which, by virtue of its unity, a place and time and cause are, at any moment, implied for every event that has taken place or can take place. Thinking was constrained by the principle so eloquently set forth, *v.g.*, in Emil du Bois-Reymond's famous essay, *Ueber die Grenzen des Naturerkenntens* (Leipzig, 1872), that, did we know completely the state of the universe at any one moment, we should be able to calculate its state at any other moment. Opposition to this dogma was not very effective until towards the close of the century, when the writings principally of William James, John Dewey, F. C. S. Schiller, and Henri Bergson effectively challenged it and put it on the defensive.¹

James was, doubtless, the protagonist in the movement. He named his philosophy 'radical empiricism,' and occasionally 'pluralism.' In the preface to *The Will to Believe* (1897) he gives this general statement of his position:

'The crudity of experience remains an eternal element thereof. There is no possible point of view from which the world can appear an absolutely single fact. Real possibilities, real indeterminations, real beginnings, real ends, real evil, real crises, catastrophes, and escapes, a real God, and a real moral life, just as common-sense conceives these things, may remain in empiricism as conceptions which that philosophy gives up the attempt either to "overcome" or to reinterpret in monistic form' (p. ix).

Dewey's insistence that thinking is a real instrument which brings situations essentially inde-

terminate into determinate form, Schiller's rather individual and peculiar type of pragmatism, and Bergson's insistence that evolution is essentially creative and discontinuous, all exhibit this new tendency in different forms, but to the same end.

There has not yet, however, so far as the writer is aware, appeared any systematic presentation of the metaphysics underlying this new movement in philosophy. What is here called pluralism represents a tendency rather than an achievement. The general direction of this tendency in various departments of human interest is indicated below, but here an attempt may be made to suggest the basal conceptions which this tendency seems to imply. Emphasis falls on change, adaptation, reorganization, or action as an original and genuine fact wherever and whenever it occurs. Accordingly there is no moment in the world's history when all possible changes may be said to be determined. All things are in process of becoming determined, and what that process will be is contingent, not simply on what has already happened, but on what may happen. But what may happen is a genuine possibility with nothing fully to determine it before it arrives. The world is thus never fully made, but always in the making. The fact that it perpetually has a future negatives any absolutistic conception of it. Our inability to grasp the world as a single, unified, and complete system is, therefore, due, not to our incapacity or ignorance, but to its essential nature as a genuine time-process which reaches many concrete and specific ends, but which implies no absolute end that limits and closes the process as a whole.

We have in these considerations not, as might be superficially supposed, a revival of the doctrine of freedom as opposed to necessity, but the beginnings of a genuinely constructive metaphysics of activity. That is, pluralism does not start with a self-contained system of terms and relations which is, in general, responsible for everything that happens, and then claim that there may be free and spontaneous infractions of the system. It starts rather with the conception of activity as empirically exhibited in any change, and tries to generalize this conception and draw out the implications that seem to be empirically involved. As every action takes time, the course of the action when followed out empirically in detail gives us, not the effect of causes all operative at the moment when the action begins, but the interplay of causes operative only from moment to moment as the action proceeds. It is only where the action is viewed retrospectively from some specific point of view in its career that it can be construed absolutely; *i.e.*, only then can any of its issues be construed as the necessary effect of causes which have determined it. Such retrospective views can give us formulæ and laws of accomplished fact and thus afford a basis for prediction in similar cases, but they cannot give us any action in its concrete vitality and operation, because every action is forward-moving. Now, the generalization of this view of activity naturally forbids a monistic or absolutistic view of the world as a whole. For, if we now speak of the world as a whole, or of the 'universe' in any intelligible sense, we must speak of it, not as something already accomplished which can be viewed retrospectively, but as something moving forward with a genuine future and real possibilities. Yet, even so, we could not conceive it as a single movement, but only as the interplay of many movements. Otherwise the movement of the universe would be only movement abstracted from its concrete setting. It could not be itself a concrete movement illustrating the interplay of factors which operate only from moment to moment as the movement pro-

¹ For other writings of the same general tenor see the bibliography at the end of this article. The opposition under consideration has not always borne the name of pluralism. One finds the same general tendencies in the supporters of pragmatism (*v.g.*) and the advocates of personal idealism. The latter doctrine, represented principally by Henry C. Sturt in England and George H. Howison in America, is a reaction against absolutism in the interest of personality conceived as spiritual and free. Howison is frankly pluralistic and exhibits close similarities with Leibniz's doctrine of monads. Sturt bases all speculation on the principles that personal experience should be the basis of all philosophical synthesis and that personal experience is spiritual; but he believes in a 'totality of goodness,' a 'noetic totality,' and that the cosmos must be dominated by a single intelligence.

ceeds. Such appears to be the general metaphysical groundwork of the new pluralism.

In psychology these tendencies had their initiative, and here they have been most effective. During the past thirty years the attempt to construe the mind or consciousness as a substance or as a complex of elementary sensations united by fixed laws of association has progressively yielded to the attempt to construe mental life in terms of activity and response. Although many psychologists have independently contributed to this progress, the publication in 1890 of James's *Principles of Psychology* may justly be cited as critical. Here was the first effective and systematic attack upon the older view. To-day the idea that 'to have a mind' means 'to act in a certain way' has become a commonplace in psychology. To think has become an adventure and a real instrument in adaptation. Knowledge has ceased to be regarded as simply the mental counterpart or image of an objective order, and knowing has become an active participation in the order of events. In other words, to be conscious of objects does not mean to possess their psychical equivalents or imply a possible consciousness which might possess the equivalents of all objects whatever, and so be the perfect and complete representative of the world. It means rather to operate with objects effectively, to seek and avoid, to work changes—in short, to organize experience. This newer conception of the mind has spread beyond psychology and markedly affected anthropology and sociology. Primitive peoples and society are studied more in terms of what they do and less in terms of the supposed 'consciousness' that they were once credited with possessing.

In logic the new movement has been more equivocal in its success. It has illuminated in a brilliant way the concrete procedure of thinking, showing how distinctions like object or thing and idea arise in its course and are not the constituent elements of thinking itself. It has given us the logic of 'how we think.' But the opposition to formal logic which has too frequently accompanied this service has obscured many logical issues and problems. The structure of accomplished thought has been too much neglected. The older logic, especially in the form set forth by Bertrand Russell, is still an active and constructive opponent of the newer tendencies.

In morals and religion it is premature to attempt to state with conclusiveness the effects which the new movement is likely to produce. Yet, so far as morals are concerned, the general direction is fairly clear, as may be seen from the *Ethics* of Dewey and Tufts (1908). The tendency is away from fixed, *a priori* principles, and towards the concrete exigencies of life. Morality is conceived, not as a system of rules which should be obeyed, but as the type of life which characterizes beings who desire and wish, hope and fear. Responsibility is conceived, not in terms of an obligation imposed upon living, but in terms of an increasing sensibility of the value of human relationships. There are no absolutes. Justice, *e.g.*, is not such. It is rather the attempt to deal with human adjustments in a progressively effective manner. In brief, morality is not an absolute ideal which, being somehow imposed on man, orders him to be moral. It is the kind of life that man conceives to be most adequately expressive of his natural impulses and his ideal hopes.

There is in these considerations a close resemblance to the more refined forms of utilitarianism, but the doctrine is not utilitarian as commonly understood. No simple or elaborate computation of pleasures and pains is implied. No attempt is made first to estimate the greatest good of the

greatest number, and then to act accordingly. There is rather the attempt to take human relationships as they are empirically given—the family, friends, the State, love, property, marriage—to see towards what they point, what desires and hopes they engender, and then to bring the resources of knowledge to bear upon the perfecting of them or the elimination from them of that which makes communal living difficult and unlovely.

In religion the tendencies are not as yet well defined. It is possible, however, to recognize among religious writers influenced by the new movement a growing appreciation of religion as something humanly characteristic, rather than as a matter beginning with the gods. There is, too, as in the ethical tendencies, the denial of absolutistic ideas. Consequently there is recognized no one religion which can be judged valid as over against all others. In estimating the worth of any religion moral instead of logical or metaphysical standards are employed.

It is mainly as a new and potent stimulus to fresh philosophizing that current pluralistic tendencies are to be estimated. Under the absolutistic systems of the last century, philosophy had largely lost its vitality. It had become almost exclusively historical, a comparative study of systems, and was not an intimate companion of living or a vivid aid to reflexion. It was largely an intellectual interest set apart from the sum of intellectual interests generally. Pluralism has effected a change in this regard. There is to-day a genuine revival of philosophical interest which is making its impression not only upon the traditional 'problems of philosophy,' but also upon the whole domain of inquiry. It is common to hear of the 'new chemistry,' the 'new physics,' the 'new biology,' the 'new history.' When we inquire generally what is the underlying motive of this 'newness,' we almost invariably find a desire for the recognition of real possibilities and a revolt against absolutistic systems.

There is, doubtless, some confusion and disadvantage in grouping under the name of 'pluralism' the tendencies which have just been considered, although the grouping has warrant in contemporary usage. There is some confusion because these tendencies are motivated not simply nor always by metaphysical considerations growing out of the opposition between monistic and pluralistic speculations. They are motivated also by obvious empirical considerations. A thinker who takes the world as he finds it, and, in reflecting on it, follows the lead of concrete tendencies as they arise and come to an issue, will doubtless be led to view the world as a process involving many different factors and not as an already completely unified and permanently organized whole. He might find some disadvantage in calling his view of things pluralism, because he might feel that, in so doing, he was affirming kinship with some form of the substantial pluralism noticed in the beginning of this article, or with the leading motives and principles of that philosophy. Substantial pluralism is a positive doctrine. The new pluralism is as yet largely negative. It is not so much the affirmation that the world is many as it is the denial that the world is one. That is the main reason why it represents to-day a tendency in philosophy much more than a systematic metaphysics.

LITERATURE.—For the older form of pluralism it is sufficient to refer to the standard histories of philosophy and to introductions to philosophy. For the newer form the following will be found illustrating the tendencies set forth in the article, by way both of support and of opposition: H. Bergson, *Matière et mémoire*, Paris, 1896, *Essai sur les données immédiates de la conscience*, do. 1898, *L'Évolution créatrice*, do. 1907; J. H. H. Boëx-Borel, *Le Pluralisme*, do. 1909; J. Dewey, *Studies in Logical Theory*, Chicago, 1908, *The Influence of Darwin on*

Philosophy, and other Essays in Contemporaneous Thought, New York, 1910, *How We Think*, Boston, 1910; J. Dewey and J. H. Tufts, *Ethics*, New York, 1908; G. H. Howison, *The Limits of Evolution*, do. 1904; W. James, *The Will to Believe and other Essays in Popular Philosophy*, London, 1897, *A Pluralistic Universe*, do. 1909, *Essays in Radical Empiricism*, do. 1912; P. Laner, *Pluralismus oder Monismus*, Berlin, 1905; A. W. Moore, *Pragmatism and Its Critics*, Chicago, 1910; J. B. Pratt, *What Is Pragmatism?*, New York, 1912; C. B. FREDERICK J. E. WOODBRIDGE.

PLUTARCH.—I. Life.—Plutarch was born about A.D. 46, as may be inferred from the statement that in 66, the year of Nero's visit to Greece, he was a pupil of the Academic philosopher Ammonius in Athens (*de EI apud Delphos*, i, p. 385 B). He was a native of Chæronea in Boeotia, and showed a constant affection for his birth-place, which he ultimately made his home. Belonging to a family of good position, he received the best education open to a young man of his time. He was instructed in medicine and natural science by the physician Onesicrates (*de Mus.* 2, p. 1131 C); and, though there is no direct evidence of his public profession of the art of declamation, his rhetorical training is manifest in such of his early writings as the *de Fortuna Romanorum* (pp. 317–326) and the *Aquane an Ignis sit utilior* (pp. 955–958).

While still a young man, he was sent as an envoy representing his native town on a mission to the proconsul (*Præc. ger. Reip.* 16, p. 816 D). It seems that political business was also at any rate the ostensible cause of his visits to Rome (*Demosth.* 2), the earliest of which must have taken place in the reign of Vespasian (*de Sollert. Anim.* 19, p. 974 A). It is a legitimate assumption that he made several visits (cf. *Quæst. Conv.* viii. 7. 1, p. 727 B), and that they occupied a considerable time; for he shows an intimate acquaintance with Roman topography (e.g., *Poplic.* 8), and was so well known there that he was accustomed to deliver lectures in public (*de Curios.* 15, p. 522 E). Among the chief of his Roman friends may be reckoned C. Sossius Senecio, who was four times consul under Trajan, and to whom several of the *Parallel Lives* were dedicated, and Mestrius Florus, another consular, in whose company he visited the historical sites of Gallia Cisalpina (*Oth.* 14). During his residence in Italy he acquired a high reputation as a teacher of moral philosophy, and was rewarded with the devotion of a large band of pupils. It is evident that in this intercourse the medium of communication was the Greek language; for Plutarch makes the interesting confession that he was well advanced in years before he commenced to study Latin (*Demosth.* 2), and the errors which he makes in his incidental references to the language (e.g., *olive παρῖος, ὅλον ἀνερ παρῖος*) [*Quæst. Rom.* 103, p. 288 F)] are such as to prove that his acquaintance with it was never more than superficial.

Subsequently, if we may trust the authority of Suidas (s.v. Πλούταρχος), he enjoyed the favour of the emperor Trajan, by whom he was elevated to consular rank, while the governor of the province was enjoined to take his advice upon all matters of importance. It is probable that he survived to witness the early part of the reign of Hadrian, but died not long after 120; for he speaks of the Olympieum in Athens as unfinished (*Solon.* 32), whereas we know that it was completed by Hadrian between the years 125 and 130.

In the latter part of his life Plutarch seems to

have settled permanently at Chæronea, where he was uninterruptedly engaged in literary labour, except during the performance of the duties attached to his municipal offices. At Chæronea he filled the post of overseer of buildings (*Præc. ger. Reip.* 15, p. 811 B), as well as that of archon ἐπόρευτος (*Quæst. Conv.* ii. 10. 1, p. 643 F). He was also an associate of the college of priests to Apollo at Delphi (*ib.* vii. 2. 2, p. 700 E), and was a member of the council which superintended the organization of the Pythian games (*ib.* v. 2, p. 674 E). Notwithstanding these activities, he gave lectures from time to time both on philosophical subjects and on others of wider interest (cf. *de Rect. Rat. Aud.* 1, p. 37 C). In his domestic life his relations with his wife and children were strikingly tender and affectionate, and are charmingly illustrated in the letter of consolation addressed to his wife Timoxena on the death of their infant daughter, who was named after her mother. From this letter a single sentence may be quoted:

'As she was herself the dearest object for her parents to fondle, gaze upon, or listen to, so should her memory remain to us as a joy far exceeding its pain' (*Consol. ad Uxor.* 3, p. 608 E).

From the same source (5, p. 609 D) we learn that two of the four sons born to Plutarch and his wife died at an early age. The names of the two sons who survived, Autobulus and Plutarchus, are recorded in the dedication to them of the treatise *de Animæ Procreatione in Timæo* (p. 1030 D); and they are mentioned as taking part in the various discussions which arose at their father's table (cf. *Quæst. Conv.* viii. 10. 3, p. 735 C). We read also of the marriage of Autobulus (*ib.* iv. 3. 1, p. 666 D), who appears again as the narrator of the *Amatorius*, and as a character in the dialogue *de Sollertia Animalium*. But it was not merely within the family circle that the kindness and geniality of Plutarch's character were displayed. There is abundant evidence from his *Table Talk* (*Quæstiones Convivales*) and the other dialogues that to his friends he was an object of affectionate regard no less than of respect for his moderation and common sense. His writings have made a similar impression upon posterity. Among many testimonies to his worth we may instance the judgment of Mahaffy, who happily remarks:

'We feel him, as we feel Sir Walter Scott, not only the originator of an inestimably instructive form of historiography, but also essentially a gentleman—a man of honour and of kindness, the best type of the best man of his day' (*Greek World under Roman Sway*, p. 293).

2. Works.—The most celebrated of Plutarch's works is his *Parallel Lives*, intended to exhibit a comparison of the greatest men whom Greece and Rome had produced, by the publication of their biographies side by side in pairs. Forty-six of these lives have come down to modern times, and their world-wide celebrity makes it the less necessary to describe their characteristics, especially as we are more nearly concerned with the other branch of his writings, which is conveniently but inaccurately labelled the *Moralia*. It is enough to say that the *Lives* were not so much the fruit of historical research as an endeavour to illustrate the moral writings of their author by depicting the characters and dispositions of men who have actually lived.

The collection of the *Moralia* (ἠθικά) is so described because most of the treatises which it comprises deal with what may be called 'moral' subjects, although not with the principles of formal ethics. The writings are actually a miscellany, containing discussions on religion, literature, politics, education, philology, folk-lore, archaeology, and natural history, as well as some of a severely philosophical type. Plutarch is less a philosopher than an essayist, and the most characteristic of

his writings are those which, in dealing with such subjects as garrulousness, false shame, restraint of anger, or flattery and friendship, display, together with a profusion of illustration and anecdote, the good taste, common sense, and genuine humanity of their author. Not the least of their merits for the modern world is that, apart from a wealth of information on literary history, the *Moralia* are a plentiful storehouse of quotations from the lost writings of early poets and philosophers.

3. **Leading ideas.**—(a) *Philosophical and religious.*—By his adoption of the dialogue form for most of these treatises Plutarch acknowledged himself as much a follower of Plato's literary methods as he was formally an adherent of his teaching (cf. *de Def. Or.* 37, p. 431 A). The latest tendency of the Academy had been in the direction of eclecticism. Philo and Antiochus had abandoned the extreme scepticism of Arcesilaus and Carneades, and, while laying greater stress upon ethical doctrines, had made an approach towards the positions of the Stoics and Peripatetics by advocating life according to nature, and the plurality of virtue as well as its self-sufficiency. In the 1st cent. of the Christian era the beginnings of a new movement, of which Plutarch was the most distinguished representative, gradually became apparent. Its leading features are two—a closer application to the study of the Platonic writings, and the growth of a spirit of religious mysticism, which ultimately issued in Neo-Platonism. Not that the accretion of alien doctrine was entirely repudiated; for it has even been said of Plutarch that 'it would be hard to say whether the number of Stoic dogmas which he rejects exceeds that which he quotes with approval' (Mahaffy, p. 301). At the same time the most important of Plutarch's strictly philosophical writings are those directed from an Academic standpoint against the Stoics (*de Stoicorum Repugnantiis*, *de Communibus Notitiis*) and against the Epicureans (*adversus Coloten*, *Non posse suaviter vivi secundum Epicurum*). His positive contributions towards the elucidation of the Platonic text are contained in the *de Animæ Procreatione in Timæo*, and are of much less importance to the student of philosophy than the controversial writings previously mentioned. Plutarch adopted from Plato as his two ultimate first principles the One and the Indeterminate Dyad (ὁὐὰς ἀόριστος). The latter, as the element of shapelessness and disorder, is called Infinity (ἀσέπεια), whereas the nature of the One, by defining and occupying the Infinity, which is empty, irrational, and indeterminate, endows it with form, and so makes it capable of supporting and containing the determination which is a necessary accompaniment of sensible objects (*de Def. Or.* 35, p. 428 F ff.). The combination of these two principles, unity and duality, is seen most clearly in the production from them of numbers (*ib.*). The creation of the world was the result of the concatenation of three factors—God, matter, and form. Matter is the shapeless underlying substratum; form is the fairest model; and God is the best of causes. God, in His desire to leave nothing indeterminate, but to organize nature with proportion, measure, and number, produced a unity by a combination of His material. This was the universe (κόσμος), equal to matter in extent, and similar to form in quality (*Quest. Conv.* viii. 2, 4, p. 720 A, B). It must be remembered, however, that, according to Plato's doctrine, matter, being itself formless and inert, is not the cause of evil, which proceeds from a foul and malignant necessity struggling with and rebelling against God (*de Anim. Procr.* 6, p. 1015 A, *de Is. et Osir.* 48, p. 370 F). The war of these opposing principles is especially to be detected in man's

chequered existence, and in the region of inequality and change which lies between the earth and the moon (*de Is. et Osir.* 45, p. 369 D). God exists not in time, but in eternity, which for His unity is an everlasting present, without beginning or end, past or future. As being absolute unity, He is incapable of differentiation (ἐρεβός [de *EI apud Delph.* 20, p. 393 A, B]). God sees, but cannot be seen (*de Is. et Osir.* 75, p. 381 B). He is absolutely pure and undefiled by any form of existence liable to destruction and death; hence our souls, which are encompassed by the body and its attributes, cannot reach God, save only in so far as, by the exercise of pure reason and through the medium of philosophy, they may attain to an indistinct vision of His image (*ib.* 78, p. 382 F). Life in the body upon earth is an exile of the soul (*de Exil.* 17, p. 607 D). It has come from the gods and will return thither, so soon as it is discharged from the trammels of the body. It is like a flame which shoots upwards in spite of the misty vapours that cling round it and seek to bind it to the earth. Hence it is not the bodies of good men that go to heaven; but their souls pass into heroes, from heroes into demons, and, when at last they have been mysteriously cleansed and sanctified, so that they are free from any mortal affection, then in no merely conventional sense, but in very truth and by a blessed consummation, they are caught up to join the gods (*Rom.* 28, *de Def. Or.* 10, p. 415 B). Some souls are not entirely imprisoned within the body, but, by keeping the purest portion in external association with the topmost surface of their owners' heads, who are thus lifted upwards and saved from complete submersion, they preserve their immortality free from bodily taints. This part, called the intelligence (νοῦς), and generally supposed to be innate, is actually external, and would more properly be known as 'demon' (*de Gen. Soc.* 22, p. 591 D). It is unreasonable to disbelieve in the inspiration of certain individuals, if we retain our belief that God is a lover of mankind. The ordinary man learns the commands of God by signs, which the prophetic art interprets, but there are a few who on rare occasions have direct intercourse with the divinity. Further, when souls freed from the body have at length become demons, they still retain their interest in the world which they have left, as Hesiod was aware (*Op.* 120), and are allowed by God to assist the final struggles of those aspiring souls which are yet in the last period of their incarnation (*de Gen. Soc.* 24, p. 593 A ff.). There are, however, bad demons as well as the good; and they are elsewhere described as belonging to the borderland which separates gods and men, and as subject to mortal affections and the changes wrought by necessity (*de Def. Or.* 12, p. 416 C; cf. 17, p. 419 A, *de Is. et Osir.* 25, p. 360 E). These passages are typical of much in Plutarch, and their Platonic character is unmistakable. At the same time, it should be observed that, in emphasizing his belief in demons, he was echoing the teaching of the Stoics (see art. DEMONS AND SPIRITS [Greek]). The same remark applies to his treatment of *μαντική*. Divination is the gift of God to man (*de Def. Or.* 8, p. 413 C), but the decay of oracles is not on that account to be attributed to Him, but rather to the failure of matter (*ib.* 9, p. 414 D, E). In a curious passage (*ib.* 40, p. 432 D) he speaks of the prophetic capacity as resembling a sheet of white paper, ready to receive impressions from the warnings of sensation, when the seer is withdrawn (ἐκστῆ) from the influences of the present and is filled with the spirit of prophecy (ἐνθουσιασμός). This inspiration may come from the inner constitution of the body, but is frequently conveyed either through air or through water at particular

places in the form of flowing water or breath. Elsewhere (*de Pyth. Or.* 7, p. 397 D) he says more simply that God does not inspire the voice of the prophetess or the words which she uses, but merely provides the sense-impressions (*φαιναίσας*), and gives light in the soul, enabling it to look upon the future. Thus, though agreeing with the Stoics in upholding the truth of *μαντική*, Plutarch refused altogether to countenance the Stoic doctrine that the divine spirit permeated every stone and piece of metal in the world (*ib.* 8, p. 398 C). His whole attitude towards religion is guided by a spirit of conservatism, seeking to uphold each venerable institution, while finding elements of truth in the various devices by which philosophers sought to remove traditional difficulties (*ib.* 18, p. 402 E, *Amat.* 13, p. 756 B). Thus he would steer a middle course between superstition and atheism, recognizing that there is not so much difference in the nature of the gods as the various conceptions of them by Greeks and barbarians, and the names given to them, might seem to imply, but that there is only one Reason that sets in order and one Providence that controls the world (*de Is. et Osir.* 67, p. 377 Ff.). The elaborate discussion of Egyptian religion (*de Iside et Osiride*) is a testimony to the progress of these foreign cults in the estimation of his fellow-countrymen, and is so constructed as to show that the ideas which underlay them are essentially the same as those which are recognized by the theologians of Greece. The leading motive of the short essay *de Superstitione*, which is, however, regarded by some merely as a rhetorical exercise undertaken in defence of a paradox, and not therefore characteristic of its author's real view (Mahaffy, p. 318), is to show that a perverted and ignorant belief respecting the nature of the gods and their attitude to mankind is more harmful to the peace of the soul than an obstinate refusal to believe in their existence. While he had no sympathy with Epicurean rationalism, which destroyed the value of piety (*adv. Colot.* 27, p. 1123 A), he was no less disinclined to accept the reckless allegorizing of the Stoics, which, by making Ares a mere synonym for combativeness, Aphrodite for desire, and Athene for intelligence, destroyed the individualities of the old gods and plunged their worshippers into a gulf of atheism (*Amat.* 13, p. 757 B). It was therefore quite consistent with his general attitude towards religion that Plutarch, as we have seen, himself exercised priestly functions, and attended with his wife to take part in the sacrifice offered on the occasion of the festival of Eros at Thespiæ (*ib.* 2, p. 749 B). The same moderation may be detected in his attitude towards Orphism. While he wholeheartedly condemns the follies of excess attendant upon the popular celebration of its rites, the modes of cleansing and purifications which were themselves filthy, the wearing of ragged garments, the wallowings in the mud, the ridiculous importance attached to the eating or drinking of particular solids or liquids (*de Superst.* 7, p. 168 D, 12, p. 171 B), he was himself the advocate of a reasonable abstinence and asceticism (*de Tuend. Sanit.* 19, p. 132 E, *de Is. et Osir.* 2, p. 352 A), and, by his abstention from eggs for a season in consequence of a dream, laid himself open to the suspicion of having adopted Orphic tenets (*Quæst. Conv.* ii. 3. 1, p. 635 A).

We have seen that Plutarch regarded the existence of evil as an outcome of necessity, but he has much more to say on the kindred problem why the gods permit the existence of moral evil without exacting appropriate punishment. To this subject he has devoted the important dialogue *de Sera Numinis Vindicta*. The occasion is provided by a supposed lecture of Epicurus, and various answers

are given to the objection raised against what is assumed to be the ordinary dealing of Providence, namely, that the delay in punishment encourages the sinner and disappoints the injured. Thus it is said (1) that the gods wish to give time for repentance, and thus set an example to others, teaching them to beware of hasty resentment, and (2) that by this delay they are able to distinguish those who are incurable and require extirpation from those who, having erred rather through ignorance than of deliberate choice, are deserving of remedial treatment (5, p. 550 Cff.). Again, since it is always possible that a wicked parent may beget a virtuous offspring, it is natural that God should not immediately root out an evil stock, without waiting to see whether it will not produce a good fruit (7, p. 553 B). But the best answer of all is that the delay is only apparent, since sin, by the misery which it causes to the sinner, brings its own punishment with it, so that length of life becomes an aggravated unhappiness (9, p. 554 A ff.). We are then introduced to the topic of punishment in the next world, and the dialogue concludes with a myth concerning the experiences of one Thespesius, who, during a trance, was permitted to be a witness of the treatment accorded to the souls of the dead. The myth is obviously modelled on the story of Er in the tenth book of Plato's *Republic*, and serves once more to illustrate Plutarch's admiration for his great predecessor. The same tendency appears in the parallel case of the myth of Timarchus in the *de Genio Socratis*, where an account is given of the supernatural visions granted to him after his descent into the cave of Trophonius at Lebadeia (*de Gen. Soc.* 21, p. 589 Ff.).

(b) *Ethical*.—The strictly ethical treatises are in the nature of short essays on moral subjects, based upon psychological observation, and designed to effect the moral improvement of their readers. Here we find Plutarch in the character of a physician of the soul, a public preacher who, so far from being inspired with the fervour of a new revelation, sought, by means of copious illustration and apt quotations from the poets, to instil a reasonable exercise of the humaner virtues. The practical aim of his advice may be seen in the three treatises belonging to the consolatory type (*παραμυθητικοί*), acknowledged by the schools as a special branch of casuistry (*παρασκευαστικός τόμος*; see the present writer's notes on Cleanth. frag. 92 f. [*Fragments of Zeno and Cleanthes*, Cambridge, 1891]). These are the *de Exilio* and the *Consolatio ad Uxorem*, which have already been mentioned, and the more elaborate *Consolatio ad Apollonium*, which was largely indebted to Crantor's *περί Πένθους*. In fact, a considerable number of these writings are open to the suspicion that they are dependent upon unacknowledged, principally Stoic, sources.

As an example we may instance the short treatise *de Virtute Morali*, which contains comparatively little of Plutarch's characteristic manner, but, while designed to support the Platonic psychology by advocating the submission of the emotions to reason rather than their entire eradication, is constructed to serve as a compendium of moral doctrine with material drawn from the severer text-books of the Peripatetics and Stoics.¹

He had no sympathy with the formal dogmatism of the schools, but did not hesitate to borrow from them whatever approved itself to his common sense as conducive to moral welfare. When we turn to those passages where he seems more especially to give utterance to his innermost convictions, we find him inculcating self-control, patience, and cheerfulness as the surest defences against the jars and worries of social and domestic life. Thus,

¹ M. Pohlenz, in *Hermes*, xxxi. [1896] 332, 338, finds the original source of the treatise in a work of Hieronymus of Rhodes.

after mentioning the advantages of various forms of abstinence, he continues:

'I put beside them a vow no less acceptable to the gods: I resolved, as if I were making a wineless oblation of milk and honey, to keep myself free from passion first of all for a few days; then, to extend the period by gradual experiment to one or two months, so that I continually made progress in the tolerance of evil, exercising an unceasing control upon my tongue in order to appear cheerful and void of resentment. I refrained consistently from base talk and extravagant action, and repressed any emotion which provoked violent agitation or shameful remorse for the satisfaction of a mean or trifling pleasure. By these means I am contented, and, by the favour of heaven, experience has confirmed the truth of my conviction that the spirit of cheerfulness, gentleness, and kindness is to none of his associates so gracious, welcome, and comforting as to its possessor' (*de Cohib. Ira*, 16, p. 464 C).

In another passage he deduces a similar moral from the contemplation of the glories of the physical world, which, following ultimately a Peripatetic model (I. Bywater, in *JPh* vii. [1876] 80), he compares with an august temple, where the most exalted mysteries are being continually celebrated:

'Yet men debase this festival which God has provided for them by unceasing lamentation and dejection, permitting themselves ever to be harassed by wearisome anxiety' (*de Tranq. An.* 20, p. 477 E).

Just as in religion he endeavoured by compromise to adjust extreme views, so in ethics he sought to reconcile the divergencies of the dogmatic schools by refusing to accept in their entirety the tendencies with which he partly sympathized.

'He will not adopt with Plato the equality of the sexes, or with the Stoics the injustice of slavery, or with the Pythagoreans the rights of the lower animals to justice at the hands of men, yet he goes a long way with all three—magnifying the position and the dignity of the house-mother both by example and precept, inculcating everywhere kindness and consideration to slaves, adopting even vegetarian doctrines in some of his earlier treatises, and upholding with satire and with paradox the superior insight and intelligence of the animals we patronize or oppress' (Mahaffy, p. 301).

(c) *Political*.—In regard to politics, Plutarch repudiated the Epicurean advocacy of abstinence (*Pyrrh.* 20) as expressed in the formula 'Live in retirement' (*ἀδὲ βίωσας*), against which he directed a short treatise (*de Latenter Vivendo*, pp. 1128–1130). But he lived in an age in which the limits of political activity were severely narrow, and he was the last man to waste himself in chafing against a restriction which it was neither wise nor possible to break down. Thus he sincerely believed that monarchy was the most perfect of all forms of government (*An Seni sit Resp. ger.* 11, p. 790 A), but that the wise ruler must be careful to observe a mean between laxity and severity, so that he may not incur either the hatred or the contempt of his subjects by aiming at despotism or making concessions in favour of popular government (*Thes. et Rom. Comp.* 2). He recognized that it was idle to rebel against the imperial dominion or to cast wistful eyes upon the historic battle-fields of Marathon and Plataea (*Præc. ger. Reip.* 17, p. 814 C). The chief political virtues are not pride and stubbornness, but patience and tolerance, which are the fruits of a well-trained reason (*Coriol.* 15). He has even a good word to say for Theramenes and his proverbial 'boot which fitted either leg' (*Præc. ger. Reip.* 32, p. 824 B), and holds that the politician should make it his chief aim to avoid a crisis. Thus, if the greatest blessings which communities can enjoy are taken into account, it will be found that, in regard to peace, the Greeks have nothing left to desire, since every form of warfare, domestic or foreign, has come to an end; while, in respect of freedom, they enjoy as much as their masters allow them, which is perhaps as much as is good for them (*ib.* p. 824 C). What sort of politics other than the petty activities of municipal government was it possible for Plutarch to recommend? His own life is now seen to furnish a near approach to the only ideal

which he regarded as attainable. A public lawsuit or a deputation to the emperor is the chief opportunity for a courageous and prudent man to seek his own advancement (*ib.* 10, p. 805 A). We should not always be striving after the highest offices, such as that of *strategus* in Athens, *prytanis* in Rhodes, or *Boeotarch* in Boeotia; but rather we should endeavour to impart lustre to those of less account, and preserve a mien suitable to the sphere of authority assigned to us by the responsible powers (*ib.* 17, p. 813 D, E). Such was the temper of the man whose chief title to fame is as the biographer of the heroes of the ancient world. Nevertheless, Plutarch was far from being a time-server, or one who would put his private interests before his country's good (*ib.* 18, p. 814 D). His quietism was founded on the reasoned conviction that, as resistance is impossible, a cheerful submission is wiser than an inopportune struggle against overwhelming odds (*cf. Philop.* 17). But, whereas the folly of ill-judged patriotism may at least claim the sympathy of a generous heart, the conduct of those who make the welfare of Greece of no account as compared with their own comfort and enjoyment deserves our profound contempt (*Non posse suaviter*, 19, p. 1100 D).

LITERATURE.—The chief texts of the *Moralia* are by D. Wytttenbach, 8 vols. in 15, with notes and *index verborum*, Oxford, 1796–1830; by F. Dübner in the Didot series, Paris, 1839–42; and by G. N. Bernardakis in the Teubner series, 7 vols., Leipzig, 1888–96. For the life and opinions of Plutarch the following may be consulted: R. Voikmann, *Leben, Schriften und Philosophie des Plutarch von Chaeronea*, 2 vols., Berlin, 1869; J. P. Mahaffy, *The Greek World under Roman Sway*, London, 1890, pp. 291–350; J. Oakesmith, *The Religion of Plutarch*, do. 1902; R. Hirzel, 'Plutarch,' Heft iv. of *Das Erbe der Alten: Schriften über Wesen und Wirkung der Antike*, ed. O. Crusius, O. Immisch, and T. Zieliński, Leipzig, 1912. A. C. PEARSON.

POINTS OF THE COMPASS.—I. *INTRODUCTORY AND GENERAL*.—Owing to the marked way in which, in several lands, notably in ancient Greece and in Christendom, sacred buildings have been placed with their most important front towards the east, this subject is generally known as orientation, and that term will be used in this article. As a title it might, however, in some cases be open to the charge of begging the question, and the one here chosen is non-committal and more comprehensive.

The religions of many peoples—perhaps of most—have taken account of the cardinal points of the compass, though the importance attached to them may have varied. The feelings aroused by sunrise and sunset must always have been very much the same all the world over, and they are in some degree expressed by the terms used for the cardinal points. Skeat (*Etymological Dictionary*², Oxford, 1884) traces the word 'east' to the Aryan root *us*, 'shine,' 'burn.' Bradley (*OED*) gives the root *aus*, 'dawn.' Skeat derives 'west' from the Aryan root *was*, 'dwell,' and says that the allusion is to the apparent resting-place or abiding-place of the sun at night. 'South' seems to mean simply the 'sunned' quarter; the derivation of the word 'north' is unknown (Skeat).

The Hebrew imagines himself to be facing east and describes east, west, north, south by the expressions 'before,' 'behind,' 'left,' 'right.' This nomenclature, even more than the Aryan tongues, suggests ideas about the four quarters of the horizon that were definite and important, and it is therefore not surprising to find that the point of the compass is stated with precision in the story

of the Fall and elsewhere. This precision is not really inconsistent with the inaccuracies in Gn 11¹⁴ and other passages. The Indo-European peoples picture themselves as facing north and call the hand towards the rising sun the better hand, the dexterous one, and the other (although the Greek veiled it by euphemisms) the sinister. The Etruscans, on the contrary, thought of themselves as looking south; the Roman augurs continued the tradition and considered the left the lucky hand. Thus it will be seen that the Indo-European peoples really had the same notions about the east as the Semitic. Walter Johnson gives useful examples of this habit (*Byways of British Archaeology*).

The subject may be said to have been neglected if not ignored till within the last decade or two. Most books on architecture, even those dealing with countries in which orientation is a marked characteristic of the buildings, make no reference to it; the most comprehensive general encyclopædias have short and perfunctory articles or none at all; works on folk-lore, which are of necessity much concerned with ritual, seldom record any observations or offer any explanations, while very often neither the word 'orientation' nor the names of the cardinal points are to be found in the index. This neglect, at least so far as Britain is concerned, is no doubt due to the belief that the custom of orientation has no historical significance, that it was even in the earliest historical times inherited from a long-buried past and had comparatively little relation to the beliefs of the age that practised it. Hence many published plans of buildings have no compass at all; of the others most have but a rough indication with nothing to show whether true north or magnetic north is intended. It is still more rare to find a plan which, while stating that the observation is magnetic north, gives also the date of the observation, although it is well known that the variation between the magnetic and the true north changes rapidly and irregularly. In the south of England the needle now points about 16° W. of polar N.; this difference is diminishing six or seven minutes a year, so that, if the decrease were constant—which it is not—the variation would be reduced by a degree in about nine years. In works of the highest scientific value we find such errors as the plan of St. Peter's at Rome turned round so as to bring the altar to the east; the magnetic variation shown east instead of west; while a third goes to the opposite extreme and carries accuracy so far as to give not only the date of the observation but the hour also. Descriptions are often loose; to say that a church 'faces east' may mean either an east door or an east altar; burial 'to the east' is equally vague; when Guiderius says, 'Nay, Cadwal, we must lay his head to th' East,' he certainly meant 'to the west' (Shakespeare, *Cymbeline*, act iv. sc. 2). The only unambiguous descriptions are 'altar to east (or west),' 'feet to east (or west).'

Lately the architectural side of the subject has been approached by a few observers in a scientific spirit in Germany and in England, and some records of the customs of savage races have been made.

In this article we shall deal with the following questions: (1) ritual acts: the direction in which the suppliant looks while praying or sacrificing, during baptism, or while performing other ritual acts; (2) the aspect of buildings: the direction of the main axis, or the aspect of the door, altar, or other feature of the temple, using that word in its widest sense; (3) burial: the direction in which the grave is made, or the body of the dead is placed in the tomb, and consequently the planning of the tomb itself; (4) beliefs unclassified (called for brevity 'superstition'): points of the compass from which attacks of evil spirits are most to be feared, and the like.

It is clear that all these, especially the three first, are in a great degree interdependent. They should therefore be discussed together wherever possible. But in some cases this would be inconvenient, and it will be necessary to consider separately the orientation of the more important classes of temples.

1. Ritual acts.—The practice of orientation has been very generally observed in ritual acts, although from the nature of the case it has not in the past left such a clear record as have temples and burials.

The direction in which the suppliant looks when at prayer or performing ritual acts has had, we shall find, in almost every form of religion a direct relation to the sun, his beliefs about it and the

emotions which it arouses. Those beliefs and those emotions range through every shade from sun-worship and totemism to perhaps mere wonder at the never-fading impressiveness of the phenomenon of sunrise. In the relatively few cases in which ritual is independent of the position or course of the sun it is governed by simple and easily ascertainable facts, such as the Muhammadan's prayer towards Mecca.

It is probable that some peoples who did not orientate their buildings did face a particular direction when in the act of adoration; some savage races who have not reached or have scarcely reached the stage of temple-building observe an orientation in their ritual; the Jew and the Muhammadan observe what may be called a 'local' orientation in prayer; the Christian still retains a considerable amount of traditional orientation in his ritual.

2. Temples.—The aspect of buildings must almost inevitably have a close relationship with the direction in which the prayer is uttered or the rite performed, for it is governed by the same ideas—this notwithstanding the very varying degrees in which the building, in different religions, can be regarded as a house of prayer or as the home of a god. But, whereas a more or less correct general position sufficed or suffices for the private person at prayer, the temple is the work and the instrument of the professors of religion and for the most part of somewhat elaborate religions, each acknowledging and dedicating its buildings to many different gods, as the ancient Greeks, or in honour of special patron saints, as in the Christian Church. This consideration complicates, or has been thought to complicate, the inquiry into this part of the subject. We shall also have to bear in mind that in the case of the building, to a greater extent than in the attitude of prayer, tradition counts for much, as in the Christian Church at the present day, long after the matter has ceased to be thought important or indeed to have any meaning at all.

3. Burial.—The position of the body in relation to the points of the compass varies much, but the underlying idea which dictated it is in the main fairly general. Expressed briefly, it is that a dead person is laid in the grave in that position which will make the journey of the spirit as easy as possible. The journey is usually to a home of the dead. Consequently the position varies according to the conception of that home.

This idea of facilitating the journey of the dead is, however, sometimes found acting in an opposite direction: it may be desirable to keep the spirit in the grave. Thus the soul of the chief should continue to reside among and to protect the tribe; that of the wicked man should be prevented from returning to the village and disturbing the peace of the surviving relatives. J. G. Frazer sees a survival of the latter feeling in the custom in this country, not long since given up, of burying a suicide with a stake through his body (*The Belief in Immortality*, London, 1913, i. 164). The further opinion may perhaps be hazarded that the selection of cross-roads as the place was suggested by the thought that, if the spirit did make its escape, it might be puzzled as to which road led home; in the same way it is still believed that the sick are cured by being taken to the cross-roads, the original idea probably having been that, when the evil spirit was expelled from the patient, it was liable to lose its way.

The journey of the spirit may be made (a) to the land of the forefathers, (b) to an under world, (c) to the isles of the blest, (d) to the place where the totem of the dead person resides. There are some doubtful exceptions to this rule, namely burial towards one

of the cardinal points or in the path of the sun—doubtful because they may after all prove to be connected with a journey. We shall have to consider these classes more at large. Meanwhile we must bear in mind Frazer's warning not to expect uniformity even among people of one tribe; modes in the disposal of the dead vary according to sex, rank, moral character, and manner of death.

(a) *The land of the forefathers.*—The journey to the land of the forefathers is the hypothesis of Herbert Spencer. The land of the dead is the land from which the tribe migrated. The idea may be summed up in the words, 'The dead man has gone home.' The body is laid with the feet in that direction. It is this hypothesis that now finds favour as the one which best fits the facts, rather than that of Tylor, to which further reference is made below. But it will none the more bear too general an application. It appears to express the most common conception among savage tribes at the present time.

(b) *The under world.*—The most familiar instance of this conception is that of mediæval Christianity. The belief appears to be shared by some primitive peoples of to-day. A. C. Kruijt, whose observations are used by Perry, maintains (see art. *INDONESIANS*, vol. vii. p. 245) that an idea common to all conceptions of the hereafter is that the soul has to cross the sea, and that this belief found its origin in the theory that the sun crossed the sea every day on its way to the land of souls under the earth; he points out that the word meaning 'setting of the sun' is used for dying, and states that many of the tribes think that the land of souls is under the earth.

(c) *The isles of the blest.*—There are two remarkable examples of belief in the happy islands. They are from opposite ends of Europe. The first is that of the Greeks. Of the second W. Ridgeway says:

'There is some evidence that the northern cremationists, like the Achæans, believed that the Spirit-land lay in the West. Perhaps the ordinance of Odin that the ashes of the dead should be sent out to sea points in this direction, but it is clear from Procopius [*de Bell. Goth.* iv. 20] that in the sixth century of our era, the peoples of north-west Europe held that the soul of the departed journeyed westward . . . into the western part of Britain. A peninsula opposite Britain was inhabited by a folk (probably the Veneti of Armorica [Brittany]), who . . . were subject to the Franks, but paid no tribute by virtue of the ancient service of ferrying the souls out into the Ocean to Britain' (*The Early Age of Greece*, Cambridge, 1901, i. 517).

The expression 'to go west' for 'to die' is still in use and has been extended to include anything that is lost.

(d) *Totemism.*—Two instances will be noted below in which a man is buried with his head to the point of the compass appropriate to his totem; but these may prove to be cases of class (a), the journey of the spirit to the land of the forefathers.

Each of the above classes presupposes a journey to be made by the soul. It remains to notice the apparent exceptions referred to above. Burials, chiefly pre-historic, occur which seem to have a direct relation to the course of the sun and do not suggest a reference to a journey. Thus the graves of Teutonic peoples on the Continent and in England often, if not generally, have the foot towards the N. but occasionally to the S.; sometimes they are E. and W. with the foot sometimes E. and sometimes W., but with the body laid on its side and facing S. The idea may have been a desire for comfort, and seems to take the form of a wish to lie in the path of the sun. It lends some weight to Tylor's hypothesis, applied by him no doubt too generally, viz.:

Orientalism originates in 'the association in men's minds of the east with light and warmth, life and happiness and glory, of the west with darkness and chill, death and decay, [which] has from remote ages rooted itself in religious belief and has affected the position alike of temple and of grave' (*PC* ii. 421).

To the ancient Egyptian the west was the land of souls; he complains:

'The West is a land of sleep and of heavy shadows. . . . Let me be placed by the edge of the water with my face to the North, that the breezes may caress me' (G. Maspero, *The Dawn of Civilization*, Eng. tr., London, 1901, p. 113).

The legend that Christ was buried with His head to the W. is attributed by Tylor to wide-spread solar ideas. We have an instance of Australian tribesmen who prefer to lie 'in the path of the sun' (Johnson, p. 274). The Tlingits, a people of Alaska, bury with the head to the sunrise (Frazer, *Totemism and Exogamy*, London, 1910, iii. 274); the reason given, namely to allow the spirit to return, makes it doubtful whether this class is really an exception to the general rule that position is determined by desire to facilitate a journey. As a doubtful case we may perhaps class with it the instance mentioned below of the Egyptian buried in a cramped position in the hope, it is suggested, of facilitating the re-birth of the body.

4. *Superstition.*—No generalizations can at present be made on this branch of the subject. Most of the beliefs may presumably have some connexion, now lost, with ritual and ideas of death. A few examples will be noted below (VI. 12, X. 1, and table at end of art.). Probably a good deal of material still remains to be collected.

II. *EGYPT.*—I. *Temples.*—The Egyptians appear to have been indifferent as to the direction in which their temples lay; at least, if they had a system, it is by most people considered to be unknown to us. J. Fergusson expressly states (*Hist. of Architecture*, London, 1891-93, i. 119) that they did not orientate their buildings; but in his day no system had been suggested, and he accepted the obvious reading of the evidence. The evidence is that the temples face in all directions. The silence of other writers on Egyptian architecture may be assumed to mean that they take the same view as Fergusson, and students of the elaborate religion of the Egyptians give us little help.

Attempts have recently been made, however, to reduce the apparent confusion to a system. Two of these attempts—those of Nissen and of Lockyer—were apparently made more or less independently of one another, but they may be considered together. Nissen discusses eleven examples.

Every temple is directed towards the point on the horizon at which the sun or the star to which the temple is dedicated rose or set on the feast-day at the time when the temple was founded. When the axis of a temple lies nearly E. and W., it necessarily points to sunrise on some day of the year and to sunset on some other day, and the temple is then called a sun-temple. If, however, the axis points to a spot on the horizon outside the limits of sunrise and sunset at midsummer, the temple is considered to be a star-temple. The point on the horizon at which the sun or a star rises on any particular day of the year is constantly changing, owing to the movement of the pole of the earth round the pole of the heavens, and it is pointed out by Lockyer that in 13,000 years this point for a star may shift 47°. Some star is then looked for which rose or set at that particular spot at some time during the epoch in which the temple must be supposed, on archaeological grounds, to have been founded. A likely star having been found, the exact date, to within a very few decades, at which it rose or set at the point in question is easily calculated. This date is the date of the building. A likely star is one which can be shown to have some possible connexion with the temple, and great ingenuity is shown in finding such connexions; e.g., the temple of Sebak-Ra at Ombos seems to point towards the setting of Arcturus, which was sometimes represented by the Egyptians as a crocodile, and the god Sebak-Ra was also represented as crocodile-headed (Nissen, *Orientalism*, p. 52). Inscriptions from Annu, Denderah, and elsewhere are quoted by both Nissen and Lockyer describing the foundation of temples, a ceremony of the greatest importance: the king himself stretches the measuring-cord and directs his glance to the course of the rising stars, his eye is fixed on the Great Bear, and he gives the corners of the temple. But it is admitted that the Denderah inscription is very late; it refers to the emperor Augustus, who, it is said, was never at Denderah; nor did the Great Bear set at Denderah in his time; it must therefore reproduce an earlier inscription (Lockyer, *The Dawn of Astronomy*, p. 178). An exact orientation was of the greatest importance, and Lockyer suggests that the long series of halls and courts which formed an Egyptian temple would make an

excellent telescope of a sort; the halls, especially those at the farther end, were dark, and the dividing walls were each pierced by a central doorway; a priest standing in the dark at the farther end, looking through this long series of doorways, would have a good view of a star at heliacal rising, i.e. rising a little before sunrise, and would thus be warned that it was time to prepare sacrifice; the fairway to the horizon was always carefully preserved uninterrupted. True, later temples were sometimes built right across the fairway, but that was done on purpose by the later priests to spite those of the old temple. The sun-temples make admirable observatories for ascertaining the exact time of the summer solstice; the measurement of time was a most important matter in an agricultural country; it was a duty monopolized by the priests. The orientation of star-temples is often what we may call indirect, i.e., it is not the long axis, but the short, that points to the rising of the star, as at Denderah and Edfu (Nissen, pp. 36, 43); and the Egyptians had the habit of building neighbouring temples at right angles to one another (Lockyer, pp. 188, 316; Nissen, p. 59).

These views have been accepted by R. Phené Spiers (*EBR*¹¹, s.v. 'Orientation'), E. A. Wallis Budge, and F. C. Penrose. They are strongly controverted by a writer in the *Edinburgh Review* (clxxx. [1894] 418 ff.). The weak points of the theory, besides those indicated above, are that, owing to the movement of the earth's axis, the same star would not serve for more than 200 or 300 years, as Lockyer admits; that that is a very short space of time in Egyptian history, so that the fact must have been observed comparatively soon; that the very late inscriptions describing the setting out of the temple with a cord by the king, inscriptions rewritten and indeed freely 'edited,' should not be accepted as plain statements of fact, devoid of poetic or religious fervour. The writer in the *Edinburgh Review*, indeed, points out that the older inscriptions say nothing about the star, while in the later instances 'the Great Bear' simply means 'the north.' Lockyer does not support his views of Egyptian sacerdotal history by reference to authorities. Nissen is less fanciful, but scarcely more convincing.

The sun and stars entered so largely into Egyptian religion and the observation of their movements was so important for making the calendar that the case can at most be said to be not proven. This would seem to be the view of W. M. Flinders Petrie (art. *ARCHITECTURE* [Egyptian], vol. i. p. 722 ff.), who, however, appears to avoid a definite statement of opinion. He does, indeed, give interesting facts about the temple of Abydos (p. 723), but no explanation of them or even a hint as to whether he thinks an explanation is required. In the earliest plan the entrance is a passage between walls 4 ft. apart and 35 ft. long, facing S.; it is probably of the 1st dynasty; in the new temples of the VIth dynasty the principal door is to the N. and the lesser to the S.; later still it was several times rebuilt or remodelled facing N. and then E.; in all there are seven (*sic*) different plans, dating from the 1st to the XXVIth dynasty and facing successively S., N., N.?, N., N.?, E., E., E.

2. **Burials.**—In the earliest burials in Egypt the body is said to be laid on the left side, lying N. and S. with face towards the E. (Maspero, pp. 112A, 361). Budge, referring apparently to the same period, says that the skeleton is laid on the left side with limbs bent and the face generally to the S., adding, however, that no invariable rule seems to have been observed as to the points of the compass. At a somewhat later but still pre-historic time and before the days of embalming, the graves are 'oriented either north or south' (*Egyptian Ideas of the Future Life*, p. 159). Budge thinks that the cramped attitude, the ante-natal position of the child, may perhaps have been adopted in order to facilitate the re-birth of the body (p. 162).

The royal tombs of the 1st dynasty at Abydos were made parallel to the river valley and hill line,

and not true to the cardinal points, the nominal N.S. line being really N.W. and S.E. But the builders recognized this diagonal direction (*Egyptian Explor. Fund Report*, London, 1900, pt. 1.).

The pyramids of Gizeh are of the IVth dynasty (variously estimated at 4000 to 6000 B.C.). They are accurately set out so that one side faces due N. They are not absolutely accurate; the sides of the Great Pyramid, which should point N., do actually bear 4' W. of N. Petrie (*The Pyramids and Temples of Gizeh*, London, 1893, pp. 40-42) thinks that this discrepancy is due, not to a fault in the setting out, but to a movement of the pole; he thus tacitly assumes that absolute accuracy was desired. Six of the nine remaining pyramids at Gizeh have a N. entrance passage sloping down towards the centre at a mean angle of 26° 47'; and at Abousseir, of the only two which are sufficiently well preserved, one has a passage at an angle of 27° 5', and the other at 26°. All these must have given view of the then pole star at its lower culmination—"a circumstance which can hardly be supposed to have been unintentional" (J. F. W. Herschel, *Outlines of Astronomy*⁹, London, 1867, p. 205 f.).

Opposite to the middle of the E. side of each pyramid there was a temple, where the worship of the deified king was carried on.

The temple, says Petrie (p. 81), looked 'towards the pyramid which stood on the W. of it (the "blessed West," the land of souls).'

In connexion with the second pyramid temple there is a granite temple about a quarter of a mile away. A paved causeway leads from one to the other. This granite temple is duly orientated to the E., but it is about E. by S. of the pyramid, this position evidently being decided by the lie of the ground. A causeway also runs E. from the third pyramid temple.

Most of the other pyramids of Egypt face N. with greater or less degrees of inaccuracy, and all have the entrance to the N. Of that at Sakkara the N.S. line is, according to Fergusson, 4° 35' E. of N.

In the Sūdān, however, there are some important groups of pyramids which are placed diagonally to the meridian. These are at Gebel Barkal and at Meroë, east of the Nile, and at Nuri or Belal, west of the Nile. The shrines are against the S.E. faces. Budge, who made observations, accepts the views of Lockyer and Penrose [and Nissen], and holds that these pyramids are orientated to the sun or, where its rays could not enter the shrine, to some star (*Proc. Royal Soc. London*, lxx. 333).

The Sphinx seems to have been called Har-enkhu by the ancient Egyptians (the Harmakhis of the Greeks and Romans), equivalent to 'Horus on the horizon' or the sun in the act of rising. The sun-god Horus takes several forms, one of which was 'Horus of the two [i.e. E. and W.] horizons.' Horus in one of his qualities is primarily the god of the sunrise, and as such is the counterpart of Hathor, the god of the west, who received the dead. It is this eastward gaze of his that has made the Sphinx so impressive to all who have beheld him, and that long ago gained for him the name of 'the Watcher.' The work is usually attributed to the XVIIth dynasty (c. 16th and 17th centuries B.C.), by which time the origin of all forms of religion was sought in sun-worship, and nearly every principal deity became amalgamated with the sun-god (A. Wiedemann, *Religion of the Ancient Egyptians*, Eng. tr., London, 1897, p. 12).

But, though theology may have changed during the course of ancient Egyptian history, we may safely guess that ritual, with which we are here concerned, remained very much the same in that

most conservative land. Egypt was a land of sun-worship in one form or another from the earliest pre-historic times till the dawn of the present era. The worship centred in Pa Rā (the house of Rā), the Greek Heliopolis. Thither a Pharaoh of the XIIth dynasty went in procession, and on the sandhill sacrificed before the god Rā at his rising and, returning to the great temple of the sun, went alone into the holy of holies to see the god, his father, Rā himself (*ib.* p. 21).

The *mastabas*, or private tombs of dynasties III. to X., have generally the entrance to the E., sometimes to the N. or S., never to the W. There was also a sort of blocked-up door facing E.; this was for the use of the dead; the spirit could enter or leave by it. An inscription is recorded invoking blessing on the dead 'that burial might be granted to him in Amentit the land of the West' (Maspero, p. 250). At the far end of the building, set back in a recess in the W. wall, is a stele.

Wiedemann thus describes a funeral:

'When the tomb had been reached, the coffin was set up on end, with face turned towards the south, on a small sandhill intended to represent the Mountain of the West—the realm of the dead' (p. 236).

III. ASSYRIA, CHALDEA, PERSIA: TEMPLES AND BURIALS.—Our knowledge of these regions in ancient times is still marred by serious lacunæ. The old Chaldeans had their theory of a world of the dead—either an under world or one lying E. or N. Of burial places other than those of royal persons nothing seems to be known, and even of those the authorities do not tell us much.

The temple, a succession of terraces about three in number, forming a sort of irregular stepped pyramid, was placed with its corners to the cardinal points—*e.g.*, the temple of Nannar at Uru in Chaldaea (Maspero, p. 629) and Nin-mah at Babylon (T. G. Pinches, *art.* ARCHITECTURE [Assyro-Babylonian], vol. i. p. 639^b). This may be chance, but, in describing the precinct of the temple-tower of Belus at Babylon, Pinches says:

'In accordance with the usual Babylonian custom, the angles indicated the cardinal points, and each side had an entrance. Inside the enclosure . . . stood some kind of erection 200 ft. square, connected with the *zigurat*, or tower, and having round its base the chapels or temples of the various gods, on all four sides, and facing the cardinal points' (p. 690 f.).

The principal buildings, with the couch of the god and the throne, were to the W. (p. 691^a). Sippara and Larsa, cities where the sun-god was worshipped, have not been thoroughly investigated. Persepolis was orientated to the cardinal points. The palace of Sargon in Mesopotamia has its diagonals pointing to them.

IV. GREECE.—1. Temples.—The normal position of a Greek temple is approximately E. and W., and it was an E. aspect that was aimed at. But an E. aspect meant the opposite of what we now mean. A religion like Christianity which has developed an indoor congregational worship considers the position of the altar within the temple and the attitude of the worshipper as the essential points; the position of the door is a corollary. But in a religion such as that of the ancient Greeks, where the temple is a mysterious home of the god entered by the few while the people remain in the *temenos* to see the sacrifice, it is the entrance front and the altar before it that are the first considerations. Greek temples therefore generally have the entrance to the E.; the altar (see *art.* ALTAR [Greek], vol. i. p. 343^a) is, if possible, placed in front of it on the main axis and so that the person sacrificing faced E. with his back to the temple—*e.g.*, temples of Aphæa at Ægina, of Apollo at Delphi. If this was difficult or impossible, the altar was elsewhere, as that of Zeus at Olympia and of Athene on the Acropolis at Athens.

By far the greater number of temples face

towards the E. Nissen's useful list of 113 Greek temples (pt. ii. p. 224) shows that 75 per cent are within an arc of 50°, or 25° on either side of true E., while more than half are within an arc of 20°, or 10° on either side of E. Of the remainder there are four principal groups with the entrance facing approximately N.E., N., W., and S. There are several large gaps: no temples have the entrance to S.S.E., N.N.E., N.N.W., or W.N.W., while there is a gap of no less than 65° from about W.S.W. to nearly due S. containing only two temples. This distribution is partly geographical and partly according to cult, but never directly chronological.

Geographically all temples on the mainland, with but five exceptions, face between N.E. and S.E., the bulk of them either just N. of E. or about E.S.E.; those in Sicily and Italy are for the most part just S. of E.; the islands and Asia Minor form three nearly equal groups facing E., S., and W. fairly accurately.

Grouped under cults, the temples of Zeus, Athene, Asklepios, and Hera face fairly uniformly E., except when in some Asia Minor examples the door is turned to W. or S. The temples of Artemis, Dionysos, and Demeter show rather greater variation. Temples to Apollo point in many directions. Among the temples of unknown dedication there is singular uniformity: they all face nearly due E., except one, which is nearly due S.

Although no general classification according to period can be combined with a classification according to direction, yet dates of buildings cannot be ignored: thus the Asia Minor temples of Zeus and Athene facing W. and S. are late, those of Artemis early; we shall have occasion to notice the Delos temples in this connexion. Still less can we neglect the period of the cult in examining the direction, as we shall see in considering the temples of Isis and Serapis. Most important of all will be the original seat of the cult, as in the cases of Apollo and the Ephesian Artemis.

The normal aspect of the entrance to a Greek temple is therefore E. Deviations from it are abnormal and are of varying degrees of importance. The reason of the E. aspect must be sought in sun-worship of some sort; the time and perhaps the place of its origin are obscured by distance. Statues of gods before house or temple doors were called *δαίμονες ἀντρίλιον*, 'deities facing the sun.' In Homer's poems, says L. R. Farnell (*art.* GREEK RELIGION, vol. vi. p. 401^a), the sun was anthropomorphized, but it is doubtful if it was so for the average Greek, who merely kissed his hand to it every morning or bowed to it on coming out of his house. The same author points out that the earliest temples—Homeric and pre-Homeric of the Minoan-Mycenæan culture—are, with one exception, domestic chapels in royal palaces and mark the sacred character of the king (p. 397^b). Of the palaces themselves those that are known to us do not face E.: Tiryns and Phylakopi face due S.; Mycenæ about W.N.W.; Troy S.E.; Knossos seems to have had several fronts, one about S. by W. and others to the corresponding points. Some of these sites are too cramped to have afforded a choice of aspect.

Some light is obtained from literature, but it is not conclusive.

In the *Ion* of Euripides the great tent set up by Ion, the son of Apollo, is scrupulously orientated—for it is a *ἱερόν*, a sacred or tabu place—so that it should not face the mid shafts of the sun's fire nor its dying rays (lines 1182–1187). On the roof were embroidered pictures of the sun, moon, and certain stars. There is nothing to connect the tent with Apollo-worship and the orientation seems to aim not so much at facing N. and E. as at avoiding S. and W.

Hesiod (c. 800 B.C.) has some passages in *Works and Days* referring to the movements of the stars and the time for re-p-

ing and other agricultural work, and other ancient authors refer to the means of measuring time by the heavenly bodies.

Deviations from true E., where these are slight, as in the case of dedications to Zeus and Athene, may be explained in one of two ways: they may be due to indifference as to exactness, or we may, with Nissen and Penrose, see in them deliberate intention in conformity with an elaborate system.

These authors suggest that the axis is directed to the point of sunrise on the feast-day; that the variations among temples having the same dedication are due to the varying customs in different states, and to the varying position of the place of sunrise caused by the movements of the earth's axis; that the latter cause incidentally gives us an indication of the date of the temple; that it was important for the priest to have warning of sunrise so that he might prepare the sacrifice; and that this was given to him by the appearing of a star which was known to rise a little before the sun. Both Penrose and Nissen, by calculating from the known movement of the earth's axis (the precession of the equinoxes), have arrived at dates at which the axes of most of the extant temples would point to a heliacal star. They have thus fixed the dates of the foundations of the temples. Penrose points out that the dates thus deduced are in most cases clearly earlier than the existing remains. His explanation is that the temple has been rebuilt on an old site, and the direction of the old axis has been followed. Lockyer agrees in the general theory, and it has been accepted by J. B. S. Holborn (art. *ARCHITECTURE* [Greek], vol. I. p. 738) and by Spiers (*EBR*, s.v. 'Orientation'), who both state that temples of gods face E. and those of heroes W. It is opposed with force by a writer in the *Edinburgh Review* (clxxx. 418) in an article on Lockyer's *Dawn of Astronomy*.

The theory indeed seems to require a broader basis of evidence. Penrose himself points out that the same star would not serve for more than 200 or 300 years, and he finds that at the rebuilding of a temple the axis has sometimes followed the star and sometimes not.

The fact that most temples point nearly due E. may be due to an old tradition having been adhered to and fairly accurately carried out. On the other hand, we may, with Nissen, find the explanation in the Greek calendar: the chief festivals were equinoctial—March, April, and early May (from the opening of navigation to the beginning of harvest [May]), and August, September, and the beginning of October, interrupted by vintage and ended by the closing of navigation.

Certainly the importance of accurate observation of the movements of the stars for the regulation of the calendar and for timing agricultural operations was fully realized. The terms 'heliacal,' 'acronychal,' and 'cosmical' rising and setting were used by the early astronomers.

After this general indication we may take a closer view. The temples of Zeus and Athene show, as stated above, a general agreement, but there is considerable difference between the two limits—some 36° in the case of Zeus and 21° in the case of Athene, not including the early temple at Miletus, Asia Minor. In Asia Minor Zeus has a temple at Magnesia with the door due W. (220 B.C. [Nissen]); Athene has two at Miletus at right angles to one another, E.S.E. and S.S.W., and one at Pergamon due S. With these exceptions, there is no connexion between direction of axis and geographical position. There is a difference of nearly 4° between the early temple of Athene on the Acropolis and the Parthenon: they are respectively 260° 55' and 257° 7', given S. = 0° and going sunwise (Nissen, Penrose).

Athene, Asklepios, and Demeter keep their E. door at Priene, Asia Minor. The two temples of Artemis in Asia Minor, at Ephesus and Magnesia, have the door approximately to W., though they differ considerably in direction of axis. This reversal is perhaps due to the confusion of the Greek Artemis with the Asiatic goddess.

The Erechtheum points rather N. of E., being nearly parallel with the Parthenon. The Theseum is 13° S. of E.; Nissen holds with the view that it

has nothing to do with Theseus, but connects it with Iachus, son of Demeter, and the Eleusinian mysteries (p. 177).

This brings us to Demeter. Her temples are mostly not far from parallel with one another and with one of the two Persephone temples, while they are only 12° removed from the Theseum on one side, and 14° from the second Persephone temple on the other side, their axis pointing 295° or about E.S.E. These Demeter temples are widely scattered—Eleusis and Sicily. But in Asia Minor there is one temple of Demeter at Priene, and in Arcadia a temple of Despōna, the Arcadian name of Persephone, both facing due E. In Sicily at Selinus there is a temple said to be of Demeter facing almost N.E.; this is remarkable because all the eight other temples at Selinus are exactly parallel with one another and face somewhat S. of E., or not far from the direction of the other Demeter temples.

The temples of Apollo present perhaps the greatest problem in Greek orientation. Even Nissen, who has an explanation for most things, admits that they are difficult. They point in many directions. This is probably due to the foreign extraction of the god: he has been thought to have come from Asia, from Egypt, from the north. Farnell says (art. *GREEK RELIGION*, vol. vi. p. 395) that he was no doubt a cult figure of tribes other than Achæans, and that in the Hyperborean ritual, which reflects at points the earliest days of Hellenism, we can follow the track of Apollo's invasion from the north. Nissen ingeniously suggests that the simple mountain shepherds of Arcadia and Ætolia accepted with the foreign god his foreign ritual and gave to his temples at Bassæ, near Phigeleia, and at Thermon the N.S. axis with the door at the N. end (that at Bassæ has also a door in the E. side); but advanced city communities with a popular theology adjusted the axis to suit their own views; thus the temples at Selinus and Syracuse face due E., and that at Corinth nearly so. But on this hypothesis the temple at Delphi facing N.E. and that at Didyma in Argolis a little S. of N.E. are difficult to place. The temple at Metapontum on the south coast of Italy, with the entrance to the S.E., may be said to conform with the custom of the country; that in the Ægean island of Thera is parallel with it; that at Letoon has its door to the S.S.W. There remain two temples of Apollo at Delos, one facing due E. and the other due W.; these must be purely political, faced according to the dictates of the times to which they belong, as Athens or Asia Minor was in the ascendant. Besides these there are in Delos two old temples facing W. which, Nissen says, Wilhelm Dörpfeld is inclined to dedicate to Apollo; finally there is the nameless temple at Mycenæ with the doorway to the S., which is perhaps more likely to have been dedicated to Apollo than to any other god.

The Delos temples were first built facing W.—the rock-cut, the Leto, two which are nameless, and one dedicated to Apollo. The aspect is perhaps due to the influence of Asia Minor—except of course the rock-cut. Then, under the influence of Athens in the 4th cent., the temples of Zeus and Apollo were built with the door to the E., and finally, according to Nissen, when the island passed away from Athens, the temple of the foreign Isis looked W.

A foreign god, as Nissen points out, may retain or may yield his native ritual. We have seen that Apollo illustrates both processes. At Alexandria the parent temple of Serapis faces S.; the daughter at Taormina is turned E., while in Delos she keeps the door to the S. The temple of Isis is turned to the W. at Delos, but keeps its S. door at Priene.

It is probably a mistake to suppose that the aspect of temples was much more than a fashion, that it expresses any definite idea in theology. We have an exactly parallel case in the Christian Church; most of our buildings have the door to the W., but in some of the most famous it is to the E. Probably few people are aware of the latter fact, even when they are attending service, although it sometimes requires a slightly different ritual. Perhaps to the Greek the matter was a little more important, but not much.

The temple with the door to the W. did not face W., any more than St. Peter's in Rome faces W.; it only faced E. in a different manner. Nissen thinks that it did face W., and that this aspect symbolizes 'world empire.' So it does, but the symbolism is of the 20th cent. and Teutonic. It is generally thought that on the feast-day the rays of the rising sun were to fall through the open door and light up the statue of the god, and the northward-facing temple at Bassæ has indeed the famous side door to the E., opposite the spot where the statue stood. But how could this have been arranged in a westward-facing temple? A hypæthral opening would throw only a reflected light on the figure. Vitruvius has some remarks on the subject which we shall presently notice.

2. Burials.—The Greek idea of death is complicated by many cross-currents, but the notion of a voyage or a journey of some sort enters largely into it. S. Baring-Gould says (*A Book of Folklore*, London, n.d., p. 160) that the ancient Greek inscribed the word *εὐλογία*, 'favourable voyage,' on a gravestone and that his descendant carves a pair of oars.

In five shaft graves on the Acropolis at Mycenæ two bodies lie N. and S., with feet to S., and all the others, eleven or more, lie E. and W. with feet to W. At Vaphio the chief is laid E. and W. with feet to E.; possibly this is only in order that he should face the door of the tomb, which is to E.

Ridgeway (i. 490) thinks that we may infer that burial with feet to W. was the characteristic orientation of the autochthonous race. He points out (i. 516) that Odysseus did not descend into Hades as did Æneas and Dante; he sailed west; and in post-Homeric belief there was no under world, but isles of the blest, which lay in the west. At Phylakopi in Melos the orientation of the tombs depended wholly on the conformation of the ground (Hellenic Society, suppl. paper no. 4 [1904], p. 234).

In later times the position of the body varied. Thus Solon proved the justice of the claim of Athens to Salamis as against the Megarians by pointing out that the tombs which he opened faced E., and that the corpses in them were turned to the E. in the Athenian fashion. We have therefore the tradition at least that in the days of Solon (c. 600 B.C.) there were in different parts of Greece two well recognized positions for the body. Such customs 'probably . . . depend on the ideas which each people has formed of the direction in which lies the land of the dead' (Frazer, *Totemism and Exogamy*, iv. 214).

V. ROME.—I. Temples.—It is generally agreed among modern writers that the Romans, whatever their theories, did not orientate their buildings (W. J. Anderson and R. P. Spiers, *Greek and Roman Architecture*², London, 1907, p. 188). The silence of Fergusson, of Middleton (*Remains of Ancient Rome*, 2 vols., London, 1892), and of Lanciani is perhaps as eloquent on the same side. E. A. Gardner (art. ALTAR [Roman], vol. i. p. 349) says that, the orientation of the temples being varied, that of the altar varied also, and that, from the position of the altar, the sacrificer appears to

have stood with his side to the temple, and in some cases with his back to it. J. Dürm lays it down that the Etruscan rule required that the temple axis should be N. and S.; that the Roman turned to the E. during prayer; therefore either the temple statue had to face W. or the axis of the temple had to lie E. and W. (*Handbuch der Architektur*, Stuttgart, 1905, sect. 431).

Of the Etruscan practice we know almost nothing. The Roman augurs inherited as the basis of their ritual the Etruscan idea of the natural or normal attitude; i.e., they imagined themselves as facing S., so that the lucky side—that towards the E.—was the left, and the unlucky side the right. But with the Roman populace the opposite was the rule: they faced N., and the right was the lucky side. Both these notions show that, whatever was the practice with regard to buildings, there was in early times a special veneration for the east.

Vitruvius, who lived and wrote in the 1st cent. B.C., is a useful link between Greece and Rome. He was an architect with a practical knowledge of work in Rome in his own day and with some outside book-knowledge of Greek lands. He has a chapter on 'The Position of Temples according to the Regions'.

'The sacred temples of the immortal gods should be so disposed, that, if there is no impediment and the use of the temple permits, the statue which is placed in the cell may seem to look towards the evening region of the heavens; so that those who approach the altar, to make their offerings, or perform sacrifices, may look towards the eastern sky and to the image which is in the temple. By this means the temple, the eastern sky, the supplicants and sacrificers making their vows, and the image seeming to rise to behold them will all be seen at one view: for it is proper that the altars of the gods should be disposed to the east.

But, if the nature of the place prevents that position, then the temple is to be turned to the view of the greater part of the city walls and temples of the gods; or should sacred fanes be built near a river, like those near the Nile in Egypt, they should look towards the banks of the river; so likewise, if near a public way they should be so situated that the passengers may behold it, and pay their salutations' (*de Architectura*, tr. W. Newton, London, 1791, bk. iv. ch. v.). Pseudoperipteral temples 'are appropriated to the use of sacrifices, for the same kinds of temples are not erected indiscriminately to all gods, because the sacred rites performed to each are different' (bk. iv. ch. vii.). 'Altars should regard the east' (bk. iv. ch. viii.).

In these passages, it appears, Vitruvius combines unconsciously what he had learned from books about Greek work with his practical knowledge of Roman custom in his own day. He had not travelled, and clearly the Greek architecture about which he had read was, as we might perhaps expect, chiefly that of Asia Minor. As to Roman work, he seems to consider the W. orientation to be a counsel of perfection, which was to give way before considerations of architecture and convenience.

In practice temples face in every direction; a glance at a plan of Rome or at a table of orientations makes this clear, and an attempt to work the data into a system would indeed be bold. But it has been made by Nissen; his lists contain 33 Roman temples and 34 temples in Italy outside Rome.

That the Romans and the Etruscans before them were very susceptible to outside influences—Greece, Egypt, and Asia—is a commonplace of history. It would be remarkable, then, if in the placing of their buildings even in Rome itself they never followed the practice of countries where orientation was general—countries within whose borders they themselves were building temples carefully orientated in accordance with native custom.

But, if we would look for truly orientated buildings, it must be on open sites or among the early buildings of a town before the place had become congested; or at least among those which, if not

early, might be expected to preserve early traditions. In Rome the circular temple of Vesta in the Forum faces E.N.E. (R. Lanciani, *Forma Urbis Romæ*, Milan, 1893-1901, pt. iv. pl. xxix.) or due E. (O. Richter, *Topographie der Stadt Rom*, Munich, 1901, pl. x.). The old Domus Publica (Middleton) and the Regia, neighbouring buildings associated with the temple, have also the E. direction—a direction contrasting strongly with all the buildings round them. The temple of Vesta was one of the most sacred of buildings, and it owed both its form and its sanctity to its extreme antiquity. The house for keeping alive a fire for the use of the community was probably the earliest building which primitive man attempted, earlier even than the shelter for his own head. The actual building in the Forum was destroyed and rebuilt more than once, and even its position had been slightly moved, but the old round form was preserved. The plan came to receive a symbolical meaning, but there can be no doubt that it was simply the natural form in which primitive man built, and that it was perpetuated in a specially sacred building by a well-known tendency just because it was primitive. It is suggested that the E. direction also is that of the primitive building, and that it points to a true orientation having been observed in early times. The well-known round temple to Mater Matuta, of early foundation, opposite S. Maria in Cosmedin has its door almost due E. (Lanciani, pt. viii. pl. xxviii.). The door of the Tullianum also looks due E. This building has, like the Regia, the trapezoidal plan which is believed to be the mark of a very primitive tradition. The Lapis Niger over the grave of Romulus is trapezoidal, but its axes run N.W. to S.E. and N.E. to S.W. The early quadruple temple on the Capitol faced about S.S.E. (*ib.*), and the early temples on the S.W. corner of the Palatine face S. by W. Outside Rome: the temple of Vesta at Tivoli has the door facing S.W. by S. (G. L. Taylor and E. Cresy, *Architectural Antiquities of Rome*, London, 1821-22, pl. lxvi. [vol. ii.] probably for local reasons. The Artemisium at Nemi runs N. and S. with the door to the S. Thus it is difficult to detect a system even among the early buildings, unless it is perhaps a tendency to make buildings face approximately either E. or S. But much could not be expected from so few remains.

It is possible that other buildings might be found in which there might be discovered a cause for the direction of the axis other than practical or architectural considerations. Contact with neighbouring or distant nations may more than once have had its influence; the third legion of the army, for instance, learned during its stay in Syria the custom of saluting the rising sun (*GB*, pt. vi., *The Scapegoat*, London, 1913, p. 416).

The orientation of buildings in Rome in historical times seems to have been made to conform to the lay-out of the city generally, as Vitruvius suggests. The lay-out of the city must be considered in areas. In the earliest town the Forum Boarium may have been truly orientated, either from ritual tradition or because of the relative positions of the Capitol and the river. The Palatine, on the other hand, is laid out on a line running N.E. and S.W.; this was probably determined by the limits of the hill and by the valley which formerly crossed it. To the N. of it were the Forum Magnum and the Via Sacra running from N.W. to S.E. Some early buildings in these parts and on the Capitol have been referred to above. The buildings of later times, such as the temples of the Forum Magnum, face in all directions, seemingly without system. Outside this primitive area and within the wall of Servius Tullius, the planning generally is determined by the run of the hills and valleys. But

the greater part of the flat Campus Martius between the wall and the river, as well as the Vatican district beyond the river, is methodically laid out on lines due N.S. and E.W. The Mausoleum of Hadrian facing S., four circuses, and most of the other important buildings have this orientation. Included among these are the Pantheon, which faces N., the baths of Alexander Severus and of Agrippa, and the Porticus Argonautum, containing the Neptunium with door to E., and the Basilica Matidies with door to E. But the buildings in the north part of the Campus Martius, north of the Via Recta, conform to the Via Flaminia (practically the Corso). The important group of buildings forming the imperial Fora (of Trajan, etc.), with their temples, are symmetrically arranged on an axis running N.W. and S.E. Three of the four remaining great baths—those of Diocletian, Titus, and Caracalla—are on an axis running N.E. and S.W., perhaps partly to fit the hill-tops and to suit the principal streets, and partly from considerations of sun and weather. The baths of Constantine face N.S. and E.W., and appear to conform intentionally with the Campus Martius scheme. Although this planning is chiefly secular, it is in different quarters so definitely orientated that it can scarcely be neglected. Temples seem to be invariably built to suit the road, as, for instance, that called of Fortuna Virilis facing N., a group of three just south of the theatre of Marcellus facing E., and those west of the Capitol which face S.W.

Outside Rome the same probably holds good—that orientation was observed to some extent, and often gave way to practical considerations. Nissen finds a system at Naples and Pompeii. The Forum at Pompeii runs N. and S., and its two temples of Jupiter and of Apollo face S. The temple of Vespasian and the sanctuary of the city Lares face W.

But, if Rome herself was influenced more by architectural effect and considerations of convenience than by religious or ritual motive, we find in the countries which she conquered a very different result, produced perhaps by the same causes. The Roman buildings in other lands are definitely orientated, though not always to the E. The determining influence may have been a desire to conform to the custom of the country or to the surrounding buildings, though in some cases the axis seems to have been fixed by religious influences, for the temple is at an angle with the street. The temple of Zeus Olympius in Athens is fairly true E. and W., with the door to E. The temples of the sun and of Zeus at Baalbek have the door to E., while that of Venus faces N.; the temple of the sun at Palmyra has a N. and S. axis, with the door in the long W. side.

At Silchester there are two square buildings near the present church which are believed by the discoverers to be temples, and are compared by them with similar buildings in Gaul. These temples do not conform with the general lines of the Roman city, but they are nearly parallel with one another and also with the mediæval church, which, it is suggested, may itself stand on the site of another pagan temple. The axes of the church and temples seem to be a little S. of E., but the point is somewhat obscured because the magnetic variation in this plan and in others, where it is given at all, is shown as E. instead of W., which has not been the case since the year 1656 (*Archæologia*, lii. [1890] pl. xxx.).

2. Burials.—The Romans for the greater part of their history cremated their dead, so that the orientation of their monuments had not to be considered.

VI. CHRISTENDOM.—1. Early ritual.—Orienta-

tion in some form was probably practised, if not in the time of the apostles, at least in that immediately following, for we learn from Tertullian that it was observed at prayer in his days (A.D. c. 160-240). He says that the Christians were thought to be sun-worshippers because they prayed towards the E. (*Apol.* 16). If this attitude was general and its objections realized and its abandonment considered possible at such an early time, and if, as was the case, the temples of both Jew and Gentile had from time immemorial faced E., the inference is that the practice was continuous. But Tylor says that orientation was unknown in primitive Christianity and was developed in the first four centuries (*PC* ii. 427).

The *Apostolical Constitutions* are very clear both as to ritual and as to buildings:

'After this, let all rise up with one consent, and looking towards the east, after the catechumens and penitents are gone out, pray to God eastward, who ascended up to the heaven of heavens to the east; remembering also the ancient situation of paradise in the east'; and, as to the church, 'let the building be long, with its head to the east' (*Apost. Const.*, ed. J. Donaldson, Edinburgh, n.d., ii. 57).

Cyril of Jerusalem in the 4th cent. not only explains that turning to the E. in prayer was symbolical of the situation of paradise (*Catech. Lect.* xix. 9), but also describes the actual ritual:

We are to remember that at baptism we entered the outer hall [porch] of the baptistery and there, facing W., heard the command to stretch forth the hand and, as in the presence of Satan, renounced him (*ib.* xix. 2).

The rite is said to be still retained in the Greek Church.

Pope Leo in the 5th cent. complains that people turned to salute the rising sun as it shone through the E. door of St. Peter's, and it has been suggested that this was one of the causes of the reversal of churches to their present aspect with the door to the W., though at St. Peter's itself no alteration was made.

It appears, then, from the evidence of the earliest writers and of the earliest buildings (1) that orientation was strictly followed—i.e., a symbolical meaning was attached to the attitude of the individual, and the E.W. direction of the main axis of churches was preserved; (2) that the ritual was not without its inconvenience (as Leo complained); and (3) that the E.W. axis sometimes means that the door faced E. and sometimes that it faced W.

This result is scarcely surprising when we consider the various facets from which the light of the gospel was reflected. There were customs both Hebrew and pagan to be utterly reversed, on the one hand, or, on the other, to be retained and infused with new meaning. Of buildings there were the Temple at Jerusalem and most of the Greek and Asiatic-Roman temples with the door to the E., while there were notable exceptions at Magnesia, Ephesus, and Delos.

2. *Early buildings.*—It may be that there was always variety in the buildings owing to the various influences at work: Greece proper, Greek work in Asia Minor, Palestine, Syria, Egypt, Rome. On the one hand, there is (1) the church of the Holy Sepulchre in Jerusalem with an E. door, of which the earliest work begins in A.D. 326 (though here the site hardly left a free choice); (2) a statement by Paulinus of Nola († 432) that the façade to the E. was more usual (though this is ambiguous); (3) the description of the early church with E. door at Antioch, not later than the first half of the 5th cent.; (4) important churches in Rome, many of which still exist, while records remain of others, including the old basilica of St. Peter, first built early in the 4th cent.; and (5) a considerable number of early churches in Northern, Central, and Western Europe.

On the other hand, there is (1) the undoubted

fact that, if churches were originally built with W. altar and E. door, they were reversed in the Eastern Church at least at a very early period; (2) Socrates the historian, writing in the first half of the 5th cent., says that the door was generally to the W.; (3) the church at Antioch is described as being exceptional; (4) the churches of Constantine at Byzantium either were all built with the E. altar or were all reversed by about the time of Justinian; (5) moreover, there is the obvious inconvenience of prayers towards the E. and the altar to the W.

The churches of Southern, Northern, and Western Europe retained the W. altar long after the E., while some still retain it. That the conservative East should have changed—as it probably did—while the progressive West kept to the old plan is perhaps an index of the theological activity of the Eastern Church in early times. It may have been due, to some extent, to a dread of the influence of Asiatic sun-worship.

The turning round of churches from what seems to have been the normal aspect with the W. altar to the present direction of altar to the E. is somewhat obscure. It seems that all the churches built by Constantine (272?-337) himself had the W. altar and E. door. Besides the church of the Holy Sepulchre already mentioned, there is a church at Tyre 'restored' by him and several churches in Rome: St. Peter's (Vatican), W. altar; St. Peter in Montorio, N.N.W. (since rebuilt); St. Chrysogonus in Trastevere, W.N.W.; St. Sebastian on the Appian Way, W. (Scott, *Essay on the Hist. of English Church Architecture*, p. 18). It must be remembered that in addition to these other churches in Rome built under the direct influence of Constantine, though not nominally founded by him, such as St. John Lateran, also have the E. door.

3. *Eastern Church.*—No work of Constantine remains above ground in Constantinople, and the orientation which he there adopted must remain a secret until some foundations of his churches are exposed. All the present buildings have the door to the W. A. van Millingen (*Byzantine Churches in Constantinople*, London, 1912) gives the plans of 22 churches; two of these have the door to N.W.; all the rest lie between W.N.W. and W.S.W., and about six of them are practically due W. (The observations are probably all magnetic, though they are not always stated to be so.)

The churches of Syria, Armenia, and Cyprus, with scarcely an exception, have the door to the W. Many of these are very early. All the Jerusalem churches, with the exception of one with a S. door, have the door to the W. The churches of Salonica, some of them of the 5th and 6th centuries, and of Mount Athos have the W. door, except the early church at Salonica, probably late 4th cent., now the mosque Eski Juma, which had the altar at the W. end. The church of St. Felix at Nola and a church at Trieste have the W. altar.

Probably many Greek temples became Christian churches. The Parthenon was converted into a church and an apse was built at the E. end.

In like manner the churches of Greece which were built for Christian worship all have an E. altar and a W. door—e.g., the 'small metropolis' of Athens (8th or 9th cent.), the Kapnikaræa (9th cent.?) in the middle of Rue d'Hermès, the church at Daphne (12th or 13th cent.), and the coupled 10th cent. churches of the monastery of St. Luke of Stiris in Phocis (due W.) and that of St. Nicholas near Skripou in Boeotia (N.W.).

The Coptic churches in Egypt, whatever their age, may be taken to represent very ancient practice. They all have the altar to the E., and the door is at the W., although it does not open directly into the main body of the church. The priests sit in a semi-circular apse behind the altar, thus facing W.

4. Western Church.—The orientation of the churches of Rome forms a strong contrast with the rest of Christendom, for a large majority of the old buildings have the altar to the W. and the door to the E. In this connexion we must remember that, from the circumstances of early Christianity, the church plan of every type must have been developed outside of Rome.

In early times, when Christians worshipped where they would attract least attention, the orientation of buildings cannot have been observed, though it would often be possible to preserve it in ritual even in private houses. Churches were indeed built before the time of Constantine, but thenceforth services were held in all sorts of buildings, and, large as was the increase in the number of Christians, the buildings available for worship would be adequate from the time when the removal of the government to Byzantium left, as it must have done, many buildings deserted. The early Christians did not object to making use of any sort of building. The smaller buildings, such as temples, were converted bodily into churches; of the larger buildings, such as *thermae*, theatres, and the like, a part only was used. Lanciani (*Pagan and Christian Rome*, London, 1892, p. 160) states that he has hardly found an ancient pagan building in Rome that has not evidence of having been used as a church at some period.

The Christian adapters of most of these buildings must have ignored orientation. But they probably regarded most of them as temporary, and few pagan buildings are still used as churches; the best known are the round temple of Romulus with the adjoining *templum sacre urbis*, since the 6th cent. the church of SS. Cosmo and Damian, in which the altar is to the E.N.E., and the Pantheon, the door of which is to the N.

Of the churches actually built by Constantine or under his auspices almost all have the W. altar and the E. narthex. When this is not the case, there is generally some obvious explanation. Scott (*Essay on Eng. Ch. Arch.*, p. 18) gives very useful lists of the old churches of Rome showing approximately their direction. Of the 53 churches recorded only 11 have the E. altar, the aspects lying for the most part between E.N.E. and E.S.E. Of these three may have been reversed and two, the important churches of S. Lorenzo without the walls and S. Paolo without the walls, certainly have. Some of them owe their foundation to Constantine. But the churches which (in Scott's list) have the W. altar number 42. These include St. Peter's and the small church of St. Stephen near the apsidal end, now removed, each with its altar to the W.; the great basilicas of St. John Lateran with altar to the W.; Sta. Maria Maggiore, N.W.; S. Lorenzo without the walls, in its original state, W.; and to them must be added S. Paolo without the walls, before it was rebuilt by Valentinian II., W.; all these except Sta. Maria Maggiore are attributed to Constantine. Three other Constantinian buildings are included in the list as well as the important churches of S. Clemente (the lower building perhaps 6th cent.), W.N.W., and Sta. Maria in Trastevere, W. Many of these, like the first and last, have been rebuilt or remodelled in late times, but preserve the old orientation. Half of them point approximately due E. and W.; about a quarter have the altar N.W. and the door S.E.; one has the altar facing S. of W.

The turning round of the two great churches outside the walls happened in different ways. The W. apse of S. Lorenzo, as built by Constantine and partly rebuilt by Pope Pelagius II., was taken down in 1216 by Pope Honorius III., who built a large nave to the west of it. Honorius then made a raised floor, in what had been the nave, to form an elevated presbytery; this accounts for the way in which the ancient columns of the original nave are partly hidden. S. Paolo, on the other hand,

was a case of entire rebuilding. Constantine built a very small church over the tomb of St. Paul on the W. side of the road to Ostia, the atrium reaching right up to the road. In the 4th cent. this little church was taken down, and a very large one built in its place. But it was impossible to move the tomb of the Apostle, and there was not room between it and the road for a large church. The body of the new church was therefore built W. of the old church, with the door at the W. end; the site of the old church with the tomb below it occupies that part of the transept of the present church immediately in front of the apse. We shall find evidence of something analogous to each of these processes of revolution in England.

In these early churches the altar stood on the chord of the apse; against the walls of the apse there were seats for the presbyters, the central one being for the bishop. The clergy therefore looked E. over the altar towards the people; the people looked W. towards the altar and the tomb of the blessed martyr; for many of the churches of Rome, including the most important, were built over the tombs of martyrs or on the places where they suffered death or torture. Lanciani says that 58 churches originated thus. The conditions which he lays down are these three: (1) the tomb-altar was not to be moved vertically or horizontally; (2) the tomb was to be in the centre of the apse; (3) the [concavity of the] apse and the front of the edifice were to look E. Durandus, in the first book of the *Rationale*, is clear as to the ritual of the second half of the 13th cent.:

'The priest is to pray towards the E., whence in churches which have a W. door he turns in the Salutations to the people; but in churches which have the entrance to E., as in Rome, there is no need in the Salutations for turning round, because the priest is always turned to the people.' Durandus gives several reasons for praying towards the E. (*The Symbolism of Churches and Church Ornaments*, tr. J. M. Neale and B. Webb, Leeds, 1843, v. ii. 57, app. B).

Scott gives the following facts with regard to present day use:

The priest faces E. and away from the people when the altar is to the E., except in two cases in which the altar arrangements have clearly been modernized; he faces E. towards the people in 17 cases out of 40 where the altar is at the W. end, including the most important and those which have best retained their early arrangements.

Scott fairly claims that from the point of view of mediæval and modern ecclesiology this position of the priest facing the people is so singular that 'we may well be surprised, not that in many Roman churches, having western sanctuaries, the primitive orientation of the celebrant has been lost, but that it has been preserved in so many instances, in defiance of the fashion of mediæval and modern times' (*Essay on Eng. Ch. Arch.*, p. 22).

The early churches of Italy outside Rome were built under Byzantine influence and date from a later time than the adoption of the E. altar at Byzantium. All accordingly have the E. altar. Ravenna possesses the most remarkable buildings of this class. They are of the first half of the 6th century. The basilican church which preceded the present church of St. Mark at Venice faced in the same direction; its altar was to the E.; but it was of comparatively late date, being of the 9th century.

5. Roman missions.—We have seen that Rome occupies an almost unique position in preserving the W. altar. But some at least of her early missions observed the same orientation. The Romano-British church recently brought to light at Silchester (*Archæologia*, liii. [1892] 26) is a small basilica with a W. apse and transepts, clear indications of an altar on the chord of the apse, and an E. narthex. The evidence that this was indeed a Christian church only stops short of absolute proof. Its date is very uncertain, but it is thought to belong to the 4th century. Other churches of a later date with the same orientation are not uncommon. No example is to be found in England now, but it has been thought that both the earliest church at Canterbury, to which reference is made below, and Wilfrith's church at Ripon had their altars to the W. There are several instances on the Continent: Great St. Martin's at Cologne

(12th cent.) and St. George's, Dinkelsbühl, of which the present building is 15th century. St. Stephen, Mayence, appears to have a choir at the W. end. St. Sebald, Nuremberg, a collegiate church, has a choir at each end, but the E. choir is an addition of the 14th century. At Verdun the cathedral has E. and W. choirs, but that at the W. end is called the old choir.

6. Double-apse churches.—There is a remarkable type of early church which it remains to notice. It has an apse and an altar at either end. It is found over a very wide area, and the place and manner of its origin do not seem to have been conclusively explained. W. R. Lethaby (*Medieval Art*, London, 1904, p. 29), quoting Strzygowski, derives it from Egypt and Syria. The importance of the N. African churches lies in the fact that they were so planned from the first. Another well-known example is the monastic church of St. Gall in Switzerland, near Lake Constance.

A 9th cent. plan of the whole monastery of St. Gall has been preserved; it seems clear that this does not represent what was already in existence; it is a scheme in contemplation, and it was not exactly adhered to in execution. It is therefore valuable as showing the ideal of the 9th century (R. Willis, *Archæological Journal*, v. [1848] 85). There is an apse at either end. That to the E. contains the high altar and the altar of St. Peter. In front of it is the monks' choir. The W. apse contains another altar of St. Peter, and before it is another choir, on either side of which are entrances for the public. There is no bishop's throne. The side altars are so placed that the officiating priest faces E. The chapels of the infirmary and of the novices' hostel are placed back to back, the altar of one being at the E. end and that of the other at the W. end.

There are not a few double-apsed churches on the Continent, and they are known to have been used in England. But a great proportion of these reached their ultimate double form by receiving additions to the original plan. They therefore come under a different category from those which were so planned from the first, and they may perhaps be taken to show one phase in a transition—an abandonment of the W. altar for the E.

Double-apse churches are found at the following places among others: Gernrode, in the Hartz; St. Cyriac's (collegiate); Hildersheim, St. Michael's; Laach, St. Mary (Benedictine); Worms Cathedral; Trèves Cathedral (the W. apse is said to be the latest); Mayence Cathedral (probably both choirs entered into the original scheme; the W. choir is called the parish choir); Naumburg Cathedral (the W. apse appears to be a creation of the 13th cent. and not to continue an early tradition); Bamberg Cathedral (the E. apse is rather the earlier and has a crypt, but the church is thought to follow an earlier plan); Augsburg (the W. choir is called the parish choir); Oppenheim, St. Catherine's (the present W. choir is later, but probably occupies the site of an early church); Reichenau on the Lake of Constance.

Outside Germany double-apse churches are rarely met with on the Continent. J. T. Micklethwaite ('Something about Saxon Church Building,' *Archæological Journal*, liii. [1896] 293) suggests that in Germany they may possibly be due to the English tradition taken thither by St. Boniface. In England we know of three: Abingdon (7th cent.), Lyninge, and Christ Church Cathedral, Canterbury. Of the last-named we have a description of the building that was burnt in 1067. Below the E. apse, which contained the high altar (of Christ), there was a crypt, but the W. apse contained the bishop's throne behind the altar of the Virgin. About the middle of its length the church was flanked by a tower on either side. It is thought that St. Augustine found an old building (Bede [*HE* i. 33] says Roman) with a W. apse, and with a narthex and towers at the E. end, that he restored this, and that after his time the nave was lengthened eastwards and a second apse built. At Lyninge the foundations of a W. apse have been found; the work is said by Scott (*Essay on Eng. Ch. Arch.*, p. 20) to be Roman.

7. Position of altar in later Middle Ages.—The turning round of the churches of Western Europe so that the altar should be at the E. end instead of at the W. probably happened in different places at

different times. Micklethwaite thinks that in double-apse churches a monks' choir at the E. end gradually overshadowed the people's choir at the W. end, till in the 11th and 12th centuries the W. altar came to be looked upon as abnormal, and at the general rebuilding of churches in that age the W. altar was put against the rood screen. A simpler explanation would be that it was a gradual conforming tendency to what had become the orthodox practice at a much earlier period.

Probably the direction of the altar was at no period held to be of very great importance. We have noticed a great amount of variety. At all times minor altars seem to have been often placed against side walls so that they faced N. or S. There are several in the plan of St. Gall which might apparently have been placed with as great convenience against the E. walls of their respective chapels. There are a few striking instances of churches with a N.S. direction. At Siena Cathedral the altar is at the E. end, but we may see the beginnings of a great 14th cent. scheme for a new cathedral which was to run N. and S. and was to absorb the old building (the present church) and convert it into a transept. Naples Cathedral is another instance; the old and new buildings are at right angles to each other.

In England it was natural that Augustine (+ 604), Birinus (+ 650), and Wilfrid (634–709), under Roman influence, should place their altar to the W. It might also be expected that the Scottish mission of Aidan (+ 651) should use the E. position. This we find to be the case. But at an early date the E. altar predominated and became universal.

8. Deviation from due E.—English churches generally have their axes near enough to true E. W. for deviation to be unnoticeable to most people. But the orientation is by no means accurate, and occasionally the deviation is very considerable. This deviation has been explained by the pretty theory that the axis is in the direction of sunrise on the day of the particular saint in honour of whom the church is dedicated. But this theory has not found favour with serious ecclesiologists in England. It is just possible that this direction was adopted occasionally, and in the aggregate such instances might be numerous, though those who hold the theory have never been at the pains to compile a list. But it is open to serious objections. There are in ancient writers no directions or orders for so placing churches and no hint that they ever were so placed, while Durandus distinctly says that churches are to point to sunrise at the equinoxes and not at the solstices (i. 8). And the exceptions are so numerous as to be in the majority. We may notice a few well-known buildings (see table at end of article). These and all observations must be corrected to suit the unreformed calendar. The calendar was reformed in England in 1751, when we had to omit eleven days. If we take the year 1100 as an average date for the foundation of our churches, the calendar would then be seven days wrong. This would not make a difference of 2°. It will be seen that most buildings face nearly E., regardless of their dedication. Rochester Cathedral is fairly correct for its feast-day, but there can hardly be a doubt that it is turned so far to the S. to accommodate it to a cramped site. At Westminster there are three notable buildings—the Abbey, St. Margaret's Church, and St. Stephen's Chapel of the old royal palace, now absorbed in the Houses of Parliament. The feasts are 29th June, 20th July, and 26th December. But the axes of the three are nearly parallel and point E. or slightly S. of E., instead of almost N.E. and S.E.

Ely Cathedral, an instance favouring the theory, may be quoted to show the rashness of holding it

without very careful inquiry. The dedication is to the Holy and Undivided Trinity. As it is a cathedral church, its history is preserved and we know that before the Reformation the dedication was in honour of the Blessed Virgin (25th March), of St. Peter (29th June), and of St. Etheldreda (whose feast was 23rd June, and whose translation in 695 and in 1106 was on 17th Oct. and in 1252 on 17th Sept.). It is not known whether St. Etheldreda dedicated her church in honour of the Blessed Virgin or of St. Peter or of both. The feast of the translation of a saint's relics was no doubt a great occasion, but it is difficult to conceive of its giving the orientation of a building, because it would be hardly possible to foresee, on the fixing of the axis, when the new building would be ready for the translation. Thus the building probably does not derive its direction from the first translation of 17th Oct. 695. But it is to sunrise on about 17th Oct. that the axis points, and it may be argued that the present building was made to suit sunrise on the anniversary of the first translation. But it is more probable that, if any day fixed the axis, it would be either St. Peter's Day (29th June) or Lady Day (25th March). We have seen that the direction does not suit 29th June. It would indeed suit Lady Day fairly well, though not exactly.

We may test the theory further by applying it to a group of small churches taken at random in one district. None of the following churches deviates more than 6° N. of true E. or 5° S. of true E., except one which is about 10° N. of true E. (it will be seen that the dates of the feasts vary from mid-summer to nearly mid-winter, at which seasons the points of sunrise are about 80° apart): St. Margaret, Norwich and Swannington (20th July); St. John Baptist, Alderford (24th June); St. Andrew, Attlebridge (30th Nov.); St. Agnes, Cawston (21st Jan.); St. Nicholas, Brandiston (6th Dec.); All Saints, Weston (1st Nov.).

A point to be borne in mind in this connexion is that the dedications of churches have not infrequently been altered; some earlier dedications have been changed to that of the Blessed Virgin Mary; this was common in the 14th cent.; others were changed to that of the Holy Trinity at the Reformation. Some places still preserve, it is said, a primeval solar feast.

In Rome, out of 45 churches (nearly the whole number in Scott's lists) 15 point reasonably near to the sunrise on the feast-day, and 30 are quite wide of it.

9. Bend in axis of churches.—Another popular theory is this: when the axis of a chancel is found not to be in a straight line with that of the nave, the deflexion was intentional and was meant to symbolize the drooping of the head of our Lord upon the Cross. Here again we have no authority from the ancient writers, and we have no right to attribute to them a meaning which they do not acknowledge. F. Bond (*Dedications and Patron Saints of English Churches*, London, 1914, p. 249) indeed quotes the case of a 14th cent. architect who died of grief on finding that a church that he had built at Metz had a bent axis.

Bond says that the theory has been supported recently by Emile Male, Victor Mortet, J. A. Brutsals, Anthyme Saint-Paul, and to some extent by de Caumont, Viollet le-Duc, and Camille Enlart, but rejected by Auguste Choisy and Robert de Lasteyrie. Johnson (p. 238) suggests that the bend was intended to produce an agreeable optical illusion. He states that deviation is generally to the S.; Bond says that it is to the N.

A little consideration will show that the deflexion must always be accidental. When a chancel is to be rebuilt, the chancel arch is blocked by a temporary wall so that the nave can continue in use. Unless the axis of the nave is carefully found and continued eastwards before this wall is built, and unless the stakes in the ground are carefully preserved, the chances are that the axis of the new chancel will not be in the same straight

line, because it is difficult to make it exactly perpendicular to the short base afforded by the piers (perhaps themselves irregular) of the chancel arch. And it is not going too far to say that the deflexion is never found except where one part of the church has been rebuilt. It is, moreover, seldom found in the best buildings—more often in the churches of country towns and villages than in cathedrals and great churches, and more often in great churches which are in other respects irregular and of various periods than in those which are of fairly uniform style and are acknowledged masterpieces.

No bend is found in Winchester, Durham, Salisbury, Wells, Norwich, Lincoln, Peterborough, Exeter, Hereford, Gloucester, Worcester, Chester, Llandaff, Oxford, Southwell. This list contains all the buildings of the first rank except a few notable cases of partial rebuilding. It would be strange indeed if Canterbury with its complicated plan and its long history showed no bend, or Chichester, which is notoriously irregular. Moreover, the evidence of symbolism in these and other buildings is vitiated by the fact that each has several deviations: Canterbury has four axes; Chichester appears to have seven; Rochester has several axes, but the deviations are very slight. And again, when there are two bends in the axis, they are sometimes in different directions. The only important buildings with a deviation which will serve for symbolism are therefore Lichfield, Bristol, St. Albans, and Ripon, with an inclination of the choir to N.; and Ely and York, to S. In each of these either the choir or the nave has been rebuilt.

The force of even these few instances is lessened still more when we see that the bend in the axis is only one irregularity among the many found in old buildings; e.g., in six cathedral churches the W. door is not in the centre, and in one, Manchester, the axes of nave and choir are parallel but not in the same straight line; only the irregular Lady chapel at the E. end deviates.

It may be that the above analysis is subject to correction, because plans, however carefully measured (like the *Builder* series here used), may occasionally omit a slight deviation. But, if the deviation is so slight as to escape the notice of the surveyor, it can have but little value as a symbol.

It is true that the cruciform plan of our great churches symbolizes the Cross. But it was a symbolism read into the cross-form after it had been evolved on other grounds. Exactly the same process is happening now in regard to the inclination of the head of the Cross.

10. Details of orientation in buildings and furniture and in ritual.—The site chosen for the English parish church was usually to the N. of the village; perhaps it would be more correct to say that a site was chosen such that the village should be S. of it. There may have been some now unknown motive in this, or it may be simply that it was preferred to approach the church through the burial-ground, which was usually to the S. Similarly, there are two possible explanations of the burial-ground being to the S. There is a prejudice against burial on the N. side. J. Brand records (*Popular Antiquities*, new ed., London, 1900, p. 475) that it was formerly appropriated to unbaptized infants, the excommunicated, the executed, and suicides. This prejudice may be due to an old belief or simply to a natural dislike of a cold, damp place with rank herbage. Thus the principal door of the church is generally to the S., but there is almost invariably a N. door opposite to it, which is often nearly or quite disused.

Tombs in the aisles are on either N. or S. side indifferently. But in the chancel the place of honour was on the N. side; this was undoubtedly in order that the tomb might be used as the Easter Sepulchre, which was on the N. side, presumably because our Lord was pierced on the right side.

In early churches the Gospel ambo was on the N. side; from it sermons were preached and decrees and excommunications read; hence there is still a

slight tendency in Anglican churches to place the pulpit on the N. side. The Paschal candlestick also was on the N. side. The Epistle ambo was on the S. side. The sedilia of mediæval type are believed to be a relic of the presbyters' seats round the apse of the early churches. They have been kept on the S. side and not on the N., doubtless because it is more convenient for the assistant to approach the celebrant, who is facing E., on his right hand. Close to the sedilia was placed the piscina. The bishop's throne is also on the S. side. There was a custom, very commonly if not generally kept up in country places till the beginning of the 19th cent., of separating the men and women, the men sitting on the S. side of the church and the women on the N. This custom had doubtless continued without a break from the earliest days of Christianity, and it is perhaps of pre-Christian origin. It is noted by Durandus (i. 46).

The dissenting bodies from the Anglican Church do not observe orientation.

11. Burial.—Christianity no doubt inherits the custom of burial with feet to E. from paganism. The reason for it given by the early Christians was that Christ at His second coming will appear in the E. and the dead will rise to move towards Him. In practice graves are made parallel with the church without any attempt at accuracy.

12. Superstition.—Few definite beliefs in this country about the points of the compass are recorded. The following has not previously been published:

An old gentleman who had to undergo a slight operation declined to allow it to be performed until the sofa on which he was lying had been placed N. and S. It is thought that he held some views about magnetism.

It is said that in Scotland there is an idea that if the passing of the soul is to be easy the floor-boards of the sick room should not run N. and S.

The association in Ireland of colours with the points of the compass will be noted presently in describing similar ideas in other parts of the world (see below, X.). Green is said to be an unlucky colour in England (Baring-Gould, p. 15).

VII. JEWS.—The Hebrew word for east means literally 'the front,' and that for west 'the back,' so that south is on the right hand and north on the left. This suggests some form of sun-worship at an early period. The supposition is supported by evidence from a later time: the Tabernacle had its door facing E. ('and for the hinder part of the tabernacle westward thou shalt make six boards' [Ex 26²² RV]). This true orientation was notwithstanding the ban of sun-worship by Moses (Dt 4¹⁹).

Lapses into worship of sun, moon, and stars are frequent all through Jewish history: Manasseh 'worshipped all the host of heaven' (2 K 21⁸); Josiah 'took away the horses that the kings of Judah had given to the sun' (23¹¹); Amos upbraids Israel with carrying with them 'the star of your god' (Am 5²⁶); Ezekiel sees 'between the porch and the altar, about five and twenty men, with their backs toward the temple of the Lord, and their faces toward the east; and they worshipped the sun toward the east' (Ezk 8¹⁶). The custom of saluting the moon by kissing the hand referred to in Job 31³⁶ may have been learned in Assyria (see *JE*, s.v. 'Star-Worship').

The Jewish attitude of prayer is an instance of what may be called 'local orientation'; it was not a turning to a point of the compass, but a turning to a place. We have a suggestion of this in Solomon's prayer at the dedication of the Temple: if a man 'spread forth his hands toward this house; then hear thou in heaven thy dwelling place' (1 K 8³⁸). And, when Daniel prayed, 'his windows were open in his chamber toward Jerusalem' (Dn 6¹⁰). This became the law; a wor-

shipper out of Palestine should turn towards Palestine, one in Palestine towards Jerusalem, in Jerusalem towards the Temple, in the Temple towards the Holy of Holies (*JE*, s.v. 'Mizrah'). In *JE*, s.v. 'East,' however, facing to the E. is said to have been the attitude of prayer, and reference is made to *Apost. Const.* ii. 57, which the writer maintains to have a pre-Christian Hebrew foundation.

In regard to buildings the custom of a true orientation, which had been established by the arrangement of the Tabernacle, was continued. It was followed in Solomon's Temple and in all subsequent rebuildings. Ezekiel is very precise on the orientation of the temple of his vision (40-47). Comparison may be made with the Apocalypse (Rev 7² 16¹²). Synagogues (apparently those of the pre-Christian era) are said by A. W. Brunner (*R. Sturgis, Dict. of Architecture and Building*, 3 vols., New York and London, 1901, s.v. 'Synagogue') to have had 'the holy ark or sanctuary' at the E. end, but no authority is given. Those of the 2nd cent. A.D. in Galilee all faced S. (*ib.* s.v. 'Syria'). Synagogues are now planned so that the ark may be towards Palestine (*JE*, s.v. 'Mizrah').

VIII. MUHAMMADANS.—The Muhammadans, like the Jews, observe a 'local orientation'; they turn in prayer towards a place, Mecca. The Ka'bah at Mecca, adapted by Muhammad as a mosque, had been a pagan temple with its entrance to the E. (J. Gwilt, *Encyclopædia of Architecture*, ed. W. Papworth, London, 1867, § 118).

The essential feature of a mosque is the *qiblah* or *mihrab*, a niche or recess in a wall, the direction of the wall being at right angles with a straight line to Mecca. In front of the *qiblah* is an area covered by a roof supported on columns which form a series of aisles running towards the Mecca wall. These form the prayer chamber; in front of it is an open court with covered walks at the sides leading from the entrance, which is generally opposite the Mecca wall. As the Jews had but one temple, synagogues being but houses of prayer, so the Muhammadans had only one temple, that at Mecca (Fergusson², ii. 516); mosques are places of prayer arranged so as to show the direction of Mecca, though they have acquired a sanctity of their own, not less than that of the shrines of other faiths.

Orientation of a kind was therefore of the first importance in a mosque. At Ispahan the axis of the great bazaar runs N. and S. The front of the mosque occupies the S. side of this, but the axis of the porch is bent at an angle of 45° so as to suit the mosque itself, the main axis of which is duly pointed to Mecca.

Private prayer on the housetop is also directed towards Mecca.

In burial the Muhammadan is laid on his right side facing Mecca (see art. DEATH [Muhammadan], vol. iv. p. 502^a).

IX. THE EAST.—Orientation in ritual observance is perhaps most pronounced in Asia, which may be more or less indirectly the source from which the European observance is derived. Tylor holds that the adoration of the sun in the ancient Aryan religion is revealed in ritual orientation.

The Brāhman turns E. at sunrise, says Tylor, and at noon, after adoration of the sun, he turns again E. to read his daily portion of the Veda and to make his daily offering.

'It is with first and principal direction to the east that the consecration of the fire and the sacrificial implements, a ceremony which is the groundwork of all his religious acts, has to be performed' (*PC²* ii. 425).

An example of the orientated altar is given in art. ALTAR (Hindu), vol. i. p. 345^b. Hindu temples are sometimes dedicated to the sun-god, but the

moon-god has none (art. BRĀHMANISM, vol. ii. p. 805^b). Temples seem to be duly orientated in the wider sense of the word.

The Indian Buddhist generally orientated his buildings fairly closely to the cardinal points, and seemed to prefer to make his entrance face E. But the Jain temples did not follow a rule, 'the Jains being indifferent apparently to any particular direction for their buildings' (H. Cousens, in *Archæological Survey of India*, Calcutta, 1907-08, p. 195).

The Thugs, on the other hand, are worshippers of Kali, the death-goddess. In her honour human victims were murdered; to her the sacred pickaxe was consecrated with which the graves of slain were dug, and the elaborate ritual of this consecration was performed facing W. The mediæval Tatars made a mound over the grave and placed on it a statue facing E. (PC³ ii. 423).

Buddhism varies much in different countries, and presumably its buildings and ritual vary. In China it appears that the temples are truly orientated (see ARCHITECTURE [Chinese], vol. i. p. 695^b) and there is therefore, it is to be supposed, some orientation of ritual. There is a paradise of the dead in the W., and the chief book read in the presence of the departed person is the "Sūtra of Amitābha," or the Buddha representing the sun in the west, behind which lies paradise' (art. CHINA [Buddhism in], vol. iii. p. 554^a; cf. art. CONFUCIUS, vol. iv. p. 19^a).

In the Confucian religion there are many sacrifices offered with an elaborate ritual. The most important of these is described in art. CONFUCIAN RELIGION (vol. iv. p. 13), and the points of the compass are carefully mentioned, but their religious significance, if they have any, is not indicated. The sacrifices of the second rank are made at altars and temples in and about Peking. The sun-god has an altar-terrace outside the main E. gate towards the region of the sunrise; the moon-goddess has an altar outside the W. gate, because the W. is the region where the new moon is born.

X. SAVAGE RACES.—1. Ritual acts.—The ritual of primitive races is with difficulty ascertained, and not very much has been recorded. The Pangin, one of the tribes of the Indian Archipelago, on all ceremonial occasions salute and invoke the directions of the rising and setting sun; the people sleep with their faces to the E., and on cremating the dead they place the body to face in the same direction; the land of the dead is in the E., and it seems that that is the direction to which most importance is attached:

'The only disturbing feature is the fact that the "setting sun" is said to be invoked. This may be due to the influence of a solar cult' (W. J. Perry, *JRAI* xliv. 286).

Another tribe, the Toraja of Central Celebes, place their houses in an E. and W. direction with the door at the W. end, thus facing the land of the dead; but this is really religious

A neighbouring tribe, the Tobada, build their 'village-house' N. and S., 'so that, as they say, on entering, one faces to the north, the direction whence they have come, and in which direction they place the land of the dead. The holy place of the house is the north centre-pile . . . and there the ghosts come to live in bunches of leaves of the aruru palm' (*ib.* p. 290).

This seems to be a first, but very important, step towards temple-worship. The largest and most important temple of the Tonapoe has a door on the E. side, thus facing towards the land of the dead and in the direction whence the tribe came. A number of cases are recorded in which houses are built with due regard to the direction of the land of the dead, and of others in which a place is provided as a residence for the ghost, or an entrance into the house is made for it.

In ritual observances the following may be noted:

In old Mexico, where sun-worship was the central doctrine of a complex religion, men knelt in prayer to the E. and doors of sanctuaries looked mostly W. (PC³ ii. 424). The Pueblo Indians of New Mexico, though they are now Christians, have preserved their ancient practice of turning to the sun at his rising, just as the Christians of Europe turn to the E. at certain parts of their worship. The cave-temple of the sun-worshipping Apalaches of Florida had its opening to the E., and the priest stood in the opening early in the morning of the feast-days waiting for sunrise. The Comanches, also sun-worshippers, when preparing for the war-path, place their weapons over night on the E. side of the lodge to receive the morning sun's first rays. The ancient Peruvians were sun-worshippers, and had in their capital, Cuzco, a temple duly orientated, with a great golden disk on the W. wall to reflect the rising sun as it shone through the E. door (*ib.* ii. 424). The Hopi mother, on the twentieth day after the birth of her child, presents it to the sun at the moment of sunrise (see BIRTH [Introduction], vol. ii. p. 642^b, and *Journ. Amer. Eth. and Arch.* ii. [1892] 163).

The following symbolic orientation is characteristic (A. C. Haddon tells the present writer) of the Pawnee, but to a greater or less extent applies to the Plains Indians generally. The 'earth lodges' are built in the traditional manner according to a divinely inspired plan, and serve for ceremonial purposes as well as dwelling-houses; the same symbolism is found in the summer tents, or *tipi*. The entrance always faces E. The central circular fireplace represents the sun, and the cleared space round it the horizon. For certain ceremonies an altar of rugs is placed to the W. of the fireplace, and on it is deposited the sacred bundle; behind it, in the place of honour, sit the priests; the space between the altar and the fireplace is holy ground, over which no priest can pass till purified by purification. This region in the W. is sacred to the evening star, the beneficent guardian of fertility, and to her four attendant messengers: wind, clouds, thunder, and rain. To the N. of the fireplace there should be a bison's skull to represent at once the gods in the heavens and the home of Tirawa, the high god, the all-embracing, the morning star, the bloodthirsty controller of the heat of the sun in the E., who prevents his brother, the sun, from burning up the world. The S. is the land of death and the receivers of the souls of the unfortunate dead, while the malevolent deity of sickness is stationed in the S.W. In ceremonial pipe-smoking puffs of smoke may be blown in various directions as offerings to these and other heavenly bodies.

J. W. Fewkes (*Journ. Amer. Eth. and Arch.* ii. 14-22) says that the underground *estufas* or *kib-nas* (ceremonial chambers) in the Tusayan (Hopi) Pueblo of Wal-pi in Arizona 'are generally placed with their walls corresponding to the conception of the primary points but not to our cardinal directions. . . . The variation of their N. is W. of the true N. (varying from 42° to 50°); consequently the N.S. lines of their *kib-nas* are in reality N.E. and S.W. lines.' The orientation 'is probably intentional, but it may be determined by the possibilities in direction of the recesses in which they are constructed.'

R. M. W. Swan considers that the temples of Mashonaland were orientated (J. T. Bent, *Ruined Cities of Mashonaland*, London, 1892).

We may here notice the wide-spread association of certain colours with the various points of the compass. A table is appended showing some of the recorded observations. It will be seen that these are from N. and S. America, China, and other parts of the world, including Ireland. There is no approach to uniformity and only a few tendencies can be faintly traced, as, e.g., that black is practically never associated with the S. or E. It is just possible that the well-known liturgical colours of the Christian Church, although of late use, are not entirely unconnected with these ideas.

2. Burial.—Practically all peoples who practise inhumation follow some rule as to the direction in which the body is to be laid.

A journey to the land whence the tribe migrated is probably the most general conception at the present time. The dead are laid in the direction of the land of the dead, and this, when both can be ascertained, is found to coincide with the direction of the land of the forefathers.

Perry gives many instances from the E. Indian Archipelago. One tribe makes the grave parallel to a river up which the spirit must travel, the tribe having migrated down the river; another, which believes that the land of the forefathers is to the S., lays the body on its side with head to W., feet to E., and facing S.; another places the body in a sitting position facing the land of the dead. In one case the direction of the grave is towards the land of the dead and in the direction of those places where the first chiefs procured their wives; in another the dead are buried on the S. side of the village, the land of the

dead is situated in the S., and it is from the S. that the people believe themselves to have come. Cases are recorded where the bodies of the dead are definitely orientated to the land of their forefathers, the situation of the land of the dead being unascertained. An exceptional and special case may help to illustrate the belief in the journey which the spirit was to take: the body of a man whose head had been cut off by a member of another clan was brought in and placed sitting on the ground against a pile of the house and facing the land of his enemy; when buried, it was placed in a sitting position still facing in the same direction (*JRAI* xlv. 289); presumably the first business of the ghost was to go and have his revenge. A tribe in E. Africa buries a man who dies in a strange place with his face towards his mother's village (art. *DEATH* [Introductory], vol. iv. p. 425b).

A man of the Wotjobaluk tribe of Vetona, Australia, is buried with his head towards the point of the compass appropriate to his totem (ib. p. 425a).

Among the Battas of Sumatra men of different totems are buried with their heads in different directions, but the reasons for these differences are not always manifest. On the analogy of the Hot-Wind totem and the Sun totem among the Wotjobaluk we may conjecture that the direction in which the body was buried was the direction in which the totem was supposed especially to reside, so that the intention of interring the bodies in these positions may have been to enable the released spirits of the dead to rejoin their totems' (Frazer, *Totemism and Exogamy*, iv. 213). But, as Haddon points out, since the people are supposed to be related to or descended from their totem, this seems to be but another form of the journey of the spirit to the land of the forefathers.

The orientation of the graves of some primitive peoples is recorded without any indication of the beliefs which decided the direction; burial with feet to the W. is observed by races of N. America, Central Africa, Samoa, Fiji, and Australia. Tylor mentions some Australian tribes who bury their dead in a sitting position facing E., even while believing that the land of the dead is in the W.

XI. PRE-HISTORIC WESTERN EUROPE. — 1. Temples.—Under this heading brief reference will be made to the great well-known megalithic monuments. They are included in this article because they have been called temples and tombs, and have been said to be orientated in the sense that their aspect was decided by religious considerations. But as a matter of fact we do not know their use, or what determined their direction, their age, or the religion of the folk who built them. If we knew any two or even any one of these facts, it might be possible to deduce the others. But we have no working base, not even any uniformity among the remains.

The two most famous examples are Carnac in Morbihan and Stonehenge in Wiltshire. Carnac is a series of immense parallel avenues running roughly E. and W. along the coast of Brittany. Stonehenge is a horseshoe within three concentric circles, two of stone and one of earth. From the outer circle runs a straight depression between earth banks. A line drawn down this depression and continued through the horseshoe divides it symmetrically and passes through a flat slab called the 'altar.' This line points to the place of sunrise on mid-summer day about, according to Lockyer (*Stonehenge*, p. 67), the year 1680 B.C. It may be that Stonehenge is a sun-temple, as Lockyer argues, and that it was built about that time. But it may not be a sun-temple, and, as to the date, A. R. Hinks points out (*NC* liii. [1903] 1002ff.) that, if the first glimpse of the sun is observed, we get the year A.D. 3000; if the middle of the disk is observed, the conditions are right for to-day; if we wait for the completion of the sunrise, the date must be put back about 2000 years.

The works at Avebury consist of a large circle enclosing two others; there is an avenue leading from the outer circle in a S.E. direction. On Haken Hill there is a circle with indications of an avenue leading N.W. The circles forming 'King Arthur's Round Table,' Penrith, are broken towards the N.E. and S.W. The work at Arbor Low, Derbyshire, seems to be orientated

almost due N. and S. (Fergusson, *Rude Stone Monuments*, London, 1872).

Callernish in the island of Lewis is a circle with a stone in the centre. From the circle single lines of stone stretch out S. and E. and W., while a wide avenue runs to the N. (These directions appear to be approximate only.) A tomb within the circle has an axis roughly N.E. and S.W., the entrance being towards the N.E.

There are considerable remains in Ireland. Those around Lough Gur, Limerick, have been described by B. C. Windle, who made careful observations of the bearings in those cases where they 'might possibly be significant' (*Proc. Royal Irish Acad.* xxx. [1912] sect. C, p. 283). The monuments near Lough Swilly, Co. Donegal, have been recorded by H. Boyle Somerville, who detects several systems of orientation, monuments being orientated for the solstitial sunrises or sunsets or both, for sunrise or sunset at the equinoxes, for sunrise or sunset at a point equidistant in time between solstice and equinox, for rising or setting of a star or of the moon (*Journ. Royal Soc. of Antiquaries of Ireland*, xxxix. [1909] 192, 215, 343).

2. Burials.—Until recently burials both on the Continent and in Britain appeared to be haphazard. But recent research seems to show that two or perhaps three definite systems were followed, though in each of these there were not a few exceptions. In some cemeteries the skeletons are found laid on their backs E. and W. with feet to E., while in others they are N. and S. with feet to N., but occasionally to S. Others again are laid on the side E. and W. with the feet sometimes E. and sometimes W., but always looking S. In some cases a single group contains skeletons pointing to all four cardinal points, as at Broughton Poggs. At the Saxon cemetery at Fairford the feet were almost invariably to the N., and W. M. Wylie thinks that this was the prevailing pagan practice among Teutons (*Archæologia*, xxxvii. [1857] 459). In Sussex and Surrey and in the south of England generally the feet are most commonly E., but, when they are not, they are almost invariably to the N. In the round barrows of Wiltshire the tendency is for the bodies to be facing S.

One of the most remarkable examples of orientation (taking the word in its wide sense) is the 7th or 8th cent. Christian cemetery at Hartlepool, the first monastic seat of Hilda of Whitby. Here were found a dozen bodies with memorial slabs incised with crosses and Christian inscriptions; yet all were lying N. and S.

There seems good ground for believing that the Teutons held the north sacred. The classical passage in mediæval literature is in *Reineke Fuchs* and is quoted by J. Grimm (*Deutsche Mythologie*, Göttingen, 1854, i. 30). Here the fox turns in the Christian direction, while the wolf is content with the heathen orientation towards the N. G. B. Brown (*The Early Arts in England*, London, 1915, iii. 161) points out that this orientation cannot have formed an important item in Teutonic paganism or it would have left a more decided mark in literature. On their conversion to Christianity the Teutons for the most part seem to have abandoned this direction in their burials for that of E. and W.

The general conclusions are as follows, though we must not expect uniformity even in the same race. Burial with the feet to the N. was probably the practice of the pagan Saxons, though this was not universal. For the most part they adopted the E. and W. position on conversion to Christianity. On the other hand, some Christian burials are, as we have seen, N. and S. Some burials on the side with feet to E. or W. but with the face

always to the S. suggest a desire to face, or lie in the path of, the sun. These general tendencies are interfered with by the survival or overlap of more ancient customs, by indifference and ignorance, and by local conditions such as a steep slope in the ground.

List of English churches showing direction of axis, dedication, and date of festival, with direction of sunrise on the festival (see above, VI. 8).

LITERATURE.—The only work dealing comprehensively with the subject is Heinrich Nissen, *Orientation*, Berlin, 1906-10 (only pts. 1-3 (Egyptian to early Christian) have been issued). Egypt is dealt with partially by E. A. Wallis Budge, *Egyptian Ideas of the Future Life*, London, 1899, and 'The Pyramids and Temples in the Sūdān,' in *Proc. of Royal Society of London*, lxx. [1899], and more fully by J. Norman Lockyer, *The Dawn of Astronomy*, London, 1894. Greek temples are discussed by F. C. Penrose, in *Proc. of Royal Society of London*, liii. [1893], lxx. [1899], and early Christian churches by G. G. Scott, junr., *Essay on the Hist. of English Church Architecture*, London, 1881. An important contribution on primitive races is W. J. Perry, 'Orientation of the Dead in Indonesia,' *JRAL* xlv. [1914] 281 ff. He opposes the hypothesis of E. B. Tylor, *PC* 3, London, 1891. Lockyer has expounded his theories on Stonehenge in his *Stonehenge and other British Stone Monuments*, London, 1906. James Fergusson's *Rude Stone Monuments in all Countries*, London, 1872, is still valuable. Pre-historic work is discussed by G. Baldwin Brown, *The Early Arts in England*, 4 vols., do. 1903-15, and by Walter Johnson, *Byways of British Archaeology*, Cambridge, 1912. Both these authors give useful references to recent research. J. G. Frazer's works, although, curiously enough, not dealing directly with the subject, must of course be studied.

T. D. ATKINSON.

POKOMO.—I. Distribution.—The Pokomo are a Bantu people inhabiting the Tana Valley, in the north-eastern part of the British E. Africa Protectorate. Their proper tribal name is Wa-Pokomo (*f* representing the 'bi-labial *f*' which in this language corresponds to Swahili *p* and Giryama *h*), but they are called Wapokomo by the Swahili and Munyu by the Galla. A recent official estimate gives their number at about 18,000. They are divided into thirteen tribes (*vyeti*, plur. of *keti*), occupying definite areas with recognized bound-

aries. None of their villages is found at any great distance from the river, with which their tribal life is so closely bound up that they have a saying 'The Tsana is our brother' (they call it Tsana, Tana being the Swahili pronunciation; the Galla name is Galana Maro). Their farthest north-western limit appears to be about 39° 30' E., on the bend of the river; this is the district of the Korokoro tribe; the rest, in order, going down the river, are Malankote, Malalulu, Zubaki, Ndura, Kinakomba, Gwano, Ndera, Mwina, Ngatana, Dzunza, Buu, Kalindi. The first nine of these are known as the 'upper' tribes (*Wantu wa dzuu*); the Ngatana (whose district is about 3° 30' S. by 40° E.), Dzunza, Buu, and Kalindi are the 'lower' (*Wantu wa nsini*). These two sections differ considerably in dialect and customs; they are sometimes said never to intermarry, but the rule is not absolute. On the confines of the Kalindi area, between Chara and Kau, and on the Ozi estuary, are some villages of 'Mahaji'—Pokomo who have become Muhammadans and more or less adopted Swahili dress and customs. The Zubaki are the most numerous tribe, numbering about 2000.

The first European to mention the Pokomo is probably Boteler, who was at Lamu in 1823, and says:

'Above the town of Kow [Kau], at every twelve or fifteen miles, there are large villages on the northern bank inhabited by the Pocomas, a tribe dependent on it, and at the distance of fifteen days' journey in a canoe, . . . is situated the town of Zoobakey, beyond which the current of the river is too strong to proceed against it' (*Narr. of Voyage of Discovery*, I. 393).

The 'town of Zoobakey' is probably a mistake for the Zubaki tribe; the distance is approximately correct.

Krapf, though he never visited the Tana, heard of this tribe, and mentions their kinship with the 'Wanyika' (see art. NYIKA). He obtained a good deal of information from two Muhammadan Pokomo settled at Takaungu, who, among other things, gave him a list of the 'principal places' on the Tana, most of which are the names of the tribes already given; others may be those of villages which have since been removed. The Pokomo, though not nomadic, like the Galla, have at various times been forced to migrate by changes in the course of the Tana, the last of which seems to have taken place about 50 years ago, the river being deflected near Marfano from its old bed, which ran to the north-east of the present one.

Von der Decken was at Kau in the early part of 1865, and speaks of the Pokomo as 'friedliche und fleissige Ackerbauer,' whose villages begin above Chara (*Reisen in Ostafrika*, ii. 271). His companion, R. Brenner, returned in 1867 and ascended the Tana as far as the Malankote district. Between these two dates the Tana had been visited by New and Wakefield, of the United Methodist Free Church Mission, who founded a station at Golbanti, primarily for the benefit of the Galla, though the Pokomo were found to be more promising converts. This station has long been without a resident European, but is in charge of a native teacher; and there is a small number of Christian Pokomo at other stations of the same mission. Brenner's estimate of these people, it may be remarked, is unduly severe. The Tana was explored in 1878-79 by Gustav and Clemens Denhardt, who ascended as far as Masa, in lat. 1° 15' S. The former gives some account of the Pokomo in the *Journal of the Berlin Geographical Society* for 1884. Subsequent information is derived chiefly from the German missionaries belonging to the Neukirchen body, who began work on the Tana in 1887, soon after the proclamation of the German Protectorate over Witu, which lasted till 1890.

2. Origin, language, etc.—The traditions of the Nyika tribes seem, on the whole, to import that

the Pokomo came, like them, from Sungwaya, though they moved southward considerably earlier. They were already settled in the Tana Valley when the Wanyika were driven from their homes by the Galla invasion. The Kauma version of the matter is that 'we refused to be conquered by the Galla, but the Pokomo consented,' and retained their country at the price of their freedom. They have been, in fact, more or less tributary to the Galla ever since—or at least till the Galla power was reduced by the attacks of the Somali on one side and the Masai on the other. According to Von der Decken (ii. 271), the Pokomo were, in 1865, dependent on the Galla 'ohne jedoch von ihnen gedrückt zu werden.' The Korokoro tribe have, like the Wasanye, ceased to use their own language and adopted Galla instead.

Krapf records the fact that the inhabitants of the Taita hills call the Wanyika 'Ambakomo,' because they believe them to be descended from the Pokomo on the Tana. It also appears, from independent traditions preserved by both peoples, that some of the Rabai tribe at one time took refuge among the Pokomo, who have derived one of their 'mysteries,' the 'great *ngadzi*' (see below), from them (Krapf, *Dict. of Swahili*, London, 1882, s.v. 'Mutsi mwiru'). The Pokomo traditions, together with various features of their language and customs, indicate a composite origin: (1) a Bantu immigration from Sungwaya, (2) the hunter tribes (Wasanye and Waboni) previously in occupation of the Tana forests, (3) the backward migration from Rabai (Werner, *Journ. of Afr. Soc.* xiii. 364 f., *FL* xxiv. 457; Böcking, *Zeitschr. für afrikan. und ocean. Sprachen*, ii. 33). The tribes seem to have reached the Tana Valley separately. Some say that the Buu and Ngatana were the first to arrive, coming from the north or north-east; others that the Mwina, Dzunza, and Kalindi were there before them. A legend given by Böcking (p. 36), and independently by the present writer (*Journ. of Afr. Soc.* xiii. 363 f.), derives the Buu from a single ancestor, Vere, who 'appeared' in the country near the 'old Tana' and was taught to make fire (by friction) by a Musanye named Mitsotsozini. As this man is claimed as a direct ancestor by the Katsae clan of the Buu, it seems that either Vere himself or his children intermarried with the Wasanye. The traditions go on to state that, when the Pokomo were attacked, first by the Galla and afterwards by the Swahili (Watsawaa), some of them emigrated (but subsequently returned), others dug pits (*dindi*) and retired underground; hence the name Kalindi (Böcking, p. 36; [Krafft], *Grammatik der Pokomo-Sprache*, p. 137). The subjugation by the Galla is here spoken of as prior to that by the Swahili, but other accounts indicate that the latter came first—i.e., if the accounts are to be trusted which place Liongo Fumo in the 13th century. That legendary hero (whose story is given in E. Steere, *Swahili Tales*, London, 1870) is said to have made the Pokomo tributary 'from Chara to Mwina'; he went no higher up the river. Some say that he imposed the 'tribute of heads' (i.e. four slaves from every large village and two from every small one), which was afterwards commuted into a payment of so many sacks of rice. This was received by the Sultans of Witu till quite late in the 19th century (Würtz, in *Zeitschr. für afrikan. und ocean. Sprachen*, ii. 89). The Pokomo tradition about Liongo agrees quite closely with the Swahili one given by Steere, which still lives at Kipini and Lamu—his grave and other sites connected with him are pointed out at the former place. Some say that he warred against the Portuguese, which would make him much later; but the matter is still involved in much uncertainty. Some of the

Pokomo make him contemporary with Vere, and others, while not asserting this, are positive that there were Swahili towns on the coast when this ancestor came to the Tana Valley, which may indicate that the Pokomo settled there at any rate later than 689, the date generally accepted for the foundation of Pate. It seems probable that the Pokomo were the earliest Bantu with whom the Arab settlers came in contact, and that their language forms the groundwork of Swahili—or at least of the Lamu dialect.

The Pokomo language contains, as might be expected, a great many Galla words and also a number of others which do not seem to be Galla, but are difficult to parallel in any other Bantu language. Considering the traditions above referred to and other points which make it highly probable that these people are partly descended from the Wasanye, we may not be far wrong in assigning these words to the language of the latter. It is difficult to establish this point at present, because most of the Wasanye have disused their own language, and (like the Korokoro) speak Galla; the few who still know the old speech are to be found in the neighbourhood of Witu.

The Pokomo, though cultivators of the soil, are also hunters and fishermen; and their hunting customs, tabus, and traditions show that the practice is of great antiquity. Their burial customs also seem to connect them with the Wasanye, for, instead of burying in the village, or even in the dead man's own house, as do most Bantu tribes, they carry the dead away into the forest. One of their 'mysteries,' the *fufuriye*, is avowedly borrowed from the Wasanye, as the great *ngadzi*, or sacred friction-drum, is said to have been derived from the Warabai. We have therefore every right to assume a composite origin for the Pokomo; and this seems also to be borne out, e.g., by the numerous gradations of skin-colour met with, 'black' and 'red' (i.e. darker and lighter) individuals being frequently seen among the children of the same father and mother. As a rule, they are of sturdier build than the Wasanye, but not often tall. Otherwise their physical type calls for no special remark. Denhardt (p. 145) says that cicatrization was common in 1878, but it is not often seen now. The two middle lower incisors are sometimes removed, or partly chipped away, but this is not universal, and seems to have, nowadays at least, no ritual significance. Denhardt, although he found that all boys underwent this operation about their eighth year, was repeatedly assured that this and the cicatrization were 'nur Schönheitsmittel.' The tribes of the Lower Tana do not practise circumcision (except such individuals as have adopted Islam); those of the Upper Tana do.

3. Social organization.—The Pokomo *vyeti* consist of exogamous clans (*masindo*, plur. of *sindo*). Many of them bear Galla names (e.g., Uta, Meta, Iiani, etc.); but these are of later adoption, and some have their old Pokomo name side by side with the Galla one—e.g., Kinakaliani of Zubaki, which is also Garijela (=Gardyed). The clans of the Wasanye also have Galla names. Traces of totemism, though no doubt it once existed, are not very obvious at the present day. The tribal organization is similar to that of the Giriyama and other Nyika tribes, and also to that of the Galla, the Masai, and apparently the Wasanye. The system of 'ages' (Giriyama *marika*) is known by the Galla name of *luya*. Circumcision, as above stated, is not practised by the Pokomo of the Lower Tana; but all the boys who enter the 'young men's house' (*gane*, or *nyumba ya worani*) at the same time, which they do about the age of 14 or 15) constitute a *luya*. They remain in the *gane* till they marry,

the next *luya* entering a few years after them, so that there are always two 'companies' (*vitaro*) in the house at the same time. There is a twofold division of the tribe, apparently corresponding to the 'right-hand' and 'left-hand' circumcision of the Masai, the two halves being called Honge and Vibare, and the senior *luya* in the *gane* belonging to each of these alternately. Apparently the *luya* does not receive a name till it has passed into the highest stage of eldership. In 1912 the young married men of the Buu tribe at Ngao were *wana wa magomba*, belonging to the Vibare section; the men of the previous *luya*, older, but not old enough to be their fathers, were *wana wa mperuya*, and the *luya* before that (to which belonged Nyota, the senior chief, then almost incapacitated through age) was *magomba*. The *magomba* are the fathers of the *wana wa magomba*, and the sons of the latter are at present known as *wadzikuu* ('grandsons') *wa magomba*. The *luya* before *magomba* was *mperuya*, of which few, if any, were still living in 1912. The duration of a *luya* would seem to be about fifteen or sixteen years—roughly, half a generation.

The word *rika* is used by the Pokomo, but is applied to a feast given to the whole tribe by the members of a new *luya* on their admission.

These age-classes must not be confused with the 'degrees' or 'orders' to which men and women are admitted at various stages of their existence, and which correspond to the *habasi* and *kambi* of the Giriyama. Boys are supposed to be bought into the *makombe* by their fathers as soon as possible after birth, but the ceremony may be delayed if the family cannot afford the fee. The initiate is entitled to wear a coronet of palm-leaf (*tama*) and ear-ornaments called *vipuli*. The next step is *nyere* (Giriyama *nyere*), followed by *kundya*, which a man is supposed to have entered before he marries. Married men are initiated into the *kiroo*, whose badge is an ostrich-feather worn in a little clay 'holder' plastered on the head, like the nest of the mason-wasp (whence its name, *nyumba ya nyiro*). After this comes the higher grade, *ngadzi*, with three divisions: the *fufuriye*, lesser *ngadzi*, and greater *ngadzi*. The special 'mystery' of the *fufuriye* (derived, as already stated, from the Wasanye, who strictly keep the secret from the Galla) consists of two flutes (called 'male' and 'female'), differing in diameter and in pitch, which are played together. They are kept at a lodge in the forest and shown only to the initiated. The lesser *ngadzi* has three stages and the greater six, one of which is called *mwanya* (=Giriyama *mwandza*). The *ngadzi* itself is a huge friction-drum made of a hollowed log, 12 ft. long and weighing half a ton. There is one *ngadzi* for the Wantu wa dzuu, and another for the Wantu wa nsini, with whom are included the Wasanye.

The members of the *ngadzi* are all called 'elders' (*wakijo*), though those belonging to the greater *ngadzi* enjoy most consideration. The government of the tribe is in their hands, and from them the two chiefs (*mahaju*) are chosen. One of them belongs to the Honge and one to the Vibare section. They appear to hold office till they die or are incapacitated by age. The name *haju* is the Galla *hayu*, 'chief.'

The *wagangana*, or sorcerers, form a distinct guild, with their own rules and initiation. There are five grades of them, the lowest called *mwana wa mpefo*, 'son of the spirits.' A man who has passed through all but the highest is supposed to be eligible for that when his son enters the lowest. Both *wakijo* and *wagangana* are buried with special honours, and the face and breast of the corpse are painted in three colours, with soot ashes, and red clay (*zazi*).

Women have two orders, the *vara*, corresponding to the *makombe* of the youths, girls being bought in by their fathers as soon as they can afford it, and the *nkaka ya mumio* (also called *ngoroshu*), which they join after marriage, their husbands paying the fees. It is probable that they have a *ngadzi* (or some equivalent) of their own, but the present writer was never able to ascertain this point.

An arrangement as yet insufficiently investigated is the division of each village into 'upper' and 'lower' sections (*danda ya dzuu* and *danda ya nsini*), which appears to have no relation to either clans or *luvas*. At Ngao, in 1912, each section had two elders (one of the four being the junior *haju*).

4. Material culture. — Pokomo huts are very much like those of the Galla; they are hemispherical, or beehive-shaped, thatched with grass on a framework of poles, which are planted in a circle and tied together at the top (not, as by the Zulus, bent over to form arches). Rice was formerly the staple crop cultivated, but, since the Tana has had a freer outlet to the sea through the Belezoni canal and the Ozi estuary, the cultivation of rice has diminished and that of maize increased, owing to the smaller area now covered by the annual inundations. All Pokomo are expert swimmers and canoe-men; the craft generally used (*waho*, plur. *maho*) is the usual African dug-out, but for long journeys performed by a large party they have the *sangala*—two canoes lashed together, with a platform of sticks between them.

Fishing is carried on with hook and line, by spearing (the fish-spear, *yutsoma*, is distinct from the hunting-spear, *fumo*), or by means of wicker traps (*mono*) and weirs. The most important animals hunted (before the game-laws were in force) were the hippopotamus, the elephant, and the crocodile. Each has its appropriate ceremonies and is celebrated in special songs. No hunt could take place without the permission of the *wakijo*, who chose a lucky day, performed incantations to ensure success, and insisted on the observance of the complicated etiquette regulating the distribution of the meat. The chief hunting weapon is the spear; bows and arrows (with iron heads, or poisoned ones, with reed points) are sometimes seen, but are commoner among the Wasanye. The crocodile is a favourite food, and is therefore to a certain extent preserved; the Pokomo are always reluctant to destroy its eggs. Other items of food, especially in times of scarcity, are wild fruits and roots—e.g., the fruits of the *mkoma*-palm (*Hyphaene thebaica*) and the tubers, the receptacle, and upper part of the stalk of the blue or white water-lily (*gunji*).

As might be expected from their being largely a hunting tribe, the Pokomo have an interest in animals and a knowledge of their habits which recall the S. African Bushmen. Böcking has recorded some of their hippopotamus and elephant songs, and many others might be gathered from the lips of the people. A specially noteworthy point is the fondness of the women for improvising songs about birds, many of which are remembered and handed down. The Tana is unusually rich in bird-life, and the creatures celebrated in the songs (the osprey, a kind of plover, etc.) seem to have attracted attention by their beauty and grace and are not, so far as one can discover, considered from a utilitarian point of view.

5. Customs, etc.—So far as the Pokomo are differentiated from other Bantu, it appears to be firstly by their affinities with the hunting tribes, and secondly by the specialized life consequent on their riverine habitat. In many ways their customs do not call for separate remark—e.g., those con-

nected with marriage are much the same as those of other Bantu, except, perhaps, that it is more usual than elsewhere for a man to bespeak his friend's daughter in infancy or even before birth. This may be due to a comparative scarcity of women; and it was the present writer's impression that men with two wives at once—and certainly with more than two—were not common; but she gives this with hesitation, as her observation of natives not under missionary influence was limited. The rules of *hlonipa* are strictly observed, applying to a prospective as well as an actual mother-in-law, to her sisters, and, in a less degree, to other members of the family.

Pokomo folklore is of the usual Bantu type, but has interesting points of contact with that of the Galla, while the latter shows striking parallels with the Nama and Masai.

POLABIANS.—See SLAVA.

POLES.—See SLAVS.

POLES AND POSTS.—In many parts of the world poles and posts have had a religious or magic significance. There is reason to believe that in many countries the post or pole has gained its significance as the representative of a once sacred tree, the spirit of the tree being supposed to have passed into it. Whether this explanation will hold for all parts of the world is problematical.

1. *Babylonia and Assyria*.—One of the oldest Babylonian inscriptions known¹ (so old that its writing is almost pictographic) bears on one side the picture of a man who wears a feathered head-dress and stands before two pillars or posts. These have each a globular enlargement near the top; and just beneath this enlargement there are on one pole four horizontal marks, and on the other eight. The inscription, of which no translation has ever been published, refers to the building and dedication of a temple. It begins:

'Wood unworked, reeds unworked, Ennamag, suitable for a dwelling, brought. Uninjured was the chief, uninjured was the officer Ennamag. Ennamag with firmness laid the bricks; the princely dwelling made.'

By it was a tall tree; by the tree he planted a post.'

The association of trees and posts to which this ancient text bears witness is confirmed by a number of early Babylonian seals, on which, in connexion with the picture of a god, a tree and a post are also pictured. Thus one seal² represents the sun-god stepping over the mountain of the eastern horizon, and behind him is a palm-tree. Before

¹ E. de Sarzec, *Découvertes en Chaldée*, Paris, 1885–1912, pl. i. bis.

² W. H. Ward, *Seal Cylinders of Western Asia*, Washington, 1910, no. 260.

him stands the moon-god, and between the two gods is a post having at the middle a globular enlargement similar to that of Ennamag. Another¹ represents the seated sun-god, behind whom is a tree, while two posts, one before and one behind him, are carved at the top into a slightly tree-like form. It thus appears that the sacred tree and the sacred posts were associated.

The sacred tree was in Babylonia usually a palm-tree. This is shown by the pictures on many seals.² The fact that the god resided in the tree is graphically shown by two seals, on which the tree is portrayed as an anthropomorphic deity whose head is surmounted by the horns of divinity, and from whose body the branches of a tree protrude.³ This was the spirit which, it was thought in early times, could be persuaded to go and reside in a pole or post that could be transported from place to place. The conception was analogous to the idea that the spirit of a crag could be persuaded to reside in a smaller movable stone and then in an idol.

The posts were often surmounted by the symbol of the deity to whose worship they were attached. The symbol of Ishtar was a star, and on many seals this symbol is pictured as resting on the top of a post.⁴ Out of this combination the sign was evolved by which the goddess's name was expressed in later Babylonian writing.⁵ A late seal, bearing an Aramaic inscription, actually has a form of the post practically identical with the sign.⁶ The post was sometimes surmounted by a sun-disk;⁷ at least once it is surmounted by both the star and the crescent moon;⁸ sometimes it bore a triangle, and sometimes a bird.⁹ When thus surmounted, it became the symbol of different deities. Thus, when it bore the head of an eagle or a hawk, it was the symbol of Zamama, the god of Kish; when it bore the head of a lion, of some unidentified deity; when the heads of two lions, it was the symbol of Ninib.¹⁰ Sometimes the post terminated at the top in a crook which turned to the right hand or the left, and in one instance it bore horns like those of a cow turned downwards.¹¹

Representations of the post, when so curved, easily pass into representations of the *caduceus*, which, according to Ward, was a serpent emblem. Sometimes objects which he designates as *caducei* seem more like posts.¹² It seems probable that the posts were sometimes carved to resemble serpents, and that the two emblems merge at times the one into the other.

Another object on the seals is of a puzzling nature. It looks like a post with a projection on one side.¹³ Frequently, though not always, a vase is pictured above it. Ward calls the vase the symbol of Aquarius, and suggests that the object in question may be the balance of Libra.¹⁴ This suggestion seems most dubious. Why should a balance always stand on end? The balance-signs in the Babylonian writing are never made like this picture. The pictures of the posts on the earlier seals, which represent them with a globular enlargement towards the top or above the middle, indicate that this, too, is a post, though why it should be made in this form it is impossible to conjecture.

There is reason to believe that the primitive Semitic name for a sacred post was expressed by the consonants 'sr, for in S. Arabia it was known as *athirat*, in Phœnician and Hebrew as *dsherāh*, and in Akkadian as *ashirtu* or *eshirtu*.¹ Apparently in early times such posts marked the limits of a sanctuary, for in course of time *ashirtu*, or *eshirtu*, became the Akkadian word for 'sanctuary,' and so passed into Assyrian. If we are right in supposing that the post was a surrogate for an earlier tree, it would follow that the limits of the earliest Babylonian sanctuaries were determined by the position of sacred trees. F. Hommel suggested² several years ago that the name of the god Ashur was derived from *ashirtu*, 'sanctuary'—a view that Barton afterwards accepted.³ If this be so, not only the name of Ashur, but the city that bore his name, as well as the warlike empire that grew out of it, all bear witness to the popularity of the cultus-post in early Mesopotamian religion.

No shrine was thought to be complete without such posts. Thus, when the Assyrian armies erected temporary shrines in order to propitiate by sacrifice a river-deity before crossing the river, they set up not only a temporary *maššēbhāh*, but two posts. This is shown in the case of the army of Shalmaneser III. in the pictures on the Bronze Gates of Balawat. The *maššēbhāh* here has a broad base so that it will stand on the ground; the two posts, surmounted with sun-disks, are provided with a base in the form of a tripod. Friedrich Delitzsch calls these 'candelabra,'⁴ but in view of the evidence of the seals and the Carthaginian *cippi*, cited below, they are probably representatives of the older posts. As Shalmaneser does not inform us of the nature of these objects or of the material of which they are made, we are left to conjecture. The object that we have designated a *maššēbhāh* may have been made of wood. If so, it was also an *dsherāh*. In any event it has near the top some of the horizontal lines borne by the post of Ennamag already mentioned.

Whether sacredness attached to the posts of doors and gates is problematical. If H. C. Trumbull's explanation⁵ of the origin of the sacredness of the threshold is correct, the door-post, which represented the male, should be as sacred as the door-socket or threshold, which represented the female. Possibly this was the case in Assyria, since at Khorsabad foundation deposits were found, not only under the corners of the city which were sacred (see art. CORNERS), but under each gate-post of the eight gates of the city. This seems to show that the gate-posts shared in the sacredness of the corners. It is possible, therefore, that some sacred symbolism attached to the gate-posts pictured on the seals of the sun-god Shamash.⁶ He is represented as stepping over the mountains of the east and through the gate of the morning by which he emerged from the subterranean passage which was supposed to lead from the west to the east. There are, however, no symbols at the top of these posts, as on some Phœnician gate-posts, to indicate that they were sacred, and the point cannot now be determined.

The Assyrian kings sometimes savagely boast that they impaled their captives on stakes round the cities which they had conquered.⁷ Such victims were at times killed before they were impaled. It has been customary to ascribe these acts to the savage brutality of the Assyrians; but, in view of a method of sacrifice by impaling cited below (§ 8), it is possible that we have in this custom the

survival of a primitive sacrifice by impaling on a post. Such a sacrifice could originate only in a period when men were in a very savage state. The Assyrians were the most brutal of all the Semites, and it is possible that such a primitive custom may have survived among them. It was exercised only in war, when persistent resistance especially enraged them. As all their wars were carried on in the name of Ashur, such resistance was impious to him, and he would take pleasure in the sacrifice of the victims. If this view be true, the stakes or posts on which the victims were impaled were a kind of rude altar.

2. Arabia.—Nearly all direct evidence of the use of the sacred post in Arabian heathenism has disappeared along with the rest of the cultus of the 'times of ignorance' which Islām supplanted. The one bit of evidence that has survived is contained in a Minæan inscription published by Hommel, which mentions a goddess Athirat as the consort of the god Wadd.¹ Athirat is the S. Arabic equivalent of Ashera (Assyr. Ashirtu). As in N. Semitic lands the word designated first the name of the post and only later that of a deity, it is probable that the same was true of Arabia, especially as the palm-tree is shown by historical² and archaeological³ evidence to have been sacred in Arabia as well as in Babylonia. The only heathen shrine of Arabia of which we have a tolerably full description is the Ka'bah at Mecca, and, while in the descriptions of that the sacred stone is mentioned, there is no mention of the sacred post.⁴

3. Phœnicia and her colonies.—Most of our knowledge of sacred posts in the Phœnician world comes from Cyprus and Carthage. The word *asherath* in the sense of 'sanctuary' occurs in a Phœnician inscription from Masub that was discovered in 1885.⁵ This use of the word accords with the Akkadian. A seal, possibly Babylonian (in any case it reflects Babylonian influence), seems to represent the limits of a sanctuary as marked by two posts similar in shape to one of the Babylonian forms.⁶

There is much evidence that in Phœnician religious thought the palm-tree held the same place as it did in Babylonian thought. In Cyprus terra-cotta figures of three women dancing round a palm-tree have been found in considerable numbers.⁷ Although these are broken, a reconstruction of the original is possible and furnishes proof of the devotion of women to this tree. Evidence of the sacredness of the tree is also afforded by many of the votive *cippi* from Carthage, on which it is drawn in more or less realistic fashion.⁸ The transition from the tree to the sacred post is shown by a terra-cotta object from Cyprus now in the museum of Bonn University.⁹

As to the forms which the post assumed in the Phœnician cult we cannot always speak with definiteness, since from the drawings on the votive *cippi* it is not possible to distinguish in every case which objects were made of wood and which of stone. The *āsherah* is once represented as a slender post surmounted by the crescent moon,¹⁰ and several times as a slender post surmounted by curved lines which form a kind of sun-disk, or two

sun-disks one above the other; in some instances two wavy lines branch out below the sun-disks.¹ These are clearly rude representations of the palm-tree made by using as few lines as possible. Another series of figures, more elaborately made, affords the transition to the more common sort of post. These are in the form of posts surmounted by the curves which resemble the sun-disks, but they still have the horns or streamers which represent the hanging date-fruit.² The post as most commonly represented on these *cippi* is identical in form with this conventionalized date-palm, except that the lines which represented the hanging dates are absent. Sometimes two globular curves are represented at the top, sometimes one, and at times even one curve is so incomplete that the post appears to be surmounted by two horns. This series of pictures demonstrates the date-palm origin of the cultus-post for the Semitic world.

The posts appear on the *cippi* in various connexions. At times they stand by the triangular figure of the goddess Tanith; this is the most common representation.³ Sometimes with the figure of the goddess there stands a hand which represented at this time the *maṣṣēbhāh*, or pillar.⁴ This hand appears also on various seals made under the mingled influences of Babylonia and other countries of W. Asia.⁵ The hand was a euphemistic symbol of the phallus, which the pillar was believed to represent. This is its meaning in Is 57⁸ in the phrase 'thou sawest the hand חַמָּה'. That this is the significance of the hand on these *cippi* is indicated by a picture in which the posts appear together with the figure of the goddess and a phallus.⁶ At times it is accompanied by two hands. Various conjectures have been made as to the significance of the posts. It seems clear from these combinations, and from the dance of the women of Cyprus about the palm-tree, that in the Phœnician religion they represented the female principle of fertility as the pillars did the male principle.

In some representations of Phœnician temples which have survived the door-posts are surmounted by curves similar to those at the top of some of the cultus-posts.⁷ Apparently, when such posts were of wood, they had a significance similar to that of the cultus-posts. Sometimes, however, they were of stone, like those at Tyre described by Herodotus.⁸ Perhaps, in that case, the sacredness of the *maṣṣēbhōth* attached to the pillars. In any event the sacredness of the doorway was connected with the two sets of symbols.

A number of the *cippi* are dedicated to Tanith and to Ba'al-Shamin, or the sun-god. Naturally it was thought that the female principle would appeal to the god, just as the male principle did to the goddess. The rude representations of the top of the palm-tree appear, as already noted, somewhat like sun-disks. In time, then, these posts were known as 'sun-pillars' (cf. Is 27³, Lv 26³⁰, where RV renders 'sun-images').

4. Amorites.—As was the case with Arabia, no archaeological evidence of the use of the cultus-post has come down to us from the Amorites, and yet we know that they not only used the post, but, like the Arabians, gave its name to a goddess. When the El-Amarna Letters were written, in the first half of the 14th cent. B.C., a compact group of Amorites were living in N. Palestine. Their

habitat stretched from the sea-coast at Accho, across the territory afterwards occupied by the tribe of Asher, up into the great valley between the ranges of the Lebanon. The chieftain of this tribe was called in the letters Arad-ilu-A-shi-ir-ti, the Akkadian form of Ebed-Ashera, a name meaning 'the servant of Ashera.'¹ The presence of this name is proof of the antiquity of this phase of the cult among the Amorites, and of its close association with deity. The memory of this name of the Amorite goddess lingered long in the Orient, for in a Babylonian hymn of the Greek period we read:²

'Unto the god Amurru, lord of the mountain,
Unto Ashrat, lady of the plain.'

5. Canaanites and Hebrews.—There is abundant testimony in the book of Deuteronomy that the pre-Israelitish inhabitants of Canaan equipped their high places with both pillars (*maššēbhōth*) and wooden posts (*āshērīm*). The Hebrews are strictly admonished to break down the one and to cut down the other (Dt 7⁵ 12³ etc.). It has often been inferred from 16²¹, 'Thou shalt not plant thee an Asherah of any kind of tree,' that the *āshērīm* were trees. In accordance with this view, the AV translated the term 'groves.' More recently G. F. Moore³ and K. Budde⁴ have endeavoured to show that the *āshērāh* was always a wooden post, and that the verse in question should be rendered 'an Asherah of any kind of wood.' It is true that the *āshērīm* were sometimes erected under living trees (2 K 17¹⁰), but it was the opinion of some of the rabbis of the Talmud that it was a living tree (*Abōda Zārā*, 45ab); and, from what we have learned of its origin, its resemblance to the living tree may sometimes have been closer than at other times. The Canaanitish post must have at times been quite large, since the one cut down by Gideon (Jg 6²³) furnished fuel with which to burn the sacrifice of a bullock.

Such posts were a part of the cultus-equipment of the temple of Jahweh in Jerusalem down to the reign of King Josiah, for he removed them at the time of his reform in 621 B.C. (2 K 23⁶). The sanctuary at Jerusalem was not peculiar in this respect, since the posts existed at Bethel (2 K 23¹⁵), Samaria (2 K 13⁶), and doubtless at all other shrines. It is worthy of notice that *āshērāh*, which represented the female principle, formed in Hebrew a masculine plural, *āshērīm*, while the *maššēbhāh*, which represented the male principle, formed a feminine plural, *maššēbhōth*. Possibly this occurred because of the supposed affinity of male deities for the female principle and *vice versa*. As noted above, this would account for the fact that the surrogate of the feminine sacred tree became the emblem of the masculine sun-god (cf., e.g., Is 27⁹).

In the Hebrew cult the posts were sometimes carved into the semblance of the human form or of its reproductive organs; when carved into such forms, the posts were sometimes draped; down to the time of Josiah there were connected with the temple women who wore hangings for the *āshērāh* (2 K 23⁷). There are several passages, as the Hebrew text now stands, which indicate that, as in Arabia and among the Amorites, the *āshērāh* became a goddess, or rather a group of goddesses. Thus Jg 3⁷ speaks of 'the Baalim and the Asheroth,' and 2 K 23⁴ of 'vessels that were made for Baal, and for the Asherah.' We also hear of 'the

prophets of Baal . . . and the prophets of the Asherah' (1 K 18¹⁹). Moore¹ holds that it is probable that in these cases the text of the OT has been glossed, and that the presence of a goddess Ashera is due to a confusion between Ashtoreth and her symbol. It is probable that, wherever the name of the post became the name of a divinity, it was because of such confusion, but it is certain that among the Amorites and in Arabia the name of the post passed into the name of a goddess, and it is quite possible that it was so in Israel. We sometimes are too suspicious of the Massoretic text.

In view of the form of the cultus-post as it is shown on Phœnician votive *cippi*, and in view of the analogy of this form with the shape of the pillars at the doors of Phœnician temples, it is tempting to see in the *āshērāh* the origin of the pillars (*ammudīm*, not *maššēbhōth*) that stood on either side of the entrance to Solomon's temple, and which were named Jachin and Boaz. They were constructed of bronze, and their tops were carved into lily-work. The writer is disposed to believe that they were transformed cultus-posts. As already noted, such posts were found in Cyprus made of terra-cotta, shaped to imitate the natural wood. It is not improbable that the form of Jachin and Boaz originated from a much conventionalized palm-tree. W. R. Smith thought² that they represented the oldest type of fire-altar; but this is most doubtful.

Cf. also art. *MAŠŠĒBHĀH*.

6. Egypt.—It appears that in Egyptian worship Osiris was the only god with whom a cultus-post was associated. The Osiris-post was of medium height and carved so that the upper part (about one-third of the whole) resembled four cups or four lotus-blossoms standing one within the other.³ Remembering how the palm-tree was conventionalized in Babylonia and Phœnicia, we readily see in this post also a conventionalized palm-tree. So closely was the post associated with Osiris that it became the hieroglyphic symbol for his name in all periods of Egyptian writing.⁴

While other gods appear not to have been associated with posts, standards borne upon rods played a great part in their cults. Thus on the palette and mace head of Nār-mer, a king of the 1st dynasty, if not a pre-dynastic king, four divine symbols are borne aloft on poles, each about three times the height of a man.⁵ Not only were these symbols borne in procession, but they are frequently represented in Egyptian reliefs as planted in the ground, so that they seem like posts surmounted by the symbol of the god. These are found from the time of the Middle Kingdom⁶ down to the latest Egyptian dynasty.⁷ They appear in many combinations; at times they seem half-humorous, as when one of the divine sceptres and the sign *nḥ*, signifying life, are pictured with hands supporting such standards.⁸

Similar to these standards are the rod-like sceptres carried by most Egyptian gods. Possibly there was originally some connexion between them, though it cannot now be traced.

7. Indo-Europeans.—Posts and poles do not play so important a part in the religion of the Indo-European peoples as they do among the Semites; nevertheless they are not wholly wanting.

(1) In the Vedas of India we hear of the 'sacrificial posts' which apparently stood before every

altar.¹ Oldenberg believes that in Rigveda i. xiii. 11 such a post is addressed as a 'tree.'² To these posts the sacrificial victims were tied before they were slain.³

In the *Mahābhārata* (xii.) these stakes are described thus:

'Sacrificial stakes of timber with their golden fastenings graced,
Consecrated by the *mantra* are in sumptuous order placed.'

Further on we read:

'Six good stakes of *vilva* timber, six of hard *khadira* wood,
Six of seasoned *sarvavarṇin*, on the place of *yajna* stood.

Two were made of *devadaru*, pine that on Himalay grows,
One was made of wood of *sleṣha*, which the sacrificer knows,
Other stakes of golden lustre quaint with curious carving done,
Draped in silk and gold-brocaded like the constellations shone! . . .

Bulls of various breed and colour, steeds of mettle true and tried,
Other creatures, full three hundred, to the many stakes were tied.'

At least in poetry a certain personification of the stake occurred.⁴ Whether the post became specially sacred in earlier Hinduism is problematical, though it was such a constant accessory of sacrificial places that, in a hymn in the *Atharvaveda*, in which the burning sun is apostrophized as sacrificial fire, the mountains of the earth are described as the 'sacrificial posts.'⁵

In later Hinduism the symbol of Śiva, the *linga* or phallus, is usually a smooth post of stone or wood. Whether this is an evolution from the sacrificial post of earlier days, or an intrusion from the Dravidian population of India, cannot now be determined.

(2) Among the *Persians* trees were apparently sacred in early times, for there is in the *Bundahishn* a myth of a tree that was supernatural and generated all seeds.⁶ Worship of trees combined with sun-worship appears to have survived among the Magi, but it found expression in the use of 'rods' or the branches of trees, rather than in the consecration and veneration of posts.⁷

(3) Among the *Greeks* and their Cretan fore-runners there are traces of a sacred post. Plato describes⁸ a sacrifice of a bull that is said to have been offered in the sunken island of Atlantis, by which it has been conjectured⁹ that he meant Crete. The bull was led to a pillar or column on which the law and a curse were inscribed, and was slain 'against the top of the column over the writing.'⁷ His blood was thus brought into contact with the column or post on which the laws were written.

Some coins from Ilium bear witness to the existence there of a cultus-post not unlike the sacrificial posts of India. One of these coins pictures 'Athena Ilias with her fillet-twined spear and owl,' and on her right a pillar to which a bull is hung. Evidently the pillar was connected with the sacrifice in some way, though not in the manner described by Plato. Another coin shows the goddess standing on a post, while before her is a cow, apparently waiting for sacrifice. A third coin pictures the goddess standing on her post, and before her is a cow hanging head uppermost from a tree.¹⁰ Miss Harrison thinks that the post was once the goddess, and that the representation of an

anthropomorphic figure standing on the pillar is a later development.

The Greek god Hermes apparently developed out of a post or pillar.¹ In the early art he is represented as a square post with a human head.² Gilbert Murray³ holds that the phallic post was placed at the head of graves to symbolize the renewal of life, and that its spirit came to be regarded as a means of communicating with the dead. Such a post was called a 'Herm,' and in time the collective totality of such posts became the god Hermes, the messenger of the gods. Later the post form of Hermes was discarded for more artistic anthropomorphic representations, and the post was even regarded with aversion.

(4) There are many survivals of tree-worship in the customs of modern Europeans, and among these the May-pole celebrations and dances hold a prominent place.⁴ In one form or another they are found in Bohemia, Swabia, among the Wends of Saxony, and in various other parts of Germany; also in Corfu, Sweden, Alsace, Provence, and Ireland; and nowhere do these customs appear in such completeness as in England. They are found in all parts of the country, have persisted almost to the present, and have found a considerable place in literature.⁵ The idea that the May-pole prevents sterility in women and cattle is almost universal among these peoples. In Saxony May-trees or May-poles were set up before houses, stables, and cattle-stalls, and even before the chambers of sweethearts; in Sweden, where the celebration comes in midsummer, young fir-trees are set up at the doorway and elsewhere about the house; in Suffolk, according to an old custom, a servant who first brought a branch of hawthorn on the 1st of May was entitled to a dish of cream—a custom that until recently continued with some modification in Cornwall.

In many of these countries the May-pole was brought into the village each year with great rejoicings.⁶ In some cases bands had been seeking it in the woods all night. Philip Stubbes, writing in the time of Queen Elizabeth, says that the May-pole was brought home with twenty or forty oxen, each ox having a nosegay of flowers on his horns, while the pole was also decorated with flowers. It was raised in all the countries with rejoicings in which old and young shared. In England, as in many places on the Continent, dancing was an important feature of the celebrations. In Northumberland, in the 18th cent., after the dancing there was a feast for which a sillabub was made of milk warm from the cow, sweet cakes, and wine. A wedding-ring was dropped into this, and the young people fished for it with a ladle. The finder was supposed to be wedded first. The customs and superstitions associated with the May-pole indicate that it was a surrogate for a divine tree, and that the sacredness of the tree was connected with the idea of fertility.

8. Native races of India.—In Hinduism the god Śiva is not represented by an idol, but by the *linga*, or *lingam*, a phallic post. It is generally supposed that the *linga*, of which there is no trace in the Vedas, is a contribution from the Dravidian peoples. The *lingam* are generally made of stone⁷

and painted red,¹ though possibly at times of wood. The use of this symbol seems now to be co-extensive with the Siva-cult. Of other religious uses of posts in India there seems slight trace.

On the fourth day of the festival of Ankamma, a Dravidian village-goddess, 'a man disguised as a woman carries a paper balloon in procession on the end of a long pole. Above the balloon is a pot, and above that a drinking-cup, while the royal staff and snake hood are carried behind accompanied by drumming and shouting. On the last day the cruel features of the worship take place. The village carpenter prepares a rude cart on which are set stakes sharply pointed at the upper end. The usual number of the stakes is nine. On these are impaled alive a goat, a pig, a lamb, a chicken, and other small animals. The story-teller . . . rides to Ankamma's temple in the midst of the suffering animals. . . . After they have arrived at the temple, a live sheep is impaled on a stake set for that purpose in the ground in front of the temple. All of these animals of course die in their agonies.'² It is believed that Ankamma is propitiated by this suffering and shedding of blood.

In this case the stakes or posts become practically altars for the offering in a most horrible way of such sacrifices as are supposed to appeal to the savage god. According to Dravidian legends, men have sometimes been put to death by being impaled on such stakes.³

9. Burma.—The Red Karens hold a festival every year in April at which the principal ceremony is the erection of a post on ground, in or near each village, set apart for the purpose. A new post is set up every year. The old ones are left standing, but, when they decay, are not renewed. The posts are really poles, 20 to 30 ft. high. The tree from which each is made is selected each year by omens obtained from chicken-bones. When the pole is set up, the people join in rude dances not unlike the May-pole dances of Europe. They feast on pork and drink quantities of liquor.⁴

10. China.—While in China there is evidence of a semi-sacredness attaching to trees because they are supposed to be the abodes of spirits that must be propitiated,⁵ no evidence of the employment of a sacred pole or post in that country is known to the writer. The nearest approach to anything of the kind is the system of poles by which a coffin is carried from the house to the grave.⁶ The coffin is placed on a frame-work which is attached to a heavy pole or beam. At each end of this there are cross-poles, which rest on the shoulders of the bearers. There are never fewer than four bearers, and, by increasing the system of cross-poles, there may be eight, sixteen, or thirty-two. These poles have no sacred significance, except in so far as everything connected with burial is to a degree sacred in China. The pole device may have been dictated by convenience, since the frame on which the coffin rests is attached to the large pole by a swivel and can be turned in any direction at will—a great convenience in passing through the winding alleys of Chinese cities.

Brooms and bundles of twigs are employed to drive away evil spirits,⁷ but this is a development from the primitive sacredness of trees different from that represented by sacred poles and posts.

11. Japan.—Trees among the Japanese might be considered *kami*, 'wonderful' or 'divine.' *Kami* was the nearest Japanese equivalent to 'god.' Trees, accordingly, were often sacred. This is shown in the Shintō ritual, where it is directed that heavenly twigs be clipped at the top and bottom, 'making thereof a complete array of one thousand stands for offerings.'⁸ Apparently each

twig became a little post for the support of an offering, and was thus a temporary sacred post. More significant are the many phallic emblems in Japan that were formerly connected with the Shintō ritual.¹ Down to 1872 phallic symbols were to be seen at many Japanese shrines. They were usually made of stone, though often of wood, and in later times of terra-cotta, iron, and gold.² In connexion with Shintō there were, accordingly, many sacred posts kindred in significance to the sacred posts of the Semitic peoples. In Japan they represented the male principle, the female being indicated by an emblem of different shape.

12. Kamchatka.—Among the Koryaks, when a pestilence is raging, a dog is killed and his entrails are wound round two poles. The people then pass between the poles, which are supposed to have power to prevent the demon of pestilence from following them.³

13. Celebes.—(1) Among the *Tokoelawi* in the interior of Central Celebes it is customary to hold a sacred festival on the eighth day after the death of a man and on the ninth day after the death of a woman. On the way home from the festival the guests pass under two poles placed in a slanting direction the one against the other, and they must not, while doing this, look round at the house where the death occurred. In this way, with the supernatural or magic aid of the poles, they take leave of the soul of the departed.⁴

(2) Among the *Toboengkoe*, another tribe of Central Celebes, when a man buries his wife, 'he goes to the grave by a different road from that along which the corpse is carried, and on certain days afterwards he bathes, and on returning from the bath must pass through' a structure shaped like an inverted V. The structure is formed by splitting a pole up the middle and separating the two parts widely at one end, while they adhere at the other. The ceremony is believed to protect the man's second wife, if he has one, from soon following the first.⁵ The leaning poles form an archway, somewhat similar to that made of boughs by the people of Borneo, beyond which a spirit is supposed to be unable to pass. Among the *Toboengkoe* it is the spirit of the dead wife, who is believed to be jealous of her living rival, against which protection is sought.

14. Melanesia.—Among the Melanesians there are few traces of sacred posts. (1) In *Santa Cruz* stocks or posts are set up as memorials of the dead.⁶ They are of the rudest sort, and have only such sacred character as attaches to the dead. In the *Banks' Islands* tree-trunks cut into very rude figures of men are frequently seen at funeral feasts. They are memorials of the dead, but have no sacred character.⁷ In the same islands rough idols are carved out of tree-trunks, varying from the rudest stock to elaborately carved images. The posts of houses are also carved into *nules*, the setting up of which is attended by a celebration called *kolekole*.⁸

(2) In *Lepers' Island* they have a way of communicating with ghosts by means of a bamboo pole.

They build a little hut in the forest near their village, adorning it with leaves and coco-nut fronds. The hut is divided by a partition, through which runs a bamboo pole 12 or 15 ft. long. To ascertain whether a ghost is present, the men sit at night on one side of the partition with their hands under one end of the pole and call the names of people who have recently died. When the bamboo rises in their hands, they know that the ghost of the last called is present. When they name one of

themselves, asking the ghost where the man named is, the pole rises and strikes the man named. After this they go out singing, with one end of the pole in their hands, and the ghost leads them whither it will. If they sing that they will go uphill, it leads them down. If they sing that they do not wish to return to the village, it leads them there. A man is said to have put a bamboo pole over his shoulder with a basket attached, when a ghost came and got into the basket, weighing it down to the ground. After that the pole led people whither it would.¹

(3) Some of the *Torres Straits* islanders performed a ceremony with poles when a turtle was caught.

The turtle was placed on a beach and two highly decorated and carved poles were erected, one on either side of its neck. These poles bore carved faces, somewhat resembling totem-poles. They were surrounded by a number of men, four of whom grasped long ropes that were attached to the tops of the poles. Beginning at the turtle's head, they walked counter-clockwise with a kind of dancing movement round the turtle. When they had advanced a short distance, they partly retraced their steps without turning round, then advanced again until they had gone completely round. All the time they were making overhauling movements with their hands on the ropes, and a drum was beaten and a song was chanted. One of the poles was regarded as male and the other as female.²

15. *Australia*.—In Australia poles are associated with the totemic ceremonies of certain tribes. (1) Thus, in the *Arunta* tribe, when a boy is circumcised or subincised, although the number of performers is very small, a sacred pole is frequently employed. This usually represents the totemic animal or plant. At such times the boy beholds the mystic ceremonies of the tribe for the first time.³

(2) Among the *Kingilli* a part of the fire-ceremony as witnessed by Spencer and Gillen was as follows:

The women danced round a pole about 15 ft. high, which bore on its top a sort of tuft;⁴ and after the dance, while the men were performing other parts of the ceremony, the women lay on the ground by the pole for the whole night.⁵ In the morning the men approached the pole in single file and crouched down, while the women, each carrying a little bag of stones in her hand, danced again round the pole, jingling the stones.⁶

The performers could give no explanation of the ceremony; it had been handed down to them from antiquity.

(3) Among the *Mara* and *Anula* tribes there is another curious ceremony in which a post figures.

When a man dies and his flesh has been eaten, his bones are collected and brought to his father and mother. They are first spread out to dry, after which they are wrapped up in paper-bark and the parcel is fixed into the fork of a stout stick which stands upright in the ground. The stick is placed in the centre of a little cleared space outlined by a raised circle of sand, in which an opening is left on one side.⁷ Within the circle a small fire, which must be lighted by rubbing two sticks together, is made and kept burning. No one may approach it but the father and mother of the dead, and no stick may be taken from it. The spirit is supposed to come and hover over the bones and the fire, and at times may be seen by the father and mother standing near the fire.⁸ After the lapse of a considerable time, often a year or more, other important ceremonies having been performed in the meantime,⁹ the bones are removed, put into a hollow log, the ends of which are stopped up, and buried.⁹

16. *Africa*.—Posts and poles are used in various semi-sacred ceremonies by the savage tribes of Africa, but the religion of most of them is so inchoate that it is often difficult to tell what degree of religious significance is attached to the posts. A few examples must suffice.

(1) The *Yorubas* used to employ posts when offering human sacrifice to Ogun, their god of war.

A place was selected where rocks and boulders enclosed a kind of natural temple. As soon as it was known that such a sacrifice was to be made and that a slave had been selected as a victim, the women of the tribe were seized with great excitement. They rushed to the victim, addressed prayers to him, sent messages by him to departed friends, and gave him their choicest articles of food. Then, encircling him, they engaged him in a wild dance of amazing rapidity, which continued until the

victim had been decapitated. While this dance was in progress, the officiating priest placed two forked sticks or posts about 7 ft. high in the ground, one on each side of the entrance to the rock-enclosed space, and across these he laid a pole from which a fringe of palm-leaves was suspended. While the dancing continued, the victim, in the space described, was laid on his face and beheaded. The head was placed in a fantastically decorated earthen pot in the rear, while the body was left lying where the decapitation occurred.¹ The sticks and pole possessed some ritual significance, though just what it was is not clear.

(2) On the *Upper Congo* a chieftain is, after his death, given a kind of worship for a time. As a part of the reverence shown to him, four of his wives are buried alive under his body, their legs and arms having first been broken so that they will not crawl out. In order that he may be properly attended in the spirit world, ten of his slaves are decapitated that their spirits may go with his. The ritual of this decapitation is as follows:

A tall flexible pole is stuck in the ground, at some distance behind the seat in which the slaves are to be placed one by one. From the top of the pole a cage-like arrangement is suspended by a cord. The pole is bent down, and the cage is fitted to the unfortunate man's head. He is blindfolded, but he knows what is happening, having on former similar occasions seen it done to others. The executioner commences to dance, and make feints; at last, with a fearful yell, he decapitates his victim, with one sweep of the huge knife. The pole thus released springs the head into the air. The crowd yells with delight and excitement.²

17. *American Indians*.—The sacred pole was found widely among the American Indians. It was planted in the centre of their villages, or, if the tribe was nomadic, it was carried about in an ark or wrapping and set up in a tent by itself in their encampment. It typified the communal life of the tribe and represented the "mystery tree," which was intimately associated with their legendary origin.³

The most striking of all these are the totem-poles of the Indian tribes of the north-west coast of America. The largest of these, as well as the most curious, are those of the *Tlingit* of Alaska and the *Haida* of Queen Charlotte Islands.

Some of them stand in front of houses, or very near them; others are set near the beach, beyond the village. When old they are weather-beaten and gray. They are sometimes compared to a forest of tree trunks left after a fire has swept through a wooded district.⁴

There are three kinds of these carved posts—totem-posts, commemorative posts, and death-posts. The death-posts are the simplest of the three. Among the *Tlingit* and the *Haida* the dead were usually burned. If the man had been important, a display was made of his body. . . . After the body had been burned, the ashes were gathered and put into a box, which was placed in a cavity hollowed out of the lower part of the death-post. . . . At the top of the death-post was a cross-board on which was carved or painted the totem of the dead man.⁵

The second kind of carved post is the commemorative post, put up to commemorate some important event.⁶ Thus an old chief once erected a post to commemorate the failure and consequent withdrawal from his village of missionaries of the Graco-Russian Church. On the pole were carved, from the top downward, an eagle, a man pointing with his right hand to the sky, an angel, a priest with hands crossed on his breast, and a trader.⁷

The totem-posts are the most interesting. They are taller and more elaborately carved than the others. They stand in front of the houses; among the *Tlingit* to one side, among the *Haida* at the very middle and close to the house. In fact among the *Haida* the doorway of the house was a hole cut through the lower end of the totem-post.⁸

Among these tribes every one bears the name of some animal or bird, such as 'the wolf, bear, eagle, whale, shark, porpoise, puffin, orca, orca-bear, raven, frog, goose, beaver, owl, sea-lion, salmon, dog-fish, crow.' The totem-poles bear the pictures of the totems of the persons living in each house. The husband and wife are of different totems, so both of their totems appear, that of the man at the top, that of the woman at the bottom. Between them other designs are frequently carved

in 'tell the tale of the man's wealth and importance, or they might represent some family story.'¹ Descent is reckoned through the mother in these tribes; consequently the carving at the bottom is most important, as it tells the totem of the mother and children. These poles are a kind of door-plate and tell at the same time something of a family's history and importance.

Besides the carved totem-poles there are also frequently carved columns or posts inside their houses.² They serve to support the two great rafters on which the jack-rafters and the roof rest. The carvings resemble those on the totem-poles and have, no doubt, a similar significance.

LITERATURE.—The literature has been fully cited in the notes. Most of it is of a fragmentary character. The more connected discussions may be recapitulated here with a few additions: M. H. Ohnefalsch-Richter, *Kypros, the Bible and Homer*, I., London, 1893, pp. 141–202; W. R. Smith, *The Religion of the Semites*,² do. 1894, pp. 187–191; W. C. Allen, 'Asherah,' in *HDB*; K. Budde, 'Asherah in the OT,' *The New World*, viii. [1899] 732–740; G. F. Moore, 'Asherah,' in *EBI*; G. A. GEORGE A. BARTON.

POLITICAL ECONOMY.—See ECONOMICS.

POLITICS.—1. Scope of the article.—The word 'politics' is used to refer both to administration or legislation and to the study of this department of human activity. Although the usual sense of the word refers rather to public activities than to theory, the subject here spoken of must be what is more strictly called the theory of politics, or political theory. The practical importance of this theory is very great, both because it obstructs and because it assists the attainment of justice and liberty. Theory has often made the accidental conditions of a passing age seem to be the nature of things, and has therefore perpetuated abuses; and it has often shown a better way when politicians were blind to facts. The facts of political life will, therefore, be treated here as a basis for speculation, analysis, and suggestion (see, further, art. STATE). That part of life which is political is generally supposed to be concerned with the organization of social relations with a view to justice and liberty. Political theory is the analysis and criticism of the attempts to attain those ends; and such theory may be divided into political science (an analysis of facts) and political philosophy (a criticism and moral evaluation of political society). But, since political society is not the only form of society, the theory of politics is only one section of social theory; and it must be distinguished from other kindred subjects. Political society is distinct from the earlier or more primitive forms of social organization (*q.v.*). In political as opposed to primitive society there is a conscious adjustment of social relations by members of a society. Until

that occurs, there is, properly speaking, no political life, although, obviously, there is no moment nor any one place in which political life appears, and it must also be allowed that the more primitive social forces are active even in an elaborate political organization. Again, in early but not very primitive society there was no distinction between what we now call 'political' and what we now call 'religious' organization. There was, therefore, no separate theory of religious institutions; but there should be one now, if our social theory is to be complete. Political theory must exclude this. In still less primitive times, and even as late as the 19th cent., no clear distinction was made between economic and political purposes. Therefore a study called 'political economy' arose; and the study of organization for economic wealth was confused with the study of organization for justice and liberty. But, however close the connexion between them, we shall presume that economics (*q.v.*) is quite distinct from political theory, at least in its subject-matter, if not in its method. Finally, politics is connected, through the general theory of society, with ethics (*q.v.*), or the study of right action; but, although ethics should be regarded as fundamentally social and should not isolate the individual, it deals with more general issues.

2. The Greek conception.—The first political theory was Greek; and it was based upon the half-conscious political organizations—monarchy, oligarchy, and democracy—which are reviewed in the famous passage of Herodotus.¹ The criticisms there made mark the beginning of political theory. They are based upon Greek experience, aided by observation of Eastern practices; and the forms of government are distinguished by psychological observation of the actions of men in half-organized groups. The immediately following practice and theory were based upon the experience of the *πόλις*—a peculiar and unique organization or institution which has not only given a name to our subject, but very profoundly affected the view usually taken of it. A word is necessary as to the nature of the *πόλις*. It was the organization of a small local group of male slave-owners, based upon what we may call religious or ritual community. It was originally exclusive, segmented according to military purposes and organized politically, in our sense of the word (*i.e.* for the purpose of justice and liberty), in one of the three ways mentioned above. But it was a society in which the political was not yet clearly distinguished from the economic or religious needs of man. For this and other reasons, therefore, it is impossible to suppose that the *πόλις* was essentially a State (see STATE). But upon the experience of the *πόλις* was based all the Greek theory of society; and the Greek theory of the *πόλις* is therefore rather an early form of philosophical sociology than what we now call political theory. The pre-Socratic views of society probably veered between the idea that all social organization is a convention (and as such a break with 'nature') and the idea that the organization of civilized society is natural. The theory of convention was probably connected with the attack on slavery and the subjection of women. 'Nature' was the name given to what would be better than the established custom. But we have no complete statement of this view of society. The most valuable and effective political theory began with Socrates (*q.v.*), and is found in Plato's dialogues. Although it is not systematically presented, we can quite clearly see the main lines of the Socratic-Platonic analysis and suggestions of social betterment. This theory of society is part of a general theory of the nature and purposes of man; and,

² F. S. Dellenbaugh, *The North Americans of Yesterday*, p. 412 ff.

since man is essentially social, ethics is part of the theory of social life which is called, in our translation of the Greek word, 'politics.' It is false to say that politics in this sense is only a part of ethics; it is absurd to suppose that Socrates and Plato (*q.v.*) were thinking only or chiefly of what we call 'politics.' Organized society presented itself to them as a whole—religious, cultural, and economic, as well as what we call political—and the discussion always refers to *all* the relations or contacts of man with man. For this reason the psychological analysis of the individual in the *Republic* is regarded as an equivalent to an analysis of society. The fundamental statement implied in Plato's work is that society is the result of three distinct elements of the character or nature of man; the reverse, he would admit, is also true that the three elements are the result of society.¹ For it is not possible to say of the individual or of society that one exists, in time, before the other. The *Republic* is in the main an analysis of fact, and only in a secondary sense a Utopia; the fact is the life of the *πόλις*. Therefore the Socratic-Platonic theory is only in part what we should now call political, and in that part is concerned more with the purpose of political action than with political devices or methods. The discovery and promulgation of what is worth doing rather than the administration of society so that its members should do it were the chief interests of Socrates. Law meant to him and to Plato what it meant to most Greeks—a statement of the reasonable rule to be followed rather than a command. And those who could discover this rule were, therefore, the only hope of society. Unimaginative commentators have turned this 'spiritual power' into a military autocracy, because of the Spartan tendencies in Plato; for Plato is indeed too impatient of the method of trial and error in politics. But the value of his work lies in suggestiveness as to ultimate ends rather than in ideas of method. He is the first political philosopher.

The situation had changed in the interval between Socrates and Aristotle; but Aristotle (*q.v.*) continues to repeat the established analysis and to depend for evidence upon an already fast disappearing life of the *πόλις*. His analysis, however, is carried farther than Plato's, and his suggestions, though less radical, are more detailed. In his *Politics* he reviews the general principles on which the *πόλις* was organized; and he begins to subordinate, as later ages did more completely, all other interests of man to the desire for orderly administration. In addition to principles shared with Plato, he gives us suggestions as to the dependence of social organization upon external or natural circumstances; he perceives the importance of economic facts; and he attempts to combine the good points of the different systems of government so far discovered by the Greeks. He is the first political scientist. Apart from his unsurpassed ability in analysis of political fact, he formulates well certain principles already discovered. The true State exists not for wealth or power, but for a full and noble life; administration is to provide opportunity for the highest social abilities of man; it is to give these opportunities to all who are capable of using them, women and slaves being proved by 'experience' incapable; and good government is such as prevents the exploitation of some members of a given society by others.

Great as Plato and Aristotle were, they omitted or under-estimated the value of certain facts of the social life which they analyzed. They treated the *πόλις* as in essence self-sufficing; but the evidence was against them. Nearly all the Greek city-States were dependent, for food, luxuries, or ideas,

on other communities; and Athens, confessedly the most advanced, if not, in the philosophers' judgment, the best organized, was civilized largely by foreign contacts. Secondly, they omitted to notice the growing departmentalizing of function which was making the primitive and all-inclusive *πόλις* into one of many institutions. Voluntary unions existed for economics, religion, or culture, which are simply disregarded by Plato and Aristotle.

So much with respect to facts; but as to conceptions of social betterment also the two great philosophers are deficient. Although each gives hints of the unity of Greece,¹ they neglect too much the attempt of Sophists like Gorgias, Lysias, and Isocrates to counteract the isolation of the *πόλις* and make an inter-State political structure. And they hark back to the primitive all-inclusive organization, since they desire a *πόλις* which is merely 'a parochial Sinai.' The history of their influence has unfortunately been as much a history of their mistakes and omissions as of their illuminating conceptions, and this both in the sphere of practical politics and in political theory. But they still give the most suggestive introduction to the general theory of society and the social nature of man. At about the same period political theory and development were beginning in China; but the early promise does not seem to have led to anything new or strange to the Western tradition, which, at any rate, continued for more than 2000 years unaffected by the East. We may therefore suppose that political, if not social, theory, as it now stands, is almost exclusively Western.

3. Roman contribution to the theory.—The domination of Rome marks the second stage in political development. A single State gradually acquired the administration of all the different local groups in W. Europe, W. Asia, and N. Africa. But even this State was a much more simple and all-inclusive organization than any modern State. It was, like the *πόλις*, in its basis religious, and in the form of its institutions military; and, although the same administration in the 2nd cent. of our era covered vast territory with many races, the structure of the State was still sufficiently like that of the original *urbis* for the conception of the Greek philosophers to be applied to it. With some modifications made by Cicero and Polybius, the idea of political life remained almost Aristotelian. Polybius is perhaps the more important, since he introduced to the political tradition the idea of a balance of social powers as a good method for administration.² But the real experience of the Romans is contained not in the philosophical commentators, but in the lawyers. For the social need of the time seems to have been orderly administration, and the desire for local or individual development was sufficiently satisfied if peace was secured.

The Roman lawyers added to the political tradition two important conceptions: an early form of the idea of sovereignty and the idea of a natural law. The one was a reflex of the imperial unity of the Roman world, the other an attempt to explain the basis of civil law. A single source of law and the dependence of all forms of association upon the will of the political power are conceptions of extreme importance in the Middle Ages, with sinister consequences in the Renaissance. And the idea of natural law lived on to affect the first efforts at international law and the early claims to 'the rights of man.' But no complete and comprehensive theory of politics had been developed among the Romans when the Roman world fell in ruin.

4. The Middle Ages.—The development of political life and theory was then interrupted.

¹ Cf. *Rep.* 443.

² Plato, *Rep.* 470; Arist. *Pol.* 1327^b. ³ *Hist.* vi. 15.

The Dark Ages contain nothing but gradual loss of the civilized administration and exact thinking of the past, together with fitful and primitive efforts to retain the ghost of the dead world or to inspire a new earth. When the darkness begins to lift, a single form appears—the Roman Church. The only stable and effective organization, with real power for ordering and directing life in every corner of W. Europe, it took over the prestige of the half-forgotten Roman rule and bestowed it upon one of the most fantastic creations of the political imagination—the Holy Roman Empire. What the Church was for the Middle Ages was largely due to Augustine's *de Civitate Dei*, which is an attempt to provide a theory to replace that of the Roman law and the Greek philosophy. Its importance for us here is that, continuing some of the old ideas of administration, it adds to them (1) a conception of another world for which temporal or earthly life is preparatory, and (2) a vague theory as to the equal value of all human beings.

Mediæval political experience may be summarized under two headings: (a) the distinction of Church and State, and (b) the hierarchy of rulers.
